H. The abbreviation used by biblical scholars to represent the Holiness Code in pentateuchal source criticism. See HOLINESS CODE.

HA-ELEPH (PLACE) [Heb *hā'elep*]. A Benjaminite town listed between Zela and Jerusalem (Josh 18: 28). The name is problematic. LXX^{B} omits the name altogether; and LXX^{A} conflates it with Zela, reading *Sēlaleph*. On identification, see ZELA (PLACE).

GARY A. HERION

HAAHASHTARI (PERSON) [Heb *hā'āḥaštārî*]. The eponymous ancestor of a family of Judah known as the "Ahashtarites" (1 Chr 4:6, cf. Noth *IPN*, 236). The genealogy traces Haahashtari's lineage back to Ashhur, the father of Tekoa through his wife Naarah. Immediately preceding the Ahashtarites in the list are three sons of Ashhur and Naarah: Ahuzzam, Hepher, and Temeni. Whether the Ahashtarites are descended from one of these three or represent a line through a fourth son is unclear. A derivation of the name from a Persian root *ḫšaça*, meaning "kingdom," "power," "rule" has been sought (*HALAT* 1: 36; cf. Myers *1 Chronicles* AB, 28). That the name is a corruption of *hā'ašḥûrî*, the "Ashhurites," and describes the preceding names (*ISBE* [1939] 2: 1311) is unnecessary. This emendation lacks manuscript support. Further, the name of the family may have been derived from a name in an intervening generation between Ashhur and the families of the Ahashtarites that were in existence at the time of the list's compilation.

KENNETH H. CUFFEY

HABAIAH (PERSON) [Heb *ḥōbayyâ*]. Var. HOBAIAH. The head of a family of priests which is listed among those exiles of uncertain descent returning from Babylon to Jerusalem and Judah (Ezra 2:61 = Neh 7:63; 1 Esdr 5:38). This priestly family, along with two others, was excluded, at least temporarily, from the priesthood as being unclean for lack of documentation of their priestly lineage. The name is theophoric and derives from the Heb root *ḥb* which means "withdraw," "hide." The *Qal* impv., *ḥābî*, is used in Isa 26:20 thus suggesting that this name was formed with the imperative, not an unusual occurrence, according to Albright (1928: 234), in hypocoristic formations. Since the Heb root *ḥb'*, which in the causative means "hide," is used in the sense of "protect" elsewhere (Josh 6:17, 25; 1 Kgs 18:4, 13; Isa 49:2), the name, which Noth (*IPN*, 178) understands as "Yahweh has hidden," could also mean "Yahweh has protected" or "Protect, O Yahweh." The several Greek transliterations of this name account for the variety of its spelling in translation: Ezra—*hobaia* (A), *labeia* (B), *ōdouia* (Luc); Neh—*hebeia* (A, B), *abia* (S, Luc); 1 Esdr—*hobbeia* (B), *obdia* (A), *ōdouia* (Luc).

RODNEY H. SHEARER

HABAKKUK, BOOK OF. The eighth book of the Minor Prophets. Medieval and early modern exegetes derived the name from the Hebrew root *ḥbq*, "to embrace." Most modern scholars follow Noth (*IPN*, 231), who derives it from Akk *ḫabbaqūqū/ḫambaqūqū*, which refers to a type of garden plant (*AHW* 1: 304).

D. Significance in Later Jewish and Christian Tradition

A. The Prophet

The book of Habakkuk provides little information concerning the identity and historical background of the prophet on whom it is based. He is identified simply as "Habakkuk the prophet" in 1:1 and 3:1 with no indication of his lineage, provenance, or dates. Consequently, a number of apocryphal traditions concerning Habakkuk appear in postbiblical literature. The apocryphal Bel and the Dragon (2d century B.C.E.) portrays him as a contemporary of Daniel during the Babylonian exile and identifies him as "Habakkuk, the son of Jesus, of the tribe of Levi" (Bel 1:1 = LXX Dan 14:1). The pseudepigraphic *Lives of the Prophets* (1st century C.E.) follows this dating but identifies him as a member of the tribe of Simeon (*Life of Habakkuk* 1–9). The midrashic historical treatise *Seder ʿOlam Rabbah* (2d–3d century C.E.) places him in the reign of Manasseh (*S. ʿOlam Rab.* 20). Clement of Alexandria (2d–3d century C.E.) identifies him as a contemporary of

Jeremiah and Ezekiel, but he also states that Jonah and Habakkuk are contemporaries of Daniel (*Str.* 1:21). Finally, the medieval kabbalistic commentary *Sefer ha-Zohar* (ca. 1300 C.E.) identifies him as the son of the Shunammite woman saved by the prophet Elisha (*Zohar* 1:7; 2:44–45).

Although most modern scholars reject these traditions as the product of later legend, the absence of personal information about Habakkuk continues to confound attempts to identify his historical background. A wide range of dates have been proposed, from Sennacherib's invasion of Judah in the late 8th century (Betteridge 1903) to Alexander the Great's conquest of the Near East in the 4th century (Duhm 1906; Torrey 1935). On the basis of Hab 1:6, which mentions the establishment of the Chaldeans, most contemporary scholars maintain that Habakkuk lived during the rise of the Neo-Babylonian Empire in the latter part of the 7th century, from the latter years of Josiah (640–609) to the reign of Jehoiakim (609–598) or perhaps Jehoiachin (598). A recent study by Haak (1986) maintains that Habakkuk was a pro-Babylonian supporter of King Jehoahaz, who was removed from the Judean throne and exiled to Egypt by Pharaoh Neco in 609. It should be kept in mind, however, that decisions concerning Habakkuk's dates and the relation of his message to the historical events of his time are dependent on a literary assessment of the book and the identification of several key references including the "righteous" (1:4, 13; 2:4), the "wicked" (1:4, 13; 3:13), the subject of the "woe" oracles (2:6–20), and the Chaldeans (1:6). These issues will be discussed below.

The question of the prophet's vocation is likewise dependent on the assessment of the book's literary genre. Many scholars follow Mowinckel (1921–24: 3. 27–29), who argued that Habakkuk was a temple cult prophet on the basis of the liturgical forms found in the book (cf. Sellin KAT [1930]; Eaton TBC [1961]; Watts CBC [1975]; Széles ITC [1987]). This view is supported by Jeremias (1970: 103–7), who notes the parallels between Habakkuk's watch station (2:1) and those of the postexilic Levites and priests in the Temple (Neh 13:30; 2 Chr 7:6; 8:14; 35:2; cf. Isa 21:8) as well as the temple context of the terms *nābî'*, "prophet," *maśśā'*, "pronouncement" (RSV 'oracle'), and *ḥāzâ*, "to see" (i.e., have a vision). A dissenting view sees Habakkuk as a visionary prophet without cultic connections (Rudolph KAT [1975]; Jöcken 1977). Others stress his wisdom background (Gowan 1968, 1976; Uffenheimer 1987) or his concern as an individual with the troubling events of his day (Keller CAT [1971]; 1973). Finally, a number of scholars note his connections with the Isaiah tradition (Brownlee 1971; Janzen 1982; Peckham 1986).

B. Text and Versions

The text of Habakkuk presents scholars with a number of problematic readings, not only because of the difficulties presented by the MT, but also because of the many variant readings found in ancient manuscripts and versions. Consequently, many scholars consider the MT of Habakkuk to be quite corrupt (e.g., Delcor 1961: 399). Earlier scholars generally assumed that these manuscripts and versions represented variant Hebrew originals and corrected the MT accordingly (Lachmann 1932; Good 1958). Recent advances in text-critical methodology which emphasize the interpretative character and intent of many text witnesses call this judgment into question (Sanders 1979). At present the issue is divided; some studies show great confidence in the MT (e.g., Haak 1986), whereas others rely heavily on textual emendation (e.g., Hiebert 1986).

A critical edition of the MT appears in *BHS*. This edition contains notes concerning the various medieval Masoretic mss and other textual versions. In addition to the Masoretic mss, the principal Hebrew, Greek, and Aramaic text witnesses are as follows:

The Habakkuk Pesher from Qumran (1QpHab) (Burrows, Trever, and Brownlee 1950; Trever 1972) dates to the 1st century B.C.E. and contains the text of Habakkuk 1–2 together with a commentary that interprets Habakkuk in relation to the early history of the Qumran sect. The text was thoroughly studied by Brownlee (1959), who examined over 160 variants from the MT. Most were minor orthographic, grammatical, and spelling changes or Aramaicisms which had crept into the text. There were a number of substantial changes, however, including *wyśm* for *wĕ'āšēm*, "guilty men," in 1:11; *ḥrbw* for *ḥermô*, "his net," in 1:17; *hwn wbgd* for *hayyayin bôgēd* (RSV: "wine is treacherous") in 2:5; *mwʿdyhm* for *mĕʿôrêhem*, "their shame," in 2:15.

The Scroll of the Minor Prophets from Wâdī Murabbaʿat (*Mur* 88) dates to the 2d century C.E., some decades after the fixing of the Textus Receptus. Within its text of the Minor Prophets, it contains Hab 1:3–2:11 and 2:18–3:19. Apart from orthographic changes, there are a few variant readings or corrections. Most notable is the substitution of *zrmw mym ʿbwt* from Ps 77:18 for *zerem mayim ʿābār* ("the raging waters swept on") in Hab 3:10.

The LXX and other Greek versions (Aquila, Theodotion, Symmachus) are represented in a critical edition (by J. Ziegler 1943) of the Greek text together with notes on the various readings found in the manuscripts. Cothenet (*DBSup* 45: 793) notes that its variations from the MT are due to a number of causes: variant consonantal texts, revocalized consonantal texts, and attempts at reinterpreting the text.

The Greek Scroll of the Minor Prophets from Naḥal Ḥever (8 Ḥev XIIgr) was apparently hidden during the Bar Kokhba revolt against Rome (Barthélemy 1963). The text contains Hab 1:5–11; 1:14–2:8; 2:13–20; 3:9–15. Barthélemy (1963: 144–57) attributes this text to Jonathan ben Uzziel, known in Greek as Theodotion (1st century C.E.). It represents a revision of the LXX made in Judea, based on a Hebrew consonantal text which is nearly identical to the MT.

The Barberini Greek version of Habakkuk 3 appears in six medieval manuscripts dating from the 8th to the 13th century (Good 1958, 1959). It does not correspond to any other known Greek version, but it appears to have a close relationship with the Coptic versions, especially the Achmimic. It has affinities with North African Latin texts, the Palestinian Syriac version, and the Peshitta. It is a free translation which employs paraphrase and is deliberately exegetical. Good (1959: 28–30) maintains that this translation was made for liturgical purposes. Its provenance is Alexandria, and it dates to the early 2d century C.E. at the latest.

Targum Jonathan ben Uzziel on the Prophets, an Aramaic version, presupposes a Proto-MT Hebrew text (Sper-

ber 1962). It is contemporary with Targum Onqelos but preserves traditions from the Palestinian Targum. Brownlee (1956) has noted the affinities between the interpretations found in this Targum and those of 1QpHab.

Critical editions of the Peshitta (Peshitta Institute 1980; cf. Gelston 1987) and the Vulgate (Weber 1975) have also been published.

C. Literary Issues and Authorship

The history of critical scholarship on Habakkuk through the mid-1970s has been exhaustively surveyed and evaluated by Jöcken (*Habakkuk* BBB). Van der Wal (1988) has published a complete bibliography of works through 1987.

1. The Book as a Whole. Most scholars maintain that the book of Habakkuk contains three major literary units: a dialogue between the prophet and God in 1:1–2:4/5; a section containing a series of woe oracles in 2:5/6–20; and a psalm in chap. 3 (Childs *IOTS,* 448). This view raises problems, however, in that there is little agreement concerning the interrelationship of these units. An alternative proposal (Széles *Habakkuk, Zephaniah* ITC; Sweeney *HBC,* fc.) maintains that the book of Habakkuk comprises two distinct sections: Habakkuk 1–2, the Pronouncement *(maśśāʾ)* of Habakkuk, and Habakkuk 3, the Prayer *(tĕpillâ)* of Habakkuk. These sections are demarcated formally by their respective superscriptions in 1:1 and 3:1; the technical terms in 3:1, 3, 9, 13, 19, which identify Habakkuk 3 as a psalm; the distinctive mythological background of Habakkuk 3; and their respective generic characters.

The distinctive characteristics of the sections that comprise Habakkuk, however they are defined, together with the literary tensions within and between them, have raised the question of literary integrity and authorship. Many critics followed the lead of Stade (1884), who argued that 2:9–20 and chap. 3 were later additions, in arguing that Habakkuk did not constitute a unified, coherent literary work (Jöcken 1977: 116–240 surveys the history of scholarship). Under the influence of form-critical studies of the Psalms, chiefly by Mowinckel (1921–24) and Gunkel (1933), and the lexical study of Habakkuk by Humbert (1944), scholars have currently reached a consensus that although the book was probably not entirely written by a single author (contra Eissfeldt 1965 and Brownlee 1971), its present form constitutes a coherent literary unity (Jöcken 1977: 241–519). In this respect a number of scholars see the book as a liturgical or cultic composition (Mowinckel; Sellin KAT; Humbert 1944; Elliger ATD; Nielsen 1953; Eaton TBC; Jeremias 1970; Watts CBC; Haak 1986; Széles ITC) or a prophetic imitation of a cultic liturgy (Fohrer 1985). Others see it as a composition which is concerned with the prophet's visionary experience (Rudolph KAT; Janzen 1982; Peckham 1986). A third view maintains that the book is organized around the question of theodicy (Keller 1973; Gowan 1976; Bratcher 1984; Otto 1985; Gunneweg 1986; Sweeney *HBC,* fc.). Consequently, there is no consensus as to the nature of the final form of the book.

2. The Pronouncement of Habakkuk. In the present form of the book, the superscription in 1:1 identifies chaps. 1–2 as "The Pronouncement which Habakkuk the prophet saw." The Hebrew term *maśśāʾ,* "pronouncement," "burden," refers to a type of prophetic oracle, but its precise meaning has been an enigma. A recent investigation by Weis (1986) demonstrates that *maśśāʾ* refers to a specific type of prophetic discourse that attempts to explain the manner in which God's intention will be manifested in human affairs. It is generally based on a vision or other revelatory experience and is spoken by a prophet in response to a particular situation in human events. An alternative view maintains that these chapters are an expanded form of the complaint genre (Haak 1986).

The pronouncement contains four major sections. Hab 1:2–4 is a complaint by the prophet to God concerning the oppression of the "righteous" by the "wicked." Neither party is identified. Hab 1:5–11 is God's response to this complaint, announcing the coming threat of the Chaldeans. Hab 1:12–17 is a second complaint by the prophet to God concerning the oppressive nature of the Chaldeans. Hab 2:1–20 constitutes the prophet's report of God's second response in Hab 2:1–4 together with his explanation of the meaning of God's response in Hab 2:5–20.

The Pronouncement of Habakkuk raises three major problems which have been the subject of scholarly discussion. The first concerns the identity of the "righteous" *(ṣaddîq)* and the "wicked" *(rāšāʿ)* in 1:4, 13, and 2:4 and the role of the Chaldeans mentioned in 1:6. Most scholars maintain that the purpose of the Chaldeans is to punish the "wicked" oppressors of the "righteous" mentioned in 1:2–4. Two possibilities have been put forward for understanding this oppression. The first identifies the "wicked" as an external enemy which is threatening righteous Judah. Assyria, Egypt (Bič 1968), Chaldea (Wellhausen 1892; Sellin KAT), Greece (Duhm 1906; Torrey 1935), or an unidentified enemy (Horst HAT [1956]) have all been proposed. The second possibility identifies the oppression as a reference to an inner Judean conflict in which a "wicked" party is opposed to a "righteous" group. Scholars who hold this view argue that the language used to describe oppression in 1:2–4 refers to internal social tensions and identify the "wicked" very generally as the wicked in Judean society (Gowan 1976; Achtemeier *Nahum-Malachi* IBC; Gunneweg 1986) or specifically either as those who allowed the Josianic reform to lapse (Janzen 1982; Johnson 1985) or King Jehoiakim and his supporters (Ward *Habakkuk* ICC; Humbert 1944; Nielsen 1953; Rudolph KAT). Others argue that the prophet's complaint was originally directed against a Judean group but was later reapplied against Chaldea in light of historical experience (Jeremias 1970; Otto 1985; Peckham 1986; Haak 1986). Elliger (ATD) maintains that the book was originally directed against Egypt but was later reapplied against Chaldea.

Because each of these identifications presents problems, there is no consensus on the issue. A recent study by Johnson (1985) may resolve the impasse. The primary issue is to explain why Chaldea is used to correct oppression in 1:5–11 but then becomes the oppressor in 1:12–17. Johnson notes that 1:5–11 does not portray Chaldea in a positive light. He therefore concludes that the establishment of Chaldea should not be viewed as a solution to the oppression described in 1:2–4. Hab 1:5–11 does not therefore solve the old problem of theodicy but constitutes a heightened form of the complaint in 1:2–4 concerning the Chaldean oppression. Not only does this view resolve the difficulties of the text, it explains the reference to the

treachery of the Chaldeans in 1:13 (cf. 2:5) in light of the long history of alliance between Judah and Babylon from the time of Hezekiah and King Josiah's death in battle supporting Babylonian interests.

The second problem concerns the meaning of Hab 2:4 and the relation of 2:1–4 to its context. Scholars generally view 2:1–4 in relation to the preceding dialogue between Habakkuk and God and maintain that 2:1–4 is God's response to Habakkuk's second complaint in 1:12–17. The prophet describes his waiting for the divine response in 2:1 and reports that response in 2:2–4, where he is instructed to write his vision clearly on tablets (Holt 1964) and to wait for its fulfillment.

Scholars agree that Hab 2:4 contains the core of God's answer to Habakkuk, but there is no consensus as to its meaning because of its grammatical and lexical problems. The verse reads, "Behold, he whose soul is not upright in him shall fail [a correction of MT 'is puffed up'] but the righteous shall live by his faith [or 'faithfulness']" (RSV). Emerton's study of the issue (1977) summarizes the problems of the first half of the verse. First, the translation of the Hebrew verb *ʿuppĕlâ* as "is puffed up" lacks support in the versions and appears nowhere else in the Hebrew Bible. Second, the antecedents of the pronouns "he" and "him" are not clear. Third, although the portrayal of a conceited and unjust (puffed up) figure in v 4a contrasts well with the righteous *(ṣaddîq)* of v 4b, there is no antithesis to the statement that the righteous shall live. These problems have prompted scholars to advance numerous textual emendations and interpretations (e.g., van der Woude 1966, 1970; Emerton 1977; Janzen 1980; Scott 1985), but none has gained general acceptance.

The text can be understood without resort to emendation. Hab 2:4 must be understood in relation to 2:5–20, which describes the downfall of an unsated oppressor because of excessive greed (cf. Schreiner 1974; Humbert 1944: 150–51; van der Woude 1966: 367). The vocabulary and syntax of 2:4 contrast the instability and impending fall of an arrogant oppressor with the righteous victim who will survive; the "wicked" oppressor is Chaldea and the "righteous" victim is Judah.

The third major problem presented by Habakkuk 1–2 concerns the identity of the oppressor presupposed by the woe oracles of 2:5–20. Because the crimes specified in these oracles are localized, some scholars suggest that the woes were originally directed against an internal Judean group, such as the ruling class of Jerusalem (Otto 1977; Jeremias 1970), before being reapplied against Chaldea by later editors (cf. Jer 22:13–23, where Jeremiah condemns Jehoiakim for such crimes). Others maintain that Chaldea was the intended subject of these oracles (Janzen 1982; Peckham 1986). In this respect it is important to recognize Coggins' observation (1982) that Habakkuk may represent a different prophetic tradition from that of Jeremiah. Prophets are known for using local imagery to condemn international crimes (e.g., Amos 1:3, 11, 13; Isa 10:14; Nah 3:5–7). Furthermore, statements in the woe oracles suggest an international situation, such as the references to peoples and nations (vv 6a, 8a, 10b, 13b), the earth, humankind, and the sea (vv 8b, 14, 17b), and the violence of Lebanon (v 17a). A supporting example is Nebuchadnezzar's report that he took Lebanon from an unnamed ruler and transported its wood back to Babylon to build a palace for the ruler of heaven and earth (*ANET,* 307). Such an act well suits the crimes mentioned in these oracles, which speak of extortion and plundering nations (vv 6b–8), unjust gain used to protect one's house (vv 9–11), bloodshed to build a city (vv 12–14), and the rape of a land (vv 15–17). The prophet concludes by stating that the oppressor will fall by its idolatry (vv 18–20), which corresponds to the Chaldeans' crime in 1:11 and 1:16 (cf. 2:13a).

3. The Prayer of Habakkuk. Habakkuk 3 begins with the superscription, "The Prayer of Habakkuk the Prophet concerning *šigyônôt.*" The term *šigāyôn,* which has been associated with the Akk *šegû* "song of lament" (Mowinckel 1921–24: 4.7; rejected by Seux 1981; see also MUSIC AND MUSICAL INSTRUMENTS) also appears in Psalm 7, a Psalm of Lament. This superscription, the technical music notations in 3:3, 9, 13, 19, and the situation of distress presupposed in the psalm have prompted many scholars to argue that Habakkuk 3 is a cultic song of lament sung as part of the temple liturgy (Sellin; Nielsen 1953; Eaton 1964; Margulis 1970). On the basis of its mythic themes of divine combat against the forces of cosmic chaos (cf. Cassuto 1975; Irwin 1942, 1956), others view it as a song of triumph (Albright 1950) or a song of victory (Hiebert 1986). Although many of these studies presuppose that the psalm was originally an oral composition because of its affinity with Ugaritic prosody (e.g., Albright 1950), Floyd (1980) disputes this view. Finally, a number of scholars have noted its associations with other theophanic texts in the Bible as well as a relationship between its framing verses (3:2, 16) and the reference to Habakkuk's vision in 2:1–4. Consequently, they define it as a vision report (Fohrer 1985) which contains a description of a theophany (Jeremias 1965; Rudolph; Achtemeier IBC).

In its present form the prayer in vv 2–19a is a petition addressed by the psalmist to God to manifest divine power in the world in order to deliver the land from invaders (v 16). It includes an introductory section (v 2), which petitions God to manifest divine acts in the world (cf. 1:5), and a concluding section (vv 16–19a), which expresses the psalmist's confidence that God will answer the petition. These sections bracket a description of a theophany in vv 3–15, which consists of two parts (cf. Jeremias 1965). Verses 3–6 describe the deity's approach, and verses 7–15 depict God's victory over the enemy in mythological terms. The theophany expresses the psalmist's confidence that God will deliver the land (v 13), demonstrating the steadfast faith of the righteous in 2:4. Instructions to the choirmaster in v 19b follow the psalm.

Because of its distinctive character many early scholars argued that Habakkuk 3 was an independent psalm that was originally not a part of the book of Habakkuk (Stade 1884; Wellhausen 1892; Nowack HAT [1897]; Marti KHC [1904]). Although the absence of Habakkuk 3 from 1QpHab might lend support to this view (Taylor *IB,* 974), most scholars maintain that this is irrelevant (Eissfeldt 1965; Fohrer 1985) because the reasons for its omission are unclear (Brownlee 1971) Contemporary scholars have identified a number of reasons for associating Habakkuk 3 with Habakkuk 1–2, including the same general theme that God will bring the oppression of the people to an end;

similarity of language, particularly the references to the "wicked" (*rāšāʿ*) in 3:13 and 1:4, 13; and the relationship between 3:2, 16, which indicate that the psalmist is waiting for God to bring about deliverance, and 2:1–5, which instruct the prophet to wait for the fulfillment of the vision (Eissfeldt 1965; Fohrer 1985). Others maintain that the unity of the book is to be found in its cultic character. This argument is based on the correspondence of the vocabulary of Habakkuk 1–2 and Habakkuk 3 with cultic psalms (Humbert 1944) or the association of the genres of lament/complaint and response in Habakkuk 1–2 with the liturgical character of Habakkuk 3 (Mowinckel 1921–24 vol. 3; Sellin; Eaton). Consequently, most scholars view the book as a unity. A number of contemporary scholars maintain that Habakkuk was the author of the psalm (Eissfeldt 1965; Fohrer 1985; Brownlee 1971; Rudolph). Hiebert (1986) employs textual and motif considerations, together with evidence pertaining to the Kuntillet Ajrud inscriptions, to argue that the psalm was composed in the premonarchic period and later added to Habakkuk 1–2. Although the question of authorship cannot be settled decisively for lack of an adequate text base (cf. Peckham 1986), it is clear that in the context of the book as a whole Habakkuk 3 functions as a corroborating conclusion which responds to the issues raised in Habakkuk 1–2. The poem expresses confidence that the vision mentioned in 2:1–4 will be fulfilled and that God's righteousness will be vindicated with the deliverance of the people from oppression.

D. Significance in Later Jewish and Christian Tradition

The book of Habakkuk has played an important role in both Jewish (Baumgartner 1885; Coleman 1964–65) and Christian (Cothenet *DBSup* 45: 791–811) traditions. As noted above, Habakkuk 1–2 served as the basis of a commentary which interpreted the text in relation to the early history of the Qumran community. In the NT, Hab 2:4 serves as the major textual basis for the doctrine of "justification by faith" in Rom 1:17; Gal 3:11; and Heb 10:38–39 (Sanders 1959; Feuillet 1959–60; Strobel 1964; Fitzmyer, 1981). The Talmudic Rabbi Simlai likewise identified Hab 2:4 as a summary of all 613 commandments of the Torah (*b. Mak.* 23b–24a). In Jewish tradition Habakkuk 3 is understood as a description of the revelation at Sinai and is read as the Haphtarah section for the second day of the Festival of Shavuot, which commemorates the revelation of the Torah at Sinai (*b. Meg.* 31a).

MARVIN A. SWEENEY

HABAZZINIAH (PERSON) [Heb *ḥăbaṣṣinyāh*]. The grandfather of the Rechabites who were tested by Jeremiah (Jer 35:3). Habazziniah's grandson Jaazaniah and his household are taken by Jeremiah to the Jerusalem temple. They are offered wine but citing the command of their ancestor Jonadab (2 Kgs 10:10–15) refuse to drink it (Jer 35:6–7). While the narrative in Jeremiah 35 concerns Habazziniah's grandson's generation, Habazziniah is likely included to underscore the continuity of the Rechabite tradition and family. In Jeremiah 35 the faithfulness of the Rechabites to Yahweh for many generations is contrasted with King Jehoiakim's failure to heed Yahweh's word in Jeremiah 36. Thus the Rechabites are promised descendants (Jer 35:18) while Jehoiakim is warned "he shall have none to sit upon the throne of David" (Jer 36:30). The Rechabites were noted for their zealous devotion to Yahweh, and this is perhaps reflected in the *yāh* endings of the three names in Jer 35:3—Jaazaniah, Jeremiah, and Habazziniah (Orelli 1889: 264). A variety of connections have been suggested between Habazziniah and the Akk *ḫabāṣu* ('the Lord has made me abundant'), though how this bears upon the text is not clear. Alternatively, it may mean "Yahweh has made me joyful" (*TPNAH*, 96, 178).

JOHN M. BRACKE

ḪABIRU, ḪAPIRU. Often considered to be the Akkadian equivalent of Heb *ʿibrî*. See HEBREW.

A. The Identity of the *ḫabiru/ḫapiru*

Ever since this Akkadian expression was first recognized in A.D. 1888, viz., in the Amarna Letters written by Abdi-Ḫepa of Jerusalem around 1375 B.C. (EA 286–90; Greenberg 1955: 47–49) scholars have discussed the significance of the *ḫabiru/ḫapiru* for the origin of the Israelites. In this discussion the etymology of the word has played a significant part since it was soon recognized that a W Semitic word must lie behind the Akkadian expression. In Akkadian cuneiform writing the consonant *ḫ* represents at least three different W Semitic gutturals (notably *ḥ*, *ḫ*, and *ʿ*), and it was therefore proposed that the *ḫabiru* mentioned in Abdi-Ḫepa's letters were Israelite tribesmen who were then forcing their way into Palestine in the course of the Israelite conquest. The fact that these *ḫabiru/ḫapiru* (or *ʿabiru/ʿapiru*) were only mentioned by the king of Jerusalem was, however, considered a serious obstacle to this identification, because—according to the OT—Jerusalem was not attacked by the Israelites until the early days of King David, ca. 1000 B.C.

Only when the German orientalist Hugo Winckler succeeded in A.D. 1895 in identifying the *ḫabiru/ḫapiru* of Abdi-ḫepa's letters with the SA.GAZ people, who figure far

more frequently in the Amarna Letters, did scholars in general incline to accept the identification of the *ḫabiru* with the Hebrews (Loretz 1984: 60). This seemingly obvious identification was soon challenged by other discoveries which showed that the *ḫabiru/ḫapiru* were present in sources from all over the ANE in the 2d millennium B.C. Especially when they appeared in the Hittite archives from Boghazköy (Ḫattušaš) it became doubtful whether they could in fact be identical with the early Israelites. Evidently the expression covered an ethnic entity which could not be equated with the forefathers of the Israelites in a simple way. The confirmation that it was necessary to disassociate the problem of the *ḫabiru* from the early history of the Israelites first became apparent in Egyptian sources and later in Ugaritic documents, which made it clear that the second consonant should most properly be read *p* instead of *b*; the same also proved that the first consonant actually was an ʿ (in Eg *ʿpr.w*, in Ug *ʿpr*). Doubt also arose as to the ethnic content of the expression, especially because of the German Egyptologist Wilhelm Spiegelberg (1907: 618–20), who believed that the term designated a social group of some sort. According to Spiegelberg the term was most properly applied to nomads who lived on the fringe of the Syrian desert (including the Proto-Israelites).

Today the mainly social content of the expression is only occasionally disputed (e.g., by de Vaux 1968), but the interpretation of its social content has changed, most notably thanks to Benno Landsberger, who showed that the expression *ḫabiru/ḫapiru* should actually be translated "fugitives" or even "refugees" (in Bottéro 1954: 160–61). That such an understanding lies near at hand is confirmed by the Sumerian equivalent of *ḫabiru/ḫapiru*, SA.GAZ (variant spellings SAG.GAZ, or simply GAZ), as this Sumerogram is in fact merely a transcription of the Akk *šaggašum*, "murderer." Moreover, SAG.GAZ is occasionally, in the Akkadian lexicographical lists translated as *ḫabbatum* "brigand." Today most orientalists consider that the expression *ḫabiru/ḫapiru* encompassed fugitives who had left their own states either to live as refugees in other parts of the Near East or outlaws who subsisted as brigands out of reach of the authorities of the states (Bottéro 1980).

B. The Etymology of *ḫabiru/ḫapiru*

The etymology of the expression has never been fully explained; nor has the discussion about the correct spelling of the word ever ceased. The Semitic root on which the expression is based may be either *ʿbr* or *ʿpr* depending on the correct reading of the second consonant. If the term should actually be read *ḫabiru* then the most obvious etymological explanation must be that it is a derivation from the verbal root *ʿbr* meaning "to pass by," "trespass" (e.g., a border, a river, or the like), a meaning which would suit the notion of the *ḫabiru* as fugitives/refugees excellently. If the correct rendering of the Akkadian cuneiform is *ḫapiru*, a derivation from the noun *ʿpr* meaning "dust" or "clay" would be likely; and *ʿapiru* might then have been a popular way of designating people of low social standing. Both Egyptian and Ugaritic evidence seems to favor a rendering of the cuneiform syllabic writing *(ḫa-bi/pí-ru)* by *ʿapiru*. However, as several scholars have maintained, none of these sources is conclusive. The Egyptian writers in particular were inconsistent as to the rendering of the Semitic labials *b* and *p*, and also the Ugaritic writers seem to have been uncertain how to render the same labials (Weippert 1971: 76–79). The evidence in favor of the rendering *ḫabiru* proposed by Jean Bottéro (*RLA* 4/1:22) is perhaps more rewarding. Some of it dates from the Middle Babylonian period and includes a series of occurrences where the word is spelled *ḫa-bir-a-a* (*ḫabirāyu*, cf. Greenberg 1955: 78; cf., however, also Borger 1958: 126). Another part comes from the Hittite archives where the cuneiform sign *bi* always seems to represent a *bi* and never a *pí* (according to Bottéro *RLA* 4/1:22). Whether Bottéro's conclusions are fully justifiable is, however, still under debate. Therefore, although the rendering of the cuneiform writing as *ḫabiru* seems most likely at the moment, we cannot exclude the reading *ḫapiru*.

C. The Sources for the *ḫabiru/ḫapiru*

The total number of occurrences of the word *ḫabiru/ḫapiru* in the ANE documents is today just above 250 (total listing until ca. A.D. 1970 in *RLA* 4/1:15–21, supplemented and corrected by Bottéro 1980: 211 [no. 2]; English translation of most passages in Greenberg 1955). Practically all examples belong to the 2d millennium B.C. although there are certain indications that the expression was not totally unknown before that date. The latest occurrences are from Egyptian sources (from the reign of Rameses IV, ca. 1166–1160 B.C.) although a few literary texts from the 1st millennium mention the *ḫabiru/ḫapiru* (Bottéro 1954: 136–43; Greenberg 1955: 54–55). As a social and political force the *ḫabiru* seem to have disappeared just before the end of the 2d millennium B.C. The geographic distribution of the *ḫabiru/ḫapiru* covers most of the Near East, from Anatolia in the N, Egypt in the S, and W Iran (Susa) to the E. The *ḫabiru/ḫapiru* were found all along the Fertile Crescent, from Palestine to Sumer.

The oldest sources which for practical reasons tell us anything about the status of the *ḫabiru/ḫapiru* come from Kaniš, the Assyrian trading station in Anatolia (19th century B.C.) and from the Sumerian area during the Neo-Sumerian epoch. Whereas doubt may be cast over the last mentioned examples (the Sumerogram SA.GAZ is always used, although the spelling may differ), the evidence from Anatolia at the beginning of the 2d millennium B.C. is more promising. The information we gain from this is, however, not totally in accordance with later sources, because the persons named *ḫabiru/ḫapiru* here may at the same time be called *awīlu*, that is "Sir," "Mr." The derogatory content of the expression is conspicuous because the persons called *ḫabiru/ḫapiru* are at that time in jail, although in possession of sufficient funds to pay for their own release. Finally, these persons were members of the staff of the palace. More important is, on the other hand, that so far it has not been possible to decide whether they were foreigners in this Old Assyrian society or belonged to the local population.

During the following era, the Old Babylonian period, the *ḫabiru/ḫapiru* are mentioned more often. There is some indication of these people being employed as mercenaries in the pay of the state administration, whereas in the archival reports from the royal palace of Mari we are confronted with the first known examples of *ḫabiru/ḫapiru* as outlaws or brigands. One document mentions that they

had even conquered a city belonging to the kingdom of Mari and caused serious trouble there (Greenberg 1955: 18). The documents from Mari and elsewhere also show that the *ḫabiru/ḫapiru* were considered a highly mobile population element.

The evidence of the presence of the *ḫabiru/ḫapiru* becomes far more extensive in the LB Age, during the second half of the 2d millennium B.C. The centers of gravity of this documentation are Nuzi, in NE Mesopotamia (15th century B.C.); Alalakh (15th century B.C.) and Ugarit, two coastal states in N Syria; Ḫattušaš (Boghazköy) in Anatolia; and Palestine and Lebanon as documented by the Amarna Letters (beginning of the 14th century B.C.). Most evidence originates in official state archives; only at Nuzi are private references to the *ḫabiru/ḫapiru* frequent. At Nuzi the *ḫabiru/ḫapiru* are most often mentioned in private contracts according to which persons called *ḫabiru/ḫapiru* bind themselves to the service of Nuzi citizens. The documents in question show that the *ḫabiru/ḫapiru* were not themselves citizens of Nuzi but foreigners without any juridical rights at Nuzi. By binding themselves through these service contracts they obtained a sort of social security so long as they remained in the service of a citizen of Nuzi. The analogy between these contracts and the OT law of the Hebrew slave (Exod 21:2–11) seems obvious (see HEBREW).

In Alalakh the *ḫabiru/ḫapiru* are normally mentioned in administrative documents listing persons of foreign origin. These foreigners seem to have been kept apart from the ordinary population of this state, maybe as servants of the royal palace administration (Greenberg 1955: 19–22). One inscription from Alalakh, however, shows that the *ḫabiru/ḫapiru* also operated as bands of brigands or outlaws outside the control of the state. In the autobiography of King Idrimi we are told how the young Idrimi during his exile lived for seven years among *ḫabiru/ḫapiru* out of reach of the authorities from whom he had escaped (*ANET*, 557–58). The same distinction between *ḫabiru/ḫapiru* as foreigners in the service of the state and *ḫabiru/ḫapiru* as outlaws is apparent in the sources from Ugarit and Ḫattušaš. Most important is, however, a passage in a treaty between the king of Ugarit and his overlord, the Hittite king, according to which the two monarchs promise to extradite citizens who have deserted their own state to seek refuge in territories known as *ḫabiru/ḫapiru* land. Such entries in the political treaties become quite frequent in this period; the phenomenon testifies to a growing concern because of the increasing number of persons who chose to live as *ḫabiru/ḫapiru* (Liverani 1965; cf. also, for the connection between *ḫabiru/ḫapiru* and the fugitives in Akk *munnabtu*, Buccellati 1977).

Most important, however, are the testimonies as to the activities of the *ḫabiru/ḫapiru* in the Amarna Letters, although the evaluation of the content of the expression *ḫabiru/ḫapiru* is subject to discussion. Generally two different hypotheses as to the content of the expression in the Amarna Letters prevail. The first (and more popular) maintains that their situation was not much different from their situation elsewhere in the ANE. The second argues that the mentioning of the *ḫabiru/ḫapiru* in the Amarna Letters does not normally indicate a sociological phenomenon, but that it is just as often used in an exclusively pejorative sense to denote opponents of the official community, that is, the Egyptian suzerainty (thus Mendenhall 1973: 122–35; Liverani 1979). In favor of the first option is the fact that the occurrence of the term *ḫabiru/ḫapiru* is unevenly distributed over the Palestinian/Lebanese area. It is seemingly concentrated in areas in or close to the mountains, the most obvious *ḫabiru/ḫapiru* territory (cf. below), whereas the number of sources mentioning the *ḫabiru/ḫapiru* becomes more restricted in other places. This distribution indicates that the expression was not just a derogatory term in the Amarna age but reflected a real social problem of the Palestinian and Lebanese societies. In favor of the second option is the fact that persons styled *ḫabiru/ḫapiru* in the Amarna Letters are in general neither foreigners nor fugitives, but heads of states or citizens of states. When a king of one of the Palestinian petty states calls his neighbor king a *ḫabiru/ḫapiru*, it is certainly not because this other king has left his country to become a *ḫabiru/ḫapiru* but because he is considered by his fellow king to be a public enemy. When we hear that the citizens of a certain city have joined the *ḫabiru/ḫapiru* and given their city over to them, this does not necessarily mean that they themselves have become *ḫabiru* or that they have in a physical sense left their city at the mercy of the *ḫabiru/ḫapiru*. It simply means that the rulers or the citizens of the neighboring city-states look upon them as enemies. That we cannot exclude the second possibility is proven by an Amarna Letter in which even the Egyptian governor residing at Hazor is accused of making alliances with the *ḫabiru/ḫapiru*. On the other hand, although this second hypothesis about the content of the expression in the Amarna Letters certainly limits the amount of actual references to the activities of the *ḫabiru/ḫapiru* people properly speaking, the derogatory use may be considered indirect evidence of the importance of the *ḫabiru/ḫapiru* phenomenon as such. If there had not been a considerable element of these people, the derogatory use of the expression itself would have been meaningless.

Perhaps the Amarna Letters cannot be taken to prove that gangs of *ḫabiru/ḫapiru* as well as *ḫabiru/ḫapiru* fugitives roamed Palestine proper. Their presence is, however, proved by an Egyptian inscription from the end of the 14th century B.C., which mentions an Egyptian campaign against some *ḫabiru/ḫapiru* living in the mountainous area around Beth-shan in Palestine (translation *ANET*, 255; cf. Albright 1952). In the Egyptian sources the *ḫapiru/ḫapiru* from Syria/Palestine are, however, mentioned as early as during the reign of Amenophis II (ca. 1440 B.C.), when they appear alongside the *ḫurri* people (i.e., the settled population of Asia) and the *šasu* nomads in a list counting the prisoners of a Palestinian campaign led by this pharaoh (*ANET*, 247). According to Egyptian documents mentioning the presence of *ḫabiru/ḫapiru* in Egypt proper, they seem to have been employed by the Egyptians as an unskilled labor force, used among other things for work on public building projects.

D. Factors Behind the *ḫabiru/ḫapiru* Movement

Although it is impossible to present a detailed history of the *ḫabiru/ḫapiru*, it should, nevertheless, be possible to delineate some of the conditions which contributed to the development of the phenomenon during the 2d millen-

nium and to indicate some general reasons both for the seemingly increasing importance of the phenomenon especially in the LB Age and for its disappearance at the beginning of the Iron Age.

The etymology of the word is W Semitic and points toward an origin among the W Semitic- or Amorite-speaking population of the ANE, although the phenomenon as such was in no way confined to the areas inhabited by this population. Nor would it be correct to think that the *ḫabiru/ḫapiru* were generally of W Semitic origin. To the contrary, the available evidence shows that a variety of ethnic groups could be listed under this heading in any society of that time, as was the case at Alalakh, where the *ḫabiru/ḫapiru* groups encompassed foreigners bearing W Semitic as well as Ḫurrian names. Accordingly, the expression must already at an early date have been separated from any specific ethnic background and become a purely social designation. Since the *ḫabiru/ḫapiru* whose names are preserved in the source material are always considered foreigners in the societies where they lived and where they were excluded from normal civil rights, they were obviously intruders who had arrived from some other parts of the region. Though their presence was noted, their status in the society was invariably low; they were almost slaves, as at Nuzi, or else they were employed by the state as unskilled laborers or ordinary mercenaries. Finally, their affinity to groups of outlaws outside the control of the political centers of that period is evident from the fact that they shared their name or designation with the brigands. Therefore both the *ḫabiru/ḫapiru* living in state societies and *ḫabiru/ḫapiru* living on their own as outlaws must be seen as representatives of one and the same general social phenomenon, that is, they were refugees or fugitives who had left their own country to find a way of survival in other parts of the Near East.

The reasons for this wave of fugitives, which, according to the available sources, seems to have increased in force during the MB and especially the LB, may have varied, and it may be futile to attempt any easy explanation. However, such a factor as debt—resulting in regular debt slavery—may have induced many impoverished peasants of the ancient states to find a living out of reach of the authorities who were going to enslave them as debtors. The actual extent of such conditions which led to the enslavement of presumably a considerable part of (especially) the rural populace may only be surmised. On the other hand, the practice, common in the Old Babylonian period, of issuing at regular intervals royal grants which annulled debt as well as debt slavery and which released mortgages on landed property (see esp. Kraus 1958; Finkelstein 1961), demonstrates that the problem was very real. Such measures, however, may not have continued beyond the period of the Amorite dynasty in Babylonia proper; and edicts of that kind may not have been issued in other places, at least not to the same extent as in Mesopotamia proper (Lemche 1979). The burden of debt may have increased because of the growing centralization of the state administration, especially in the LB, when the so-called "palatinate" type of states developed into a despotic system with ever-diminishing rights of the ordinary population (on this system Liverani 1974 and 1975). It may be an indication of the juridical organization of this type of state that no law codices have survived from those regions of W Asia where, seemingly, the *ḫabiru/ḫapiru* movement grew to unprecedented dimensions in the LB Age, because all juridical power was vested in the centralized state authorities symbolized by the person of the king residing in his palace.

Two additional factors contributed to the development of the *ḫabiru/ḫapiru* movement. First of all, the region was subdivided into numerous petty states which evidently facilitated the possibility of escaping the authorities in one's own state. Second, and more important for the refugees who decided to live as outlaws, was the extent of territories especially suitable for the life of such brigands, that is, territories which could in no way be controlled by the tiny forces of the petty states of the area. Such territories were normally to be found in the mountains or in the steppes between the desert and the cultivated areas (on this see Rowton 1965: 375–87 and 1967; cf. also Rowton 1976). The extent of the movement and the problems which it caused transpire from a series of international treaties trying to regulate the traffic of the refugees by impeding their freedom in states other than their own. The reciprocity of the extradition of the *ḫabiru/ḫapiru* between states testifies to a deeply felt concern because of the movement of the refugees. The acme of these endeavours on the part of the communities is the paragraphs included in the great international treaty between Egypt and Ḫatti at the beginning of the 13th century B.C. (*ANET*, 199–203; cf. Liverani 1965).

Irrespective of whether this sketch of the development of the *ḫabiru/ḫapiru* movement is true or not, the movement lost its impetus after the breakdown of the palatinate system at the end of the LB; and although the problem of refugees and fugitives has always been endemic to the Near East, the *ḫabiru/ḫapiru* disappeared. One may only guess at the specific reasons, but the possibility exists that the ideological foundation of the new states which arose during the Iron Age, not least in W Asia, promoted a better understanding of social responsibility among the leading class, since many of the states were founded on the basis of former tribal societies. It may be that the egalitarian ideology of these tribal societies lived on, although it cannot be assumed that debt slavery disappeared in the Iron Age. To the contrary, debt slavery was very much in evidence; but it was perhaps softened by an ideology which proclaimed brotherhood among all members of the new states (on the egalitarianism of the Iron Age using Israel as an example see Gottwald 1979; cf., however, also Lemche 1985: 202–44, including criticisms of Gottwald for not distinguishing between ideology and real life).

In conclusion it must be maintained that after 1000 B.C. no reference to the activities of the *ḫabiru/ḫapiru* is known. References to *ḫabiru* in later sources are literary reflections of the past.

NIELS PETER LEMCHE

HABOR (PLACE) [Heb *ḥābôr*]. A river along which the Assyrians resettled some of the N Israelites after they had captured Samaria in 721 B.C. (2 Kgs 17:6; 18:11; cf. 1 Chr 5:26). The Habor was a tributary of the Euphrates river, attested in Assyrian sources as *ḫabûr*; today it still retains the name al-Khābûr. The biblical designation of the Habor as "the river of Gozan" was apparently unique to the Israelites. Assyrian documents recovered at Gozan (Akk *Guzana*, modern Tell Halaf on the Khābûr at the Turkish-Syrian border) contain some Israelite personal names which undoubtedly belonged to some of the exiles deported there from Samaria (see Cogan and Tadmor *2 Kings* AB, 197).

The "upper Habor" originates E of the Euphrates in the mountainous region of SE Turkey and flows SE into Syria. This "upper Habor" region (above Al-Hasakah [36°29′N; 40°54′E]) is within the 10-inch rainfall line; the agricultural fertility of this region (as well as its cultural vitality) is attested by the plethora of still-unexcavated mounds. Below Al-Hasakah the Habor flows due S where it joins the Euphrates at Buṣayrah (35°09′N; 40°26′E), about 60 miles upriver from Mari. This "lower Habor" region is within the 4-inch rainfall line, meaning that it was better suited for sustaining pastoral rather than agricultural activities. In the Old Babylonian period (esp. ca. 1900–1700 B.C.) numerous tribal groups considered the steppe-land bounded by the Habor, Balikh, and Euphrates rivers to be their territory. The Benē Sin'al tribes apparently pastured their flocks more along the upper Habor; the Yaminite tribes, which were actually quite wide-ranging, apparently centered their pastoral activities more to the S (along the Balikh and Euphrates rivers); the tribes of Khana (centered around Terqa) seem to have pastured their flocks more along the lower Habor as far SE as Mari (*CAH*³ 2/1: 24–27).

GARY A. HERION

HACALIAH (PERSON) [Heb *ḥăkalyāh*]. The father of Nehemiah (Neh 1:1), Hacaliah is mentioned only here and in Neh 10:2—Eng 10:1. It is often suggested that the name means "Wait for Yahweh," but the use of an imperative form runs counter to the way in which Hebrew proper names are usually formed (Brockington *Ezra, Nehemiah and Esther* NCBC, 124; Cohen *IDB* 2: 507; *TPNAH*, 125–26), and the root *ḥkl* has no attested verbal form in biblical Hebrew (*TPNAH*, 125). Apart from a brief reference to family sepulchers (Neh 2:3, 5), which may suggest a certain measure of wealth or social standing, nothing else is known about Nehemiah's father or his family (Brockington, 124).

FREDERICK W. SCHMIDT

HACHILAH (PLACE) [Heb *ḥăkîlâ*]. A hill in the Judean hill country where David found refuge from Saul (1 Sam 23:19; 26:1) and on which Saul encamped in his pursuit of David (1 Sam 26:3). Located on the hill of Hachilah (1 Sam 23:19) was HORESH, a site in the Wilderness of Ziph (1 Sam 23:15), and its strongholds. While the hill of Hachilah remains unidentified, the association of Horesh with Khirbet Khoreisa (*IDB* 2: 644) perhaps provides a clue. Accounts in the OT locate it "south of Jeshimon" (1 Sam 23:19), "east of Jeshimon" (1 Sam 26:1), and "beside the road on the east of Jeshimon" (1 Sam 26:3).

LAMOINE F. DEVRIES

HACHMONI (PERSON) [Heb *ḥakmônî*]. HACHMONITE. Since this name ends with *î*, which frequently occurs as a formal element indicating a gentilic name, it is possible in both passages in which the name occurs to read either a personal name, "Hachmoni," or a gentilic name, "a Hachmonite."

1. The father or ancestor of Jashobeam, one of David's champions (1 Chr 11:10–47, v 11; = 2 Sam 23:8–39, see v 8, where the variant Tahchemonite occurs). Here the name has generally been read as a gentilic designation with reference to some unidentified place or people: "son of a Hachmonite" or simply, "a Hachmonite" (Noth *IPN*, 232). If "Tahchemonite" is a corruption for "the Hach-

monite" (Driver *NHT*, 364), then the form in 2 Samuel also supports reading with the gentilic name. Also, apparently the same Jashobeam, as well as 11 other men from this passage, is mentioned again in 1 Chr 27:2–15, where he is designated as the "son of Zabdiel" (v 2), a name, which formally cannot be other than a personal name. Caution, however, must be exercised before attempting to harmonize these two passages and reaching the conclusion that Jashobeam both was the son of Zabdiel and was a Hachmonite. Differences between the two lists in 1 Chronicles suggest that the composition of neither was dependent upon the other (Williamson *1 and 2 Chronicles* NCBC, 174). Further, there appears to be a convention in these lists of using personal names in the formula "a son of (personal name)" and gentilic references in the formula "the (gentilic name)." Note that the discrepancies to this rule found in the parallel text in 2 Sam 23:8–39 are resolved in Chronicles (see Hebrew texts: 2 Sam 23:11 and 2 Chr 11:27; 23:34 and the possible parallel 11:36; 23:30 and 11:31; 23:36 and 11:38). Also, two other names ending in *i* occur in the Chronicles text in the "son of" formula. The interpretation of the first, "the son of HAGRI" (v 38) may be open to debate; however, the second, "the son of SHIMRI" (v 45), designates a personal name, since the text goes on to mention his brother and give his gentilic reference, "JOHA his brother, the TIZITE." Given this convention, it appears that the author of our text understood Hachmoni to be a personal name for the father or ancestor of Jashobeam.

2. The father or ancestor of Jehiel, an official of the court who served as a counselor or tutor to David's sons (1 Chr 27:32). This name, if derived from *ḥkm*, "to be wise," would have an appropriate symbolic value (i.e., "Jehiel the son of 'the wise one' ") and raises the issue of the name being an artificial construction. Again, although it is possible to read this phrase as "son of a Hachmonite," the author appears to have followed the convention mentioned above and to have understood Hachmoni to be a personal name.

RODNEY K. DUKE

HADAD (DEITY) [Heb *hădad*]. The ancient Semitic storm god, the deity of rain, lightning (his weapon), and thunder (his voice). "Hadad" perhaps means "thunderer" (cf. Heb *hêdād*, "shout"). His name was Hadad among the Amorites and Arameans, Adad among the Mesopotamians, and Haddu among the Canaanites. He is the god Baal, well-known from the Ras Shamra texts and the OT. Hadad/Haddu was most probably the proper name of Baal ("Baal" means "lord," a word used to designate the deity, as a title for other gods, and in secular contexts). Hadad also was known as Ramman or Rimmon (2 Kgs 5:18).

The name Hadad may have been brought E to Mesopotamia by the Amorites toward the end of the 3d millennium B.C. Among the Mesopotamians Hadad/Adad was revered as the god who gave the life-sustaining rains but feared as the one sending storms causing destruction and loss of life. He was a god of oracles and divination (so, too, at Aleppo in Syria). The Assyrians in particular venerated him also as a war divinity.

Among the W Semites the dominant characterization of Hadad/Haddu, as seen especially in the Ras Shamra texts (and as reflected in the OT), was as the storm god who was the fertility deity par excellence. Baal-Haddu sent the all-important, fertilizing rains; he overcame the dark forces of chaos and death.

This divinity, when he is mentioned in the OT, is never designated as "Hadad" ("Baal" is used), with one possible exception ("Hadad-rimmon" of Zech 12:11). However, "Hadad" does appear as a theophoric element in OT personal names. Since Hadad was the chief deity of the Arameans of Syria, a number of kings from this area had the name Ben-hadad (Aram Bir-hadad), "son of Hadad" (e.g., 1 Kgs 15:18 [cf. the name Tabrimmon, "Rimmon/Ramman is good"]; 2 Kgs 13:3). An Aramean king of Zobah, defeated by David, was named Hadadezer, "Hadad is help" (e.g., 2 Sam 8:3, 5; 10:16, 19; 1 Chr 18:3). A prince of Hamath had the name Hadoram, "Hadad is high/exalted" (1 Chr 18:10; see also Gen 10:27; and 2 Chr 10:18). "Hadad" occurs by itself as a personal name (e.g., 1 Kgs 11:14; 1 Chr 1:30, 46–47, 50–51), which is probably an abbreviation of a compound or sentence name containing "Hadad" as theophoric element.

Concerning iconography, the bull was the symbolic animal of Hadad. The god himself is depicted in certain representations as wearing a headpiece with horns protruding from the front and grasping the thunderbolt.

The worship of Hadad persisted into the Hellenistic era and beyond. Lucian (or Pseudo-Lucian), giving his own eyewitness description of the religion of Hierapolis in his *The Syrian Goddess* (2d century A.D.), identifies "Zeus" as the consort of the Syrian goddess (Atargatis). It is generally agreed that this Zeus is actually Hadad.

WALTER A. MAIER III

HADAD (PERSON) [Heb *hădad; ḥădad*]. Var. HADAR. In addition to being the name of one of the sons of Ishmael (Heb *ḥădad*), Hadad (Heb *hădad*) is also the personal name of three rulers of Edom, only two of which are attested in the Edomite King List (Gen 36:31–39). Opinions vary as far as the date of the Edomite King List is concerned. Suggestions range from the 11th century B.C. (Weippert 1982: 155), through the 8th to 6th centuries B.C. (Bennett 1983: 16), to the 6th–5th centuries B.C. (Knauf 1985). Scholars tend to agree, however, that the succession scheme of this list is artificial and that, in all likelihood, the rulers listed in it were contemporaries (Bartlett 1972: 27; Weippert 1982: 155).

As a personal name, Hadad is only attested for Edom, ancient S Arabia (*hdd*^{m} CIS IV 55) and ancient N Arabia (Safaitic and South Safaitic *hdd*, to be vocalized *Hadād, Hudaid,* or *Haddād* according to the Classical Arabic; Knauf 1985: 246). According to these parallels it is not necessary to assume that Hadad is a hypocoristic name containing the name of the Syrian weather god, Hadad, without a predicative element. Certainly, however, Hadad, both as a name of a deity and of a person, conveys the same basic meaning: "The one who smashes."

1. The eighth son of Ishmael (Gen 25:15). The MT

here and in the parallel 1 Chr 1:30 reads *hădad*, while other mss read *hdd* and *ḥdr*. See also HADAR (PERSON).

2. The son of Bedad and fifth ruler of the Edomite King List (Gen 36:35f. = 1 Chr 1:46f.). For the name of his father, one may compare *bd* and *bdʾl* in Safaitic and Thamudic, Thamudic *bddt*, and Classical Arabic *Budaid*. This Hadad is said to have defeated Midian in the country of Moab. The historical value of this statement is doubtful; it may derive from an unjustified synchronism with the major judges of Israel in their present order, which made Hadad I contemporary with Gideon (Knauf 1985: 251f.). The name of his "capital" (a village, tower/castle, or encampment?), Avith, may reflect an Arabic **Ghuwaith*. The place is not yet identified (Knauf 1985: 250).

3. The eighth ruler of the Edomite King List (1 Chr 1:50f.). In the Gen 36:39 parallel the RSV translates HADAR, following MT *hădar*. His filiation is not recorded; instead, the name of his wife (Mehetabel) is given. This could indicate that he was a man of no family who owed his status to a marriage into the Edomite nobility. His "capital", Pau (Arabic **Faghw?*), remains unidentified (Knauf 1985: 250).

4. The adversary of Solomon (1 Kgs 11:14–22). The biblical narrative presents a number of problems: it is unclear what kind of "kingly stock" existed in Edom when David conquered the country (that is, probably the N part of what later became the Edomite state); and it is unclear how successful Hadad III was in organizing Edom against its occupation by Israel (Bartlett 1976). There was no "united monarchy" in Edom prior to the end of the 9th century B.C. (Bartlett 1972). That the name of the father of this Hadad remained unrecorded, too, indicates that his lineage was unknown to the biblical author. Remarkably, no name of a ruler of Edom is given in the account of David's subjugation of this country (2 Sam 8:14). It can be doubted, however, that Solomon would be overly concerned about the revolt of Hadad; Israel, at that time, was probably content to control the communication lines to Elath/Ezion Geber on the gulf of Aqaba, and had no interest in a permanent occupation of the Edomite plateau (and probably also lacked the means to do so). The basic outlines of the story of Hadad III, however, need not be questioned. He was a member of the Edomite nobility and fled from the Israelite onslaught to Egypt via Midian (NW Arabia), crossed the gulf of Aqaba and the Sinai peninsula via Pharan (Wâdī Feiran), and found political asylum in Egypt, where he was kept and taken care of as a potential card to play off against Israel when it would suit Egypt. At the same time the Israelite rebel, Jeroboam, was similarly treated by Egypt (1 Kgs 11:40).

ERNST AXEL KNAUF

HADADEZER (PERSON) [Heb *hădadʿezer*]. Aramean king defeated by David as reported in 2 Sam 8:3, 5 (= 1 Chr 18:3, 5); and 10:16 (= 1 Chr 19:16). According to the 2 Samuel 8 passage he was the son of REHOB, king of ZOBAH, located N of Damascus. In the 2 Samuel 10 passage his territory is unnamed. 1 Kgs 11:23 mentions him as king of Zobah from Davidic on through Solomonic times.

The exact location of the territory controlled by Hadadezer is not certain. While 2 Sam 8:3 and 1 Kgs 11:23 designate him as king of Zobah, which is generally located N of Damascus, 2 Sam 10:16 describes him as controlling the Aramean territory "beyond the river (i.e., the Euphrates)" (Malamat 1958), which suggests territory E of the Ammonite range and not N of Syria.

In the unit preceding 2 Sam 10:16 there is mention of Arameans from Beth-rehob and Arameans from Zobah functioning as mercenaries for the Ammonites. Though Hadadezer is not mentioned in this unit while there is in the unit mention of other kings, it would appear that an Aramean Empire controlled Syrian and Mesopotamian territory.

There is also a question as to the number of times Hadadezer and David met in battle. While on the surface the narratives of 2 Sam 8:3–8; 10:6–15, 16–19 suggest three such occasions, there is much disagreement as to whether the references to these battles between David and Hadadezer are to the same or different battles, and if the latter, as to the sequence in which they occurred.

First, the description of the battle in 2 Sam 10:16–19 ends with the claim that the Arameans thereby became subject to David. Since this is also the result of the battle described in 2 Samuel 8, other scholars argue that these are references to the same battle (Wellhausen 1891; Ackroyd 1981; Soggin 1984).

On the other hand, according to the 2 Samuel 8 account Hadadezer and his army are totally defeated and his territory subjugated. In the 2 Samuel 10 account, however, there is no sense that he is leader of a vassal state under Davidic control. Rather the state of affairs appears to be that his territory is independent of any foreign control and that he commands large mercenary troops. Thus the question arises as to how he could be so soundly defeated in chap. 8 and so independent in chap. 10. For this reason some scholars argue that the battle in 2 Samuel 10 must have preceded that in 2 Samuel 8 (Bright *BHI*; McCarter *2 Samuel* AB; Noth *NHI*).

Finally in the 2 Samuel 10 accounts as noted above Hadadezer is not mentioned in the unit which describes the coalition of Arameans hired by the Ammonites to attack David (2 Sam 10:6b–15 [= 1 Chr 19:6–15]). Rather his name appears in a subsequent unit (2 Sam 10:16–19a [= 1 Chr 19:16–19a]), where his army appears to be in

battle along with other Arameans against David. Interestingly, there is no mention at all of Ammonites in this unit. This is surprising since the battle described there is used as the basis for an etiology on the break in the military relationship between the Ammonites and Arameans. Thus the question arises as to whether these war stories in chap. 10 relate to a two-stage operation or to totally different wars.

RANDALL C. BAILEY

HADADRIMMON (DEITY) [Heb *hădad-rimmôn*]. The ancient Semitic storm god. Zech 12:11 states that in the future there will be great mourning in Jerusalem, "as great as the mourning for Hadadrimmon in the plain of Megiddo" (RSV). Hadad is the god Baal (well known from the Ras Shamra texts and the OT), "Hadad" probably being the proper name (perhaps meaning "thunderer") of Baal ("lord"). "Rimmon" is an epithet of Hadad (Adad in Mesopotamia); the Akk form is Ram(m)an. It has been suggested that Heb Rimmon *(rimmôn),* which is identical to the Heb word for "pomegranate," is a deliberate mispointing of an original Ram(m)an, *ram(m)ān* (or something similar), to disparage the deity. This epithet Rimmon/Ramman is best understood as "thunderer" (cf. Akk *ramāmu,* "to roar," hence, "to thunder"). Accordingly, the name Hadadrimmon means "Hadad is Rimmon" or "Hadad is the thunderer." Hadad, or Rimmon/Ramman, was the chief deity of the Arameans of Syria, and his worship there is mentioned in 2 Kgs 5:18 (cf. the name Tabrimmon, "Rimmon/Ramman is good," in 1 Kgs 15:18).

Concerning the mourning referred to in Zech 12:11, there are two main positions seen in the scholarly literature (for other interpretations of the passage, see the summaries of Baldwin *Haggai, Zechariah, Malachi* TOTC, 192–93 and Smith *Micah–Malachi* WBC, 278–79). The first, and older position, is that the verse should be translated, "the mourning *of* Hadadrimmon," Hadadrimmon being regarded as a village or town (named after the deity) in the plain of Megiddo. Reference is made to Jerome, who said that this Hadadrimmon was a town called in his day Maximianopolis, SE of Megiddo, close to Jezreel and Taanach (and later identified by some scholars with a village named Rummaneh). The lamentation "of Hadadrimmon," which took place in the village and/or throughout Judah, was, it is explained, for the good king Josiah (see 2 Chr 35:20–25, esp. v 25), because Hadadrimmon was the location either of Josiah's being mortally wounded or of his death. However, that this village actually existed is uncertain; that it was the spot of Josiah's being wounded by the archers is even more questionable. As to where the king died, 2 Chr 35:24 indicates he expired in Jerusalem (cf. 2 Kgs 23:29–30, to be understood as saying "Neco" fatally wounded Josiah, who was brought "dying" from Megiddo to Jerusalem?).

The second main position, preferable to the first, is that Zech 12:11 speaks about mourning rites for the deity Hadadrimmon. Devotees of the god believed that it was he who sent the rains necessary for abundant crops and the preservation of life. Conceivably this mourning took place at times of drought, when rain from Hadad would be sorely missed. Comparison can be made to the Baal cycle in the Ugaritic literature, which describes the mourning of El (the head of the pantheon) and Anath (Baal's consort) when Baal dies (later Baal revives), and a subsequent struggle between Baal and Death, which neither combatant wins. One should also note Ezek 8:14, which depicts annual, ritual mourning for the Mesopotamian fertility deity Tammuz (Dumuzi). Lamentation for Hadadrimmon is mentioned in Zech 12:11 as a point of comparison since it would have been a (or the) striking example from the ANE milieu of bitter mourning shared by many people. This grief would have been particularly intense in the broad, fertile plain of Megiddo, a choice agricultural area. See also BAAL (DEITY); HADAD (DEITY); RIMMON (DEITY); UGARIT (TEXTS AND LITERATURE).

WALTER A. MAIER III

HADAR (PERSON) [Heb *hădar*]. Var. HADAD. A masculine name found in the OT.

1. The eighth ruler listed on the Edomite King List (Gen 36:39). In the 1 Chr 1:50–51 parallel the MT reads *hădad.* See HADAD (PERSON).

2. The Syriac version and the Bomberg (Venice) edition (1524–25), followed by the KJV, read *hădar* as the name of the eighth son of Ishmael in Gen 25:15. The RSV here and the 1 Chr 1:30 parallel read Hadad. He is said to have dwelt with his brothers in the region from Havilah to Shur, in the area of the Sinai and NW coast of Arabia. The names of six of these brothers are mentioned in Assyrian inscriptions from the 8th and 7th centuries B.C.E., but Hadar is one of four names which do not appear elsewhere.

VICTOR H. MATTHEWS

HADASHAH (PLACE) [Heb *ḥădāšâ*]. Town situated in the Shephelah, or lowland, of Judah (Josh 15:37), within the same district as Lachish. This settlement, the name of which perhaps means "new town," is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). It may be the same place as Adasa, which 1 Macc 7:40–45 identifies as the location of the victory of Judas Maccabeus over Nicanor. Although a general location somewhere between Lachish and Gath is called for by the context, no suitable candidate for the ancient town has been identified.

WADE R. KOTTER

HADASSAH (PERSON) [Heb *hădassâ*]. The name given to Esther when she is first introduced by the narrator of the book of Esther (2:7). He tells us that Mordecai, a Jew resident in Susa, was "raising Hadassah, that is Esther, his

(i.e., Mordecai's) niece." The most natural understanding of this appositive construction is that her given name was Hadassah, but she subsequently became more commonly known by the name Esther. In this interpretation Hadassah would be her Hebrew name (the view adopted by the Targum, see Paton *Esther* ICC, 170; Moore *Esther* AB, 20), belonging to that class of male and female names in the OT drawn from the names of plants. "Hadassah" would be the feminine form of *hădas*, "myrtle" (cf. Isa 49:19; 55:13; Neh 8:15; see Noth *IPN*, 230–31). An earlier view held that the book of Esther was historicized Babylonian mythology in which "Esther" is Ishtar, the Babylonian goddess of love; and hence "Hadassah" was the Hebrew form of Akk *ḫadaššatu*, "bride," an epithet of Ishtar (Jensen 1892: 209; cf. Paton, 88). Such an etymology is belied not only by the fact that this view of the book is today given no credence, but also by the fact that it is highly improbable that Akk *ḫ* would be rendered by Heb *h*, i.e., Akk *ḫădaššatu* would appear in Hebrew as *ḥădassâ* (with *ḥet*), not *hădassāh* (with *he*).

FREDERIC W. BUSH

HADES, HELL. The Greek word Hades *(hądēs)* is sometimes, but misleadingly, translated "hell" in English versions of the NT. It refers to the place of the dead but not necessarily to a place of torment for the wicked dead. In Greek religious thought Hades was the god of the underworld; but more commonly the term referred to his realm, the underworld, where the shades or the souls of the dead led a shadowy existence, hardly conscious and without memory of their former life. In early times it seems Hades was usually conceived as a place of sadness and gloom (but not punishment) indiscriminately for all the dead. However, as early as Homer the notion existed that some individuals experienced endless punishment in Hades, and later, especially through the influence of Orphic-Pythagorean ideas, belief in postmortem rewards and punishments in Hades became common. While Greek ideas about the afterlife probably did not influence the origins of Jewish expectations of retribution after death, later Jewish writers sometimes incorporated particular terms and concepts from the Greek and Roman Hades into their own pictures of the afterlife.

The old Hebrew concept of the place of the dead, most often called Sheol *(šĕʾôl)* in the Hebrew Bible, corresponded quite closely to the Greek Hades. Both were versions of the common ancient view of the underworld. Like the old Greek Hades, Sheol in the Hebrew Bible is the common fate of all the dead, a place of darkness and gloom, where the shades lead an unenviable, fading existence. In the LXX therefore Sheol is usually translated as Hades, and the Greek term was naturally and commonly used by Jews writing in Greek. This Jewish usage explains the ten NT occurrences of the word *Hades*.

The rise of Jewish belief in resurrection and eternal life had a significant impact on ideas about Sheol/Hades. Resurrection was understood as God's eschatological act of bringing the dead from Hades back to life. Probably the earliest, simplest idea was that the shades will return from Hades to bodily life. Sometimes they were expected to be raised as spirits to dwell with the angels in heaven. According to a more dichotomous view of human nature, the soul will be brought from Hades, the body raised from the grave, and body and soul reunited in resurrection. Whichever view of resurrection was adopted, Hades became the *temporary* abode of the dead, between death and the general resurrection at the end of the age; but there was not *necessarily* any other change in the understanding of Hades.

In most early Jewish literature Hades or Sheol remains the place to which all the dead go (2 Macc 6:23; *1 En.* 102:5; 103:7; *Sib. Or.* 1:81–84; *Ps.-Phoc.* 112–113; *2 Bar.* 23:4; *T. Ab.* A 8:9; 19:7) and is very nearly synonymous with death (Wis 1:12–16; 16:13; *Pss. Sol.* 16:2; Rev 6:8; 20:13), as well as actually synonymous with other OT terms for the place of the dead ("the earth," "the dust," Abaddon: *1 En.* 51:3; Ezra 7:32; *Ps.-Philo* 3:10; *2 Bar.* 42:8; 50:2). At the resurrection Hades will return what has been entrusted to it (*1 En.* 51:3; 4 Ezra 4:42; 7:32; *2 Bar.* 42:8; 50:2; *Ps.-Philo* 3:10; 33:3; cf. Rev 20:13)—a notion which expresses God's sovereignty over Hades (cf. 1 Sam 2:6; Tob 13:2; Wis 16:13). The dead have been temporarily entrusted by God to the safekeeping of Hades; at the resurrection he will demand them back. Thereafter death will no longer happen, and so the mouth of Hades will be sealed so that it can no longer receive the dead (*2 Bar.* 21:23; *Ps.-Philo* 33:3), or, in an alternative image, Death and Hades will be thrown into the lake of fire (Rev 20:14). Thus Hades retains its close association with death and is not confused with the place of eternal torment for the wicked after the day of judgment, which was usually known as Gehenna. Even when Hades is portrayed as the fate for which the wicked are heading, in contrast to the eternal life to which the righteous are destined, the traditional characteristics of the place of the dead—darkness and destruction—are often in mind (*Pss. Sol.* 14:9–10; 15:10, 13; 16:2; *Jub.* 7:29; 22:22).

However, the picture of Hades was affected by the expectation of resurrection and eternal destiny in a further way. The notion of resurrection was connected with that of the judgment of the dead. At the day of judgment, the righteous will receive the reward of eternal life and the wicked the judgment of eternal destruction or eternal torment. This ultimate distinction between the righteous and the wicked was often held to be anticipated during the temporary abode of the dead in Hades. The earliest example is *1 Enoch* 22, where Enoch is shown four "hollow places" in which four different classes of the dead are kept until the day of judgment. The early character of this concept is shown by the fact that one of the two classes of the wicked, those who have already been punished for their sins in this life, will apparently be neither rewarded nor punished on the day of judgment, whereas sinners who have not been punished in this life will then receive their judgment. But for all classes Hades is essentially a place of waiting for judgment: the righteous are refreshed with a spring of water while they await the joys of paradise, but the wicked are not said to be punished. They are simply held in detention awaiting trial and condemnation.

In later conceptions the classes of the dead are reduced to two. The places where they wait came to be called the chambers or treasuries of the souls (*Ps.-Philo* 32:13; *2 Bar.* 21:33; 30:1; 4 Ezra 4:35, 41; 7:32, 80, 85, 95, 101, 121; cf. *Ps.-Philo* 15:5: "chambers of darkness" for the wicked; *Ps.-Philo* 21:9: "the secret dwelling places of souls"; the terminology of chambers may derive from Isa 26:20; cf. *1 Clem.* 50:3).

In the extended account of the intermediate state in 4 Ezra 7:75–101, it is explained that after death the souls of the dead have seven days of freedom, during which they see the rewards awaiting the righteous and the torments awaiting the wicked. The wicked are therefore sad in anticipation, and the righteous rejoice in anticipation of the destiny awaiting them, but the rewards and punishments themselves are reserved for the last day. After the seven days the righteous enter their chambers, where they rest in quietness, guarded by angels (7:85, 95). In this account the wicked do not have chambers at all but continue to wander around in tormented awareness of their doom (7:80, 93).

The idea that the eternal punishment of the wicked has already begun in Hades, even before the last judgment, begins to be found occasionally in Jewish literature of the NT period. In this case Hades sometimes becomes the scene not only of darkness and gloom, but also of fire (cf. Sir 21:9–10), which had traditionally been reserved for the torment of the wicked in Gehenna after the last judgment. (*1 En.* 63:10 seems to be an exceptional case where Sheol itself is the scene of final punishment in fire after the last judgment; cf. perhaps 103:7–8.) Thus in the surviving fragments of *Jannes and Jambres* we seem to have the first instance of the many stories (later popular in Christianity) in which someone is brought back temporarily from Hades in order to warn the living of the fate of the wicked (it is this possibility which is requested and refused in Luke 16:27–31). The Egyptian magician Jannes explains to his brother that he is being punished in the fires of the underworld. In the *Apocalypse of Zephaniah* Hades is equated with the abyss (6:15; 7:9; 9:2), and the seer sees in it the sea of fire and other forms of punishment for the wicked (6:1–2; 10:3–14). (However, neither of these works is certainly of pre-Christian Jewish origin.) Josephus claims that the Pharisees believed there are postmortem rewards and punishments "under the earth" (*Ant* 18.14).

In a final development Hades sometimes becomes exclusively the place of punishment for the wicked, while the righteous go at death to paradise or heaven. This may be the case in the *Apoc. Zeph.* However, we should not expect too much consistency in eschatological concepts. Older images often survive alongside later developments. Thus the *Testament of Abraham* (Recension A) clearly refers to Hades as the fate of all the dead (8:9; 19:7); but it is not easy to reconcile this with its account of the separation of the souls, who at death go through two distinct gates, one leading to eternal punishment and the other to paradise (11), which is located in heaven (20:12, 14). In Jesus' story of the rich man and Lazarus (Luke 16:19–31), which reflects popular conceptions of the afterlife, it seems that only the rich man goes to Hades (though this is not entirely clear), where he is tormented in fire, while Lazarus goes to "Abraham's bosom" in paradise (cf. *T. Ab.* A 20:14). The two locations are within sight of each other (cf. 4 Ezra 7:85, 93); but this need not imply that both are in the underworld, since even after the last judgment paradise and Gehenna are said to be within sight of each other (4 Ezra 7:36–38; *1 En.* 108:14–15; *Apoc. El.* 5:27–28).

Other NT references to Hades also reflect Jewish usage. In Acts 2:27, 31, which directly reflect OT usage, Hades is the abode of all the dead before the resurrection. Also directly dependent on OT usage is Matt 11:23 = Luke 10:15 (cf. Isa 14:13–15). The image in Rev 20:18 is a traditional apocalyptic one (*1 En.* 51:3; *4 Ezra* 4:42; 7:32; *2 Bar.* 42:8; 50:2; *Ps.-Philo* 3:10; 33:3), while the personification of Hades, along with death, there and in Rev 6:8, derives from OT usage continued by later writers (for death and Sheol both personified, see Ps 49:14; Isa 28:15; Hos 13:14).

The gates of Hades (Matt 16:18) are traditional. Both the Babylonian Underworld and the Greek Hades had gates, but the image more immediately reflects the OT (Isa 38:10; cf. "gates of death" in Job 38:17; Pss 9:14; 107:18) and later Jewish writings (Wis 16:13; *3 Macc.* 5:51; *Pss. Sol.* 16:2; cf. *Ap. Pet.* 4:3). The gates of Hades keep the dead imprisoned in its realm. Only God can open them (cf. Wis 16:13; *Ap. Pet.* 4:3, which probably reflects a Jewish description of resurrection; Ps 107:16 may have been interpreted in this way). Whatever the precise meaning of Matt 16:18, its reference must be not to the powers of evil, but to the power of Hades to hold the dead in death. A related image is that of the keys of Hades (Rev 1:18), which open its gates (cf. *2 En.* 42:1): the risen Christ, victorious over death, has acquired the divine power to release from the realm of death (cf. also *b. Sanh.* 113a). For bibliography see DESCENT TO THE UNDERWORLD.

RICHARD BAUCKHAM

HADID (PLACE) [Heb *ḥādîd*]. Town in the territory of Benjamin. Scholars maintain that Hadid is already mentioned in the Thutmose III town list, no. 76 *"h(u)dit(i)i" (h-d-t)*, after a place in the Shephelah and before a place in the Sharon. Hadid is also mentioned as one of a cluster of towns, the two others of which are Lod (Lydda) and Ono, to which the Babylonian exiles returned (Ezra 2:33; Neh 7:37; 11:34). From this text one may infer that Hadid was settled during the First Temple period, in the time when the tribe of Benjamin expanded W, perhaps during the reign of Josiah. See also Alt 1925: 11–15.

Hadid had strategic significance during the Hasmonean period, after Jonathan had fortified Jerusalem. Simeon, who encamped near Hadid, had fortified the town and installed gates during the Trypho's campaign (1 Macc 12:38; 13:13). In a clash near Hadid, Alexander Jannaeus was defeated by the Nabatean king, Aretas III, who invaded Judea (*Ant* 13.392). Later Vespasian conquered it and built a camp there (*JW* 4.486). According to the Mishnah, Hadid was among the cities surrounded by walls since the times of Joshua (*m. ʿArak.* 9:6). See also Abel 1926, 35: 218; Boree 1930: 29.

Josephus describes the city as being situated on a mountain overlooking the plains of Judea (*Ant* 13.203). Eusebius locates it E of Lydda (*Onomast.* 24:24; see also Beyer 1933:

233). It also appears on the Madeba Map (no. 59; Yeivin 1954: 149) and is mentioned by the Jewish traveler Astori Haparchi ca. 1322. The city is identified with a mound named al-Haditha, 6 km E of Lod. Archaeological surveys there yielded sherds of pottery dating from the LB and Iron Ages (Alt 1928: 71). A mosaic pavement with Nilotic scenes, dating from the 6th century C.E., was discovered there in 1940. See also Noth *Joshua* HAT, 93; *Historical Encyl. of Palestine* 2: 248 (in Hebrew).

RAMI ARAV

HADLAI (PERSON) [Heb *ḥadlāy*]. The father of Amasa, one of the leaders of the tribe of Ephraim during the time of Pekah, ruler of the N kingdom, Israel (2 Chr 28:12). This patronymic could also refer to the extended family of Hadlai, rather than to the biological father of Amasa. The name belongs to a class of nontheological Semitic personal names having to do with the body (Noth *IPN*, 226). The precise determination of the meaning of the name is an illustration of the history of the Hebrew language. There are two meanings to the Heb root *ḥdl*, either "to stop," "forbear" or "to be fat," "successful" (*HALAT*, 280–81). The lack of a close semantic connection between the two meanings may be explained by the fact that the earliest form of the Semitic language from which Hebrew later developed had two closely related consonants, the voiceless, fricative, pharyngeal *ḥ* and the voiceless, fricative, velar *ḫ*. Hebrew used the one letter *ḥet* to represent both sounds (Moscati et al. 1969: 38, 41). Thus there are two roots represented with two separate meanings; and, according to Kutscher (1984: 18), they were pronounced by the ancient Hebrews differently from each other. Of the two choices Hadlai probably means "fat one" *(ḥdl)* rather than "forbearer" *(ḥdl)*, since fat is also used metaphorically in Hebrew to mean "successful" and a personal name is most likely to be complimentary or hopeful.

KIRK E. LOWERY

HADORAM (PERSON) [Heb *hădôrām; hădorām*]. **1.** A son of Joktan (Gen 10:27; 1 Chr 1:21) and hence the name of a S Arabian locality or of the tribe residing in it. E. Glaser (1980: 434) juxtaposed the biblical *hădôrām* and Yemenite *Dauram*. Epigraphically *dwrm* is attested in two Old Sabean inscriptions, RES 3945,15 from Ṣirwāḥ and CIS IV 603b,12 from Našq in the Jauf. In the first text it is listed along with several towns which the Sabean king Karibʾil Watar (probably in the 7th century B.C.) incorporated into his realm. The context of the other places mentioned in both inscriptions suggests that *dwrm* is to be identified with *Dauram* at the upper part of the Wâdī Ḍahr about 16 km NW of Ṣanʿāʾ. Probably because of its strategically important location, al-Hamdānī in the 10th century A.D. refers to *Dauram* as a pre-Islamic fortress of the Wâdī Ḍahr (1979: 123). The ruins of the ancient town are situated on the flat-topped mountain Ṭayba bordering on the SW part of the fertile valley, which still bears the name *Dauram* today. A clan name *(d)dwrm*, which could be read *(Dū-) Dauram*, i.e., "(he of) *Dauram*," is attested in two votive inscriptions which are kept in the Museum of Aden (AM 840 = NAM 418,2; AM 343,1.3); both inscriptions had been dedicated to the Sabean god Almaqah in two different temples in the region of the oasis of Mārib. The reason why the name *Dôrām* is not attested in the biblical text, as one might expect assuming that *Dauram* and *hădôrām* are to be identified, may be that the Arabian name was adapted to the NW Semitic name *hădôrām* borne by two different persons in the OT (see #2 and #3 below). The identification of *hădôrām* with the *Ahl al-Hadara*, a designation used by the inhabitants of Oman for certain bedouin tribes, was proposed by B. Thomas (1932: 48) and was taken over by Koehler-Baumgartner (*HALAT*, 229). This equation is, however, unacceptable, because the correct form is *Ahl al-Ḥaḍara* with the literal meaning "tribes of the down country." Likewise to be rejected because of the inaccurate correspondence of the consonants is the identification of biblical *hădôrām* with the tribe of the *Ḥaḍūr* (A. von Kremer 1866: 25), whose name survives in the *miḫlāf Ḥaḍūr* to the W of Ṣanʿāʾ.

2. Son of Tou, king of Hamath, who was sent by Tou with gifts to thank King David for defeating their mutual adversary Hadadezer (1 Chr 18:9–10; MT *hădôrām*; LXX *hidouraam*). The Israelite form of the name, Joram (Heb *yôrām*; an abbreviated form of "Jehoram"), is used in the parallel account (2 Sam 8:9–10; note LXX reads *ieddouran* here, and *Ant* 7.5.4 reads *adōramon*), replacing the theophoric element Hadad ("Hadad is exalted") with Jehu ("Yahweh is exalted"). According to Malamat (1963: 6–7) this is a second (diplomatic?) name taken by Hadoram and reflects Israel's influence in Hamath, which had been at least geographically part of the Hittite Empire (see also

Malamat 1958: 101; McCarter *2 Samuel* AB, 244, 250). Thus, rather than assuming there is a textual corruption and emending Joram to Hadoram in 2 Sam 8:10, both names can be considered authentic references to the son of Tou.

3. The taskmaster under Rehoboam who was stoned to death by the enraged Israelites, who heard Rehoboam vow to increase their burden of forced labor (2 Chr 10:18; MT *hădorām*; LXX *adōniram*; but Codex Alexandrinus reads *adōram*; *Ant* 8.8.3 reads *adōramos*). Various spellings of the name create some confusion about the identity of Hadoram. The parallel account spells his name Adoram (1 Kgs 12:18; MT *ʾădorām*; LXX *adōniram*; but Codex Vaticanus reads *aram*). The person responsible for forced labor under Solomon was named Adoniram, the son of Abda (1 Kgs 4:6; 5:28—Eng 5:14; MT *ʾădonîrām*; LXX *adōniram*), and previously under David was named Adoram (2 Sam 20:24; MT *ʾădorām*; LXX *adōniram*). It is reasonable to assume that the person in charge of forced labor could have remained in office from the time of David until the beginning of the reign of Rehoboam. Based on the shared office and similar spellings of their names, Hadoram can be identified with Adoniram and Adoram, as the LXX already did by standardizing the spelling to Adoniram. His brutal death stands as a symbol of the break between the N (Israel) and the S (Judah), and foreshadows the turmoil yet to come in their history.

MARK J. FRETZ

HADRACH (PLACE) [Heb *hadrāk*]. A place, probably an Aramean city-state, located in N Syria on the Orontes river S of Hamath and N of Damascus. The city may be identified with the present day Tell Āfis, located about 20 miles (45 km) SW of Aleppo. It is mentioned only once by Zechariah along with Damascus and Hamath in connection with a prophecy concerning "the cities of Aram" (Zech 9:1), which were enemies of Israel. In 1908 the stele of Zakir, king of Hamath and Luʿash (ca. 800 B.C.), was discovered here. Zakir had withstood a siege of Hadrach by an Aramean coalition led by Ben-hadad III. Tiglath-pileser III named Hadrach in his annals as one of the "19 districts of Hamath" that had allied to support Azariah of Judah (742 B.C.) and was later made an Assyrian province. Zech 9:1–6 may be the record of an unsuccessful revolt by Hadrach against Sargon II (720 B.C.).

RAY L. ROTH

HADRIAN (EMPEROR). Hadrian, who became emperor on 11 August 117, was born in Rome of a family whose ancestors, originally Italian colonists, had long been resident at Italica (near Seville) in Spain. After his father's death in 85, he was brought to Rome under the guardianship of the future emperor Trajan (to whom he was related) and the future praetorian prefect Attianus. The link with Trajan was further strengthened in 100 when he married Vibia Sabina, also an imperial relative. His official career began late in Domitian's reign with military service in Germany and Moesia and progressed rapidly once Trajan became emperor. He took part in the first Dacian War, commanded a legion (*I Minervia*) in the second, governed Pannonia in 107, became consul in 108 (when only 32), held a number of priesthoods, and, toward the end of the reign, was appointed governor of Syria. At the time of Trajan's death, Hadrian was designated to his second consulship, which he held in 118. His support in the imperial court was widespread, but not universal; and while his popularity with Trajan (and especially with his wife Plotina) is well attested, neither he nor anyone else received any of the honors usually granted to heirs apparent. However, on the day after Trajan's death at Selinus in Cilicia (8 August 117), a letter of adoption, allegedly written by Trajan, reached Hadrian at Antioch, followed on the eleventh by the news of Trajan's death. The same day, the troops proclaimed him emperor.

Despite the controversial circumstances surrounding his accession, the Senate immediately voted him the usual imperial powers; but he never managed to establish a successful relationship with that body, mainly because of the initial decision (which may not have been his) to execute four of Trajan's leading generals. They were accused of planning Hadrian's assassination, found guilty, and promptly executed. Possibly they had opposed his decision to abandon some of Trajan's E conquests. But the damage was done; and, when he reached Rome, he had to strive to attain some degree of popularity: he was obliged to dismiss Attianus, now prefect (responsibility for the executions was assigned to him); to distribute largess to the people on three occasions by January 119; to cancel debts; and to provide expensive gladiatorial displays. Yet his efforts were not without success. Throughout his reign of 21 years, he was away from Rome for about 12 (121–125; 128–134); and no serious attempts were made to take advantage of these absences. On the other hand, he was never popular with the Senate.

He worked hard. For him it was an emperor's duty to familiarize himself with the entire empire. So "he personally viewed and investigated absolutely everything" (Dio Cass. 69.9.1). He visited armies everywhere, drilled the soldiers himself, lived as they did (Dio Cass. 69.9.3), and even published an assessment of their efficiency (*CIL* VIII 2532, 18042: N Africa, July 128). But he did not limit himself to military matters; for he seems to have regarded it as his responsibility to become aware of a province's problems, to inspect its administration, to attend official and religious festivals—and, as well, to indulge in hunting and sight-seeing. The emperor was no longer a remote or vague figure.

Hadrian withdrew from some of the newly acquired provinces (e.g., those beyond the Euphrates) and consolidated Rome's gains in others (e.g., Dacia). Almost certainly his reasons were economic. He sought prosperity and security for the empire through a policy that was essentially defensive; and, in the main, he was successful, though there were uprisings on the lower Danube, in Britain, in Mauretania, and in Judea. But the most outstanding example of his policy, without parallel in Roman

times, was seen in Britain, where, on the Tyne-Solway line to which Trajan had already withdrawn, Hadrian erected a massive wall some 70 miles long, more than half of it in stone. It was at least 15 feet high and 7.5 feet thick, with a deep ditch in front and substantial earthworks behind. As well, there were 16 garrison forts, a fortlet every mile, and a turret every third of a mile. Consistent with this was the considerably less expensive timber barrier linking the Rhine and the Danube.

He had least success in dealing with the Jews. Severe riots had occurred in Jewish areas throughout the east toward the end of Trajan's reign (Dio Cass. 68.32.1–2), and they continued under Hadrian until 119 (*Annee Epigraphique* 1928, Nos. 1 and 2). Later his insistence on having a shrine in Jerusalem dedicated to Jupiter Capitolinus and built on the site of the temple resulted in the revolt of 132–135, led by Bar Kokhba and ruthlessly suppressed by Hadrian (Dio Cass. 69.12.1–14.3). As a consequence, "From that time on, the entire race has been forbidden to set foot anywhere in the neighborhood of Jerusalem" (Eutropius *Historia Ecclesiastica* 4.6). His policy toward Christianity was, like Trajan's, one of toleration, as is evident from his much-discussed letter in 122/123 to the proconsul of Asia, Minicius Fundanus: Christians would be punished only "if someone prosecutes them and proves them guilty of any illegality" (Eutropius *Historia Ecclesiastica* 4.9).

In administration his aim was consolidation and centralization rather than innovation, as has sometimes been argued. Leading bureaucrats were now almost always equestrians and not freedmen. Attempts were made to improve control of the empire's finances, but whether they were introduced by Hadrian or Trajan is uncertain; and similarly with the development of a pay and career structure for equestrian officials. Again, legal reforms were introduced, soldiers' conditions improved, and their weapons standardized. In essence he tried to systematize existing practices rather than introduce new ones.

Hadrian was enlightened and intelligent, taking an active part in the empire's literary and cultural life His architectural achievements included the villa at Tivoli, the mausoleum in Rome, and the rebuilding of the Pantheon. He was, nonetheless, an autocrat; and in 136, he executed his only relatives, his 90-year-old brother-in-law, Julius Ursus Servianus, and his grandson Pedanius Fuscus Salinator, then adopted one of the consuls for 136, Ceionius Commodus, who took the name L. Aelius Caesar But when he died on 31 December 137, Hadrian chose another senator, Aurelius Fulvus (later the emperor Antoninus Pius), who was required to adopt both Aelius' son (later the emperor Commodus) and the grandson of another senator, Annius Verus (later Marcus Aurelius). On 10 July 138 Hadrian died at Baiae and was buried in his mausoleum. The Senate still detested him and deified him only at the insistence of Antoninus Pius.

BRIAN W. JONES

HAGAB (PERSON) [Heb *ḥāgāb*]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:46 = 1 Esdr 5:30). The omission of Hagab in the parallel text in Nehemiah 7 appears to be a result of haplography, due to the similarity of the name Hagabah in Ezra 2:45 = Neh 7:48 = 1 Esdr 5:29 (Williamson *Ezra, Nehemiah* WBC, 26). Differences such as this raise questions about the sources of and literary relationships among 1 Esdras, Ezra, and Nehemiah.

MICHAEL DAVID MCGEHEE

HAGABAH (PERSON) [Heb *ḥāgābâ*]. Head of a family of Nethinim (temple servants) who are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:45 = Neh 7:48 = 1 Esdr 5:29). For further discussion, see AKKUB.

CHANEY R. BERGDALL

HAGAR (PERSON) [Heb *hāgār*]. According to Genesis 16; 21:8–21; 25:12, Hagar was the handmaiden of Sarah (Gen 16:1) with whom Abraham fathered his son Ishmael. See also ISHMAEL (PERSON); ISHMAELITES. Genesis 16 is a short story of high literary standing: human attempts to implement the divine promise (Gen 15:4) prove counterproductive; they lead to the anarchy of the desert (Gen 16:12). When the promised child, Isaac, finally is born, it is against human expectations (Gen 18:10–15; 21:6–7). From Gen 16:15–16 (usually attributed to the P source), the author of Gen 21:8–21 must have concluded that Hagar had returned to Abraham's house in order to give birth to Ishmael; accordingly, his story of Hagar's expulsion aims at bringing Ishmael back to the desert, where he belongs (Thompson 1987: 89–97; Knauf 1989: 16–35). As a sophisticated theological construct, the stories Genesis 16 and 21 do not necessarily reflect oral traditions about Hagar (and Ishmael) except for a general knowledge that Ishmael was the name of a bedouin tribe (or tribes; Gen 16:12; 20:20–21) and that Hagar was the legendary ancestress of the Ishmaelites (see below).

Hagar's Egyptian nationality (Gen 16:1; 21:9, 21; 25:12) is a literary device to connect the story in Genesis 16 with Gen 12:10–20 (cf. Gen 12 16). If the first story about Hagar was written at the time of Hezekiah, Hagar's nationality may veil the author's opposition to Hezekiah's foreign policy (cf. Isa 30:1–5; 31:1–5; Görg 1986).

As a female personal name, Hagar is well attested in ancient Arabia (Palmyrene and Safaitic *hgr*, Nabatean *hgrw*; to be distinguished from the male name *Hâjir* in Arabic, Minaean, and Nabatean; Knauf 1989: 52, n. 253). The name can be explained by Sabean and Ethiopic *hagar*, "town, city" (from an original meaning "the splendid" or "the nourishing"?); it is unlikely that there is any connec-

tion with *hajara,* "to emigrate," in more recent Arabian languages.

Just as Ishmael represents a large N Arabian tribal confederacy of the 8th and 7th centuries B.C. (see ISHMAELITES), so also can his mother be expected to have been of similar importance and antiquity. Therefore Ishmael's mother, Hagar, should not be connected with the Hagrites, a relatively small Syrian and N Arabian tribe of the Persian and Hellenistic periods, attested in 1 Chr 5:19 and in Greek and Roman geographers (Knauf 1989: 49–53; and see also HAGRITES).

A cuneiform inscription found on Bahrain and dating to the second half of the 2d millennium B.C. mentions "the palace of Rimum, servant of (the god) Inzak, the one of *A-gar-rum*" (Butz 1983). Hagar is then mentioned as a country and/or people by Darius I in an Egyptian hieroglyphic inscription from Susa (Roaf 1974: 135). The name, spelled *hgrw,* is accompanied by a representation of a typical Hagrean, whose hairdress distinguishes him from the central Arabian bedouin. This ethnographic feature suggests that Darius' "Hagar" refers to the E Arabian country and not to a central Arabian tribe (Knauf 1989: 144–45). In the 3d century B.C. a king of Hagar issued his own coins; at the same time, trade between Hagar, the Minaeans, and the Nabateans flourished. As D. T. Potts has most convincingly shown, Hagar is nothing else but the Gk *Gerrha* and can be identified with the present ruins of Ṯâj (Potts 1984). Both Christian and Muslim authors used "Hagar" for E Arabia well into the Middle Ages (Knauf 1989: 54).

The available documentation, in spite of a gap between the LB Age and the Persian period, is more likely to connect Ishmael's mother with Hagar in E Arabia than with another Hagar (of which there is no lack, given the meaning of the word in Old S Arabic). For the prophet Jeremiah there were only two political entities in Arabia (with the exception of the caravan cities of NW Arabia): the Qedarites (see KEDAR), surviving from the Ishmaelite confederation, and Buz, which was the designation of E Arabia current in the 7th century B.C. See BUZ (PLACE).

ERNST AXEL KNAUF

HAGGADAH. A noun derived from the Hebrew root *ngd,* "to show," "to announce," "to tell," "to testify" (Jastrow 1903: 871). In contemporary scholarship the word (also spelled *aggadah*) carries several meanings: (1) nonlegal material in rabbinic literature (*EncJud* 2: 354; 6: 141; Moore 1927: 161; Cohen 1975: 24); (2) narrative, story, legend, folktale, fairy tale, or the like (*EncJud* 2: 356; 6:141; Bacher 1892: 408); (3) biblical exegesis or an amplification of the Bible (*EncJud* 2: 354, 358–59; 6:410–11; Bacher 1892: 418); (4) discourses which are assumed to have followed the Torah readings in the ancient synagogues (*EncJud* 2: 358–59; Cohen 1975: 26); and (5) one segment of midrash, distinguishing between legal exegesis (halakic midrash) and nonlegal exegesis (haggadic midrash; *EncJud* 2: 354; 6:141; Cohen 1975: 25; *HJP*^{2} 2: 346; Bacher 1892: 425; Vermes 1961: 1–8).

Approaching the meaning of Haggadah from the point of view of its role in rabbinic culture, several scholars underscore the fact that Haggadah was not authoritative, while the Halakah (legal discourse) was binding (*EncJud* 2: 354; Moore 1927: 162; Cohen 1975: 24; *HJP*^{2} 2: 497). Therefore Haggadah is much more imaginative, freewheeling, and varied than Halakah (*EncJud* 2: 354–59; Cohen 1975: 25; *HJP*^{2} 2: 346, 353–54, 497; Slomovic 1988: 65). Haggadah is often described as that segment of rabbinic literature which (1) deals with morals, ethics, and daily life; (2) provides the motivation and the will to follow YHWH and to perform his commandments; (3) includes the discussions of YHWH's attributes; or (4) contains words of comfort (Halivni 1986: 509; *EncJud* 2: 355–56, 360–62; 6: 141; Moore 1927: 161–62; Cohen 1975: 25; *HJP*^{2} 2: 346; Halivni 1986: 509).

These varied meanings of Haggadah also appear in the rabbinic texts. In Mishnah *Ned.* 4:3 Haggadah probably refers to a nonlegal biblical exegesis. In Sipre Numbers the word conveys the sense of (1) tales and events, or (2) biblical exegesis (Kosovsky 1973: 1280). A review of the references to Haggadah in the concordance to the Babylonian Talmud reveals that Haggadah carries the meaning of (1) utterance, (2) giving evidence or testimony, (3) biblical exegesis, or (4) the nonlegal segment of rabbinic thought. Haggadah is set in opposition to (1) *ḥokmâ,* wisdom, (2) *šĕmû*$^{\text{ɔ}}$*ôt,* oral legal teachings, and (3) Halakah, law. The Talmud refers to books of Haggadah; however, their content is unknown, except for one which reportedly contained discussions of the laws concerning the execution of a gentile and another which included biblical terms and the ways in which they were to be treated in exegesis. References to books of Haggadah appear, even though there is a ruling that such collections should not be written down (Kasowski 1971: 1024–25).

Contrary to much speculation it seems likely that Haggadah did not derive solely from biblical exegesis (*EncJud* 2: 356; Moore 1927: 161–62). Also, the non-halakic nature of Haggadah has been exaggerated (*EncJud* 2: 359). There is a Jewish tendency to classify and categorize the phenomena in the world (Cooper 1987), and the distinction between Haggadah and Halakah probably results from this inclination. The difference between Halakah and Haggadah is artificial and perhaps too precise, and it may merely be literary convention for expressing a supposed binary division of rabbinic thought. The sages to whom Haggadah, in its variety of meanings, is attributed also are rabbis to whom halakic statements are assigned (*EncJud* 2: 363). Furthermore, the theological presuppositions which stand behind the Halakah—there is one God, who created the world according to a plan, who revealed that plan to Israel, and who will reward or punish Israel and all humankind

commensurate with their adherence to that plan—also serve as the underpinning for the haggadic texts. Many haggadic passages serve to illustrate halakic statements, and there appear to be instances in which general halakic rules are derived from haggadic pericopes. While Halakah teaches by enumerating rules and principles, Haggadah enlightens by means of stories and examples (Safrai 1987: 127). The latter appeals to human imagination, while the former results from strict adherence to the intellectual processes. In expressing the complementary nature of Halakah and Haggadah, Bialik stated that "Halakhah is the crystallization, the highest quintessence of aggadah, while aggadah is the refinement of halakhah" (*Encfud* 2: 354). Cohen writes that Halakah ". . . stands for the rigid authority of the law, for the absolute importance of theory, the law and theory which the Haggadah illustrates by public opinion and the dicta of common-sense morality" (1975: 25).

GARY G. PORTON

HAGGAI, BOOK OF. The tenth book in the Masoretic ordering of the Book of the Twelve (or Minor Prophets). It contains oracles alluding to the harsh socio-economic conditions that dominated the tiny province of Yehud (Judah) during the reign of Darius I. Two factors had influenced Judean identity at this time: the Persian mandate to rebuild the temple, and the dyarchic structure of governor and high priest approved by the Persian authorities. The temple still lay in ruins when Haggai began to prophesy on 29 August 520 B.C.E. (Hag 1:1); but enormous progress had been made by the time he concluded his brief ministry, some three and a half months later, on 18 December 520 (Hag 2:10, 20). The book of Haggai itself provides vivid testimony to the effect of the prophet's words on the people as they began the task of rebuilding the temple (Hag 1:12–13), supplementing the cursory notes provided by Ezra (5:1; 6:14).

Because Haggai's ministry overlapped with that of Zechariah and since Zechariah presupposed that temple work had already recommenced, the decision to rebuild the temple, which dates back to the first return in 538 (Ezra 1:8–16; 3:6–4:4), was evidently reactivated as the result of Haggai's eloquent exhortations. Haggai was greatly concerned with the reluctance of the Judeans to respond to the Persian mandate to rebuild the temple. In urging them to begin reconstruction, he also supported the pattern of high priestly and gubernatorial joint rule as permitted by the authorities in Ecbatana (Hag 1:1). Zechariah's subsequent focus on the meaning and symbolism of the temple as a legitimate expression of the new dyarchy that accompanied it complements Haggai's program.

A. Dyarchic Pattern of Rule in Judah

Although Haggai's utterances were for the most part addressed to the whole community of Judeans, many of whom had only recently returned from Babylon (Hag 1:12; 2:2), it is clear that his words were directed mainly toward the two leaders, Zerubbabel, the Davidic governor, and Joshua, the high priest. The province of Yehud no longer had a Davidic king; and Zerubbabel, the governor, was officially in charge of the liaison in all matters requiring Persian attention. Joshua held an office of ecclesiastical authority that had clearly been upgraded in the restoration (see Zech 3:1ff.). The priesthood in the early postexilic period began to assume much of the internal political, economic, and judicial administration that previously had resided with the royal house, although the presence of the Davidic scion Zerubbabel as the governor of Yehud encouraged occasional eschatological outbursts that focused on the future role of the Davidide (Hag 2:21–23; Zech 4:6b–10a). These future-oriented oracles suggest a belief among the Judeans that this dyarchic pattern was only temporary. The lineage of Joshua, however, was no less impressive than Zerubbabel's, though from a Persian perspective such an arrangement was permanent except in case of rebellion, when any kind of home rule would be removed. Persia's motives in appointing both a Davidic governor and a legitimate priestly officer thus cannot be divorced from political purposes: establishing a loyal following in Yehud that would guarantee control of the major roadways that skirted the Mediterranean and that gave Persia access to the W portion of its far-flung empire.

B. Literary Considerations

The book of Haggai may be divided into two major parts containing five literary subunits. The first part, Restoration of the Temple (1:1–15), consists of two subunits: "Prophetic call to work on the temple" (1:1–11) and "Response of the leaders and people" (1:12–15a). The second part, Oracles of Encouragement (2:1–23), is divided into three subunits: "Assurance of God's presence" (1:15b–2:9), "Priestly ruling with prophetic interpretation" (2:10–19), and "Future hope" (2:20–23). Each of the units is associated with one of the five chronological notations in the book, indicating the separate moments in the second

year of the reign of Darius when certain prophetic materials emerged. Although there is an integrity to each subunit with respect to content, there is also a continuity and flow from beginning to end, which gives the book a sense of unity and a vivid rhetorical style.

Although Haggai and Zechariah each have their distinct style and message, there are many literary similarities and connections between the two chapters of Haggai and Zechariah 7–8. Some 18 correspondences in literary form and language may be isolated for these four chapters (Meyers and Meyers, *Haggai, Zechariah 1–8* AB, xlix), indicating that Haggai and Zechariah 7–8 form an envelope construction tying together the elements of a composite work, Haggai–Zechariah 1–8. Because it makes no reference to the rededication of the temple in 516 or 515 B.C.E., this composite work probably was finished well in advance of that event. The latest date mentioned in either Haggai or First Zechariah is 7 December 518 (Zech 7:1). Hence, the compilation of the composite work, probably intended to be presented at the temple rededication, would have been completed between 518 and 516–15.

The following is a list of the chronological data in the book of Haggai and First Zechariah:

Chronological Data in Haggai–Zechariah 1–8

Passage No.	Passage	Year of Darius	Month	Day	Date of New Moon	Equivalent Date B.C.E.	Date No.
1	Hag 1:1	2nd	6th	1st	29 Aug.	29 Aug. 520	1
2	Hag 1:15	2nd	6th	24th	29 Aug.	21 Sept. 520	2
3	Hag 2:1	2nd[a]	7th	21st	27 Sept.	17 Oct. 520	3
4	Hag 2:10[b]	2nd	9th	24th	25 Nov.	18 Dec. 520	4
5	Hag 2:20	2nd	9th	24th	25 Nov.	18 Dec. 520	4
6	Zech 1:1[c]	2nd	8th	—[d]	27 Oct.	Oct. (Nov.) 520	5
7	Zech 1:7	2nd	11th	24th	23 Jan.	15 Feb. 519	6
8	Zech 7:1	4th	9th	4th	4 Dec.	7 Dec. 518	7

[a]The year appears at the end of the preceding date, Hag 1:15.
[b]This date is repeated, without the year, in 2:18 as a summary of the 2:10–18 section.
[c]This date breaks the sequence, being earlier than the previous two dates in Haggai.
[d]The formula omits the day.

The date formulas in Haggai, unlike comparable material in Kings, Chronicles, or other prophets, are tied to the realm of a foreign power. As such, they indicate the extent to which Judean policies and thinking were geared towards Persia. They also suggest prophetic awareness of the imminent conclusion of the 70 year period of desolation referred to in Jeremiah (Jer 25:11–12; 29:10). Reckoned from the destruction of the First Temple in 587–586, the approaching year 517–516 apparently signaled a new era for Judah. This careful reckoning of dates is unique in prophecy and accentuates Haggai's views regarding Yahweh's purposeful control over history. The date formulas, which mirror each other by virtue of the chiastic arrangement of year–day–month language, also constitute another literary device by which the overall unity of Haggai and First Zechariah is established.

1. Prophetic Call to Work on the Temple (1:1–11). Because of the adverse economic and political conditions in Judah at the time, the prophet was acutely aware of the disparity between present conditions and future hope. Temple language and ideology are utilized in trying to convince the populace to build God's house (1:8, 14). Haggai succeeded in rousing the spirit of Yahweh in the two leaders who, together with the people of Judah, rebuilt the temple. By providing centralized management for the limited resources to which the leadership had access, the temple became the cornerstone of the new administrative organization. In the first literary unit (1:1–11), the word "house" is used for God's dwelling in vv 2, 4, 8, and twice in 9, and for individual households in vv 4 and 9. This repetition highlights the contrast and the connection between the personal welfare of the people and the plight of the temple.

2. Response of the Leaders and People (1:12–15a). Haggai uses a clear and powerful argument to advance his case: the difficult circumstances of the present and the misfortunes of the past are directly related to the neglect of the temple, which represents God's presence in the community. The only escape from such a predicament lay in rebuilding the temple. Only then could appropriate blessings flow and the just rewards of human labor be realized, according to the promise of the covenant.

The description of the positive Judean response to this exhortation ends with a date formula (1:15), which gives the day and the month (21 September) of the year 520 B.C.E., Darius' second regnal year, less than a month after Haggai's initial address on 29 August (1:1). The people had wasted little time in beginning the temple project. The several weeks involved may have been the time required for community deliberation, although that deliberation may have been immediate. The decision was made, materials were secured, and the preliminary work on the temple site began immediately.

3. Assurance of God's Presence (1:15b–2:9). The next date (in 2:1) is built upon the regnal year given in 1:15b, indicating that within a month (17 October) enough progress had already been made on the building so that the people could already compare it to the preexilic one. Thus, after less than a month, Haggai had once again spoken in the name of Yahweh.

As in the previous section, he addressed the civil leader Zerubbabel, the priestly leader Joshua, and the people

(2:2). These three are then each commanded to "take courage" for the task at hand (vv 3–5), although the terminology used for the third group is altered ("all the remnant of the people" becomes "people of the land"). The full listing of the prophet's audience twice in this section emphasizes once more the prophetic role as intermediary between God and the people.

The dual concerns of this oracle of reassurance—economic well-being and political structure—come together in its final statement; "in this place I will grant well-being" (2:9). The well-being for which the people yearn will become available to them, but not only to them. In the future time, when all the nations recognize Yahweh's universal rule, those nations too will achieve well-being. The power of Yahweh as universal ruler will not be exploitative. In contrast to human emperors, Yahweh will establish universal plenty. This eschatological vision accords Yahweh the position of king. It is Yahweh's house (the temple) that is to be exalted with treasures, and Yahweh will give his blessings from there. The temple is a symbol of divine kingship, and no political king shares Yahweh's rule. The eschatological imagery of this passage, like that of Isa 2:2, is surely derived from the short-lived zenith of the Israelite empire under David and Solomon, when glory and wealth filled Jerusalem (1 Kings 4 and 10). But even that empire was a God-given structure in its Deuteronomistic formulation, and so its ideal replication in the future naturally shifts the focus to God's kingship.

4. Priestly Ruling with Prophetic Discourse (2:10–19). The arcane priestly language and the agricultural terminology of 2:10–19 are linked to the specificities of the prophet's immediate situation, making this passage in Haggai more difficult than most for the modern reader to comprehend. No passage, however, is more indicative of the transformation of prophecy itself than this. A complex priestly ruling has become the vehicle for conveying the message that work on the temple is related to the fortunes of the people. The prophet utilizes the ruling to expand on its meaning in God's design. Although this passage ends with an oracle (indicating Haggai's prophetic role), the situation involves priestly decisions and reveals the authoritative position of the priesthood even prior to the completion of the Second Temple.

The heart of the priestly ruling itself concerned the concepts of sanctity and defilement. Haggai asserted that sanctity is nontransferable but that defilement is; or rather, that sanctity can be transmitted only through direct contact with a sacred substance or person and not via a third party or object, whereas contamination can be transmitted both directly and indirectly. This distinction reveals something about the nature of holiness and purity, and about their opposites, defilement and impurity. Because these categories have contrasting properties, sanctity, which surrounds God, is much more difficult to contract than is uncleanness, which is apparently very contagious.

The sequence of conditions set forth in 2:15–19 amplifies Haggai's assertions of 2:14—that the sacrifices offered prior to the restoration of God's house were not acceptable. God's favor was not forthcoming because the people were tainted by sinful behavior, which had inevitably caused the pervasive impurity. Before temple restoration began, the people were experiencing economic deprivation; but now, however, God is offering them material blessings (2:19). God's power to do so is implicit in the dramatic change of fortunes. By drawing attention to God's power being used in the present for economic purposes, the stage was set for Haggai's final oracle, which portrayed Yahweh's exercise of power in the future and in the political realm.

5. Future Hope and Zerubbabel (2:20–23). This oracle, like the preceding one, was delivered on the 24th day of the 9th month (18 December 520). This time, however, Haggai's audience consisted of a single individual, Zerubbabel. Although a royal figure (as the final verse of the oracle makes clear), Zerubbabel is addressed as governor and his Davidic lineage is downplayed by the omission of his patronymic. This private oracle is addressed to a civil leader who, along with the high priest, shared the ceremonial aspects of temple refoundation. That event marked a restoration of the high priestly role that had been associated with tabernacle and temple in the Pentateuch and in Ezekiel's visions; but what implications did it have for the monarchic role? The rebuilding of the temple meant the reestablishing of the kingship of God, and not of man.

The eschatological idea evoked by the temple restoration appears in terms of political imagery: a political ruler such as had existed in the days of Israel's greatest grandeur would once again appear on the world scene. Yet there would be a difference. David as royal prototype first had to conquer many lands before establishing imperial domination. In contrast, this oracle asserts that Jerusalem's future universal role will be inaugurated first by God's overthrowing foreign kingdoms (2:22). Yahweh will assume the military tasks essential to the overthrow of lands that do not acknowledge his sovereignty. The Davidic model of a human warrior king is absent. Only divine intervention can bring about the universal kingdom. Because it is Yahweh who will one day overthrow the powers that dominate the world, it is Yahweh whose sovereignty will be established. The role of a Davidide cannot be the same as it was in the past. Having overturned the world order, Yahweh will then reign with the Davidide as his "servant" and his "signet." These two terms relegate the Davidide to a vice-regency, a participant in God's administration of the nations of the world, but not the initiator or leader in that task. The oracle is not only eschatological but also theocratic.

The monarchic potential contained in the figure of a Davidide has thus been made a component of theocratic rule; he is an instrument of Yahweh's dominion and not a political monarch of an independent kingdom. The accession of a Davidide to a special relationship with Yahweh in the future signifies the centrality of Jerusalem but not of a monarchy. Rather than being a "messianic" figure, an active participant in the struggle to bring about the new age, he will be a token earthly symbol of divine sovereignty.

The mention of Zerubbabel by name has occasioned all manner of speculation about political developments in Yehud. Did the Judeans perhaps expect Zerubbabel's status to change abruptly from governor to king? Does this oracle reveal stirrings of nationalism or even of rebellion against Persian rule? The answer to these questions, in the light of the preceding discussion, is negative. Zerubbabel

is governor now, and his future role could only be a subsidiary one in a theocratic scheme. The naming of Zerubbabel is secondary to the choosing of Zion, which is the place where the locus of universal well-being will be established. That Zerubbabel's name appears in this eschatological vision testifies to Haggai's intense awareness of Judean uncertainty about rebuilding a temple without also restoring the palace; it does not testify to an expectation of some change in Yehud's status from Persian province to independent kingdom. The Jerusalem temple and priestly establishment had always accompanied, and indeed had legitimized, a royal house. That royal house was not ignored during this period of rebuilding, as Haggai's oracles indicate. The prophet deeply believed that the rebuilding of the temple accompanied the return of Yahweh's power as an active presence in the world. Could the overthrow of nations and the universal rule of Yahweh with his Davidic assistant be far behind? It is no wonder that with such a view of the temple, Haggai's words display a sense of imminence.

Subsequent generations felt that the eschatological force of this last oracle was weakened by its specific reference to a particular Davidic descendant who came and went without any noticeable change in world history. At the same time, pinpointing Haggai's utterance in this crucial transition period in Judean history has merit of another kind: it links the present moment, concretized by Zerubbabel's name, with the future. It inserts a contemporary figure into the age when God's benign and universal rule will prevail. Haggai, by using a living individual in his future vision, bridges the gap between present and future. Although he does not make the future imminent, he presents a view of time in which eschatology is not distinguished from history. Haggai's oracles inspired the rebuilding of the temple; and his words of encouragement ensured that the Judean restoration would begin in a framework that was true to its ancient heritage, with both priest and prophet as contributors to the organization of the affairs of the people of Israel.

CAROL MEYERS
ERIC M. MEYERS

HAGGEDOLIM (PERSON) [Heb *haggĕdôlîm*]. Presumably the father of Zabdiel, a priest and contemporary of Nehemiah (Neh 11:14 RSV, NEB, AB). His supposed son, Zabdiel, is described as an overseer of the priests then engaged in the work of the house of God. "Haggedolim," however, as a personal name is very suspect, as it structurally appears to be a Hebrew masculine plural adjective used substantively, meaning "great ones" *[gĕdôlîm]*, prefaced by a definite article "the." Accordingly, BHS has proposed reducing the present word to its masculine singular counterpart *haggādôl*, "the great one," seeing in the present text's final two Hebrew consonants a case of mistaken dittography with the immediately succeeding Hebrew word in the next verse [*ûmin*, Neh 11:15]. As a consequence, Zabdiel may then be viewed as a person of high priestly descent, i.e., the son of the great (= high) priest (cf. the *terminus technicus* for "high priest," *hakkōhēn haggādôl* in Nehemiah [3:1; 3:20] and elsewhere [Lev 21:10]). Katzenstein believes that the title *(hak-)kōhēn (hā-)rō²š* was the title of the chief priest in the time of the First Temple with the title *kōhēn gādôl* appearing only after its destruction. See Katzenstein 1962: 377–78, nn. 3, 4. The strong likelihood that we are not dealing here with a personal name is further strengthened by the LXX, where the end of the verse is omitted in the major mss; and in those remaining LXX mss which do have some addition one reads "son of (one of) one of the great men" *[huios tōn megalōn]*). Compare also the Vg's "son of the mighty ones" *[filius potentium]* and the KJV's "and their overseer was Zabdiel, the son of one of the great men." In closing, one may note the absence of the name Haggedolim as well as any reference whatsoever to Zabdiel as overseer in Neh 11:14's own synoptic parallel, 1 Chr 9:13.

ROGER W. UITTI

HAGGI (PERSON) [Heb *ḥaggî*]. A son of Gad, grandson of Zilpah and Jacob, and ancestral head of the Haggites. His name is entered second among the seven sons of Gad mentioned in the list of the descendants of Israel that went to Egypt (Gen 46:16; so also *Jub.* 44:20). In the census reported in Numbers 26, he is again the second mentioned of the seven descendants of Gad whose names were adopted as clan names (Num 26:15—LXX 26:24).

RICHARD W. NYSSE

HAGGIAH (PERSON) [Heb *ḥaggiyâ*]. A Levite, a descendant of Merari and father of Asaiah (1 Chr 6:15—Eng 6:30). Noth (*IPN*, 222) argued that the last portion of the name is hypocoristic, not theophoric, so instead of meaning "Feast of Yah" it would mean "Born on a feast day."

TOM WAYNE WILLETT

HAGGITH (PERSON) [Heb *ḥaggît*]. A wife of David and mother of Adonijah (2 Sam 3:4 = 1 Chr 3:2). Haggith is the fourth wife/mother mentioned in two lists of David's sons born in Hebron (2 Sam 3:2–5 = 1 Chr 3:1–3). Her name also appears in the epithet "son of Haggith" as a designation for Adonijah (1 Kgs 1:5, 11; 2:13). Used three times, the phrase alerts the reader to the rivalry between Solomon/Bathsheba and Adonijah/Haggith.

The list of wives and sons in 2 Sam 3:2–5 serves both a genealogical and literary function. 2 Sam 3:1 notes that David grew "stronger and stronger," while his enemy Saul grew "weaker and weaker." This general statement about David's strength is made specific by the genealogical list in vv 2–5. The increase of David's strength is mirrored in the increase of his wives (i.e., Haggith) and sons. See also DAVID; ITHREAM.

LINDA S. SCHEARING

HAGRI (PERSON) [Heb *hagrî*]. According to 1 Chr 11:38 Hagri was the father of Mibhar, one of David's mighty men. In place of "the son of Hagri," the parallel passage at 2 Sam 23:36 reads "Bani the Gadite," indicating textual confusion between *bn hgry* (1 Chr 11:38) and *bny hgdy* (2 Sam 23:36). For a discussion of the variant forms see MIBHAR.

STEPHEN PISANO

HAGRITES [Heb *hagrî*]. Name of a pastoralist tribe residing in the region E of Gilead during the period of the early Monarchy. In the time of King Saul, the tribe of Reuben, assisted by the other Transjordanian tribes of Gad and Manasseh, subjected the Hagrites and took control of their territory "until the [Assyrian] exile" (1 Chr 5:10, 19–22). Since the Hagrites are listed with other Transjordanian enemies of Israel during the preexilic period—Edom, the Ismaelites, and Moab (Ps 83:7—Eng 83:7)—it appears that the hostilities continued even afterwards. King David later seems to have won the loyalty of at least some of the tribe, as Jaziz the Hagrite was given oversight of the royal flocks in the organization of his kingdom (1 Chr 27:30).

Since this information is derived entirely from later traditions, it has been suspected that it reflects the later Transjordanian ethnography at the time of the Chronicler in the postexilic or Persian period (Knauf 1985: 49–52). The earlier sources of Samuel and Kings are silent in regard to the Hagrites (cf. 1 Sam 15:47). The account of the Chronicler also contains some exaggerations and anachronisms that create suspicion the Hagrite material is a fabrication, e.g., the numbers provided for the booty and captives taken in the campaign seem incredible (1 Chr 5:21); the mention of Jetur (= Ituraeans?), Naphish, and Nodab with the Hagrites (5:19) appears to be a tradition no "earlier than the 8th century B.C." (Ephʿal 1982: 239). However, there is a possible reference to the Hagrites in the roster of David's soldiers from an earlier source (2 Sam 23:8–39). In v 36, the name of "Igal the son of Nathan" is followed by the phrase "of Zobah, Bani the Gadite" (MT *mṣbh bny hgdy*). This may be a corruption of the reading "Igal son of Nathan, the commander of the army of the Hagrites" (*rb ṣbʾ bny hgry*), as suggested by McCarter (*2 Samuel* AB, 493–94). The proposed emendation agrees both with the context and the parallel passage of 1 Chr 11:37, "Mibhar the son of Hagri" (*mbḥr bn hgry*, MT 11:38; but cf. LXX and Knauf 1985: 49, n. 235). This phrase also appears in a context with other foreign soldiers (23:36–39) who served in David's professional army at Jerusalem (Naʾaman 1988). The putative Hagrite may be another one of the mercenaries recruited during David's Transjordanian conquests. It is then possible that the references to the Hagrites in the Chronicler preserve an older tradition stemming from the early Monarchy, not a postexilic addition. Nevertheless, any ethnographic relationship of the Hagrites to Hagar and the Ismaelites is uncertain (Gen 16:15–16); and they definitely should be disassociated from the later *Agraioi/Agraei* mentioned by the Greek and Latin geographers (Str. 16.4.2 [767C]; Ptol. *Geog.* V.19.2; and Plin. *NH* VI.159–61). The latter are probably the inhabitants of Hofuf-Thaj located in the al-Hasa oasis in NW Arabia, on the Persian Gulf (Potts 1984: 111–12).

DAVID F. GRAF

HAIRNET. Hairnets, sometimes even made of gold, were worn by women in Palestine during the Roman period. See DRESS AND ORNAMENTATION.

HAKKATAN (PERSON) [Heb *haqqatan*]. A descendant of Azgad and the father of the returning exile Johanan. Johanan returned under Ezra with 110 other descendants of Azgad (Ezra 8:12 = 1 Esdr 8:38). Williamson (*Ezra, Nehemiah* WBC, 111) suggests that the list of twelve in Ezra 8 is indicative of the author's theology that the remnant is the true heir of Israel. According to the table in Ezra 2:12, 1222 other descendants of Azgad (Neh 7:17 reads 2322) had returned earlier to the land under Zerubbabel.

GARY S. SHOGREN

HAKKOZ (PERSON) [Heb *haqqôṣ*]. Var. KOZ; ACCOS. **1.** A Judahite, the father of Anub and Zobedah (1 Chr 4:8). Koz' abrupt entry into the Judahite genealogy in 1 Chr 4:8 may have resulted from the accidental or intentional omission of the name at the end of v 7 (Curtis and Madsen *Chronicles* ICC, 107). Scholars currently tend to argue that Koz represents an actual preexilic person whose name was embedded in a source that the Chronicler employed (Weinberg 1981: 104). This view diverges from an earlier generation which argued that Koz and his compatriots of 1 Chr 4:5–8 originated at an artificial construct, formed from postexilic familial names (Rudolph *Chronikbücher* HAT, 32–33).

2. A priest who received the seventh position in the priestly order of the temple during the reign of David (1 Chr 24:10). An evaluation of the historical reliability of his existence in the time of David depends ultimately on the literary context of 1 Chr 24:1–19. Though there is general agreement that the priestly list originated after the Exile, its exact date remains debated. J. Liver (1968: ix, 29–32) associates the 24-course priestly organization to the reforms of Nehemiah, while H. G. M. Williamson (1979: 262–68) assigns it to the late Persian period. Because of genealogical connections between 1 Chr 24:7–18 and the Hasmonean priestly claims, L. Dequecker (1986: 94–106) dates the list to the Hasmonean era. The stylistic characteristics of the list, however, seem to link the list to the time of the composition of Chronicles. Whatever the exact date of the composition of the list, Hakkoz does not seem to represent an individual from the time of David. The Chronicler may have transformed the name of an

important postexilic family into the name of an individual for his priestly list in 1 Chronicles 24.

3. A prominent postexilic family, who returned from Babylon with Zerubbabel (Ezra 2:61 = Neh 7:63 = 1 Esdr 5:38). Upon their return to Jerusalem the family of Hakkoz were not able to produce the necessary genealogical records to prove their priestly lineage (Ezra 2:62 = Neh 7:64 = 1 Esdr 5:39). They thus had to wait upon the outcome of the casting of the Urim and Thummim. The outcome of this process is unknown. Only 1 Chr 24:10 suggests that the family may have been permitted to enter the priestly ranks. Other references to the family do not regard the family as priestly; nevertheless, they did obtain a certain degree of social prominence. A member of this family, Meremoth, constructed a section of Jerusalem's wall during Nehemiah's refortification of the city (Neh 3:21). The family seems to have retained its prominence well into the Hellenistic era. A certain Eupolemus, "the son of John, from [the family of] Accos," served as a special Judean ambassador to Rome in order to solicit Roman aid against the Syrians during the Maccabean War (1 Macc 8:17).

JOHN W. WRIGHT

HAKUPHA (PERSON) [Heb *ḥăqûpā'*]. Head of a family of Nethinim (temple servants) who are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:51 = Neh 7:53 = 1 Esdr 5:31). For further discussion see AKKUB.

CHANEY R. BERGDALL

HALAH (PLACE) [Heb *ḥălaḥ*]. 2 Kgs 17:1–6 narrates Israel's revolt against Assyria and the Assyrian conquest of Israel. In v 3 the Assyrian king is Shalmaneser V (727–722); but the capture of Israel's capital, Samaria, is historically credited to his brother, the Assyrian monarch, Sargon II (721–705). Isa 20:1 refers to the conquests of Sargon. According to Sargon's archives he captured Samaria and deported 27,290 people (*ANET,* 284). According to 2 Kgs 17:6, "He carried the Israelites away to Assyria, and placed them in Halah, and on the Habor, . . . and in the cities of the Medes." 2 Kgs 18:9 states that Shalmaneser captured Samaria after a three-year siege and in v 11, "the king of Assyria carried the Israelites away to Assyria, and put them in Halah. . . ." In 1 Chr 5:26 we read that the two tribes of Reuben and Gad and half of the tribe of Manasseh in the Transjordanian region (Gilead) were deported by Pul (his personal name), better known by his throne name, Tiglath-pileser (745–727), "to Halah, Habor, Hara, and the river Gozan. . . ." In 2 Kgs 15:29 this same king had captured Gilead, Galilee, etc. and deported the people to Assyria. Obadiah 20 says "the exiles in Halah who are of the people of Israel shall possess Phoenicia as far as Zaraphath" (RSV emending Heb *haḥēl-hazzeh,* "this army," to *Halah*). While it is unclear exactly who deported them to Halah, the site seems distinct from Habor (the city or river), Hara, and Media. The LXX considered Halah a river, possibly the Balikh, which flows from Haran to the Euphrates 100 miles W of the Khabur. The Balikh, Khabur, and Media combination would have the sense of geographic spread, i.e., Sargon spread the Israelites across the N part of the Assyrian Empire.

However, the exact location of Halah is still debated. Gehman (1970: 358) calls Halah a district to which captives of the ten tribes, i.e., not just those of the city of Samaria, were taken as exiles. This combines the exiles of Pul and Sargon and assumes the ten tribes were still distinct entities. Gehman identifies Halah with the later Chalchitis (Ptolemy 5.18.4) in Mesopotamia near Gozan (the later Gausanitis—Tell Halaf on the river bank) in the basin of the Habor or Khābûr river. Another source says Ptolemy's Chalkitis [sic] is near Gozan, on the Balikh river. Halah has also been identified as Akkadian Halahhu on the W bank of the Tigris near the mouth of the Lower Zab river S of the capital of Ashur, 70 miles S of Nineveh, 250 miles from the Balikh, which is W of Ashur and Nineveh (Gray *Kings* OTL, ^{2}1970: 644). Millard (1980: 602) identifies Halah with the Assyrian site of Halahhu, both a town and a district NE of Nineveh. Sennacherib's inscriptions refer to a gate of Nineveh named "the gate of the land of Halahhi." Halakku has been located near Kirkuk, 9 miles E of Nuzi, and 60 miles E of Ashur. An unidentified Halhu is related to Strabo's Calachene, a plain of N Assyria, E of the Tigris. There is a Chalonitis in Pliny and Strabo, NE of Assyria (cf. Millard), called Halah by Syrians. Halah has also been identified with Assyrian Kalah, biblical Calah (Gen 10:11), Nimrud, 18 miles S of Nineveh. Hilakku has been identified with Cilicia (Turkey). Pinches (*ISBE* 2: 1321–22 [1939 ed]) lists these various identifications, but considers all more or less improbable for philological reasons except Assyrian *Halahhu,* which (except for the doubling and the case ending) is the same as Halah, letter for letter. It is mentioned in *Western Asia Inscriptions* (2, pl. 53, l. 35), between Arrapha (Arrapachitis) and Rasappu (Reseph). Tablet K. 123 calls it *mat Halahhi,* "the land of Halahhu." It apparently included the towns of Se-bise, Se-irrisi, and Lu-ammu[ti?], which were centers for the Assyrian government. The first quote implies that Halah was near or in Gausanitis and had chief towns of these names. Of the eight personal names in K. 123, five are Assyrian; and the remainder are Syrian rather than Israelite.

HENRY O. THOMPSON

HALAK, MOUNT (PLACE) [Heb *hāhār heḥālāk*]. A mountain in the central Negeb, the identity of which is

uncertain. It is sometimes thought to be the same as Jebel Halaq on the NW side of the Wâdī Marra, N of ʿAbdeh. The Bible describes it in fair detail. It is probably located close to the ascent of Akrabbim (Num 34:4; Josh 15:3). It is a range in between the Wilderness of Zin and the wooded slopes of Seir (Josh 11:17). The ancient towns of Tamar, at the S tip of the Salt Sea (Ezek 47:18–19), and Kadesh-barnea flanked it on either side. It formed the boundary of Judah and Edom (Josh 15:1) and indicated the S limits of the land conquered by Joshua (Josh 11:17; 12:7). The Deuteronomistic History, by its reference to Mount Halak, stresses an important theological point. The Lord, just as he promised to Moses (Josh 1:3; 11:23) and the fathers (Josh 1:6; 21:43), gave to Israel the whole land, Mount Halak being a prominent landmark in the wilderness in the S.

PAUL BENJAMIN

HALAKAH. A noun derived from the Hebrew root *hlk.* "to walk." It is usually translated as "law" and denotes a specific ruling, a legal statement or discussion, the general category of legal material, or that portion of rabbinic literature which is not Haggadah. Halakah focuses on activity, specifically that activity in which primarily Jews should be engaged in personal, social, national, and international relationships, as well as in all other practices and observances of Judaism (*EncJud* 7: 1156; Safrai 1987: 121–22; Finkelstein 1975: 261; Ginzberg 1970a: 166).

Moore believed that "Jewish ethics are impressed upon the Halakah as well as expressed in the Haggadah" (1927: 141). However, the Halakah is not independent of the ethical categories of Judaism, and it "expresses" Jewish ethics as much as does the Haggadah (Ginzberg 1970a). In theory at least, there was no hierarchical ranking among matters which we today might label as ethical laws, civil laws, or ritual laws because all of them play the same essential role in God's design of the universe (*m.* ʾ*Abot* 2:1; *j. Qidd.* 1:1). Based on their reading of Genesis, the rabbis believed that God created a highly structured and ordered world and that the Torah, with its laws, commandments, proscriptions, and prohibitions provided the blueprint of this order (*Midr. Gen. Rab.* 1:1). It was the task of all Jews to study the Torah, so that they might understand God's plan and ascertain what they were expected to do in order to align themselves with the cosmic and social order God had designed. Because properly observing the entire Halakah was viewed as being essential to life on earth, the study of Torah in its broadest sense became the primary religious activity of rabbinic Judaism (Viviano 1978).

It has often been said that the Halakah is a set of rigid rules or commandments which were imposed upon the Jewish people by God (Moore 1927) or, in a pejorative sense, by the rabbis (Schürer *HJP*^{2} 1:69; 2 §25,iii). While the rabbis would agree that God is the ultimate source of the Halakah, they did not view the commandments or the Halakah as an imposition: "Beloved are the Israelites, for God has encompassed them with commandments: Phylacteries on head and arm, fringes on their garments, *mezuzot* on their doors" (*b. Men.* 43b).

The Halakah, however, developed as much from within the life of the Jewish community as it did within the rabbinic academies. Local customs frequently took on the force of Halakah (*EncJud* 7: 1160; Safrai 1987: 121, 128, 175–77; Zeitlin 1975: 294, 305). If the majority of the people could not follow a particular law or if its implementation would cause a substantial loss, it was rejected (*b. B. Bat.* 60b; *b. Moʿed Qat.* 2a; *EncJud* 7: 1159; Safrai 1987: 125, 132; Zeitlin 1975: 305, 311). Because the laws were given to the Jews so that they might live by them, almost any specific rule could be abrogated in a time of emergency (*Sipra* 86b and parallels; *Mek. Ish.* on Exod 31:16). If there were uncertainty about a specific practice, one need only to observe how the common people acted in order to discover what was acceptable (Safrai 1987: 177–79; Zeitlin 1975: 290).

From the rabbinic point of view, the major source of the Halakah was the written Torah, the first five books of the Hebrew Bible—Genesis, Exodus, Leviticus, Numbers, and Deuteronomy. The importance of the written Torah is illustrated by the fact that laws designated as *dĕʾôraytâ,* "from the Torah," were viewed as superior to those which were *dĕrabbānān,* "from our rabbis" (*EncJud* 7: 1157–59). Alongside the written Torah was the oral Torah, the most important part of which is its legal as against its nonlegal portions.

It is likely that the designation of something as part of the oral Torah did not necessarily mean that it was created or transmitted orally; rather, it denoted that part of the Halakah which was not explicitly contained in the written Torah (Brüll 1876: 5–6). Some held that the injunctions in the "Prophets" and the "Writings" were the earliest portions of the oral Torah (*EncJud* 7: 1157). In any event part of the Halakah in the oral Torah derives directly from interpretations of Scripture, by whatever definition (*EncJud* 7: 1158). Many consider biblical exegesis to be the earliest source of the Halakah in the oral Torah, but the arguments over the origin of biblical exegesis, midrash, continue today. Some hold that biblical exegesis was the original route by which postbiblical Halakah was created, while others claim that biblical exegesis postdates the nonexegetical statements of law contained in the Mishnah, considered by many to be the first written compilation of the oral Torah (Lauterbach 1951; Halivni 1986: 38–65; Safrai 1987: 153–55).

Another view of the oral Torah argues that it contains legal materials which were transmitted orally from God through Moses, Joshua, the elders, the Prophets, the men of the Great Assembly, and the rabbis (*m.* ʾ*Abot* 1:1). While these materials supplement, complement, and complete the material in the written Torah, they are not considered to be the product of actual biblical exegesis. A number of legal injunctions from the oral Torah are designated as "torah given to Moses at Sinai." These may be ancient traditions for which there is no scriptural support or at the most very faint support, but which are considered to be of equal authority with those which are specifically mentioned in the Torah (*EncJud* 7: 1158; Safrai 1987: 183). Some legal traditions are said to derive from "the words of the scribes" (*EncJud* 7: 1158–59), but this is an ambiguous phrase, for "scribes" existed throughout late antiquity, and their exact activity is unknown (*EncJud* 7: 1160; Safrai 1987: 128, 175–76; Zeitlin 1975: 305; Saldarini 1988: 241–76; Bickerman 1962: 54–71). Decrees and

ordinances also serve as sources for acceptable activity (Ginzberg 1970b: 79; Safrai 1987: 128, 163; Zeitlin 1975: 302–4). In addition, case law and precedent also form an important source for legal decisions (Safrai 1987: 164, 178–79). It appears that most of the legal traditions derive from individual sages and discussions within rabbinic academies, not from formal national institutions, such as the Sanhedrin or court, *bêt dîn* (Safrai 1987: 168; Neusner 1981). A large number of these traditions have little or no support in the Bible; for example, we read that "the rules about the Sabbath, festival-offerings, and sacrilege are as mountains hanging by a hair, for Scripture is scanty and the rules are many" (*m. Hag.* 1:8; Safrai 1987: 155–56). Halakot may deal with practical matters or may be totally abstract and theoretical; however, seldom is this distinction made clear in the rabbinic documents. While the statements of Halakah are essential elements within the oral Torah, the methods by which the injunctions were to be derived are also carefully delineated and are also viewed as part of the oral Torah (*EncJud* 7: 1158; Safrai 1987: 153–55; Halivni 1986). Judaism seems to favor justificatory law, so that the reasons given for a specific Halakah were frequently assessed and debated (Halivni 1986).

Because Judaism does not have a hierarchal structure of authority, in principle each sage and each court has equal authority, so that the pronouncements of all sages are theoretically of equal value. For this reason, the rabbinic legal discussions are characterized by differences of opinions, disputes, and debates (Safrai 1987: 168–75; Neusner 1971). However, the rabbinic documents do contain some guidelines concerning which sage is more authoritative on a particular subject (*EncJud* 7: 1164). Similarly, the rulings of one court may supersede the rulings of another only if it is composed of sages of superior intellect and ability (*EncJud* 7: 1159).

GARY G. PORTON

HALAKHIC LETTER FROM QUMRAN. See MIQSAT MAᶜASE HATORAH (4QMMT).

HALAM, KHIRBET EL-. See ARUBBOTH (PLACE).

HALHUL (PLACE) [Heb *ḥalḥûl*]. Town situated in the N-central hill country of Judah (Josh 15:58), within the same district as Beth-zur. This settlement is listed among the towns within the tribal allotment of Judah (Josh 15:21–62). During Roman times this town was known as Alulus. Josephus records that the Idumeans assembled here in A.D. 68 (*JW* 4.9 §6). The ancient name is preserved at modern Halhul, located approximately 6 km N of Hebron (M.R. 160109). The ruins of the ancient town are surely located here or in the immediate vicinity.

WADE R. KOTTER

HALI (PLACE) [Heb *ḥālî*]. The second town listed in the description of the territory of the tribe of Asher (Josh 19:25). As such, it is to be sought in the S section of the tribal territory. Abel (*GP,* 2: 341) suggested it be identified with Tell el-Aly (M.R. 160235), which, however, is a natural hill and not an ancient ruin. Aharoni (*LBHG,* 377) proposed Khirbet Ras ᶜAli (Tel ᶜAlil; M.R. 164241) on a spur close to the coastal plain, S of the Naḥal Sipori gorge. This site was occupied during the EB and LB periods and during the first stages of the Iron Age. Gal (1982: 22, 107) has suggested that Ras ᶜAli retains the ancient name but that the actual location of biblical Hali was at a site on the other side of the gorge (Tel ᶜAlil West; M.R. 164242), which shows evidence of having been occupied from the 10th to 8th centuries B.C.E. and again in the Persian period. If this identification and those of Beten with Tell al-Far and of Achsaph with Tell el-Harbaj (Aharoni *LBHG,* 371) are correct, then these three places listed in Josh 19:25 are located in the same vicinity and appear in the text in geographic order, but from N to S.

RAFAEL FRANKEL

HALICARNASSUS (PLACE) [Gk *Alikarnassos*]. The principal city of Caria in Asia Minor located on the coast opposite Cos on the N bank of the Sinus Ceramicus (37° 02' N; 27° 26' E). The ancient city had two ports protected by a small island called Zephyrion (or Arconnesus). The historians Herodotus and Dionysius and the elegiac poet Heraclitus came from the city of Halicarnassus. It was also the site of the famed tomb of King Mausolus. The city is

mentioned in passing as a recipient of a letter from Lucius in support of the Jews (1 Macc 15:23).

Halicarnassus was probably established prior to 2200 B.C.E. by an unknown tribe belonging to a language family the most vivid testimony of which was the -ssos/-nthos place name suffixes scattered throughout W Anatolia and parts of Greece. Halicarnassus was later populated by Mycenaeans (compare with Strabo 14.2.6). A continuity of the pottery at Halicarnassus from the close of the Bronze Age through the Greek Dark Ages appears to suggest that the site was continuously occupied by the same people during a period otherwise marked by population shifts and political upheaval.

During the Dark Ages the city was revitalized by Dorians and Ionians from Troezen in the Argolis (Strabo 8.6.14; and 14.2.6; Vitr. 2.8; Paus. 2.30; and Hdt. 7.99). Later epitaphial evidence shows that the city had a mixed population of Greeks and Carians who apparently used the Ionic dialect as their official language (see Meiggs and Lewis 1969: no. 32). Halicarnassus was part of a six-state Dorian confederation but was expelled from the league because a champion athlete from the city supposedly refused to dedicate a victory tripod to Triopian Apollo, the god in whose honor the games were held (Hdt. 1.144).

In the 6th century B.C.E. a citizen by the name of Lygdamis (I) usurped authority in Halicarnassus and was succeeded by his daughter Artemisia (I). Artemisia (I) supplied five ships to the Persian fleet and fought valiantly at the Battle of Salamis (see Hdt. 7.99; 8.88; 8.93; and an interesting tradition about her death in Ptolemy Hephaestion 190). Artemisia (I) transmitted the rule to her son Lygdamis (II). Herodotus opposed Lygdamis (II) and was exiled to Samos during his reign. Lygdamis (II) later ordered the execution of the historian's uncle, the epic poet Panyassis. Herodotus, however, returned to lead a conspiracy which drove the tyrant from power. Shortly after this, the city came under Athenian control for a brief time (Thuc. 2.9; and 8.42).

In the early 4th century the Carian cities were subjugated by Hecatomnus from Mylasia (395–377 B.C.E.). Hecatomnus had three sons, Mausolus, Hidrieus, and Pixodarus, and two daughters, Artemisia and Ada, who married their two older brothers. Mausolus succeeded his father and changed his capital to Halicarnassus. When Mausolus died in 353 B.C.E., he was buried in an elaborate tomb that was completed by his wife and successor Artemisia (II).

The so-called Mausoleum at Halicarnassus, one of the Seven Wonders of the ancient world, was rediscovered by C. T. Newton in 1857 using descriptions found in Vitruvius and Pliny the Elder. Some architectural and sculptural fragments are now housed at the British Museum. Pliny described the tomb as a circular structure 140 feet high and 410 feet in circumference. It was surrounded by 36 columns and covered by a pyramidal dome. According to Vitruvius the tomb was behind the agora, which was situated along the seashore. Still further away from the agora behind the tomb was a temple of Mars. The agora was flanked by the palace of Mausolus and the temples of Venus and Mercury.

Artemisia (II) was succeeded by Hidrieus, who died without leaving an heir. The crown passed to Hidrieus' wife, Ada, who was deposed by her youngest brother Pixodarus with the assistance of Orontobates, a Persian satrap and son-in-law of Pixodarus. Alexander the Great laid siege to Halicarnassus; defeated Memnon, the Persian general who was defending the city; and restored Ada to authority. Halicarnassus was later rebuilt and six towns were annexed to it as compensation for its losses (Pliny 6.29). The city suffered again during the Mithradatic War but was restored to its former prosperity by Cicero's brother Quintus (Cicero, *QFr* 1.8).

A number of Jews lived in Halicarnassus, and in the year 139 B.C.E. a letter was written by the Roman Senate on their behalf (1 Macc 15:23). A decree was issued in the 1st century B.C.E. granting the Jews of Halicarnassus the freedom to worship and to construct a "place of prayer" near the seaside, according to their ancestral customs (Jos. *Ant* 14.10.23).

SCOTT T. CARROLL

HALIF, TELL (M.R. 137087). A site on the N fringe of the Negeb, between Beer-sheba and Lachish.

A. Identification

Tell Halif (Tell Khuweilifeh) has been identified with biblical Ziklag, the city ceded to David by the Philistines (1 Sam 27:6–7). This suggestion was first made by M. Abel in 1938 on the basis of its proximity to Horvat Rimmon (Khirbet Umm er-Rammamin), which lies less than 1 km to the S (Abel, *GP* 2, 318). Already in the 19th century, C. R. Conder and H. H. Kitchener had identified this latter site with biblical En-rimmon. Both sites are mentioned in the territorial lists of Judah in Josh 15:31–32 and as part of the inheritance of the tribe of Simeon in Josh 19:5–7.

Tell Halif has also been identified with the later Byzantine settlement called Tilla. According to the *Onomasticon* of Eusebius, two large Jewish villages, Tilla and Rimmon, were located just 16 miles S of Beit Guvrin, which places them exactly in the Halif area.

More recently E. Oren has suggested that Tell Sera', on the Philistine plain 18 km W of Tell Halif, is Ziklag (Oren 1982). At the same time A. Kloner has argued that Tell Halif was the original site of Rimmon, its name having been taken and preserved at nearby Horvat Rimmon by the first Roman-Byzantine reoccupants of the area in the 2d century A.D. (Kloner 1980).

B. Location

Tell Halif is a prominent mound in the easternmost part of the high Shephelah at the N fringe of the Negeb. It faces the Hebron mountains to the E and overlooks the plain of Philistia to the W. Modern Kibbutz Lahav is located on its SE shoulder. The mound lies in a marginal and potentially erratic subsistence zone but occupies a strategic position astride the westernmost ridge of the Judean foothills. Its position commands the main S route from Egypt

and the Mediterranean coast eastward into the Hebron area.

C. Excavations

Serious investigations at and around Tell Halif began only in the 1950s following the establishment of Kibbutz Lahav. Initial efforts included informal survey work and intermittent salvage operations (Biran and Gophna 1970; Gophna 1972; Seger 1972; and Alon 1974).

In 1975 the Lahav Research Project, a private consortium of American scholars and institutions, was formed by Joe D. Seger to undertake an integrated study of the region focused on excavation of the ancient remains at Tell Halif. During Phase I, through 1980, five major seasons of field investigations were conducted (see Seger 1984a; Seger and Borowski 1977). Phase II work was initiated in 1983 (see Jacobs 1984). From the start excavation efforts were accompanied by complementary investigations of the region surrounding Lahav, its ancient environments and human ecology, as well as by an ethnographic study of the area's more recent bedouin and village Arab occupants. Primary excavation work has been concentrated in three major fields on the mound summit (Fields I–III), with satellite projects in Cave Complex A, just below Field I, and on Sites 101 and 301 of the lower town area to the NE. In addition, an intensive site survey of the region within a 10-km radius of the site is being undertaken.

D. History of Settlement

Researches in the Lahav area have documented a long history of habitation stretching from the Chalcolithic period in the late 4th millennium B.C. to modern times (see Table 1). The earliest settlement was on the NE terrace (Sites 101 and 301), where Chalcolithic and EB I occupants lived in open villages. During the EB II the settlement shifted onto the higher ridge to the W, and a well-fortified town was established overlooking both the E valley and the W coastal plain. Four substantial strata of EB II and III remains have been identified with a history roughly coterminous with the Old Kingdom period in Egypt. Excavated remains in Field I include major Stratum XV fortification walls with an outlying glacis. The site suffered a major destruction ca. 2550 B.C. after which occupation resumed and continued until ca. 2300 B.C. From this time and until the very end of the MB in the mid-2d millennium, the tell was abandoned.

However, following the 16th century B.C. Egyptian resurgence under the early 18th Dyn. pharaohs and the associated destruction of Stratum D occupation at Tell Beit Mirsim, located just 8 km to the N, settlement at Halif resumed. During the LB I reoccupation included the construction of a substantial "residency" type Egyptian house suggesting that the area was firmly under Egyptian control. Analysis of faunal remains from associated Stratum X remains in Field I shows a frequent occurrence *equus assinus* (donkey), suggesting that Halif may have served as a trading outpost or way station during this time. Following a major destruction at ca. 1400 B.C., the residency house was partially reconstructed and reused during the Amarna age; but during the LB IIB (Stratum VIII) the area of the house was completely transformed into a storage facility with a succession of stone-lined pits.

Table 1
TELL HALIF—MAJOR STRATA

Stratum	*Period*	*Date*
I	Modern Arab	A.D. 1800–1948
II	Islamic-Crusader	A.D. 700–1500
III (Site 66)	Roman-Byzantine	A.D. 100–600
(gap)	Early Roman	100 B.C.–A.D. 100
IV	Hellenistic	300–100 B.C.
V	Persian	500–300 B.C.
(gap)	Late Iron II	650–500 B.C.
VIA	Iron II	700–650 B.C.
	destruction	
VIB (Site 72)	Iron II	900–700 B.C.
VII	Iron I	1200–900 B.C.
VIII	LB IIB	1300–1200 B.C.
IX	LB IIA	1400–1300 B.C.
	destruction	
X	LB IB	1475–1400 B.C.
XI	LB IA	1550–1475 B.C.
(gap)	MB II	1850–1550 B.C.
(gap)	EB IV	2300–1850 B.C.
XII	EB III	2400–2300 B.C.
XIII	EB III	2450–2400 B.C.
XIV	EB III	2550–2450 B.C.
	destruction	
XV	EB II–III	2650–2550 B.C.
XVI (Site 101, 301)	EB I–II	3200–2650 B.C.
XVII (Site 101, 301)	Chalcolithic	3500–3200 B.C.

Aside from the abandonment of use of the storage area in Field I, only minor shifts in domestic architecture document the Stratum VIII–VII transition to the Iron Age I period in the early 12th century. In general, traces of 12th and 11th century occupation are limited. However, continuity through the period is indicated; and late 11th century settlement is inferred from the presence of degenerate-style Philistine potsherds and other late Philistine period artifacts. While the site clearly was not a major Philistine center, evidence, nonetheless, indicates that it was within the orbit of Philistine influences during the period of David's exile just before 1000 B.C. and thus may in fact have been Ziklag (see Seger 1984a).

During the 10th century and continuing into the Iron Age II period after 900 B.C., the site once more enjoyed an era of growth and expansion and was developed as one of Judah's frontier outposts. Perhaps as early as the reign of Jehoshaphat (874–849 B.C.), the mound was massively refortified with substantial walls and by an outlying glacis paved with a flagstone surface. The 9th–8th century is well marked on the mound by Stratum VIB occupation and by an extensive cemetery on the Site 72 hillside to the S. In both Fields II and III substantial late 8th-century domestic remains were found sealed by a massive destruction of the city. This has been associated with the 701 campaign of the Assyrian king Sennacherib against S Judah and Lachish. Iron Age II occupation was resumed by squatters for a brief time in the early 7th century, but by 650 B.C.

the site was completely abandoned and remained so until the Persian period after 500 B.C.

In the 5th century the E summit of the mound was again resettled. The remains of a substantial Stratum V building that probably served as a barracks or storage facility for a Persian military outpost were excavated in Field II. Above the Persian building two occupation phases of a subsequent Hellenistic domestic structure were found. A Ptolemaic coin from below its final-phase surface indicates that this Hellenistic occupation persisted at least into the late 3d century.

During the early Roman period between 100 B.C. and A.D. 100, the site once more lay abandoned. However, a dramatic recovery took place following the Roman destruction of Jerusalem and especially in the wake of the Second Jewish Revolt under Bar Kokhba in the 2d century A.D. Both Halif (Tilla) and nearby Horvat Rimmon (En-rimmon) were resettled. At Halif substantial remains of this occupation are found both on the mound and down its NE slopes on Site 101, and the occupation is documented also by presses and other installations throughout the surrounding countryside.

Site 101 continued to be occupied well into the early Islamic period. During the time of the Crusades, in A.D. 1192, a significant battle between Saladin and Richard the Lion Hearted took place at Beer Bustan, the area's main well just below the tell to the NW. In the 18th and early 19th century the site developed into the bedouin and village Arab market settlement of Khuweilifeh, which provides the Arabic name for the site.

HALL OF JUDGMENT. See JUDGMENT, HALL OF.

HALL OF PILLARS. See JUDGMENT, HALL OF.

HALL OF THE THRONE. See JUDGMENT, HALL OF.

HALL OF TYRANNUS. See TYRANNUS (PERSON).

HALLEL. A designation for a small grouping of psalms. The word comes from the Heb verb *hālal*, "to praise," since many of the psalms contain the phrase "Praise the Lord!" It has been variously used to describe the following psalm groups: 104–106, 111–118, 120–136, and 146–150.

Israel used the Hallel Psalms regularly in her three great feasts: Passover, Pentecost, and Tabernacles. Hallel Psalms 113–118 are called the "Egyptian Hallel"; in part, they recount the saving deeds of Yahweh from the time of the Exodus from Egypt under the leadership of Moses (to whom the authorship of these psalms was traditionally attributed). They were sung or recited at these feasts, the later Feast of Dedication (or Lights, the modern holiday Hanukkah), and the New Moon assemblies. They were not used at the more solemn occasions of the New Year and the Day of Atonement, where confession and self-examination predominated.

The celebration of Passover particularly utilized the Hallel Psalms 113–118. Jewish pilgrims sang these psalms on their way to Jerusalem. Bowman (1962: 743) relates that Psalm 118 was sung responsively by pilgrims and the Levites as the former approached to enter the temple and worship. The popular response to Jesus' entry into Jerusalem on Palm Sunday was the ritual welcome accorded to all pilgrims.

Jewish families sang Psalms 113–114 before the Seder meal and 115–118 afterward. In the Synoptic Gospels (Matt 26:17–29 [= Mark 14:12–25; Luke 22:7–20]), Jesus and his disciples ate a Seder (Passover) meal and sang a hymn before departing for the Mount of Olives (Matt 26:30). Thus, in all likelihood, they sang all or parts of Psalms 115–118 (or, less probably, Psalms 135–36).

The "Great Hallel" was identified with Psalms 120–136, 135–136, or 136 alone. It contains Israel's praise for Yahweh's provisions in the past and present. Along with Psalms 146–150, it was used in the daily morning service of the synagogue. See also PSALMS, BOOK OF.

HALLELUJAH. See PSALMS, BOOK OF.

HALLOHESH (PERSON) [Heb *hallôḥēš*]. The father of Shallum, ruler over half the district of Jerusalem, and one of those who, with his daughters, assisted in making

repairs to the city wall (Neh 3:12). Hallohesh is also described as one of the chiefs of the people and a signatory to the covenant established by Ezra (10:24).

FREDERICK W. SCHMIDT

HAM (PERSON) [Heb *ḥām*]. The name of the second son of Noah, and the brother of Shem and Japheth. The name appears 17 times in the Bible (Gen 5:32; 6:10; 7:13; 9:18 (twice), 22; 10:1, 6, 20; 14:5; 1 Chr 1:4, 8; 4:40; Pss 78:51; 105:23, 27; 106:22). It is either etymologically related to the word *ḥm,* "warm," "hot" (from *ḥmm,* "to become warm, hot"), or derived from the Egyptian Keme, "the black land" (a name for ancient Egypt). In support of the former, the descendants of Ham appropriately occupy the warmer or hotter lands of the S regions of the ancient world. In support of the latter, the name Ham is used in some of the later psalms in apposition to Egypt (78:51; 105:23, 27; 106:22).

A. Biblical Data

Ham's sons are Cush, Misraim, Put, and Canaan. The descendants of three of these—the Cushites (Ethiopians), the Egyptians, and the Canaanites—and their respective lands are mentioned hundreds of times throughout the Bible. The fourth son Put—Libya according to some, the Horn of Africa according to others—and his descendants figure less prominently. According to the biblical ethnographic conceptions, the descendants of Ham occupy chiefly the lands to the S and W of Israel. Some of his descendants, however, may have controlled part of Asia (cf. 10:6–20).

Ham is one of Noah's three sons who joined him in the Ark and thereby escaped the Flood (6:9, 13; 9:1–18). It was he who reported to his brothers that Noah, who had become a tender of vineyards after the Flood, was drunk and naked. His brothers walked carefully backward and covered their father (9:22–23). The disgrace of a drunken father, according to Ugaritic epic poetry, was a crime; and "looking upon the nakedness" of one's father, mother, or closest relatives was prohibited in Israelite tradition (Lev 18:7–19; 20:11–21).

Related to this episode, Ham is also distinguished as being the father of Canaan (9:18, 22) whom Noah, after he woke up from his drunken sleep, condemned to servitude (9:20–27) and after whom the land of Israel was named (9:18; 11:36; 13:12; 17:8). The text reads, "And Noah awoke from his wine, and knew what his younger son had done to him. And he said, 'Cursed be Canaan; a servant of servants [or, the bottom-ranked servant] shall he become to his brothers. . . .' " (9:24–25). This statement has been misinterpreted by medieval Jewish, Christian, and Muslim theologians, transferring the curse of Canaan on to Ham. Such an interpretation has no basis in the biblical text or in early Jewish thought. According to one postbiblical Jewish oral tradition (see B below), Canaan was actually Noah's *fourth* and youngest son—hence, he was Ham's brother, not his son. This and such phrases as "his younger son" and "to his brothers" in Gen 9:24–25 (the passage concerning Canaan) have led some exegetes to theorize that there was an earlier story separate from the flood story, with another list of Noah's sons as Shem, Japheth, Ham, and Canaan, and that a later tradition harmonized the two stories, making Ham the father of Canaan.

B. Later Jewish Tradition

Very few references are made to Ham in the so-called Apocrypha or Pseudepigrapha, or in the literature of Qumran (*Jub.* 4:33; 8:10, 22–24; 9:19; *L. A. B.* 1:22; 4:6; *T. Sim.* 6:4; *T. Isaac* 3:15). The most important references are found in the book of *Jubilees.* According to one of these, it was Ham who, together with his other sons Cush and Misraim, cursed his son Canaan, because Canaan violated the divine ordinance of land distribution and usurped the dwelling and inheritance of the children of Israel, the land of Canaan (*Jub.* 10:28–34). According to another the land given to Ham is hot, to Japheth cold, to Shem neither hot nor cold (18:12–30). See Fig. GEO.05.

The first world empire, the building of cities, and particularly the building of the Tower of Babel are attributed to Ham's grandson Nimrod, the son of Cush (*b. Ḥul.* 89a and *ʿAbod. Zar.* 53b; *Pirqe R. El.* 24; cf. also *3 Enoch* 1; *L. A. B.* 4:6–8; 5:1). According to a 13th-century ethical work called *Sefer ha-Yashar* (Noah 22), Ham stole from Noah the garments which God had originally made for Adam and Eve and which had been in the possession of Enoch and Methuselah and gave them to Nimrod. The quasi-Jewish Hellenistic *Sibylline Oracles,* in which the sons of Noah are given the names of Greek gods (3:110–15), and the gnostic Sethian *Apocalypse of Adam* (V, 5 72:17; 73:14, 25; 74:11; 76:134) mention Ham in the context of the division of the world and empires among the sons of Noah.

Few biblical stories are as enigmatic as Noah's curse of one of his descendants, popularly but erroneously known as "the Curse of Ham." Some later Jewish traditions speak about the punishment of Ham personally (Tanhuma Noah 13) or his immediate family (*Pesiq. R.* 21:22 [ed. Friedmann]) on account of "his sin." That Ham committed a sin is not questioned (*b. Sanh.* 70a; 108b). The expression "sin of Ham" is also found once in *Jubilees* (22:21). But the popular expression "curse of Ham" is found neither in biblical nor postbiblical Jewish literature.

Most later Jewish sources make it clear that Canaan, not Ham, suffered the curse (*Bek.* 13a; *Qidd.* 7a; 67b; *Lev. Rab.* 17:5; *Midr. Tadshe* 17; etc.). In their speculation as to why Canaan was cursed instead of the guilty Ham, some rabbis went as far as to assert that God wanted to spare the other members of his family which naturally included Cush, Misraim, and Put (*Midr. Ha-Gaggdol* Bereshith, Noah 25). Others, however, not content with this answer alone, chose to speculate that Noah, stopped by Ham from having a fourth son, in accordance with the law of retaliation cursed Canaan, his fourth son (*Gen. Rab.* 36:5–7). Still others, not being satisfied with this answer, propose the syllogism that since God had already bestowed a blessing upon Ham (Gen 9:1) and since a blessing cannot be retracted nor can a curse be substituted in its place, Noah put the curse on his grandson. None of these explanations seeming adequate, others suggest that not Ham but Canaan himself must have been the real culprit, ascribing to him varieties of sins which he might have committed against Noah—whether it was seeing and reporting Noah's nakedness or being involved in a disgraceful act of castration or sexual assault against Noah (cf. also *Gen. Rab.* 36:5–7; *Tanhuma* (Buber)

49–50; *Tanhuma* Noah 13–15; *b. Sanh.* 70a and *Pesaḥ* 113b; *Targum Jonathan; Genesis Apocryphon* 19:13).

It is not until the Middle Ages that the curse of Canaan became attributed directly to Ham by Jewish, Muslim, and Christian writers equally (see, e.g., Saadia Gaon, *Perush Rabbenu Saadia Gaon al ha-Torah* [ed. Y. Gafah, p. 21]; Rashi on Kiddushin 22b, *sade niqneth;* cf. also Benjamin of Tudeal, the 12th-century traveler, who speaks about the sons of Ham being black slaves [*Maasot Benyamin* or *The Itinerary of Benjamin of Tudela,* 1625]).

C. Christian Tradition

Early Christian exegesis was not kind to Ham. Augustine called him the "wicked brother," and said that "Ham (that is hot) who as the middle son of Noah, and as it were, separated himself from both, and remained between, neither belonging to the first family of Israel nor to the fullness of the gentiles, what does he signify but the tribe of heretics, hot with the spirit, not of patience, but of impatience, with which the breasts of heretics are wont to blaze, and with which they disturb the peace of the saints?" (*City of God,* Book 16: 2). Elsewhere he compared Ham with Cain.

Chrysostom likewise spoke about the sons of Noah who received good reports because they loved their father "whereas the other was cursed because he had no love for his father" *(Homilies on I Thess 4).* According to Clement of Rome, *"Tertia decima generatione cum ex tribus filiis suae ex maledicto conditionem servitutis induxit"* (*Recognitiones,* Book 1, 30; cf. also *Cave of Treasures,* fol. 19b [Budge's edition, p. 121]).

The objective of the early Christian theologians was primarily exegetical exposition, wrong as it may be, for homiletic purposes. Beyond that, they did not propound the slavery of African people on the ground that they are descendants of Ham. On the other hand, their rationalization of the biblical curse of Canaan, especially in the medieval period, contributed to the later justification of slavery and colonialism: the "Curse of Ham" was coined and the punishment transferred from Canaan and his descendants to Ham's whole family systematically (see, e.g., Jobson's *The Golden Trade* [1623], ed. C. Kingsley [Teignmouth, 1904], 65ff.; cf. also Pernal 1940).

D. Islamic Tradition

Ham is not mentioned by name in the Quran but is alluded to as the unbelieving son who refused to follow his father at the time of the Flood and who consequently drowned (11:44[42]–49[47]). Extra- and post-Quranic Islamic traditions are acquainted with the biblical story of Gen 9:18–27 concerning the curse of Ham's son, Canaan, and with later Jewish and Christian legends. Muslim historians repeat versions of a certain spurious Jewish haggadic tradition that Ham's sin was carnal relations in the Ark; and they add to his offense an assault against his father; they claim that, although born white, he turned black as a result of his father's curse.

According to al-Tabari Jesus brought Ham back to life. Ham related episodes of life in the Ark and the end of the Flood to the apostles. Al-Tabari meliorates the fate of Ham—although he was reduced to servitude, his brothers were lenient. The historian al-Masude, a contemporary of Saadia Gaon writing in the first part of the 10th century, obstinately misrepresents Gen 9:25 quoting it: "And he said, 'Cursed be Ham. . . .' "

EPHRAIM ISAAC

HAM (PLACE) [Heb *hām*]. In Gen 14:5 the locality at which CHEDORLAOMER and his allies defeated the Zuzim. It is listed between Ashteroth-karnaim (in Bashan) and Shaveh-kiriathaim (in Moab). Ancient interpreters were uncertain about its location. The Qumran text 1QapGen 21:29, which has *zwmzmy'* instead of Zuzim, accordingly replaced Ham with *'mn.* The LXX, *Tg. Neof.,* and Vg understood *bhm* of the Heb text as *bāhem* "among them" (i.e., among the Rephaim), rather than *bĕ-hām,* "in Ham." The *Tg. Onq.* and *Tg. Ps.-J.* rendered Ham by *hmt'* (Hemtā or Hamettā), as though they knew of a place so named in the appropriate region. But no such toponym appears in the Talmudic literature, unless it is a deliberate alteration of *ḥammeṭa dĕ-pĕḥal,* a place with hot springs near Pella in Transjordan mentioned in the Jerusalem Talmud. Ham is believed to appear as *hum* in the Palestine List of Thutmose III, No. 118; but its place in the enumeration provides no clues as to the area of its location. It has been suggested that Ham was identical with the small mound (37 × 34 m at the top) at the modern village of Hām, 5.5 km S-SW of the city of Irbid in N Jordan. See BETH-ARBEL. The surface survey of the mound by N. Glueck revealed great numbers of medieval and Roman sherds, a considerable number of Iron Age I–II sherds, a small quantity of EB I–II sherds, but no MB and LB sherds. Unless excavations prove differently, this gap in the occupation of the site excludes its identity with Hum of Thutmose III's list, though not necessarily with Ham of Genesis 14. A. Bergman (1934: 176) thought to have discovered another mention of Ham in the Bible by emending *ḥwtyhm* (*ḥawwōṯêhem,* "their villages") in Num 32:41 to *ḥwt-hm* (*ḥawwōt-hām,* "the villages of Ham") as the earlier name of Havvoth-Jair. However, the biblical passages on the latter disagree about their location (in Bashan or in Gilead); and in any case Tell Hām was too insignificant a site to have given its name to a cluster of 30 or 60 fortified cities.

MICHAEL C. ASTOUR

HAMAN (PERSON) [Heb *hāmān*]. A nobleman, promoted to the rank of vizier by King Ahasuerus, and mortal enemy of the Jews in the book of Esther. After being made vizier by the king, Haman became enraged at Mordecai, who ministered at the king's gate, for not obeying a royal command to bow down and show proper respect to Haman (Esth 3:2–5). Haman decided therefore not only to eradicate Mordecai but also every Jew in the realm (3:6). He convinced the king that the Jews were disobedient to his rule and deserved to be eliminated (3:7–11). He received the authority to send out a decree ordering the elimination of all Jews and the confiscation of their property (3:12–14). In the meantime he built a gallows especially for Mordecai and was planning to ask the king's permission to hang him from it (5:9–14). This plan, however, was foiled when Queen Esther turned Ahasuerus against Haman at the second of two feasts she had prepared for the two men. When Haman accidentally fell on Esther's couch pleading for mercy, Ahasuerus thought he was trying to assault her. Thus he had him hanged from the same gallows that Haman had prepared for Mordecai (7:5–10).

This story portrays Haman as the adversary par excellence of the Jews. The MT tradition links him with AGAG, the ancient king of the Amalekites, who were enemies of the Hebrews (Esth 3:1, 10; 8:3, 5; 9:10, 24; cf. 1 Samuel 15; Num 24:7; Exod 17:8–16; Deut 25:17–19). Moreover, Mordecai is portrayed as a relative of King Saul, who was in turn the enemy of Agag, Haman's ancestor (Esth 2:5; 1 Sam 9:1–2). Thus the ancient conflict between Israel and Amalek is portrayed as continuing in the contest between Mordecai and Haman (McKane 1961; Clines 1984: 14–15; Berg 1979: 66–67). This interpretation of the person of Haman is continued by Josephus, the Targums of Esther, as well as the Talmud. These sources consistently describe Haman as a descendant of Amalek (Paton *Esther* ICC, 194–95; Thornton 1986; Moore *Esther* AB, 35). The LXX treats the figure of Haman in a similar way. He is never described as an Agagite but rather as either a "Bugaean" (Gk *Bougaios;* cf. LXX 3:1; 9:10; A:17), perhaps a reference to a famous friend of Alexander the Great, or as a "Macedonian" (Gk *ho Makedōn;* cf. LXX 9:24). Either way Haman would be seen as a hated Greek by later Jewish audiences who still remembered the atrocities of Greek rule (Moore 35–36; Clines 1984: 44).

This does not mean that Haman was a purely fictitious character. The name *agag* may be derived from *agazi,* a Mesopotamian tribe mentioned in Sargon's annals (Paton, 69–70). (Although it is difficult to explain how the final *g* in Heb *agag* has shifted to *z* in Akk *agazi.*) In addition, *hāmān* may be a Persian name derived from Old Persian *hamanā,* "illustrious," or perhaps *homa,* "a sacred drink." Several link it with *omanes,* a Persian name mentioned by Greek authors (Paton, 69; Moore, 35). Moreover, the ten sons of Haman (Esth 9:7–10) also appear to have genuine Persian names (Clines 1984: 323; Gehman 1924: 327–28). What we seem to have then in the character of Haman is a historical figure whose lineage has been reshaped and reinterpreted by the various traditions in a symbolic way (Clines 1984: 293).

JOHN M. WIEBE

HAMATH (PLACE) [Heb *ḥāmāt*]. HAMATHITES. A city in Syria, the S border of which often became part of the formula for the N idealized border of Israel (cf. 1 Kgs 8:65; 1 Chr 13:5). The city was an object of the Assyrian conquest (Isa 36:19), and some of its inhabitants were exiled and settled in Israel (2 Kgs 17:24). The site has a long history, from early prehistoric through modern times. It was known as *Ematu* in the Ebla texts, and in the Syro-Hittite (Luwian) hieroglyphic inscriptions it is called *Amatu.* During the classical period its name was *Epiphaneia Syriae* or *Epiphaneia ad Orontem.* The non-classical name is thought to mean the "warm place" or "fortress." The modern name of the site is Hama.

6. Roman Period

A. Location and Excavations

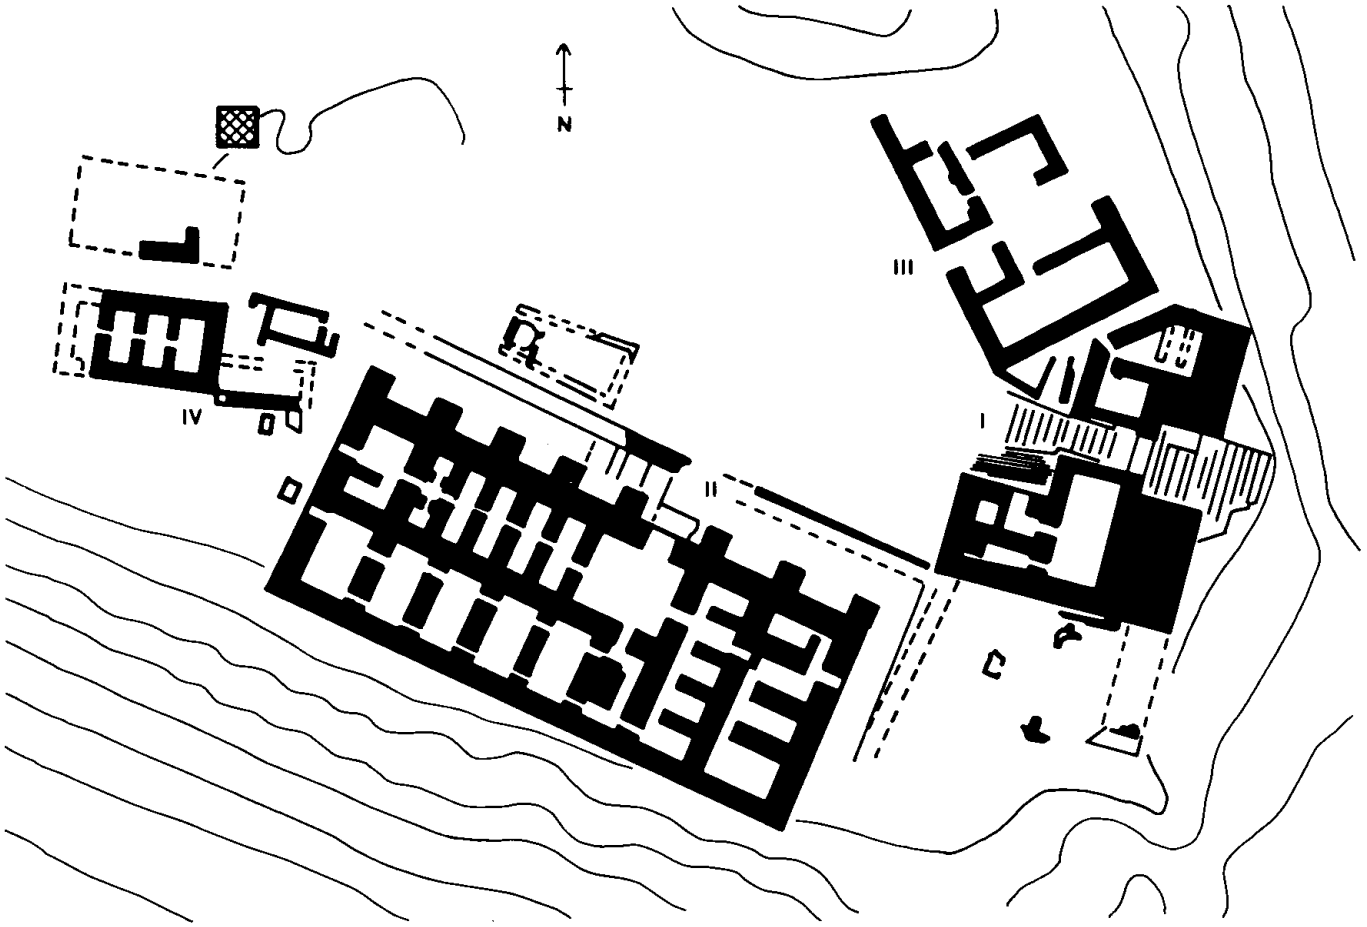
Hamath is situated in central Syria (M.R. 312503) where the main road from the N first crosses the river al-ʿĀsī, the ancient Orontes, 214 km N of Damascus. The river flows through the town from SE to NW, in the form of an S. The greater and older part of the town lies on the left bank and is dominated by the Citadel Mound, ca. 45 m high and ca. 400 × 300 m. From 1931 through 1938 the site was excavated by a Danish expedition, which opened a total area of 18,000 m^2, to a depth varying between 4 and 29 m. In addition, 48 smaller excavations were made in the modern town and a few in the neighborhood. The excavations on the Citadel Mound revealed a long series of cultural layers, numbered from the top, M marking the earliest, those of the Neolithic period, 6th millennium B.C., and A, the top layers containing remains from the Middle Ages.

B. Results of the Excavations

1. Prehistoric Finds. The earliest signs of human presence in the area are the so-called pebble tools from the Pluvial A period corresponding to the earliest two glacial periods of Europe, Günz and Mindel; they were found by Dutch geologists at Šarya in the E outskirts of Ḥamā. Somewhat later, from the First Interpluvial, the Second Interglacial period of Europe, are artifacts of Acheulean and Levalloisian types collected near Ḥamā. Seven Neolithic layers were distinguished on the tell, bearing witness of a culture related to that in the ʿAmq at the lower Orontes.

In Chalcolithic times, in layer L (ca. the 5th and most of the 4th millennium B.C.), there was a strong cultural influence from N Mesopotamia, probably because of intensive barter. This layer, however, also comprised obsidian from Asia Minor. In layer L 3 Ḥalāfian pottery appeared together with local imitations of pottery from Samarra. At the end of the 5th millennium, the influence from the SE was stronger, as is shown by a local variety of the ʿUbaid ware. Houses at that time often had one large room with a hearth in the middle. The dead were buried under the floors. Board-shaped idols and animal figures of clay indicate the emergence of artistic development, as do stamp seals of stone or clay with incised geometric patterns. Some of the seals must have been personal identification marks like those of Mesopotamia in the 4th millennium, when the first attempts of writing developed. About 3300 B.C. full urbanization was a reality in Syria.

2. Early Bronze Age. The K layers belong to the earliest Bronze Age. Already in K 10, the potter's wheel appeared; and a terrace wall may be part of a true town wall; but houses were soon constructed beyond it. Seals and figurines of Mesopotamian types and primitive local sculptures have been discovered. About 2600 B.C. more primitive tribes from Asia Minor made their way into central Syria as inferred from a new, mottled reddish or yellow and black, polished pottery, the so-called KHIRBET KERAK WARE; at Ḥamā it turned up in K 5, from which period dates also the earliest-found casting mold for bronze tools. Interments under the houses became rarer; and a large space was reserved for round structures, which were probably grain silos.



Layer K 1 had signs of a destruction, which was followed by a rebuilding in J 8. Layer J is the fully developed EB. Apparently burials no longer occurred in the town, which had become a densely built-up area with narrow streets or alleys. From K to J the pottery did not change very much, but a tall goblet was the leading characteristic all through J 8–1, and "Goblet" or "Chalice Culture" has become a popular denomination of this period's Syrian civilization. In J 5 a spade-like rope-traction ard was used for tilling the ground, but soon the ard-plough gained predominance. Botanical finds indicate cultivation of barley, wheat, probably emmer, horsebean, lentil, a plant with seeds resembling peas, wine, cherry, and olive. Oil lamps were flat bowls with pinched rims to produce a spout for the wick. The wheeled carriage, and perhaps the horse, were known. Husbandry comprised at least donkeys, oxen, sheep, goats, pigs, and dogs. The town of J 5 suffered a violent destruction followed by a slow decadence in J 4–1. The J 5 pottery corresponds completely to that in the destruction layer of Ebla, modern Tell Mardikh, the center of a wealthy kingdom which reached its highest peak in the 24th century B.C. Evidently the same catastrophe hit both sites in the 23rd century, probably a consequence of the Akkadian conquest of N Syria; the date is confirmed by a C_{14} analysis of material from Hamath.

3. Middle and Late Bronze Ages. Nomads from the N part of the Euphrates valley, in Akkadian named "Amurru," (i.e., "West"), caused much trouble in Syria about 2000 B.C. In the 19th century these so-called Amorites established their own states, and the finds in H 5 actually present a new picture. In the middle of the town, enormous cylindrical grain silos were constructed; the dead were buried in rock-cut chambers outside the urban area; and the ceramic repertoire was simple and monochrome with combed or ropelike patterns and with a carinated bowl as the leading type. Between the MB layer H and the LB layer G, no real difference in culture can be proved; but H 1 showed signs of a great destruction, perhaps caused by the Hittites, who invaded N Syria ca. 1375 B.C. At that time the frontier of the Egyptian Empire was only about 50 km S of Hamath, the Bronze Age name of which, *Ematu,* may be identical with the *Imat* or *Amata* of Egyptian texts. Sherds of imported Cypriot and Mycenaean vases date the layers of the G period to the 14th and 13th centuries B.C. Some buildings were more spacious and had corridor-like storerooms resembling those of palaces elsewhere. However, the LB town may have been administratively subject to the neighboring, more wealthy city of Qatna.

4. Iron Age. According to the Bible the king of Hamath, Toi, sent his son, Joram, with gifts and congratulations after David had defeated Hadadezer, ca. 975 B.C. (2 Sam 8:9–10; cf. 1 Chr 18:9–10) Solomon, however, is said to have built fortresses and grain stores in part of Hamath's territory (2 Chr 8:4); Jeroboam II also is said to have defeated Hamath (2 Kgs 14:28). Nevertheless, the Assyrian records reveal that in 853–845 B.C. the Hamathite king, Urhilina, played an important role in the great coalition which for a time was able to stop the Assyrian advances toward the W. Stone blocks with Luwian inscriptions in Syro-Hittite hieroglyphs found at Ḥamā in the 19th century refer to Urhilina's renewal of a temple dedicated to Baʿalat and to his son, Uratamis, fortifying the town; the temple had been somewhat neglected under Urhilina's father, Paritas, and under his anonymous grandfather. In the first half of the 8th century B.C., under King Zakkur, from whom a victory stele inscribed in Aramaic is kept in Paris, Hamath apparently reached its greatest power, dominating most of Syria from the Amanus to the Lebanon and from the Mediterranean to the desert. But in 738 ʿEnel of Hamath was forced to surrender 19 provinces to the Assyrians, i.e., the coast and the N part of the Orontes valley. In 720 a usurper, Iaubiʾdi, perhaps of Palestinian origin, tried to regain the lost territory but was defeated and killed; and a number of the inhabitants were deported and the whole country incorporated in the Assyrian Empire.

The remains of biblical Hamath were discovered in the so-called Syro-Hittite or Early Iron Age layers F 2–1 and E 2–1 and are supplemented by the cemeteries found outside the mound. In the troubled times around 1200 B.C., several profound changes took place. A new burial rite, that of urn fields with cremation, was introduced; weapons and tools of iron appeared among which was the cut-and-thrust sword. The fibula replaced the dress pin, and the pottery developed new shapes and patterns in a "geometric" style showing influence from the Mycenaean culture in Greece and Cyprus.

The Royal Quarter was found on the SE part of the mound. See Fig. HAM.01. Its ruins, called Buildings I–IV, spread over an area of at least 160 × 160 m around an open central space with a small sanctuary. Toward the SE was a towered gate (I); toward the NE a temple, probably

HAM.01. Plan of the Royal Quarter at Hamath, showing buildings I–IV. *(Adapted from Fugmann 1958: 151, fig. 185)*

that of Baʿalat (III); in the W, a small gate (IV) led to the other quarters of the town; and to the S was a palace (II). The palace had a large reception hall, many storerooms, and an upper story, which seems to have been the royal residence. The entrances to the buildings were guarded by lion sculptures half in relief, and the front of the palace was guarded by colossi in the round. The fittings of the central sanctuary comprised a huge stone basin and two stone altars, one of which had the shape of an empty throne with armrests representing sphinxes. The basin and the throne obviously correspond to the Copper Sea and the cherubim-borne mercy seat in the contemporary temple of Jerusalem. A relief stele of ca. 900 B.C. was reused as a threshold in the supposed Baʿalat temple. The front of the stele has a representation of a seated god served by a smaller person, most likely the king; below this is a monster with two lion heads and the body of an eagle, a creature which in Mesopotamia was the symbol of the war god Ningirsu. The storerooms of the palace contained jars for grain, wine, and oil, and included tools, weapons, horse trappings, and much more. A foundation document with the impression of a cylinder seal in the style of the first half of the 8th century was found under the E wing of the palace, and in front of the building were bricks with incised Aramaic inscriptions mentioning the *major domus* Adanlaram. Scanty remains of clay tablets inscribed in cuneiform writing, ritual texts, and a letter to king Uratamis were discovered in the temple.

Among the funerary offerings the most spectacular are a gold-plated bronze statuette of a seated god with beard and horns and an ivory goblet with a handle in the shape of a wild goat.

Other fine works of art were found in a small palace, Building V, in the SW part of the town (e.g., ivory reliefs from furniture, which seem to be local products). Several cylinder and stamp seals were brought to light, both in the cemeteries and in the town, including reused items, and sealings, among which was one with the name of Adanlaram. The cremation burials ceased about 700 B.C., and everywhere in the town indisputable signs of the Assyrian ravages were visible. The buildings perished in a conflagration which was so vehement that even some basalt sculptures and bowls partly melted. After the catastrophe most of the site was abandoned; but the literary sources report that Hamath still existed in the 7th and 6th centuries B.C.; and they are corroborated by a few remains from that period, now labeled E/D.

5. Hellenistic Hamath. Under the Seleucids the town revived and was named Epiphaneia, presumably after Antiochus IV Epiphanes, who reigned from 175 to 164 B.C. The excavations have shown that all over the mound a new settlement was laid out according to a rectangular plan

with the streets orientated N-S and E-W. The coins found under the constructions date from the 3d and 2d centuries B.C. and thus confirm the attribution to the monarch. In the middle of the mound, a large ruin was transformed into a podium measuring ca. 20 × 20 m, which may have supported the principal sanctuary. Most of the names scratched or painted on pottery were Greek; only a few were Semitic. No doubt, Epiphaneia was almost completely included in the European cultural sphere; but it was a small and rather insignificant provincial town.

6. Roman Period. In 64 B.C. the Romans conquered Syria, and in 52–50 and 40 B.C. the Parthians invaded the country. But a coin hoard dated to the first half of the century betrays nothing of these events. During the Roman domination the town gradually expanded into the valley, where remains of a 3d-century A.D. temple are preserved in the present Great Mosque. In the 4th or 5th century A.D. it was transformed into a church, rebuilt in the 6th century; and recent finds nearer to the mound (under the Greek Orthodox cathedral and Episcopal residence) indicate the existence of another large church with mosaic floors (ca. A.D. 415); the earliest local bishop known was Mauritius about 325.

Probably large waterwheels similar to the present *nawaʿīr* or norias (which a tradition attributes to the Romans) were a dominant feature in the town's physiognomy, as they were in neighboring Apameia, where one was represented in a mosaic. Roman tombs were discovered in the rocks to the W. In the largest one, of the 2d century A.D., funerary plaster masks, limestone busts, and statues portray the deceased. Although of modest local workmanship, they are closely related to those found in the cemeteries of the important caravan town Palmyra. That the tomb was still used in the Christian period is established by the inscriptions and crosses on the walls. A few marble sculptures have survived in the town, hidden away by a faithful pagan worshipper. Two of them are busts of the Greco-Egyptian god Serapis, respectively a copy and a variant of Bryaxis's famous colossal cult statue from the 4th century B.C. in Alexandria. Compared with biblical Hamath, the Greco-Roman town marked both a step backward insofar as it had lost the characteristics of a capital in an independent state and an advance since it profited from participation in the culture of a world empire. The care of the central government is shown by the fact that a fortification wall was built under Constantine the Great, or more likely Justinian the Great, to avert the danger of Sassanian attacks.

After the Muslim conquest in A.D. 636, the ancient name of the town was resurrected.

MARIE-LOUISE BUHL

HAMATH, ENTRANCE OF (PLACE) [Heb *lĕbōʾ ḥămat*]. A geographic location in modern Syria which is specifically mentioned as a part of the N boundary for the land promised to Israel (Num 34:7–9; Josh 13:5; Ezek 47:16). The land of HAMATH, with which Lebo-Hamath is associated, was well-known and may explain the function of Lebo-Hamath as a boundary marker. However, Lebo-Hamath itself may also have been well-known (*RLA* 6: 410).

The question of the exact location of Labo-Hamath has not been decisively answered. Some propose that the whole phrase *lĕbōʾ ḥămat* must be taken together as the name of a city. Riblah has been one possible site because of the association of Lebo-Hamath with Zedad and Hazar-enan (see Num 34:7–9). More strongly supported, however, is modern Lebweh, located below Riblah at the source of the Orontes river (attested in Assyrian texts as *La-da/ab-ʾu-u*). Lebo occurs in some Egyptian inscriptions (*rwbj* in the Execration Texts, *la-bi-ʾu* in the syllabic orthography of the New Kingdom) in reference to a city S of Hamath in the Lebanon valley, corresponding to modern Lebweh.

Others (including RSV) analyze *lĕbōʾ ḥămat* as a construct noun phrase. The infinitive *lĕbōʾ*, "to enter," "to approach," is taken together with the place name Hamath, specifying a particular geographic area of Hamath. Three

suggestions have been given for the location of a possible area known as Lebo-Hamath. The Orontes valley, between Antioch and Seleucia, is one proposal. Also, an area near Wâdī Nahr el-Barid has been suggested. These first two ideas, however, are not well substantiated. More likely is the last notion of the lower part of the valley of Coele-Syria between the Lebanon and the Anti-lebanon mountains (see Josh 13:5; Judg 3:3; Num 13:21; see also CANAAN).

TOM F. WEI

HAMATH-ZOBAH (PLACE) [Heb *ḥămāt ṣôbâ*]. A compound place name found only once in the Bible (2 Chr 8:3). It occurs in an account of Solomon's fortification program throughout his empire (8:1–10). Verses 3–4 briefly state that Solomon captured Hamath-zobah in a military expedition and went on to fortify the great Syrian oasis of Tadmor and to build store cities in Hamath. These events are not mentioned in 1 Kgs 9:10–22, the passage that is roughly parallel to 2 Chr 8:1–10.

The exact referent of this name is not clear. Some scholars identify the name with the combined regions of the ancient states of Hamath and Zobah, suggesting that the Chronicler is using Persian period (i.e., his contemporary) terminology for that area, since during the Persian period Zobah was part of the province of Hamath (Noth 1937: 45–47; Myers *2 Chronicles* AB, 47–48). Others, however, propose that Hamath-zobah was the name of a city in the kingdom of Zobah. Eissfeldt (1975: 592–93) suggested that it was the capital of Zobah, a city quite distinct from the Hamath which was capital of the state of Hamath. Lewy (1944: 443–54) also viewed it as a city of Zobah and identified it with Baalbek/Heliopolis in Lebanon.

Another proposal has been made by Y. Aharoni (*LBHG,* 319, n. 54), who noted that the major manuscripts of the LXX read *Baisōba* instead of Hamath-zobah in 2 Chr 8:3. Arguing that the Greek reading represents Heb *Beth-zobah,* he proposed that the Greek reflects the original text, that the current Hebrew reading is the result of a scribal error, and that the town referred to here had no connection with the name Hamath.

Unfortunately, little certainty can be reached on these matters, although a few comments are worth making. The wording of 2 Chr 8:3 slightly favors the interpretation of Hamath-zobah as a city name, since similar occurrences of the verb "to go" in the sense of a military campaign normally appear in accounts of attacks against cities (cf. Judg 9:1; 1 Kgs 22:6 = 2 Chr 18:5; 1 Kgs 22:15 = 2 Chr 18:14). But even assuming that it is a city name, no further evidence is available which would allow one to determine whether the Hebrew or the Greek text preserves the name more accurately.

The question of the historical accuracy of this account of a military campaign by Solomon is also unsettled. The differing opinions on this passage are largely based on the varying evaluations of the historical reliability of Chronicles as a whole and particularly of the material in Chronicles that is not found in Kings. Those who generally accept the assertion in 1 Kgs 5:1(—Eng 4:21) that Solomon controlled the Levant as far N as the Euphrates usually assume some historical accuracy for the account of the campaign against Hamath-zobah (e.g., Eissfeldt 1975: 592–93; Malamat 1963: 7; Aharoni, *LBHG,* 319, n. 54). Others (e.g., Miller and Hayes, *HAIJ,* 197–98, 208–10) are much more skeptical about the extent of Solomon's empire in the N in general and about this passage in particular, arguing that the account occurs in the middle of a passage (8:2–4) that seems to be a serious distortion of what is found in 1 Kgs 9:10–18. In 1 Kgs 9:10–14 Solomon gives 20 cities to King Hiram of Tyre, while in 2 Chr 8:2 Hiram gives the cities to Solomon. 1 Kgs 9:15–18 makes no reference to Hamath at all and mentions Tamar, a small town in Judah, instead of Tadmor, the great oasis city in Syria referred to in 2 Chr 8:4. On the issue of the historical reliability of Chronicles, see CHRONICLES, BOOK OF.

HAMID (PLACE). See ABU HAMID, TELL.

HAMMATH (PERSON) [Heb *ḥammat*]. Apparently a descendant of Hur, son of Caleb; and also the father of the Rechabites (1 Chr 2:55). It is possible that this Hammath is to be identified with the city of Hammath in Naphtali (Josh 19:35, where LXX A reads *hamatha,* but B reads *hamath*). In 1 Chr 2:55, however, the LXX reads *mesēma.* Talmon (1960) suspects that here *ḥmt* should be understood as "family-in-law." Apparently this is the idea that underlies the NEB: "These were Kenites who were connected by marriage with the ancestor of the Rechabites." The entire passage (1 Chr 2:42–50a, 50b–55) is problematic (see Braun *1 Chronicles* WBC, 42–43).

CRAIG A. EVANS

HAMMATH (PLACE) [Heb *ḥammat*]. Var. HAMMOTH-DOR; HAMMON. One of the fortified cities of the tribe of Naphtali (Josh 19:35). Aharoni has suggested that Hammath was #34 in the hypothetical original list of Levitical cities on which the Joshua 21 and 1 Chronicles 6 lists were based (*LBHG,* 304), although in those lists it appears in its variant forms HAMMOTH-DOR (Josh 21:32) and HAMMON (1 Chr 6:61—Eng 6:76). The name Hammath—and that of its variants—means "hot springs," and at least since the time of Josephus (who referred to it as Emmaus) the place was renowned for its healing power (*Ant* 18.2.3 §36; *JW* 4.1.3 §11). Hammath was apparently well-known in the early rabbinic period, and it is referred to numerous times in Jewish writings of that period. These writings make it clear that Hammath was a suburb just outside Tiberias, the site of a major Jewish academy (*Talm.*

Meg. 2.2; *t. ʿErub.* 7.2, 146); consequently, ancient Hammath/Hammoth-Dor/Hammon can be confidently identified with Hammam Tabariyeh (M.R. 201241), a hot springs 3 km S of Tiberias on the W shore of the Sea of Galilee. Apparently the hot springs provided a sufficiently stable economic base to enable the town to last well beyond the abolition of the Jewish Patriarchate in A.D. 429. See also TIBERIAS (PLACE).

Excavations there, however, have thus far failed to yield Iron Age remains (see *EAEHL* 4: 1178–84). In 1921 Slouschz excavated a synagogue about 500 m N of the city's S wall, which has since been dated to the 4th century A.D. A contemporaneous cemetery was found nearby. In the early 1960s M. Dothan excavated a portion of the city wall and one of its towers, which were dated to the Byzantine period (although they apparently rested on the remains of earlier fortifications). Coins indicate that the site was occupied at least as early as the 1st century B.C. Dothan's excavations near the hot springs themselves uncovered three occupation levels. In the lowest (level III, early 2d century A.D.?) was found the remains of a public building the function of which is unknown. Above it, in levels IIB, IIA, IB, and IA, were found the remains of a synagogue that went through four successive construction phases between the 4th and the mid-8th centuries A.D. Among the finds associated with the level IIA synagogue (4th century A.D.) were important Greek and Aramaic inscriptions and well-preserved mosaics (of the Torah shrine and the zodiac) exemplifying superb Hellenistic-Roman artistic style.

GARY A. HERION

HAMMEDATHA (PERSON) [Heb *hammĕdātāʾ*]. The father of Haman. He is mentioned in several places in the book of Esther (3:1, 10; 8:5; 9:10, 24) as well as in the Additions to Esther contained in the LXX (Add Esth 12:6; 16:10, 17). He is never spoken of apart from being the father of Haman and as such has no independent existence as a character in the Esther story. Nothing further is known about him, but he appears to have a bona fide Persian name. A contemporary Aramaic ritual text found at Persepolis contains a proper name that could be the Aramaic equivalent to his name, spelled *ʾmdt.* In addition, in the Persepolis fortification tablets this name or one like it appears to be spelled out in cuneiform writing as *ha-ma-da-da* (Millard 1977: 484). Millard suggests that the Persian name from which these names are derived would be *amadāta,* "strongly made" (1977: 484). Other suggested Persian etymologies include *hāma-dāta,* "given by (the god) *Hāma,*" or *mâh-dāta,* "given by the moon." On the other hand, some see this name as a variant form of the name Haman (Paton *Esther* ICC, 69).

JOHN M. WIEBE

HAMMOLECHETH (PERSON) [Heb *hammōleket*]. A Manassite mother of three, who is mentioned only in 1 Chr 7:18. Her name means "she who reigns" and may have originally served as a divine title. The form of the name in the LXX, *Malecheth,* reflects the translator's interpretation of the initial *ha* in Hammolecheth as the Hebrew article. Ishhod, Abiezer, and Mahlah were her children. While all three are usually regarded as sons, the last name may be a feminine form and so designate a daughter (cf. Josh 17:3). Morgenstern (1931: 58), however, has suggested that *hammōleket* was not a proper noun at all but simply indicated the authoritative position that the woman held in one of the clans of Manasseh. In this way it preserves evidence of the matriarchate in Israel. This suggestion, though, has won little support, and most continue to regard *hammōleket* as a proper noun. (Rudolph *Chronikbücher* HAT, 70)

Two problems arise in the passage that introduces Hammolecheth. The first concerns the designation of her as "his sister." The preceding verse contains the name of five men, the last of whom is Manasseh. While the antecedent of "his" therefore is by no means certain, most interpreters have favored Gilead (Myers *1 Chronicles* AB, 50). In this case Hammolecheth's father would have been Machir and her grandfather Manasseh.

Additional problems arise in connection with Hammolecheth's children. While genealogies in the Hebrew Bible usually trace ancestry from father to son, in this case the husband of Hammolecheth is unnamed. The reason for this is not obvious. Moreover, Joshua 17 lists Abiezer and Mahlah, the second and third of Hammolecheth's children, as the first son of Gilead (17:2) and the first daughter of Zelophahad (17:3) respectively. This may reflect multiple uses of the same names, or it may indicate confusion in the genealogical tradition. Finally, Curtis and Madsen (*Chronicles* ICC, 152) have suggested that Shemida (1 Chr 7:19), who is not related to the rest of the genealogy of Manasseh in 1 Chronicles 7, was the fourth son of Hammolecheth. This proposal has found little support among other interpreters. See SHEMIDA.

M. PATRICK GRAHAM

HAMMON (PLACE) [Heb *ḥammôn*]. Var. HAMMATH; HAMMOTH-DOR(?). **1.** A town in the territory of Asher (Josh 19:28). The portion of the list in which Hammon occurs seems to refer to cities in the N area of the tribe, much of which today is in Lebanon. While some scholars (*GTTOT,* 191; *HGB,* 432) doubt that the city was located on the coast, the site is generally identified with Khirbet Umm el-Awamid (M.R. 164281) in the Wâdī el-Hamul near the spring of En-Hamul. Both the name of the wadi and the name of the spring suggest the preservation of the name Hammon.

Two Hellenistic period Phoenician inscriptions support this identification (*TSSI* 3: 188–121); one was excavated at Umm el-Awamid, and a second was purchased nearby, and both refer to an *ʾl ḥmn,* which can be read as "god of

Hammon" and to the *bʿl ḥmn,* "the citizens of Hammon." While the inscriptions are not conclusive given their Hellenistic date, on balance, the names of the spring and wadi, combined with the inscriptions, support the identification of Umm el-Awamid with Hammon.

2. A town in the tribal territory of Naphtali assigned to the Gershomite clan of the Levites as a Levitical city (1 Chr 6:61—Eng 6:76). Another list of Levitical cities is preserved in Joshua 21, where in v 32 Hammon is replaced by Hammath-dor. Most researchers have concluded that the two OT lists of Levitical cities were derived from a single original, which dated to the time of the United Monarchy (Albright 1945: 49–55). Aharoni (*LBHG,* 304) has suggested that both Hammon and Hammath-dor developed because of scribal errors from an original Hammath, which is located at modern Hammam Tabariyeh (M.R. 201241), springs to the S of modern Tiberias. See also HAMMATH (PLACE). Albright (1945: 55) argued that both Hammon and Hammath-dor were independent toponyms but suggested a location for neither.

MELVIN HUNT

HAMMOTH-DOR (PLACE) [Heb *ḥammōt dōʾr*]. Var. HAMMATH; HAMMON. A town in the tribe of Naphtali which, along with its pasture lands, was set aside for the Levites (Josh 21:32). In 1 Chr 6:61—Eng 6:76, the second city in the parallel list is Hammon *(ḥammōn).* Albright (1945: 64) has argued that Hammoth-dor and Hammon are different cities and should not be understood to be the same. He based his argument on the readings of Joshua 21, observing that although the LXX offers variant readings, a comparison shows that the original text is preserved in the Greek. Albright's position has not been widely accepted. Aharoni (*LBHG,* 105) argued that Hammoth-dor and Hammon are an example of a "double list" and that the differences in the list may be interpreted as a variation on the same name. In his listing of the Levitical cities, he maintains the 34th city is Hammoth-dor/Hammon while Dor (unidentified in either Joshua 21 or 1 Chronicles 6) is the 35th city in the supposed original list. A problem with that reconstruction arises from the fact that there is no record of any city named Dor in Naphtali. Van Beek (*IDB* 2: 517) suggested that this Levitical city is almost certainly known as Hammon in 1 Chr 6:61—Eng 6:76 and Hammoth-dor in Josh 21:32. Hammoth-dor appears once outside the Levitical city listing as Hammath *(ḥammat)* in the allotment to Naphtali in Josh 19:35. Hammon is mentioned only in the list in 1 Chronicles 6. Outside the OT it is possible that the Hamath mentioned in the papyrus Anastasi I, a document from the time of Rameses II, is Hammath on the Sea of Galilee, i.e., Hammath-Dor. See also Thomas 1934: 147–48.

Hammoth-dor has been identified as Hamman Tabariyeh (M.R. 201241), a hot spring just S of Tiberias on the W shore of the Sea of Galilee (Dothan 1962: 153–54). It is located on a trade route that starts at Hazor and goes along the W coast of the Sea of Galilee. From there it goes into the Rift valley extending S to the Red Sea. A secondary route breaks off from this trade route a few km S of Hamman Tabariyeh. That road goes past Mt. Tabor on its way to Acco. Hammoth-dor is famous for its hot baths that date back to the period of the Second Temple; however, one of the problems of identifying Hamman Tabariyeh with Hammath is that there are no remains there earlier than the Roman period. Albright (1926: 26–27) argued that a Bronze Age town at the hot springs of Tiberias is not likely. He suggested that Hammath was probably on Iron Age foundations since there was no trace of a mound near the site. Because there are no early remains at Hamman Tabariyeh, its identification with biblical Hammoth-dor must be questioned. Just N of Tiberias is a site called Tell Raqqat. Peterson (1977: 95) in his survey has suggested this identification, and Boling (1985: 24) has accepted his proposal. At Tell Raqqat there is evidence that the site was occupied from the Early Bronze to Iron II inclusively. See also *EncJud* 7: 1242–44; 12: 818–21.

JOHN L. PETERSON

HAMMUEL (PERSON) [Heb *ḥammûʾēl*]. A descendant of Simeon (1 Chr 4:26). The various genealogies for Simeon differ in the number of sons attributed to Simeon. Gen 46:10 and Exod 6:15 list six and comment that Shaul (the last listed) was born to a Canaanite mother. Num 26:12–13 and 1 Chr 4:24–27 list only five, omiting Ohad and the comment on Shaul's mother. In 1 Chr 4:24–27 Simeon's line is traced seven generations beyond him through Shaul with only one name given for each generation and usually without notation on their activities. Hammuel is named the fifth generation descendant. He is not otherwise known. His grandson Shimei, however, did draw the notice that he outdistanced his unnamed siblings in producing offspring, 26 sons and 6 daughters; but none is named; and the genealogy ends with Shimei.

In 1 Chr 4:26 the LXX reads *amouēl,* suggesting a Hebrew spelling with only one *mem.* Such a spelling is commonly present in the versions outside the MT for Hamul, a son of Perez (Gen 46:12; Num 26:21; 1 Chr 2:5).

RICHARD W. NYSSE

HAMMURAPI (PERSON). The sixth and best attested of 11 kings in the so-called First Dynasty of Babylon (also known as Hammurabi), whose extensive collection of laws

provides numerous correspondences with biblical law. During his 43-year reign the city of Babylon for the first time rose to prominence as the hub of a short-lived but extensive empire, which declined after his death. Although each of the 42 years following his accession year is identified sequentially with an event considered significant (building projects, pious royal donations to temples, wars), like other events in the early 2d millennium B.C. the absolute dates of Hammurapi remain uncertain. Astronomical data narrow the likely date for Hammurapi's first year to the years 1848 or 1792 or 1736 (the so-called high, middle, and low chronology respectively).

A. The First Dynasty of Babylon

Hammurapi is part of a wave of rulers in S Mesopotamia who began to appear at this time bearing Amorite names; some of the kings of the First Dynasty of Babylon who preceded Hammurapi still bore Akkadian names; but beginning with Hammurapi all of the rulers of this dynasty after him had Amorite names. The Amorites had long before begun to infiltrate the urban centers of Mesopotamia, and the reign of Hammurapi marks the apex of this culture shift. The tribal origins of Hammurapi's dynasty were not forgotten when the Amorites became thoroughly urbanized and ultimately wielded the scepter of the kingdom (see Finkelstein 1966), a situation with some similarity to Israel's tradition of a transfer from a tribal hegemony to a monarchic state. During the 300 years which passed from the founder of the First Dynasty of Babylon (Sumuabum) to the last king (Samsuditana), no king reigned longer than Hammurapi. The five kings of Babylon in the 100 years which preceded Hammurapi give little evidence of ambitions beyond the confines of the city-state of Babylon itself, and they may indeed have often been vassals of more powerful neighbors. Hammurapi's father and predecessor, Sin-muballiṭ, seems to have begun the inertia of expansion which his son brought to fruition. But Hammurapi's son and successor, Samsuiluna, already began to experience the consequences of an overextended empire confronted with numerous enemies (among them the Kassites—who eventually would rule Babylonia—and other foes formerly fought by Hammurapi). The decline which followed Hammurapi climaxed 155 years later in the reign of the final king (Samsuditana), who saw the dynasty brought to an end by a Hittite invasion.

B. Military Expansion

Before Hammurapi consolidated all of Mesopotamia under the dominion of Babylon, the balance of power was succinctly portrayed in a letter written by a contemporary who noted that "there is no king who is mighty by himself." The writer proceeds to clarify this generalization by identifying five primary coalitions: 10 to 15 kings follow Hammurapi of Babylon, a like number of kings each following Rim-Sin of Larsa, Ibal-pi-el of Eshnunna, and Amut-pi-el of Qatana, while Yarim-Lim of Yamhad stands out with 20 kings following him (*ANET*, 628). This balance began to shift when, according to Hammurapi's 30th-year date formula, he fought and protected his borders against Elam, Assyria, Gutium, Eshnunna, and Malgium; the following year he defeated Rim-Sin of Larsa. In order to defeat Rim-Sin, Hammurapi exploited the combined power of the above-noted royal coalitions by soliciting military support from the kings of Mari and Eshnunna (*ARM* 2. 33). Kings with foresight advised, "Don't provide the man of Babylon with auxiliary troops!" (*ARM* 6. 27); for Hammurapi eventually turned against even those to whom he once turned for help, a notable case being the king of Mari, who had commemorated his assistance in his own year date formula: "The year Zimri-Lim went to the aid of Babylon."

The year following Rim-Sin's defeat began an eight-year period of persistent attacks by Hammurapi to the N, beginning with his defeat of the armies of Eshnunna, Assyria, and Gutium. This N campaign was repeated in the following year when he this time defeated Mari and Malgu, returning two years later to demolish their walls. The 37th-, 38th-, and 39th-year date formulas record Hammurapi's victories against his foes to the N.

C. Administration of the Kingdom

Hammurapi's rule was not exclusively preoccupied with military exploits, for the 18 middle years of his 42 year reign (his 12th through 29th date formulas) are exclusively identified by domestic activities. The incorporation of S Mesopotamian cities into a single political unit under the leadership of Babylon was perceived as the legitimate continuation of an old tradition where the kingship of Sumer and Akkad was transferred from city to city. Not only does Hammurapi style himself the king of Sumer and Akkad, but in the prologue and epilogue to his collection of laws he appears as the one who benevolently restored the land's prosperity following a period of decline: "the Shepherd . . . who gathers the scattered people of Isin . . . who causes justice to appear . . . who causes the light to shine for the land of Sumer and Akkad, . . . I uprooted the enemies above and below, I extinguished strife, I promoted the welfare of the land, . . . I tolerated no trouble-makers . . . that the strong might not oppress the weak, to guide properly the orphan and the widow." Such imagery is related to that later employed by Israel's prophets in their descriptions of Yahweh's future restoration and gathering of his scattered people.

In addition to Hammurapi's official inscriptions, which are designed typically to publicize his regal grandeur to observers and future generations, eyewitness accounts of Hammurapi in action in his court in Babylon have been preserved, providing candid glimpses into the behavior of a Babylonian monarch. We have preserved the claims of a man who insists that "whatever subject occupies Hammurapi's mind, he always sends me word and wherever he is I go to him so that whatever troubles him he can tell me" (*ARM* 2. 31); and several such encounters are preserved (e.g., *ARM* 2. 21, 22, 24, 25). Hammurapi is represented by these sources as actively involved in all affairs of his kingdom, easily approachable, and hardly aloof. Another witness testifies that when Amorite messengers from the N once received an audience with Hammurapi, an inequality in gifts of garments on this occasion was perceived as an insult. Hammurapi was reported to have replied curtly to the messengers as he insisted on his absolute sovereignty: "You always cause trouble for me. Now you are harassing my palace about garments. I clothe those whom I wish; and if I don't wish, I don't provide gar-

ments!" (*ARM* 2. 76). Hammurapi is heard elsewhere imperiously insulting visiting dignitaries: "I'll return the Elamite messengers to their lord without escort!" (*ARM* 2. 73). On the other hand, Hammurapi's vassal rulers of what is now Tell-Rimah received a report from their son, who notes: "I reached Babylon safely and have seen the king Hammurapi in a good mood" (Dalley et al. 1976: 135).

Some of the correspondence in which Hammurapi was an active communicator is preserved. Of his international correspondence, there remains evidence of letters passing between Babylon and Mari (*ARM* 2. 33–34, 51–54, 67–68) and reputed quotes from correspondence between Hammurapi and Rim-Sin of Larsa (*ARM* 2. 72). Scores of letters from Hammurapi himself are also preserved in the archives of two of Hammurapi's administrators in Larsa toward the end of his reign, and these documents are helpful in discerning the structure of Babylonian society and Hammurapi's remarkably active role in the maintenance of the kingdom (*AbB* 2, 4, 9).

There is also a letter which gives a hint as to the eventual demise of Hammurapi. His son Samsuiluna wrote a letter now in our possession in which he notes: "The king my father i[s ill(?)] I have taken [my seat] on the throne of [my father's] house" (*ANET,* 627). He proceeds to relate how he has canceled debts in the land, a typical action of monarchs when they began their reigns.

The reign of Hammurapi, with its expanding horizons for Babylon, facilitated the enhancement of enriched cultural and cosmopolitan dimensions in Babylonian society. The flourishing of scribal activity is evident not only in the numerous administrative documents from this period, but also in the quantity of OB literary texts (themselves already heirs to a long tradition), which were to set the standard for future literary activity into the 1st millennium B.C.

D. Hammurapi and the Bible

Hammurapi's original significance for biblical studies derived from two facts. First was the discovery in 1901 of a corpus of laws which was promulgated by Hammurapi (*ANET,* 163–80). The 8-foot-high diorite stele (now in the Louvre) originally containing 282 laws was discovered not in Babylon (where it was erected by Hammurapi) but in Susa, where it had been taken as booty by the Elamites, who raided Babylon six centuries after the time of Hammurapi (many of the laws were effaced from the stone by the Elamites). In addition to that discovery, numerous copies and fragments of these laws have been found at other sites throughout Mesopotamia; and the stone was copied by scribes even down into the first millennium B.C. The portrait of Hammurapi on the stele depicts the deity Shamash granting to Hammurapi the symbols of justice (scepter and ring), appropriately corresponding to the content of the stone, which relates the laws which Hammurapi promulgated.

The relevance for society in general of the collection and standardization of Hammurapi's laws is perplexing. Prices, fines, and penalties do not always correspond with actual data from the same period; and records of actual court cases do not cite the collection of laws as a basis or rationale for adjudication. This is a problem similar to that which confronts the biblical scholar with regard to the antiquity of the civil laws in Exodus and Deuteronomy which were often ignored in narratives (e.g., Deut 24:16; Josh 7:24–25; 2 Sam 21:1–9; cf. 1 Kgs 21:1 with 2 Kgs 9:26). Likewise, the Laws of Hammurapi and the laws in the Pentateuch are incomplete and leave many subjects untreated. It is likely that Hammurapi's laws are to be understood as part of his amalgamation of diverse traditions in a newly unified domain, and he is therefore not to be pictured as an innovator of new legislation. Hammurapi was not the first patron of an edition of laws, for he stands in a tradition of legal editors as is seen in smaller and less well-preserved law collections sponsored by kings before the time of Hammurapi. A continuity among legal collections makes it clear that even the internal arrangement of laws was not haphazard but followed certain conceptual patterns, a feature which seems to be reflected in biblical law as well (Kaufman 1987).

In the epilogue of his laws, the public nature of this collection is underscored by an appeal to their non-elitist, universal availability to all: "Let any oppressed man who has a cause come into the presence of the statue of me, the king of justice, and then read carefully my inscribed stele, and give heed to my precious words; and may my stele make the case clear to him; may he understand his cause; may he set his mind at ease!" Only a minority could read the cuneiform inscription, making the appeal itself an exaggerated one. But the old tribal justice once achieved by recourse to tribal leaders was compromised by the reality of an extensive kingdom where, although Hammurapi continued to involve himself in mundane affairs to an amazing degree, a vast administration and bureaucracy stifled the active involvement of the king in every legal dispute. Such stone steles inscribed with laws distributed throughout the kingdom functioned as Hammurapi's surrogates—if not in fact, at least symbolically—in asserting a non-arbitrary and coherent stability to the justice administered by the kingdom's bureaucrats.

The format of engraving legal norms in stone finds an echo in Deuteronomy (5:22; 9:9–11; 10:3), where the laws given to Moses at Mt. Sinai are depicted as also being engraved in stone. Words in stone are not subject to easy manipulation, and the explicit words of Hammurapi's epilogue clarify the permanence which the medium presumes: "In the days to come, for all time, let the king who appears in the land observe the words of justice which I wrote on my stele; let him not alter the law of the land which I enacted." Numerous curses are inscribed for the person who "has abolished the law which I enacted, has distorted my words, has altered my statutes."

The second significance of Hammurapi for biblical studies lies in a now abandoned proposal that the biblical Amraphel from Shinar (appearing in a story about Abraham in Gen 14:1, 9) was the famous Hammurapi of the First Dynasty of Babylon. Although Shinar is defensible as a designation for Babylon, the Hebrew form of the name Amraphel seems to presuppose a name of Amorite background such as ʾAmar-pi-ʾel or Emudbal (Schatz 1972).

The name Hammurapi is not unusual, being attested elsewhere not only of other kings (e.g., of kings of Yamhad, Hana, or Kurda also in the early second millennium B.C.) but also of nonroyal figures. In the 13th century B.C., the last king of Ugarit of whom we have information bears

the same name as well. The spellings of these names presume an initial element *ʿammu*, "paternal uncle" and a second element *rapiʾ*, "healer" or "hale," pointing to a name which signifies that the deceased divinized kinsman is the one who invigorates (perhaps bearing some connection to the Rephaim).

SAMUEL A. MEIER

HAMON-GOG (PLACE) [Heb *hamôn-gôg*]. The name, translated as "the multitude of Gog," of a valley described in Ezek 39:11, 15. Of uncertain location, Hamon-Gog was prophesied as a place for the massive burial of Gog, chief prince of Meshech and Tubal, and the multitudes that followed him. See also GOG (PERSON). Verse 11 reports that the extensive burial would deter traveling through this pass, even though it would also be called the "valley of Oberim" ("travelers"), perhaps a reference to a well-traveled highway or suggesting a connection with the Abarim mountain range of Num 33:47, located in NW of Moab, NE of the Dead Sea. Mt. Nebo is the dominant feature in this portion of land.

JEFFREY K. LOTT

HAMONAH (PLACE) [Heb *hămônâ*]. The name of the city in the valley in Ezek 39:16 where the armies of Gog will be buried after their destruction. This is the only occurrence of the name, and its location is unknown.

The name derives from the noun *hmôn,* "sound," "murmur," "roar," "crown," "abundance," from *hmh,* "murmur," "growl," "roar," "be boisterous," i.e., the roaring of a crowd, multitude (BDB, 242). The LXX has *Poluandrion,* "multitude" and uses the same term for Hamon-Gog (Ezek 39:11, 15) and as generic for multitude (Ezek 39:11; Jer 2:23; 19:2, 6). BDB (242) notes the reading as dubious, as does Kittel *(BHK),* for *wĕgam šem-ʿîr hămônâ,* literally "and also the name of the city Hamonah." RSV says the city is there (taking *šem,* "name," as *šam,* "there") while KJV supplies "shall be," i.e., will be built to commemorate the defeat, or a current city's name will be changed to Hamonah. Eichrodt (*Ezekiel* ET, OTL, 517–18) leaves the phrase out of the text, translates vv 11 and 15 as "the valley of the pomp of Gog," and footnotes v 16, "MT: 'And also the name of one city is Hamona' (i.e. pomp); and archaeological note, explaining the name of a city, Hamona, by the 'pomp of God.' "

The city is in the valley of the Travelers, called the valley of Hamon-gog, E of the sea (39:11). May (*IB* 6:28) interprets "sea" as the Dead Sea. The Hebrew for "travelers" is repointed by some following the Coptic version to read Abarim (*haʿăbārîm* for *hāʿōbĕrîm*), i.e., the mountains of Abarim, which included Mt. Nebo, N of Wâdī Zerqa Maʾin (Nahaliel; Num 27:12; 33:47–48; Deut 32:49) above the NE corner of the Dead Sea. One notes that the troops will die on the mountains of Israel (39:4); and God is quoted as saying, "I will give to Gog a place for burial in Israel." The people of Israel will spend seven months burying the dead (39:12). All this suggests the valley and its city are in Israel, i.e., Cisjordan. There were, of course, times when Israel controlled the Nebo area, which was also controlled by the Ammonites at times, though it seems most often to have been part of Moab. Thus it seems more natural to interpret "sea" as Mediterranean Sea and the burial and the city as in Israel proper, with the cleansing of the land meaning burial, and not removal of the bodies to another land.

Zimmerli (*Ezekiel 2* Hermeneia, 291–93, 317–19) also sees v 16a as an obvious addition. He translates v 11 as Oberim(?) valley, but acknowledges the reading Abarim. "Sea" may then mean Dead Sea, but he notes that this is not Israel. The sea may be the Mediterranean or the Sea of Galilee. The former might suggest the valley of Jezreel, while the latter might indicate the valley of the Wanderers, the Wâdī Fejjas, as cited by several scholars. Beth-shan, Megiddo, and Emmaus (Ammaoun in 1 Macc 3:40) have been suggested as the city that will be renamed Hamonah. He notes the identifications "remain in the realm of free speculation." For his own speculation Zimmerli raises a question about the loose assonance between the valley of Hamonah ("hordes") and the valley of Hinnom. This associates the valley of abomination with Gog. "That an etymological etiology is intended here is in any case probable."

Of course, the entire context in Ezekiel is metaphoric and symbolic, or legendary to use Eichrodt's phrase (*Ezekiel* ET, OTL, 529); so it may not be a literal city or place at all. The term "multitude" is a common metaphor as is another valley in the famous line in Joel 4:14 [—Eng 3:14], "Multitudes, multitudes in the valley of decision."

HENRY O. THOMPSON

HAMOR (PERSON) [Heb *ḥămôr*]. The father of Shechem (Gen 33:19). When Jacob returned from Paddan-aram, he purchased from the sons of Hamor a piece of land, upon which he erected an altar (33:19–20). Presumably the sale happened in the presence of the representatives of the place (cf. chap. 23). Joseph was later buried there at Shechem (Josh 24:32) when his remains were removed from Egypt to Canaan. Stephen jumbled two stories when he said that "Jacob and our fathers" were buried at Shechem in a plot bought by Abraham from the sons of Hamor (Acts 7:16). Actually Jacob was buried at Machpelah in a plot bought by Abraham from the "sons of Heth" (Gen 50:13).

Hamor's son Shechem raped Jacob's daughter Dinah

(34:2). At Shechem's request, Hamor, without mentioning the violation, asked for Dinah to be given in marriage to his son (vv 4–8). Both agreed to the condition of circumcision, only to be killed in that weakened state by Simeon and Levi three days later out of revenge (vv 13–29).

Hamor was the prince or chief of the region around the city (v 2). However, the textual tradition appears confused about whether the tribe of which Hamor was head was Hivite (MT) or Horite (LXX)—cf. Josh 9:7; also note Gen 36:2, 20. These terms seem to overlap to some extent, a circumstance which was historically grounded in contacts between the two groups to the N of Canaan proper (Boling *Joshua* AB, 251, 264–65; Blenkinsopp 1971: 275, esp. n. 38). The Hamor clan remained dominant at Shechem into the time of the judges. According to Judg 9:28, depending on how one understands the passage, either Abimelech and his deputy were put in office by the Hamorite aristocracy or the Shechemites were being urged back to traditional ways—viz., those of serving the "men of Hamor." Since the name Hamor means "(he-)ass," the MB practice among Amorites at the W Mesopotamian city-state Mari of ratifying a treaty by sacrificing an ass comes to mind. Some (e.g., Albright *ARI,* 113; Willesen 1954: 216–17) have supposed that the expression, "sons of the ass/Hamor," applied to the Shechemites several times, might have designated "members of a confederacy." Others (e.g., Kidner *Genesis* TOTC, 173; Davidson *Genesis 12–50* CBC, 191) have objected that although sacredness of the animal may account for the name, Hamor was an individual.

EDWIN C. HOSTETTER

HAMRAN (PERSON) [Heb *ḥamrān*]. Var. HEMDAN. A clan name mentioned in the genealogy of Seir the Horite in 1 Chr 1:41. Hamran is listed as the first of four sons of DISHON, son of Anah, and he is therefore a great-grandson of Seir. The name Hamran, which appears as "Amran" in the KJV, is found only in 1 Chr 1:41; but it is equivalent to HEMDAN (the Gk Lucian and Alexandrinus form) also found in the parallel genealogical clan list in Gen 36:26. For discussion of the Horite clans, see JAAKAN.

VICTOR H. MATTHEWS

HAMUL (PERSON) [Heb *ḥāmûl*]. The younger son of Perez (Gen 46:12; 1 Chr 2:5), one of the twin sons of Judah and Tamar (Gen 37:27–30). His name appears as Hamuel in the Samaritan Pentateuch and in the LXX, in which case it means "God protects" (*TPNAH,* 138). In the record of Jacob's family, Jacob's children and grandchildren are listed by families, according to their mother and order of birth (Gen 46:8–27). Hamul was the grandson of Jacob and Leah by their fourth son, Judah (Gen 46:12). None of Hamul's descendants is mentioned in the OT although the descendants of his brother Hezron are fully given (1 Chr 2:5–24). Hamul was the head of the family of the Hamulites (Num 26:21). The name may mean "spared" (*IDB* 2: 519).

CLAUDE F. MARIOTTINI

HAMUTAL (PERSON) [Heb *ḥămûṭal*]. Daughter of Jeremiah of Libnah; wife of King Josiah; and mother of Johoahaz and Zedekiah, kings of Judah (2 Kgs 23:31; K *ḥămîṭal,* Q *ḥămûṭal* in 2 Kgs 24:18 and Jer 52:1). The name of this individual perhaps means "my father-in-law is protection" (*HALAT,* 313b) or "my father-in-law is the dew" (*BDB,* 327b); if *waw/yod* expresses the vocative (see Dahood 1977: 218; 1978: 190), it may mean "become warm, O Dew."

ROBERT ALTHANN

HANA (PERSON) [Gk *Anan*]. Var. HANAN. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:30) and clearly a variant of HANAN (Heb *ḥānān*) in Ezra 2:46 = Neh 7:49.

MICHAEL DAVID MCGEHEE

HANAMEL (PERSON) [Heb *ḥănam'ēl*]. The son of Jeremiah's uncle Shallum (Jer 32:6, 8, 9) and the cousin whose field at Anathoth the prophet purchases. This incident, widely held to be authentic, occurred during the Babylonian invasion of Jerusalem (587 B.C.E.) while Jeremiah was imprisoned. Included in that part of the book of Jeremiah known as the "Book of Consolation" (Jeremiah 30–33), the purchase of Hanamel's field expresses hope for Yahweh's restoration of Judah following the Exile: "Houses and fields and vineyards shall again be bought in this land" (Jer 32:15). The purchase of Hanamel's field occurs according to the right of redemption (Lev 25:25); so the event has been of particular interest because the detail of the text provides a glimpse into the social, economic, and legal practices of ancient Israel. It is widely held (*TPNAH,* 82) that Hanamel's name derives from *hnn 'l,* "God is gracious," though how this bears upon Jer 32:6–15 is uncertain.

JOHN M. BRACKE

HANAN (PERSON) [Heb *ḥānān*]. Var. HANA. The name of nine men in the Hebrew Bible. Hanan is a shortened form of names such as Elhanan, "God is gracious," and Johanan or Hananiah, "YHWH is gracious." The root *ḥnn,* "to be gracious," is a common element in many biblical and extrabiblical Hebrew names from various periods (*IPN,* 187; Shiloh 1986: 29; Avigad 1986: 57–58, 74, 97; *TPNAH,* 345); the shortened form Hanan, however, is only known from late preexilic (Jer 35:4; Avigad 1986: 58) through postexilic sources. The name's prominence in the

postexilic period suggests that the returnees were either thankful to God, who had restored them to Zion, or were hoping that God would soon complete the promised ideal restoration.

1. According to Jer 35:4 Jeremiah brought the Rechabites to "the chamber of the sons of *[bĕnê]* Hanan the son of Igdaliah, the man of God" in the Jerusalem temple. This Hanan is never mentioned elsewhere. The plural *bĕnê,* "sons of," is odd, especially since temple chambers are usually occupied by a single person. Carrol (*Jeremiah* OTL, 652) has suggested that *bĕnê* is being used as a technical term for a guild member and the verse refers to "the prophetic guild of Hanan . . . the prophet." A similar use of *bĕnê* plus a personal name for guild members is attested to in the names of psalmists' guilds, as in "the sons of Korah" (e.g., Psalm 42), namely, members of the Korahite guild. Thus Jeremiah brought the Rechabites to the chamber of a prophetic guild at the temple, probably since he thought they might be sympathetic to the anti-Jerusalem component of this prophecy (v 17). Several LXX mss read a longer form for the name Hanan; there are several similar cases within the MT where the full and abbreviated names of the same person alternate (*TPNAH,* 150–52).

2. One of the families of the NETHINIM, "temple servants," which returned from the Exile according to the lists in Ezra 2:46 and Nehemiah 7:49, which are almost identical. The list of returnees is probably composite and its original purpose and date remain uncertain (Williamson *Ezra, Nehemiah* WBC, 28–32; Blenkinsopp *Ezra Nehemiah* OTL, 83). According to the tradition of Josh 9:23 and 27, the temple servants were non-Israelite in origin; and this explains the many non-Israelite names in the temple servant list (Williamson *Ezra, Nehemiah* WBC, 36; Blenkinsopp, 90). In this case it is possible that Hanan should not be interpreted as an abbreviation of a specifically Israelite name like Yohanan but should be connected to the name Hanan, which was commonly used by other Semitic peoples (*HALAT,* 321), and to seals of probable Ammonite or Edomite origin which use the names Hananel and Elhanan (*TPNAH,* 345).

3. A prominent Levite who played a role in the reforms of Ezra according to Neh 8:7 and 10:11—Eng 10:10. Nehemiah 8:7 describes the public reading of the Torah by Ezra on the first day of the seventh month at the Water Gate in Jerusalem (Neh 7:72 [—Eng 7:73]–8:8). Hanan is listed as one of the 13 Levites who instructed the people in the meaning of the Torah. The MT reads *wĕhalwiyyîm,* "and the Levites," possibly suggesting that 13 people plus the Levites participated; however, *wĕhalwiyyîm* should either be emended with the LXX to *halwiyyîm* (BHS; Blenkinsopp, 284), or the *waw* should be understood explicatively. The exact role of these Levites remains unclear because of the unique technical vocabulary in v 8 (Fishbane 1985: 108–9), but the connection of the Levites to teaching or to liturgical reading and singing is consistent with what we know elsewhere of their role in the postexilic community (Cody 1969: 187–90). In Neh 10:11 (—Eng 10:10), Hanan appears on a list of Levites in vv 10–14 (—Eng 9–13) among the signers of the *ʾămānâ,* "compact," on the 24th of the first month (Neh 9:1). There is approximately a 50 percent overlap between the list of Levites in Neh 8:7 and 10:10–14 (—Eng 10:9–13); this might suggest that the list in Nehemiah 10 is largely artificial (Williamson, *Ezra, Nehemiah* WBC, 325–30), or it might suggest that the Hanan of 8:7 should probably be identified with that of 10:11 and indicates that Hanan was among the more important Levites of the period.

4 and 5. Two people listed in Neh 10:23 and 27 (—Eng 10:22 and 26), in a list of "the chiefs of the people" (vv 10:15–28—Eng 10:14–27). Both the list as a whole and the appearance of Hanan twice on the list may be problematic. In v 27—Eng 26 the Peshitta reads Hanani for Hanan, and Rudolph (*Esra und Nehemia* HAT, 172; so BHS) would change one of the Hanan's to Hanani. This is not compelling; this list is a compilation of various lists, and the doubling of Hanani probably reflects two separate Hananis in the author's source material. Williamson (*Ezra, Nehemiah* WBC, 325–30; and Blenkinsopp, 313) have shown persuasively that much of this list is an artificial creation since it incorporates lists known elsewhere in Nehemiah. In that case the overlap between the list of Levites in vv 10–14 (—Eng 9–13) and the list of chiefs in 15–28 (—Eng 14–27) should be pointed out (Bani in vv 10 [—Eng 9] and 15 [—Eng 14]; Hodayah in 10, 14, and 19 [—Eng 9, 13, and 18]; possibly Binui [10—Eng 9] = Buni [16—Eng 15]; and Hashaviah [11—Eng 10] = Hasub [24—Eng 23] or Hashabiah [26—Eng 25]), in which case the name(s) Hanan might have been borrowed from the levitical list to the list of chiefs. Thus it remains unclear how many, or indeed if any, people named Hanan were actually among the chiefs of the people who signed the compact.

6. Son of Zaccur, son of Mattaniah, one of the four people entrusted with the proper distribution of tithes upon Nehemiah's return from his visit to Persia according to Neh 13:13. The verse states that these four distributed tithes "to their brethren." This suggests that this Hanan was a Levite; perhaps he could be identified with the Hanan of 8:7 and 10:11. Williamson (*Ezra, Nehemiah* WBC, 388) and Blenkinsopp (356) suggest that this Hanan's grandfather, Mattaniah, should be identified with the Mattaniah the precentor mentioned in 11:17 and 12:35. This is possibly supported by the inclusion of Hanan's grandfather's name (Mattaniah) in Neh 13:13, since these name lists in Nehemiah sometimes give genealogical information to connect someone to a well-known ancestor (e.g., 12:35).

7. According to 1 Chr 8:23 a Benjaminite, the son of Shashak (v 25); Hanan among the clans who resided in Jerusalem (v 28). It is not clear how this entire section of the Benjaminite genealogy should be related to the rest of the chapter and when this Hanan supposedly lived (Williamson *1 and 2 Chronicles* NCBC, 82–83). The presence of the names Anthothijah and Penuel in vv 24–25, which are related to geographic locations, suggests that one of the functions of this genealogy is to relate clans living in various places (Demsky 1971; see ALEMETH and MOZA). In this case Hanan here might be related to the town Beth-hanan mentioned in 1 Kgs 4:9.

8. According to 1 Chr 8:38 and 9:44 one of the six sons of Azel, son of Moza, a descendant of Benjamin and Saul. Hanan's name within this list is a bit odd, since it is the only hypocorism among the six children. Given the tendency of v 36 in this genealogy to connect clans through geographic locations (Demsky 1971; see ALEMETH), this Hanan might be related to the Beth-hanan mentioned in

1 Kgs 4:9. The genealogy in chap. 9 ends with Hanan, while that in chap. 8 contains additional information (see ESHEK). On the repetition of the genealogy in chaps. 8 and 9, see AHAZ (PERSON) #1.

9. Son of Maacah and one of the warriors of David (Mazar 1963) according to 1 Chr 11:43. The list of David's warriors in 1 Chr 11:26–47 is derived from various sources; the first section (until the middle of v 41) is derived from 2 Sam 23:24–39. The second part differs in form from the first and probably reflects an additional preexilic source that was available to the Chronicler (Williamson *1 and 2 Chronicles* NCBC, 103–4). If it were a fabrication, it would probably follow the previous section's style more closely. The purpose of 1 Chronicles 11 is to glorify David by showing the extent of the military power that supported him, thus reinforcing the divine promise to David (see 1 Chr 11:10); this idea probably motivated the chapter's editor to go beyond his usual source and to find additional lists of David's warriors.

HANANEL, TOWER OF (PLACE) [Heb *migdal hănan'ēl*]. A tower in the N part of exilic and postexilic Jerusalem, mentioned in Jer 31:38; Zech 14:10; Neh 3:1; and 12:39. The tower's exact location is not certain. The fullest information for locating the tower comes from the topographical details in Nehemiah 2, 3, and 12. These passages indicate that the tower was at the NW corner of the wall surrounding the Temple Mount. Neh 3:1 specifies the tower as the farthest point in Nehemiah's restored wall to be consecrated by the high priest (or, following Williamson, to be boarded). It has been proposed that this tower, together with the Tower of the One Hundred, guarded the NW approach to the Temple Mount. Possibly they flanked the Fish Gate (Avi-Yonah 1954: 240–42). These towers were perhaps related to the temple's fortress mentioned in Neh 2:8 (Williamson *Ezra, Nehemiah* WBC, 204). The later citadel of 1 Macc 13:52 and the Antonia Fortress of Herod may correspond to the Tower of Hananel (Avi-Yonah 1954: 242) or mark the spot on which it had stood earlier. Zech 14:10 has led some to suppose that the Tower of Hananel was a prominent landmark for the N boundary of the city at that time (Williamson *Ezra, Nehemiah* WBC, 204).

It is striking that the Tower of Hananel appears in texts that stress the completion of some important, at times eschatological, event. In Jer 31:38–40 the reference to the Tower of Hananel appears at the climactic conclusion of the Book of Consolation (Jer 30:1–31:40). Here, in the last of three oracles about the coming days, Jeremiah speaks of the full restoration of the city for all time. The Tower of Hananel is one of several landmarks indicating the large scope of the restoration. Could the references in Neh 3:1 and 12:29 allude to this promise in Jeremiah? In Zechariah the Tower of Hananel also appears at a concluding section, in a sequence of proclamations concerning the coming Day of the Lord (Zech 14:1). Here nature itself will be transformed (Zech 14:6). God's kingship will be manifest (Zech 14:9), and Jerusalem will be literally elevated. The Tower of Hananel marks the N limit of this newly elevated and secure Jerusalem. Such references suggest that the Tower of Hananel represented more than a stronghold and a recognizable landmark. It may have become a symbol for a fulfillment of certain eschatological hopes (Eskenazi 1988: 85–86).

HANANI (PERSON) [Heb *ḥănānî*]. The name of five individuals in the Hebrew Bible. The name is a shortened form of Hananiah, which means "YHWH has taken pity" (Noth *IPN,* 187).

1. The father of the prophet Jehu (1 Kgs 16:1, 7; 2 Chr 19:2; 20:34 [LXX *anani*]) and a seer during the reign of Asa (2 Chr 16:7). The Deuteronomistic Historian records only Jehu's prophecy against Baasha, king of Israel (900–877 B.C.E.). That Hanani is consistently named as Jehu's father might indicate either that Hanani was a well-known figure, thus helping to identify Jehu, or that "Jehu son of Hanani" is to be clearly distinguished from "Jehu son of Jehoshaphat" (2 Kgs 9:2). The Chronicler records a prophecy by Hanani himself against King Asa of Judah (913–873 B.C.E.) in the 36th year of his reign (2 Chr 16:1–10). This story is theologically motivated and follows the tradition of later prophets, e.g., Isaiah 7 and Zech 4:6 (Myers *2 Chronicles* AB, 94). Hanani's prophecy also shows the lessons of Asa's downfall just as Azariah's sermon in 15:2–7 explains the good years of his reign (Williamson *Chronicles* NCBC, 274). The Chronicler goes on to relate two prophecies of his son Jehu against Jehoshaphat of Judah (873–849 B.C.E.). The dates of these prophecies do not preclude the possibility that all the accounts are based on authentic memories of historical persons and their activity.

2. A postexilic family of levitical singers within the Heman group (1 Chr 25:4, 25 [LXX *ananias*]). 1 Chronicles 25 describes the selection of 288 Levites from the families of Asaph, Jeduthun, and Heman, who were to "prophesy with lyres, with harps, and with cymbals" (v 1). (The Chronicler seems to have replaced the cultic prophets with Levites [Myers *1 Chronicles* AB, 171; see 2 Chronicles 20, and compare 2 Kgs 23:2 with 2 Chr 34:30].) Lots were cast to determine the specific duties of each family. The 18th lot fell to the family of Hanani, but the text does not specify what duty was assigned to them. Although the Chronicler alleges a random selection process, the lots

seem to fall in a regular pattern based on the order of names listed in vv 1–6. Myers believes the names listed in v 4b (of which Hanani is one) are actually incipits of hymns interpreted by the Chronicler as personal names, filling out the needed number for the 24 lots (Myers *1 Chronicles* AB, 172–73). Williamson asserts that these five families were named "perhaps playfully, after the openings of Psalms which they were regularly accustomed to sing" (Williamson *Chronicles* NCBC, 167). In either case it seems likely that this "personal name" was originally a word in the opening line of a psalm.

3. A member of the priestly family of Immer and one of the returned exiles who was required by Ezra to divorce his foreign wife (Ezra 10:20 [LXX *anani*] = 1 Esdr 9:21 [LXX *ananias*]). Hanani was a member of a family from which a group of exiles returned with Zerubbabel (Ezra 2:37; Neh 7:40). For further discussion, see BEDEIAH.

4. A brother of Nehemiah who brought news to Nehemiah of Jerusalem's state of disrepair (Neh 1:2 [LXX *anani*]; 7:2 [LXX *anania*]). While the word "brother" (ʾaḥ) has a broad meaning within Nehemiah's memoirs, this is the only use of the term referring to a specific individual; so we can assume that Hanani was Nehemiah's blood brother. Noting the seemingly casual conversation between Nehemiah and Hanani, Fensham suggests that Hanani was merely on a family visit to Susa (*Ezra Nehemiah* NICOT, 151). Alternatively, Myers raises the discussion that Hanani was part of a delegation sent directly to Artaxerxes in order to bypass unfriendly Samaritans who had blocked attempts at rebuilding Jerusalem (*Ezra, Nehemiah* AB, 94–95). Neh 7:2 shows that Hanani held a position of power in Jerusalem under Nehemiah's governorship as one of two people responsible for opening and closing the gates during a time of political tension. (It is possible that "Hananiah" is in apposition with "Hanani my brother," but note "I said to them" in v 3.) Much has been made of a possible identification of Hanani with an individual named in the edict of Arsames to Elephantine. However, the reading of the name is questionable, and the probable reconstruction is "Hananiah" (Sachau 1911: pl. 4). Thus our knowledge of Hanani is limited to Nehemiah's memoirs.

5. A postexilic musician who assisted in the ceremony rededicating the newly reconstructed walls of Jerusalem (Neh 12:36). Neh 12:27–43 lists the persons who accompanied Ezra in a circumambulation of the walls of Jerusalem in a dedicatory service; however, the LXX omits Hanani and the five names preceding his, and there are other differences from the Hebrew text. Hanani is listed as a trumpeter who "went to the right" (12:31) around the wall while another group of celebrants "went to the left" (12:38). The inclusion of rituals of purification (v 30) underscores the importance of this rite. It is possible that this is the same Hanani mentioned in Ezra 10:20 or Nehemiah's own brother (Neh 1:2). However, Hanani was a popular name in the postexilic community (in addition to the above texts, note 1 Chr 25:4); and the missions of Ezra and Nehemiah may have been separated by several decades; therefore such an identification seems unlikely.

JEFFREY A. FAGER

HANANIAH (PERSON) [Heb *ḥănanyāhû; ḥănanyāh*]. Eleven individuals in the Hebrew Bible bear this name, which means "Yahu is gracious" (Noth *IPN,* 187). The name is found three times in the Gibeon inscriptions (#'s 22, 32, 51. See *TSSI* 1: 56). It also occurs in a 2d-century A.D. fragment, probably from the Herodium (Puech 1980: 121 [line 5], 125).

1. Commander of a military unit under King Uzziah of Judah (2 Chr 26:11).

2. Father of the Zedekiah, who was a high official under King Jehoiakim and who was among those who listened to the scroll of Jeremiah's oracles being read by Baruch (Jer 36:12).

3. Son of Azzur, a false prophet from Gibeon who contradicted the prophet Jeremiah's warning that Judah should continue to accept the rule of Nebuchadrezzar, king of Babylon (Jeremiah 28; cf. chap. 27). In the fourth year of the reign of Zedekiah, king of Judah (594/593 B.C.), in the fifth month, Hananiah declared publicly in the temple that Yahweh had broken Babylon's yoke and that within two years the exiles of 597 B.C., including King Jehoiachin, would return (28:1–4). This optimistic view is probably to be understood in relation to the plans of Judah and her neighbors to rebel against Nebuchadrezzar. The moment might have seemed opportune for in 595/594 B.C. Nebuchadrezzar had to deal with a revolt in Babylon, which he rather quickly suppressed (Wiseman 1956: 36–37). Hopes may also have been pinned on the accession in 594 B.C. of a new pharaoh in Egypt, Psamtik (Gk Psammetichus), who might restore Judah's former boundaries (*BHI,* 328). The division between pro-Babylonian and pro-Egyptian parties will in any case have ensured continual ferment, which the royal government, weakened by the deportations and torn in different directions, will have been unable to control.

In 594/593 B.C. ambassadors from Edom, Moab, Ammon, Tyre, and Sidon came to Jerusalem, perhaps at Zedekiah's instigation. Jeremiah warned them to accept Babylonian rule. According to the MT (Jer 27:2–3) Yahweh tells the prophet to put on yokes and send them to the kings as a sign that they should submit. Jeremiah himself is still wearing the yoke when Hananiah meets him in the temple, and he replies to Hananiah that prophets who prophesy good fortune can be judged authentic spokesmen of Yahweh only when their words are fulfilled (28:6–9; cf. Deut 18:21–22). In a symbolic action Hananiah then takes off the wooden yoke Jeremiah wears around his neck and breaks it, reiterating his prophecy (vv 10–11). After an interval Yahweh informs Jeremiah that he has placed an iron yoke on the neck of Nebuchadrezzar's subjects, that is one that cannot be broken. Jeremiah then tells Hananiah that he has been misleading the people and preaching rebellion against Yahweh. For this he will die (cf. Deut 18:20), a prophecy that was fulfilled that same year in the seventh month (vv 12–17; cf. Ezek 11:1–13).

4. Father of Shelemiah and grandfather of Irijah, the sentry who arrested Jeremiah at the Benjamin Gate on the grounds that he was deserting to the Babylonians when the prophet was about to leave Jerusalem for Anathoth during a break in Nebuchadrezzar's siege of the city (Jer 37:13). (For a discussion of the spelling of Nebuchadrezzar, see NEBUCHADNEZZAR.)

5. A son of Zerubbabel and descendant of David (1 Chr 3:19, 21), perhaps born ca. 545 B.C. (Myers *1 Chronicles* AB, 21).

6. A postexilic person of the tribe of Benjamin (1 Chr 8:24).

7. A descendant of Heman (1 Chr 25:4, 23), a postexilic member of a family of temple singers established by David (v 1).

8. Member of the family of Bebai; he put away his foreign wife in the time of Ezra (Ezra 10:28; 1 Esdr 9:29).

9. A perfumer who helped renovate the walls of Jerusalem under Nehemiah (Neh 3:8).

10. Son of Shelemiah and among those who repaired the walls of Jerusalem under Nehemiah (Neh 3:30).

11. Governor of the castle, whom Nehemiah put in charge of Jerusalem (Neh 7:2). The Hebrew of the verse could mean "my brother Hanani, that is Hananiah, the governor of the castle." "Hanani" is a short form of "Hananiah."

12. A head of the people who signed Ezra's covenant (Neh 10:23; cf. McCarthy 1982: 34).

13. The head of the priestly family of Jeremiah in the time of the high priest Joiakim (Neh 12:12). He was a trumpeter at the dedication of the wall of Jerusalem (v 41).

14. Ancestor of a Levite family which returned from the Exile with Ezra (1 Esdr 8:48; cf. Ezra 8:19).

15. One of the four young men of the tribe of Judah who figure in the stories of the book of Daniel (1:6–7, 11, 19; 2:17) and the Alexandrian additions (see also 1 Macc 2:59). The chief of the eunuchs gave him the name Shadrach.

HANDS, LAYING ON OF. The laying on of hands is a ritual gesture attested in both the OT and the NT.

OLD TESTAMENT

The laying on of hands is a gesture which, in the context of sacrifice, shows ritual attribution of a sacrificial animal to the one performing the gesture, or which, in a nonsacrificial context, demonstrates who the object of ritual action is.

The majority of examples of this gesture is found in the Priestly literature (P) described with the Hebrew verb *sāmak,* "lean on," "support." Outside of P the gesture is found only twice: in 2 Chr 29:23 with *sāmak* and in Gen 48:14, 17, 18 described by the verbs *śîm* and *šît* (both meaning "place," "put"). It has been thought that the verb *sāmak* indicates a form of the gesture where pressure is applied to the recipient (*m. Beṣa* 2:4; *m. Ḥag.* 2:2–3; Daube 1956: 225), as opposed to the gesture with *śîm/šît,* which would not entail pressure. But this distinction in the form is hard to sustain on the meager evidence. The verb *sāmak* in the Priestly writings may be only idiomatic and not indicate that pressure was applied.

The instances occurring with the verb *sāmak* can be sorted out into two categories distinguished by context of the rite, its physical form, and its meaning (Wright 1986):

(A) The majority of the cases of the gesture occurs in the context of sacrifice. Here the one who brings an offering (and only this person, not someone else in the person's behalf; cf. *m. Menaḥ.* 9:9) puts *one* hand on the head of the animal being offered (cf. Lev 1:4; 3:2, 8, 13; 4:4, 24, 29, 33). If a group of people perform the gesture together, they presumably each lay one hand on the head of the animal (Exod 29:10, 15, 19; Lev 4:15; 8:14, 18, 22; Num 8:12; 2 Chr 29:23).

This one-handed form of the gesture in sacrifices is best explained as ritually attributing the animal to the offerer; it indicates that the entire sacrificial rite pertains to him or her, even though others (priests and other auxiliaries) participate in making the offering later in the rite. This interpretation is confirmed by the fact that it makes sense of the lack of the gesture with birds and cereal offerings (Lev 1:14–17; 2; 5:7–13). These offerings are small and can be carried by the offerer in the hands. The simple presentation of these offerings is sufficient ritually to attribute them to the offerer; no hand placement is therefore necessary.

Other interpretations of the gesture in sacrifice, such as viewing the rite as the means of transferring the offerer's evil, personality, or emotion to the animal and through which the animal serves as the offerer's substitute (suffering punishment vicariously) or as a vehicle for carrying the personality or emotion to God, do not easily fit every case of sacrificial hand placement and do not explain the lack of the gesture with birds and cereal offerings.

The hand placement on the Levites in Num 8:10 is to be understood under the principle of attribution just explained (note that the surrounding terminology is sacrificial in nature). By this gesture the Israelites show that the Levites are their "offering" to God and that benefits from the Levites' service will accrue to them.

From a comparative perspective Hittite ritual has a hand placement gesture very similar in form and meaning to the gesture in biblical sacrifice. This rite occurs most frequently in contexts of sacrifice or offering. It is performed by placing one hand on or at a distance from some offering material (e.g., bread, cheese, wine, meats, a live animal). And it ritually attributes the offering material to the one performing the rite. This allows other persons to distribute the offering material while the credit goes to the one who placed the hand.

(B) Three cases of the gesture in the Bible described with *sāmak* are nonsacrificial and appear to be performed with *two* hands, rather than one (Peter 1977; Janowski

[1982] is more cautious in his assessment of the evidence). The clearest example is Lev 16:21. Here the text explicitly prescribes that Aaron place his two hands on the head of the scapegoat. (Note that the scapegoat is not a sacrifice; it is merely a bearer of impurity.) The other two cases are less clear in regard to how many hands are used. In Num 27:18 God tells Moses to place his hand (singular) on Joshua's head and set him apart as the new leader of Israel. In the fulfillment section (v 23), however, Moses places both his hands on Joshua's head (note that the parallel text, Deut 34:9, has the plural). The LXX reads a plural in both cases (though the Samaritan reads a singular in both cases). The final example is ambiguous. Witnesses of blasphemy are to place their hands on the head of a blasphemer before he is stoned (Lev 24:14). Since the subject of the action is plural, it is impossible to determine from the text how many hands were used.

A conclusion from the foregoing evidence is difficult and can only be tentative. Numbers 27, despite the conflict between prescription and fulfillment, indicates that two hands could be used in the ritual of succession. Hence it and Leviticus 16 provide two examples of a two-handed gesture outside of sacrifice. The ambiguous example in Leviticus 24, since it is also outside the context of sacrifice, may also be intended to occur with two hands.

Proceeding under the hypothesis that these three examples all use a two-handed form of the gesture, it is possible that a single meaning fits all of them. The meaning that suits all of them is *demonstrating* who or what is the focus of the ritual action. This is evident in three key texts. (1) The rite in Leviticus 24 is the means the witnesses have of demonstrating who the guilty party is, thereby confirming their testimony and emphasizing their responsibility in the death of the blasphemer. This meaning is suggested by the parallel action of witnesses in Deut 13:10; 17:7; and the hand placement gesture in Susanna 34. The interpretation that by this gesture the witnesses transfer the pollution of blasphemy that has attached to them back to the blasphemer is not supported by the what is known about impurities elsewhere in the priestly writings of the Bible. (2) In Leviticus 16 Aaron demonstrates what object is the recipient of the sins of the people. The rite here is not strictly a means of transfer; sins do not travel through Aaron's arms to the goat. It merely points out where the sins confessed by Aaron are to alight. (3) In Numbers 27 the rite demonstrates who Moses' successor will be. Again here, in view of the preceding examples, authority is not passed through Moses' arms to Joshua. Moses by the gesture merely points out who the recipient of his authority is and demonstrates to the community that Joshua is his legal successor.

Finally, hand placement in Gen 48:14–18, described with *śîm* and *šît,* can be understood like the last three examples as a means of designating who the recipients of blessing are. A gesture related to hand placement for blessing is Aaron's stretching of his hands out over the people in Num 9:22.

NEW TESTAMENT

"Laying on of hands" is regularly the translation of the Gk phrases *(epi-)tithenai tas cheiras (epi)* and *epithesis tōn cheirōn,* which depend on the Heb *sāmak yad ʿal,* "to press or lean the hand on," or *šît (śîm) yad ʿal,* "to place the hand on." This Greek terminology is rather set, although Mark interchanges *epitithenai tas cheiras* and *haptesthai* (cf. Mark 7:32–35; 8:22–26; 10:13–16; cf. 16:18); and *cheirotonein* (Acts 14:23) should be viewed as part of this verbal pattern. The OT application of laying on of hands is followed in the NT, except that there is no sacrificial use and that the association with healings and with baptism and the Holy Spirit is added. Thus in the NT laying on of hands relates to healing, blessings, baptism and the Spirit, and assignment to a given task. There are underlying unifying characteristics. The context is always religious, as the frequent mention of prayer demonstrates; and obviously the laying on of hands is a symbolic action. Yet in each instance something is achieved (Adler 1951: 63, 67–68).

In the OT and rabbinic tradition the laying on of hands is never associated with healing (cf. 1QapGen 20:28–29), and surely this gesture is not an essential part of miracles (*TDNT* 9: 428, 431). According to Mark and Luke, Jesus did heal through the laying on of hands (Mark 5:23; 6:5; 7:32; 8:22–26; Luke 4:40; 13:13); and so did Christians (Mark 16:18) like Ananias (Acts 9:12, 17) and Paul (Acts 28:8; New 1933: 137–38). Of course, healing is communicated through this laying on of hands.

Jesus also blessed children through the laying on of hands (Mark 10:13–16 and parallels). The passage views children as having the correct attitude for reception into the kingdom. Luke 24:50, "and lifting up his hands he blessed them *(kai eparas tas cheiras autou eulogēsen autous),*" should be noted here, although the Greek is not that of "laying on of hands."

In Acts laying on of hands is related to the reception of baptism and the Holy Spirit. Acts 19:5–6 state this most clearly. In a scene reminiscent of Pentecost, Paul laid hands on those who had received only John's baptism and were now baptized in Jesus' name, and the Holy Spirit came upon them, and they spoke with tongues and prophesied. According to Acts 9:17 through Ananias' laying on of hands Paul not only regains his sight but is filled with the Holy Spirit. Acts 8:16–19, likewise, report the reception of the Holy Spirit through the laying on of hands. However, Luke in this passage is less interested in distinguishing the laying on of hands and the reception of the Spirit from baptism in the name of the Lord Jesus than in stressing the significance of the Church in Jerusalem's (and, hence, God's) approval of what has happened in Samaria (O'Toole 1980: 860–62). Finally, most scholars understand Heb 6:2 in terms of the laying on of hands connected with baptism (Parratt 1969: 211; cf. Attridge *Hebrews* Hermeneia).

Jesus himself did not ordain the apostles through the

laying on of hands, nor is Matthias through the laying on of hands assigned Judas' place among the Twelve. However, in the NT, ordination is associated with the laying on of hands and should probably be linked to the ordination of rabbis, the evidence for which comes from the second half of the 1st century. Daube (1956: 229–33; but see *TRE* 14: 418–20) holds that the rabbis confined *sāmak yad ʿal,* "to press or lean the hand on," to the sacrificial cult and to the ordination of a rabbi. Whether Daube is correct or not, it does not seem unreasonable to assume that the ordination of rabbis originated earlier than A.D. 50, with the development of the scribes as a specific group (*m. Sanh.* 1:3; *t. Sanh.* 1:1; *TDNT* 9: 429). But Christian ordination would also include recognition of apostolic authority and be accompanied by prayer (Knoch 1983b: 232).

Of the passages to be considered here, Acts 13:3 is really more of a commissioning of Barnabas and Paul for the task to which the Holy Spirit has called them, than an ordination (Barrett 1985: 51). Although it is difficult to uncover the historical background, most scholars hold that Acts 6:6 (cf. Num 8:10; 27:15–23) is an ordination (*TRE* 14: 418). For Vanhoye (Vanhoye and Crouzel 1982: 730) Acts 6:1–6 provide indications of how ministries were established in the Church. The passage distinguishes between ecclesial authority and "the multitude of the disciples." The Twelve call the meeting and explain what seems good to do and why. The assembly agrees, holds an election, and presents those elected to the Twelve, who confer on them their ministry through prayer and the imposition of hands. But some scholars feel that all the disciples laid hands on the Seven.

Paul and Barnabas, with prayer and fasting, appointed *(cheirotonein)* elders in Lystra, Iconium, and Antioch (Acts 14:21–23; *TDNT* 9: 437). Other passages refer to Timothy's ordination. According to 1 Tim 4:14 (cf. 1:18) Timothy is not to neglect the gift given him by the prophetic utterance when the council of elders laid their hands on him, while 2 Tim 1:6 again records the gift of God, but through the laying on of Paul's hands. Whether one sees a contradiction between these verses, or a "fiction" in the second (*TRE* 14: 420), or simply explains that Paul along with the council of elders could have ordained Timothy depends in part on the date given the Pastorals. On the other hand, Daube's (1956: 244–46) proposed translation of *meta epitheseōs tōn cheirōn tou presbyteriou* (1 Tim 4:14) as "ordination to the eldership" is not justified because it does not respect the context or the genitive case of *tou presbyteriou.* However, Timothy's ordination is designated a grace or a gift (Knoch 1983a: 160); and prophecy played a part in his being chosen for this ministry.

In 1 Tim 5:22 Paul advises Timothy not to be hasty in the laying on of hands. Since the context (vv 17–21) considers Timothy's treatment of elders and since the "laying on of hands" parallels 1 Tim 4:14 and 2 Tim 1:6, the author is speaking of Timothy's ordination of elders (Grelot 1983: 225).

ROBERT F. O'TOOLE

HANES (PLACE) [Heb *hānēs*]. In Isa 30:1 the prophet condemns the rebellious people who seek protection from pharaoh (Shabaka of the 25th Dyn.). That protection will turn to shame, and v 4 notes "for though his officials are at Zoan and his envoys reach Hanes, every one comes to shame." Gold (1965: 857) notes this is an embassy sent to Egypt ca. 703 B.C. seeking support for Hezekiah's rebellion against Assyria (others see these as pharaoh's envoys). Gold identifies Hanes with Anusi, 80 km S of Memphis (at the S end of the delta), probably Heracleopolis, ca. 100 km S of Cairo. The site is known as Ahnas el-Medina, just S of the Fayyum, on the W bank of the Nile. Kyle (*ISBE* 2: 1335 [1939 ed]) says it was a large city on an island between the Nile and Bahr Yuseph (a branch of the Nile that leads into the Fayyum), opposite the modern town of Beni Suef. Simons (*GTTOT,* 440) describes it as on the right bank of the Bahr Jusuf and W of Beni Suef. Lambdin (*IDB* 2: 522) derived the Hebrew from Eg *Hwt-nn-nsw,* "the House of the royal child." Simons says its ancient Egyptian name *(h)nni* continued in Anysis (Herodotus) and as Khininshi in the annals of Ashurbanipal (ca. 668–631/627). The name now survives in the Coptic *ahnas* or *ahnasijeh el-medinah.* Its local name *ahnasijeh umm el-kiman* means "of the heaps of ruins," a reflection of the extensive remains of the ancient city. It is also the Egyptian Hunensuten, abridged Hunensu and Arabic Ahmeysa.

The Greeks identified the local deity, the ram-headed Herishef, with Hercules and called the city Heracleopolis, the city of Heracles. This was Heracleopolis Magna. Besides being the capital of the 20th nome of Upper Egypt, Hanes was the home of the 22d Dyn. (ca. 935–735 B.C.) and remained a city of great importance. In the reign of

Psammetichus I (ca. 663–609, 26th Dyn.), Hanes was the center of government for Upper Egypt. Griffith (*HDB*, 363) noted that in the 25th–26th Dyn. (ca. 715–600 B.C.) the standard silver of Egypt was that of the treasury of Harshafe. Shabaka, the Ethiopian, established the 25th Dyn. in 715 and wiped out the short-lived Saitic Dyn. and their Delta state. While Isaiah's oracle says Judean efforts at alliance with Egypt were useless, Scott (*IB* 5: 330) notes the reasonableness of it. The Ethiopian Dynasty had come N to Middle Egypt in Hanes and controlled Lower Egypt as well. Thus it might very well be strong enough to defeat Assyria. But it was not.

Hanes has also been identified with Heracleopolis Parva in the E delta in Lower Egypt. Spiegelberg derived such a site from Herodotus' (2.166.137) reference to Anysis in the delta (Kitchen *NBD*, 452–53). Griffith (363) says the LXX translators did not recognize the name of the city in Isa 30:4, so they tried to translate the word. There is a wide divergence of readings but "in vain," *hinnam*, seems to have been read instead of Hanes. One translation is "for there are in Tanis (Zoan) princes, wicked messengers." Kitchen suggested "mansion of the king" as the name of pharaoh's palace in Zoan/Tanis itself. The Aramaic Targum of Isaiah has Tahpanes, the Egyptian fortress on Egypt's E frontier, near Zoan, in the N delta. Kyle notes Dumichen's view that the hieroglypic name of Tahpanes is Hens. This could have influenced the Targum translation. He thought the plain meaning of Isa 30:4 points to a city in the delta nearer to Jerusalem than Tanis. Kitchen sees v 4 as a parallelism so that the second line refers to the first, either as the mansion of the king noted above, or as Heracleopolis Parva. But this is not necessary if the intent of v 4 is to show how far the embassy traveled in contrast to how little good it did.

HANGING. See PUNISHMENTS AND CRIMES.

HANGINGS [Heb *qelāʿîm*]. Fabrics that were part of the construction of the tabernacle court as described in the books of Exodus and Numbers (Exod 27:9–18; 35:17; 38:9–18; 39:40; Num 3:26; 4:26). The tabernacle was situated inside an enclosure measuring 50 × 100 cubits. This court was demarcated by a series of five-cubit-high (ca. 7.5 ft) pillars: 20 pillars on the two long sides, 10 pillars on the W end, and 6 on the E end. The fewer number on the E is the result of the 20-cubit-wide (ca. 30 ft) gate to the courtyard at that end. The gate had its separate fabric "screen" (RSV; also called "hangings" in the KJV). See also TABERNACLE.

The hangings were evidently stretched or draped from the pillars that marked the perimeter of the courtyard (Exod 27:9–18; 38:9–18). They thereby formed the courtyard walls, extending a total distance of 280 cubits (ca. 420 ft). Like the "walls" of the tabernacle itself, the hangings were fabric and thus part of the movability associated with all components of the tabernacle, which was a portable shrine. The hangings were among the tabernacle's components carried by the levitical family of Gershon (Num 3:26; 4:26).

The nature of the fabric from which they were made, along with their position as the outer boundary of the tabernacle precincts, makes the hangings the least sacred among the various furnishings and construction materials (fabrics and planks or pillars) that constituted the tabernacle complex. These materials exhibit a range of quality and workmanship, from ornate and costly to plain and less costly. The gradations correspond to levels of sanctity, with the richest items, and the ones most complicated to craft, being the most sacred.

The hangings were made of "fine twined linen," which was a much simpler fabric than the multicolored and mixed linen and wool weaves, some with decorative embroidery, that characterized other tabernacle fabrics. Four levels of complexity and thus of sanctity can be identified for the cloth used in the tabernacle (Haran 1978: 167); and the hangings belong to the fourth, or least elaborate, level. The only other fabrics described in the tabernacle texts of Exodus that are like those of the hangings are the four basic undergarments worn by all the priests. The word for the linen fabric of the hangings and the priestly garb is *šēš*, which is probably an Egyptianism and should be considered evidence of very early literary material, perhaps going back to an Egyptian environment, preserved in the priestly writings (Hurvitz 1967).

Two other Hebrew words are translated "hangings" in the RSV. One (*bāttîm*, 2 Kgs 23:7) apparently refers to woven garments or drapings made for the Asherah that stood in the temple in Jerusalem at the time of Josiah's reform. The other (*tĕkēlet*, "blue hangings," Esth 1:6) is a word for some sort of blue fabric that, along with white cotton material, was stretched on marble pillars in the garden of the Persian king Ahasuerus.

CAROL MEYERS

ḤANINA BEN-DOSA. There are more rabbinic references to Rabbi Ḥanina ben-Dosa than to Ḥoni and Ḥilkiah. He was from Galilee and lived during the middle of the 1st century C.E.; he was thus a near contemporary of Jesus of Nazareth. A pupil of Johanan ben Zakkai, he was a Tannaitic sage of the first generation, and was revered as a wise teacher (*b. Ber.* 34a; *Pirqe R. El.* 204–5; *y. Ber.* 4, 5, 6; *b. Ber.* 34b). He is quoted in the Mishnah: "R. Ḥanina b. Dosa said, 'He whose fear of sin precedes his wisdom, his wisdom endures; but he whose wisdom precedes his fear of sin, his wisdom does not endure. . . .'" (*m. ʾAbot* 3:10). He was righteous, denied being a prophet, and was probably an ascetic. A voice from heaven is reputed to have commended his devotion and self-sacrifice (*b. Taʿan.* 24b–25a; *b. B. Bat.* 74b; *b. Ber.* 17b): "The whole world is sustained for the sake of my son Ḥanina (Heb *ḥnyn bny*), and Ḥanina my son (*bny*) has to subsist on a *qab*

of carobs from one sabbath evening to the next sabbath evening" (*b. Ber.* 17b). He was a wonder-worker, and like Ḥoni and Ḥilkiah he was able to cause rain to fall (*b. Taʿan.* 24b). Like Jesus of Nazareth he was famous for his healing miracles. He is alleged to have healed not only R. Gamaliel's son but also R. Johanan ben Zakkai's son (*b. Ber.* 34b).

Like Ḥoni and Jesus of Nazareth, Ḥanina's life was embellished with legends (*Midr. Rab. Qoh.; y. Dem.* 1:22a; *t. Ber.* 3). His empty oven fills miraculously with bread; he sees his goats return home with bears on their horns and extends the beams of a neighbor's house (*b. Taʿan.* 25a).

JAMES H. CHARLESWORTH

HANNAH (PERSON) [Heb *ḥannâ*]. The first, and doubtless the favorite, of the two wives of Elkanah (cf. 1 Sam 1:2, 5). Barren for many years, Hannah may have prompted Elkanah to take a second wife (a similar rationale explains the actions of Sarai, Gen 16:2; Rachel, 30:3; Leah, 30:9). To be infertile was the ultimate tragedy for a married woman, since only by bearing a son to her husband could she provide a means of perpetuating his name and securing the orderly transfer of his estate upon his death (cf. e.g., 11:30; 15:2–4; 16:1–2; 17:15–16; 21:1–2; 25:5).

Hannah's shrewish rival, Peninnah, became the mother of many children and made constant fun of Hannah, apparently unaware that her infertility was caused by the Lord (1 Sam 1:5–6; cf. similarly Gen 15:3; 16:2; 20:18; 30:2). So merciless and continuous was the provocation that Hannah not only often wept and refused to eat but also became "resentful" (1 Sam 1:8; literally, had a "bad/angry heart"; for the only other precise parallel cf. Deut 15:10, where the same phrase means "grudging[ly]"). On such occasions Elkanah would attempt to console her with the thought that he was better for her than ten sons.

But Hannah refused to resign herself to a life of barrenness, and her sadness and "bitterness of soul" led her to pray and make a vow to the Lord (1 Sam 1:10–11). While at Shiloh on one of her family's annual pilgrimages (probably to celebrate the Feast of Tabernacles; cf. Judg 21:19–21), she promised that if God would give her a son, she would give the child back to him as a perpetual Nazirite (1 Sam 1:11). Although the term *Nazirite* does not appear in the account, it is clearly presupposed (as demonstrated by 4QSam^a; the Hebrew text of Sir 46:13; Jos. *Ant* 5.10.3 §347; and *m. Nazir* 9:5).

Eli, priest at Shiloh, observed Hannah moving her lips as she prayed silently, and he misinterpreted her action as a display of drunkenness. It is understandable that he should do so, since prayer in the ancient world was almost always audible (cf. e.g., Dan 6:10–11; Pss 3:4; 4:1; 6:9; etc.) and excessive drinking was a common accompaniment of festal occasions (including especially the Feast of Tabernacles; *AncIsr:* 496).

But Hannah justly protested that she had not been drinking; on the contrary, she had been pouring out her soul (1 Sam 1:15) to the Lord, a vivid figure of speech for praying earnestly (Pss 42:4; 62:8; Lam 2:19) to him. Her explanation satisfied Eli, who expressed his hope that God would grant her request. Sensing divine assurance in Eli's response, Hannah broke her self-imposed fast and in due course returned, expectantly, with Elkanah to their hometown. There the Lord "remembered" her (1 Sam 1:19)—as she had asked him to (1:11)—and enabled her to conceive and eventually bear a son to her husband. She named the boy Samuel.

After Samuel's birth Hannah decided not to make the annual pilgrimage to Shiloh until he was weaned so that, on her next trip, she could leave him there to serve the Lord for the rest of his life. Since the breast-feeding of a child lasted for two or three years in the ancient world (2 Macc 7:27), Samuel would have been considered old enough to spend an extended period of time away from home after his weaning. Accompanied by a three-year-old bull to be sacrificed to the Lord, Elkanah and his family made what was to be their most fateful journey to Shiloh. There Hannah affirmed to Eli that she was the woman whom he had first met a few years earlier; there she introduced him to Samuel as the son whom God had given to her; and there, as she had promised, she gave her son back to the Giver.

Although 1 Sam 2:1–10, the so-called Song of Hannah, may have originated as a royal song of triumph (Willis 1973) at the Shiloh sanctuary in connection with Israel's victory over an enemy, such songs would then have been taught to worshippers. This one would have perhaps become a personal favorite of Hannah and would have been used by her to express her gratitude and praise to God as well as her "victory" over Peninnah (see esp. 2:10, where Hannah declares that the Lord will "thunder against" all who oppose him, just as Peninnah's intention had been to "irritate"—literally, "thunder against"—Hannah; 1:6). The first three lines of 2:8 are almost identical to Ps 113:7–8a. If Psalm 113 is later than Hannah's song, the psalmist has added an exquisite touch in the light of Hannah's situation: "[The Lord] settles the barren woman in her home / as a happy mother of children" (113:9; cf. also the mention in 1 Sam 2:21 of additional children later born to Hannah). Since the Song of Hannah is commonly dated to the 11th or 10th century B.C. on the basis of stylistic phenomena as well as the divine names and titles it contains (cf. e.g., Freedman 1976: 55, 96), there would seem to be no compelling reason to deny that Hannah's song is contemporary with her.

Appearing near the beginning of 1 Samuel, its closest parallel in the OT is the Song of David (2 Samuel 22), which appears near the end of 2 Samuel. These two remarkably similar hymns frame the main contents of the books and remind us that the two books were originally one. Both songs begin by using "horn" as a figure of speech for "strength," by referring to God as the "Rock," and by reflecting on divine deliverance (1 Sam 2:1–2; 2 Sam 22:2–3). Both end by paralleling "his king" with "his anointed" (1 Sam 2:10; 2 Sam 22:51).

Hannah's song is generally conceded to have provided the main inspiration for Mary's *Magnificat* (Luke 1:46–55). The two hymns, both commemorating miraculous preg-

nancies, begin similarly; and certain themes in the Song of Hannah recur in the *Magnificat* (cf. 1 Sam 2:4, 7–8 with Luke 1:52; 1 Sam 2:5 with Luke 1:53). These two songs and their contexts have in turn influenced the *Protevangelium of James,* a 2d-century A.D. pseudepigraphic work that tells the story of Mary's elderly parents' prayers for a child. The old woman vows that the child will be "a gift to the Lord my God" (cf. 1 Sam 1:11). Mary is born in response to the prayers, and at the age of three she is presented by her parents to the priests in the temple at Jerusalem. Mary's aged mother is named Anna, the same as that of Samuel's aged mother, Hannah (see JAMES, PROTEVANGELIUM OF).

As for the name Hannah itself (*ḥannâ,* "Grace/Gracious"), it is found only in 1 Samuel 1–2 in the OT. But a Hebrew seal from the Lachish area dating to ca. 725–675 B.C. displays the name *ḥnh* (Bartlett 1976: 59–61). And in the NT, Luke 2:36–37 mentions an aged widow named Hannah. Unfortunately, the KJV spelling "Anna" in that verse has become conventional. In any case the NT Hannah is called a prophetess—as, coincidentally, is the OT Hannah in Jewish tradition as enshrined in the Targum of Jonathan ben Uzziel as well as in *Meg.* 14a.

RONALD YOUNGBLOOD

HANNATHON (PLACE) [Heb *ḥannātōn*]. A city on the N boundary of the territory of Zebulun (Josh 19:14). Situated on the Darb el-Hawarneh—the major highway connecting the Hauran and N Transjordan with coastal Palestine—Hannathon was one of the major Canaanite centers of the lower Galilee (Oded 1971). The town figures in two of the Amarna Letters, that of the king of Babylon (EA 8), who describes the robbing of a Babylonian caravan near Hannathon by the kings of Shimʿon and Acre, and that of Biridiya, king of Megiddo, who tells of the release of Labayu of Shechem at Hannathon, following the payment of a ransom or bribe to Zurata, king of Acre, who was to escort him to the custody of the pharaoh. Hannathon appears once more in the extrabiblical record in the annals of Tiglath-pileser III of Assyria who, in 733/732 B.C.E., campaigned in N Palestine. Hannathon, along with several other Galilean towns, fell to the Assyrians during this campaign (*ANET,* 283; cf. 2 Kgs 15:29).

Tel Hannaton (Tell Badawiya; M.R. 174243) is a large site (5 hectares) which dominates the SW part of the Bet Netofa valley. Systematic surveys of the site (Gal 1982: 24) have revealed evidence of settlements in the Chalcolithic period, the EB, MB, and LB, the Iron Age I, and in the 10th–8th centuries B.C.E. Traces of several fortification lines are visible on the site.

RAPHAEL GREENBERG

HANNIEL (PERSON) [Heb *ḥanniʾēl*]. Two persons mentioned in the Hebrew Bible have this name. The name Hanniel has been explained variously but is derived in one case from the root *ḥnn,* "to be gracious," "to show favor." This produces a meaning "god has been gracious." One suggestion (*EncMiqr* 3: 215–16) is that Hanniel is similar in form to Hannibaʿal, a name known from Punic (Benz 1972: 313) and which came into Latin as Hannibal. Another explanation of the name uses the root *ḥen,* "favor," "pity," as a noun and would suggest that "god is *ḥen* [pity]" or that "god is my *ḥini* [my pity-taker]."

Note that the Samaritan reads *ḥanaʾel* and that similar names occur in the Samaria ostraca and the Elephantine documents.

1. The son of Ephod and the member of the tribe of Manasseh selected to oversee the distribution of the land of Canaan (Num 34:23).

2. The father of a clan from the tribe of Asher (1 Chr 7:39).

Bibliography

Benz, F. 1972. *Personal Names in the Phoenician and Punic Inscriptions.* Studia Pohl 8. Rome.

RAPHAEL I. PANITZ

HANOCH (PERSON) [Heb *ḥănōk; ḥănôk*]. HANOCHITES. **1.** Third son of Midian (Gen 25:4). For the meaning of the name, see ENOCH, which shares the same Heb spelling *(ḥănôk).* As with the other offspring of Keturah and Abraham, this "grandson's" name may have been related to an Arabian town or oasis on the international trade routes (Ephʾal 1982: 231–33, 240), perhaps even the city Cain named after his son Enoch (Gen 4:17; Winnett 1970: 192–93).

2. First son of Reuben (Gen 46:9) and ancestor of the Hanochites (Num 26:5). The proximity of Reuben's tribal area to Midian may suggest a relationship between the peoples represented by the two Hanochs (Skinner *Genesis* ICC, 352).

RICHARD S. HESS

HANUKKAH. See DEDICATION, FEAST OF.

HANUN (PERSON) [Heb *ḥānûn*]. A personal name formed from the *Qal* passive participle of the root *ḥnn*

meaning "favored." The implied source of favor is a deity (*IPN,* 169, n. 4; 187).

1. An Ammonite king, the son of Nahash (2 Sam 10:1–4; 1 Chr 19:1–4) and brother of Shobi (2 Sam 17:27). Hanun was a contemporary of David's, and is reported to have succeeded to the throne upon his father's death (2 Sam 10:1; 1 Chr 19:1). Following usual dynastic principles, he would have been the eldest son of Nahash. Upon the advice of his court, Hanun was to have rebuffed and humiliated David's envoys, who were sent to reaffirm the preexisting alliance between Israel and Ammon, which needed the ratification of the new king. Some were suspicious that David's messengers had been sent as spies to scout out the capital city's weaknesses in preparation for its capture (2 Sam 10:2–4; 1 Chr 19:2–4). The reference to loyal behavior *(ḥesed)* in v 2 designates the mutual relationship of rights and duties between allies (Glueck 1967: 46–47) and is frequently used in parity and vassal treaties. War was to have ensued as a result of Hanun's failure to ratify a new treaty, with an eventual victory by David's troops (2 Sam 10:6–12:31; 2 Chr 19:6–20:3). The historical reliability of the biblical account is questionable since the Israelite historiographer would not have been privy to the private consultations at the Ammonite court; nevertheless, the narrative would seem to be based on a reliable tradition about Ammon's refusal to continue treaty relations with Israel at Hanun's succession.

After the capture of the capital city of Rabbath Ammon, David is reported to have donned the crown of the king or the national god Milcom (O'Ceallaigh 1962), thereby signaling his assumption of direct control over Ammon. He was to have put the Ammonites to labor with saws, and iron picks, and axes (2 Sam 12:31; 2 Chr 20:3). According to tradition then Ammon lost its ally status soon after Hanun's accession to the throne; and Hanun was deposed. It is commonly argued that David took personal control of the throne of Ammon, joining it to Israel and Judah through a personal union, but assigning it a lower status (i.e., Alt *KlSchr,* 70; Noth *NHI,* 194; Bright *BHI,* 198; Herrmann *HHI,* 157–58). Two alternate views have been suggested. According to one, Ammon was made a vassal state (Soggin 1985: 59). According to the other, it was directly incorporated into the Davidic state, with a governor in charge (Ahlström fc.).

The subsequent report in 2 Sam 17:27 concerning Shobi ben Nahash indicates that after the capture of Rabbath Ammon, David reinstated a member of its ruling family to serve as titular head of state. Shobi was another son of Nahash, evidently a younger brother of Hanun's. His office tenure tends to rule out the general view that David became king in Ammon, unless he ruled only briefly and then decided to step down in favor of a new arrangement involving Shobi. Nor is it likely that David would have appointed a member of the former royal family to be a governor in annexed Ammonite territory; he would have served as a rallying point for rebellion by the local population in a bid to reestablish statehood. It is most likely that Shobi was set on the Ammonite throne personally by David, to be a loyal vassal, sometime after Hanun's deposition. David may have given Shobi his throne name, which means "captive." Shobi's status as a vassal is strongly implied by both his name and by his offering aid to his distressed overlord during Absalom's rebellion, demonstrating his resolve not to side with the overlord's enemy, following common vassal treaty requirements (McCarthy 1963: 182, 191, 194, 200). Even if one would choose to dismiss the reference in 2 Sam 17:27 about the aid supplied by the three Transjordanian vassals as fictional elaboration aimed at stressing David's legitimacy and status as king even in exile, the names of the three individuals depicted may well derive from official Davidic court records that indicated their status as vassals to David.

2. A member of the postexilic community who participated in the rebuilding of the walls of Jerusalem in the time of Nehemiah (Neh 3:13, 30). He appears to have worked on two different sections of the project, with different cohorts, as did a number of other individuals. In one assignment he worked alongside the inhabitants of the town of Zanoah to rebuild the Valley Gate, on the W side of the settlement, near the present-day Jaffa Gate (Burrows 1934: 129, 134–36; Simons 1952: 124–27), restoring its masonry, doors, bolts, and bars. In addition, the group repaired a segment of the old wall that ran S from the Valley Gate for about 1000 cubits, or 1500 ft, to the Dung Gate. Since this was a comparatively large section of wall and the only one the length of which is specified in the entire account of the wall rebuilding in chap. 3, it is suggested either that Hanun and the Zanoahites represented a large work force or that most of the wall was still standing and required only nominal repairs (Keil 1873: 197; Batten *Ezra, Nehemiah* ICC, 214; Williamson *Ezra, Nehemiah* WBC, 207). When the Neo-Babylonians destroyed the city in 587/586 B.C.E. (2 Kgs 15:4–10), they probably would not have broken down the entire wall, an act which would have been unnecessarily time-consuming. Instead, they probably would have breached at intervals segments of the wall that remained after the direct assault. Only certain segments would have required rebuilding from the foundation level. Hanun worked on another segment with Hananiah ben Shelemiah N of the Horse Gate, just S of the area where the temple servants and merchants resided.

Debate continues over whether or not the two Hanuns in vv 13 and 30 are a single individual or two separate people (i.e., Batten, 214; Keil 1873: 193; Myers *Ezra, Nehemiah* AB, 119). Hanun appears in v 13 without a patronymic or hometown identification, which has led some to conclude that he was a chief, ruler, or another inhabitant of Zanoah, the home of the group with which he was working (i.e., Batten, 214; Keil 1873: 183). In v 30 Hanun is identified as the sixth son of Zalaph. Because it is very unusual to denote birth order in a patronymic, it has been suggested that the consonants of the Hebrew word "sixth" *(hššy)* may have once represented Hanun's hometown (Guthe 1901: 44): Hanun, the son of Zalaph, the ". . . ite."

In favor of identifying the two Hanuns is the reference in v 30 to the work constituting a "second section," which implies that one or both of the individuals had already completed a section elsewhere (pace Burrows 1934: 127–28). There are seven instances where the text refers to work representing a second section. Of those occurrences, details of both sets of constructions are given for Meremoth, son of Uriah, son of Hakkoz; the Tekoites; and

Binnui/Bavvai, son of Henedad; while details are lacking for the first repair work completed by Malchijah, son of Harim, and Hasshub, son of Pahath-Moab; Ezer son of Jeshua; and Baruch son of Zabbai. Possible details about the first work assignments completed by both Hanun and his companion Hananiah may be provided in vv 8 and 13 respectively if one is willing to identify the individuals without patronymics with their namesakes with patronymics. It seems likely that the report of rebuilding in chap. 3, which follows a sequential arrangement for the entire circumference of the city, has been based on actual records of the repair process but has been simplified and pieced together from a nonsequential list for narrative flow and easy audience understanding (Myers, 112–13; contrast Williamson, 199–200). Work on many sections was almost certainly undertaken simultaneously, to speed completion of the project. It is possible that the first assignment Hanun completed was the one at the Horse Gate, so that his name was listed with patronymic in the records in this first occurrence and that he was listed by first name only under the second entry.

DIANA V. EDELMAN

HAPAX LEGOMENA. Words (other than proper names) which occur only once in the Bible. This originally Greek term, which means "once said," was first used by Alexandrian grammarians in the 3d century B.C.E. to mark unique terms in classic Greek works.

Rare biblical words have attracted attention for centuries, usually because they are believed more difficult to understand or more susceptible to scribal confusion than other words. However, the criteria used to identify such words have differed according to the varied concerns of those who study them. The Masoretes marked many phrases and spellings found only once in the Hebrew Bible with the letter *lamed,* as an abbreviation for the Aramaic word *lêtaʾ* ("there is no other"), presumably to warn scribes that, although unusual, these forms were not mistakes.

As is common in the early stages of linguistic study, medieval Jewish Bible scholars were particularly aware of difficult words, drawing special attention to those they described as having "nothing similar" (Heb *dômeh*). The 12th-century Spaniard Abraham ibn Ezra was especially fond of pointing out linguistic rarities, identifying such words with a variety of phrases, including "it has no mother or father" and "it is one, and there is no second," which Jewish tradition had used to describe God, often in anti-Christian contexts.

Whereas the Masoretes were concerned with avoiding scribal error, the medievals' concern was more linguistic. Committed to the accuracy of the traditional Hebrew text, they recognized that the Bible did not preserve all of ancient Hebrew. As a result, words which occurred only a limited number of times seemed particularly difficult to understand. Whereas some interpreters, such as the 10th-century Spanish lexicographer Menahem ibn Saruq, chose to rely on biblical context alone, his near-contemporary, the philosopher and exegete Saʿadia Gaon, proposed that one could use rabbinic literature as a source for additional attestations of such terms. His list of 90 (though the title of his work refers to only 70) words for which this approach was useful thus anticipates modern scholarship's reliance on cognate literatures where the biblical evidence is insufficient. However, Saʿadia's motive was not academic. Concerned with the Karaite movement's claim that Judaism should rely on the Bible alone, he saw such words as demonstrating the need for rabbinic literature.

Although the widening horizons of modern biblical scholarship have provided a host of new resources, the problem with hapax legomena is still generally perceived as resulting from the limited evidence available for their interpretation. This etymological focus is particularly apparent in the importance ascribed to a subcategory which I. Casanowicz (*JEnc* 6: 226–28) called "absolute" hapax legomena, those words which not only occur only once in the Bible, but are also unrelated to any other words found there. The fact that published lists differ as to which words belong in this class demonstrates inconsistency as to how the definition should be applied. One reason for this is uncertainty as to whether to include words which occur several times, but in only one context (for example, a single verse or a passage repeated verbatim in two different parts of the Bible). Although in itself a relatively minor disagreement, this reflects differing assumptions as to the significance of certain words being rare and disagreement as to their difficulty.

Scholars usually seek ways to link rare words with more common terms so as to make them less difficult to understand. In earlier times this often involved showing that certain pairs of consonants can interchange or that the order of letters can be reversed so that seemingly rare words can be correlated with more common terms. Arguing that unique words are incorrect, perhaps because of scribal errors resulting from their unfamiliarity, modern scholars have sometimes proposed textual emendations, preferably on the basis of some sort of credible evidence. Others accept the likely accuracy of the text, seeing such words as an accidental result of the Bible's relatively small size, the limited number of topics which it contains, and the paucity of surviving texts in ancient Hebrew. To compensate for the limited information available within the Bible itself, they have followed Saʿadia's lead in seeking evidence from other Semitic languages. During the Middle Ages the resources available for this approach, which can

be traced back to antiquity, were extended beyond Aramaic and rabbinic literature to include Arabic and sometimes even unrelated languages, such as Berber and Greek. With the wealth of additional resources now available, modern scholars have found Akkadian and Ugaritic texts particularly valuable.

Noting that related words can have different meanings in different languages, H. Cohen (1978) has urged caution in the use of such materials. To avoid mistakes, he suggests that cognates must appear in at least one context that is identical with that of their biblical counterparts before information about one should be used to illuminate the meaning of the other. Although intellectually appealing, this method has proven possible in only a handful of cases.

An alternative approach looks upon hapax legomena as a statistical rather than a philological phenomenon. Numerous studies of word frequency have shown that about half of any work's vocabulary is likely to occur only once. The comparable proportion for the Hebrew Bible is closer to one-third. There are several possible explanations for this relative paucity. One is that because the Bible is substantially larger than the other texts studied, it offers more opportunities for words to recur. The nature of Hebrew grammar, in which different meanings can be generated by conjugating the same verbal root according to different patterns, may also play a role. In any event such evidence raises serious questions for those who have questioned the biblical text's reliability because of the supposedly large number of hapax legomena it contains.

A word's frequency is dependent on the nature of the text in which it occurs. For example, animal names are less likely to be found in military passages than in those devoted to farming. Words which are rare in the Bible may not therefore have been difficult for ancient readers or listeners. However, statisticians have also demonstrated that certain words are inherently more common than others. This is supported by the fact that the Bible's hapax legomena occur significantly more often in poetic passages than in prose, a result of poets' preference for less ordinary words as well as of the parallelism characteristic of biblical poetry, which relies heavily on synonyms. The concentration of uncommon words is also a function of style; some authors use a more esoteric vocabulary than others. One can find variation even within individual books. For example, God's speeches in the book of Job include markedly more rare words than those of other characters, a phenomenon which can be paralleled in the literatures of other traditions.

HAPHARAIM (PLACE) [Heb *ḥapārayim*]. A town located in the territory of the tribe of Issachar, mentioned only in Josh 19:19. Yeivin (1957: 590) equated Hapharaim with both Number 53 *(ʿpr wr)* and Number 54 *(ʿpr šri)* in the List of Thutmose III at Karnak. However, Kallai (*HGB,* 422) has noted that the Egyptians did not usually confuse the letters *ḥet* and *ʿayin* and that therefore the names in the Thutmose III list are not to be associated with Hapharaim. The toponym had also been connected with Number 18 *(ḥprm)* in the Conquest List of Shishak I at Karnak (see *ANET,* 242), which, while linguistically acceptable, is rejected by many researchers Aharoni (*LBHG,* 327) who believe the site Shishak mentioned was located E of the Jordan river.

Hapharaim is sometimes located (*RAB,* 146) at Khirbet el-Farriyeh (M.R. 160226), based in part on the similarity of the ancient and modern names. However, this site, located NW of Megiddo, is far outside the territorial boundaries of Issachar determined by the other sites in the passage. Albright (1926: 227–28) suggested the location of Hapharaim at the village of et-Ṭaiyibeh (M.R. 192223). While superficially the name is not similar, by the Islamic period Hapharaim had changed to a root of *ʿpr, (HGB, 423), which has negative connotations in Arabic, resulting in the substitution of a "good" (ṭyb)* name. Albright's identification has been generally accepted, although Kallai (*HGB,* 203) has noted that Afula (M.R. 177223) remains another possibility.

HAPIRU. See HABIRU, HAPIRU.

HAPPIZZEZ (PERSON) [Heb *happiṣṣēṣ*]. A priest who received the 18th position in the priestly order of the temple during David's reign (1 Chr 24:15). 1 Chronicles 24 is the only place where Happizzez appears in the OT. It seems highly unlikely that he was a historical priest contemporaneous with David. Instead, Happizzez may represent a familial name, a clan located at Beth-pazzez (Josh 19:21). An evaluation of the historical reliability of his appearance, however, depends ultimately on the literary context of 1 Chr 24:1–19. For questions regarding the date of this list of priests, see HAKKOZ. See BETH-PAZZEZ.

JOHN W. WRIGHT

HAR HARIF (M.R. 107989). A set of prehistoric sites located at the highest elevations of the central Negeb highlands adjacent to Sinai, ca. 900–1000 m above sea level. It was first investigated by an expedition under the direction of A. E. Marks from 1969 through 1974. More extensive excavations were conducted by A. N. Goring-Morris and A. Gopher in 1980 and 1981.

This area, at the S boundary of the Irano-Turanian vegetation zone, contained relatively abundant plant and animal food resources during the Late and Terminal Pleistocene and so provided an attractive focus for local hunter-gatherer bands. Various open-air campsites of Upper Paleolithic and Epipaleolithic groups (especially of the local "Ramonian" industry) have been investigated on the loess-covered plateau. These camps usually comprise limited (20–150 m^2) scatters of flint artifacts in which organic materials have not been preserved and presumably represent ephemeral hunting camps.

A large Natufian site complex of the 10th millennium B.C., Rosh Horesha, is located in an adjacent shallow valley; extending over at least 4 dunams, it is the southernmost Natufian base camp known in the Negeb. Many bedrock mortars in the vicinity indicate that plant resources (probably pistachio nuts, but perhaps also barley) were major staples in addition to meat from hunted prey. The associated lithic assemblage was abundant.

The Epipaleolithic Harifian industry is named after a series of sites found on Har Harif, the best documented of which are Abu Salem and Ramat Harif. These sites, well dated by C^{14} determinations to the second half of the 9th millennium B.C., apparently represent the summer base camps of a local group. These camps, each extending over ca. 600 m^2, comprise no more than three or four separate (family?), semi-subterranean, circular dwellings up to 3 m in diameter and a few additional smaller structures, such that there would have been no more than 30 occupants. The economy was based upon vegetal resources, processed on grinding slabs (barley? or other cereals) and by pounding with mortars and pestles, as well as upon hunting (especially gazelle, ibex, and wild goat), seemingly with the newly developed bow and arrow. An abundant flint industry (more than 5000 tools and 80,000 pieces of waste in one structure alone) is distinctive but reminiscent of the preceding Natufian. Exotic ornamental elements are quite common, especially sea shells, most from the Red Sea (as opposed to the Mediterranean orientation at Rosh Horesha), turquoise beads, malachite, and other rare minerals.

During the winter months the Harifians apparently separated into smaller (family?) units and moved to nearby lower regions, especially the dune fields of N Sinai and the W Negeb, where small transient campsites without architectural remains have been documented, and perhaps also E to the shelter of the Maktesh Ramon.

This transhumant Harifian adaptation was disrupted by increasing desiccation, leading to the virtual abandonment of the Negeb during the first half of the 8th millennium B.C. The region was only subsequently reoccupied some 1000 years later at Abu Salem, where the remains of a Pre-Pottery Neolithic B campsite with a few small structures were found.

HAR-HERES (PLACE) [Heb *har-ḥeres*]. The toponym Har-heres, which means "scurfy mountain(s)," appears in the OT only in Judg 1:35. It was the name of a mountain range on the E or SE edge of the valley of Aijalon (cf. Josh 10:12), in the transition zone between the mountains and the hill country. In certain periods there may have been a settlement on the mountainside. In any case a site on the S slope of the bare hills running NW about 2 miles SE of Yalo bears the name *ḥirbet ḥirša;* another, on the W slope of a range slightly farther S is called *ḥirbet ḥarsīs.* It is reasonable to assume that one of these names preserves the OT toponym Har-heres.

Judg 1:35 mentions Har-heres in conjnction with Aijalon (Yalo) and Shaalbim (Selbit), which are clearly villages; in the past the toponym has likewise been understood as the name of a village. It has usually been interpreted as a variant of the familiar Beth-shemesh (Tell er-Rumeileh near En-shems), since Heb *ḥeres,* like *šemeš,* can also mean "sun" (cf. Job 9:7). This identification is contradicted, however, by the initial element *har,* which in the OT always means "mountain (range)." The apparent exception in Josh 15:10, where Har-jearim is equated with the village Chesalon, is based on a mistaken secondary identification: Chesalon was located on the N slope of Har-jearim. Furthermore, the LXX of Judg 1:35 translates *har* as *oros,* whereas it always transliterates the names of villages (e.g., *baithsamys* for Beth-shemesh).

According to Judg 1:34–35 Har-heres, like the nearby

villages of Aijalon and Shaalbim, remained in the hands of the Amorites when the small band of Danites tried to enter the fertile valley of Aijalon before migrating to Laish (Judg 18:27–29) from their encampment at Kiriath-jearim (Judg 18:12). The house of Joseph, more precisely the tribe of Ephraim, considered this territory as part of its sphere of influence and finally acquired sovereignty over it.

HARA (PLACE) [Heb *hārā'*]. A place of exile for some of the Israelites or at least the people of the capital city of Samaria. The word means "mountain" or "highland." It is omitted in LXX AB and Syr. In 1 Chr 5:26 Hara is listed with Hala, Habor, and the river Gozan, as the place of exile by Assyrian King Pul (his personal name) or Tilgath-pileser (more accurately, Tiglath-pileser III, his throne name, 745–727 B.C.). In 2 Kgs 17:6 and 18:11 the RSV records that the king took the people of Samaria (the city) to Assyria and put them in Halah; on the Habor, the river of Gozan; and in the *cities* of the Medes. Instead of Hara, Heb has "cities of Media." The LXX has "mountains of Media." Perhaps Hara is a corruption of *har,* "mountain," or *ha'ir,* "city." Gozan (Ptolemy's Gauzanitis, modern Tell Halaf) is in N Mesopotamia. Curtis (*Chronicles* ICC) claimed it was a district, the Assyrian *Gu-za-na.* The Habor is the modern river Khābûr, the ancient Chaboras, which rises in Karabjab Dagh (ancient Mons Masius), runs for 200 miles through the Gozan district, and empties into the Euphrates SE of the modern town of ed-Deir, which some identify as Hara. Some suggest that Hara should be read Hara on the Balikh 100 miles to the W. Others understand Hara as a local designation of Mons Masius. But a similar attraction is found in the mountain district E of the Tigris river. Arabs called these highlands El Gebal "the Mountain." It is less likely, but possible, that Hara is a corruption of Harhar, a Median city conquered by Sargon and colonized by him with captives from other countries. Tobit (1:14–15) communicated with fellow Jews in Media (Bowman *IDB* 2: 523–24), lending some support to a location in Media. Many commentators see "mountains" or "cities" as original with the Chronicler, mistaking the term for a place called Hara. However, Keil (n.d.: 111) suggested the Chronicler was drawing on a separate authority. *Cities* is a more general term while Hara is the specific name of the district (El Jebel) in Aramaic, for Heb *har,* "mountain" a name which he knew through his separate authority. It is a name which could only have been handed down by the exiles who lived there. Keil identified Halah with Strabo's Calachene, E of the Tigris near Adiabene, N of Nineveh on the Armenian frontier. The Habor is not the Chaboras in Mesopotamia, but a district in N Assyria where Jakut mentions there is both a mountain Chaboras on the Assyria-Media frontier and a river Khābûr Chasaniae, which starts near the Upper Zab, near Amadijeh, and enters the Tigris below Jezirah. Thus Halah, Habor, and Hara are E and N of the Assyrian capital, further removed from Israel than the upper Euphrates and further removed as troublemakers for the Assyrian occupation of Israel.

HARADAH (PLACE) [Heb *harādâ*]. The ninth encampment of the Israelites after leaving the Wilderness of Sinai as listed in Num 33:24–25, placed between Mt. Sepher and Makheloth. The name, which means "fear," "trembling," or "anxiety," gives no clue as to its possible location, though it may suggest a place where the Israelites met some misfortune (compare this with Kibroth-hattaavah, in Num 11:4–6 and 31–35, where a story relates the origin of a similar name). Suggested locations for this site include the Wâdī Lussan (*GP,* 215; M.R. 085985) and Jebel 'Aradeh (Palmer 1872: 253, 419; M.R. 099843). For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai see DOPHKAH.

HARAN (PERSON) [Heb *hārān; ḥārān*]. **1.** Son of Terah; brother of Abram and Nahor; and father of Lot, Milcah, and Iscah (Gen 11:27–29). Haran died in Ur of the Chaldeans while his father was still alive. Haran as a personal name is to be distinguished from Haran, the place name (Heb *ḥārān*). The personal name is composed of two elements: *hr,* the Hebrew word for "mountain"; and a W Semitic suffix which appears on proper names *-ānu/i/a* (Sivan 1984: 97–98). (For another use of the *-ān* ending in personal names of Genesis 1–11, see KENAN.) In personal names from Mari and Alalakh, the spellings *ḫa-ri-* and *ḫa-ru-* occur, but their relation to the *hr* element is not certain (cf. Sivan 1984: 222; but Huffmon *APNM,* 204). Such an element has not been recognized in Amorite; and the only example of the W Semitic noun, *hr,* in cuneiform, appears in a gloss in an Amarna Letter from Byblos (EA text 74, line 20), where it occurs in a geminate form *ḫa-ar-ri.* More certain is the initial element in both the later Phoenician personal name, *hr-b'l* (Benz *PNPPI,* 303), and the Israelite personal name, *hryhw,* from Gibeon (Pritchard 1962: 119).

2. A son of Shimei, of the sons of Gershon, of the tribe of Levi (1 Chr 23:9).

3. Son of Caleb and his concubine, Ephah; brother of Moza and Gazez; and father of Gazez (1 Chr 2:46).

RICHARD S. HESS

HARAN (PLACE) [Heb *ḥārān*]. The place to which Terah and his family (including Abram) migrated from Ur and where the descendants of Abram's brother Nahor dwelt and Terah died (Gen 11:31, 32).

A. Name and Location

The Sumerian word KASKAL, which Akkadians read as *ḫarrānu,* "road," was adapted as the name of the city of Haran. The determinative signs URU or KUR attached before the name of the city of Haran indicated it either as (1) city (or town, or village), or (2) country (or land, or region). The Akkadian city name *Ḫarrānu* was transcribed into Hebrew as *Ḥārān.* The Babylonian and Assyrian word *ḫarrānu* as a feminine noun (rarely as masculine word) denoted (1) "highway," "road," "path"; (2) "trip," "journey," "travel"; (3) "business trip"; (4) "caravan"; (5) "business venture"; (6) "business capital"; (7) "military campaign," "expedition," "raid"; (8) "expeditionary force," "army"; (9) "corvée work"; (10) "service unit" from the OAkk period onwards. The city of Haran, probably located at the "junction of trade routes," was named after the crossroads.

Some consider that this city, Haran, was named after Terah's son Haran (Gen 11:26–28), but the Hebrew spelling of the names is different. Since Haran was born at Ur and died there before the migration of the Terahide family from Ur, it is inconceivable that the city of Haran was named after him.

Haran may be identified with Padan (Gen 48:7). The Akk *padānu* and *paddānu* both mean "road" (like *ḫarrānu*) and "the biliary ducts of the liver." The expression Padan Aram appears more often than the simple Padan but only ten times in Genesis. Some consider the expression "the field of Aram" (Hos 12:12) as the Hebrew translation of Padan Aram. However, most probably the expression "the field of Aram" may be another way of referring to the plain between two rivers (either Euphrates and Tigris or Euphrates and Khābûr) corresponding to the name Aram-naharaim. In the Targumic Aramaic the word *paddĕnā'* means "yoke," "span of oxen." The Akk *paddānu* "road," and the Aram *paddĕnā'* "span of oxen," share the common idea of "spanning two regions," for the road is considered as the bridge between two or more regions.

Haran is situated about 100 km N from the confluence of the Euphrates and the Balikh (a tributary of the Upper Euphrates) and 80 km E of the city of Carchemish on the winding upper Euphrates river. It is located at the confluence of the wadis which join the Balikh in winter, also at 80 km W of the city of Guzana or Gozan (Tell Halaf) and halfway between Guzana and Carchemish on the E-W road which links Nineveh on the Tigris and the E Mediterranean countries, at the point where the N-S route along the Balikh crosses.

"The city of Nahor" in Gen 24:10, mentioned as the place where Rebekah's parents lived, may be identified with "Nakhur," which is often mentioned in the Mari tablets as well as in the Middle Assyrian documents of the 7th century B.C. According to Albright it is located below Haran in the Balikh valley, judging from the name of a town Til-Nakhiri, "the Mound of Nakhur," in the above documents (*FSAC* 115, 236–237). It was probably another town, different from the city of Haran, but still in the Haran district. In Assyrian documents we see more names of towns similar to the names of the people in Terah's family: e.g., Til-Turakhi, "Mound of Terah," probably also located on the S Balikh like Til-Nakhiri, and Serugi "Serug," modern Seruj, some 55 km W of Haran.

B. History

The OA Cappadocian tablets (Kültepe texts), business letters and legal documents of Assyrian merchants (working in the E portion of Asia Minor in the 19th and 18th century B.C.), and an itinerary and a letter addressed to Yasmah-Adad (the Assyrian viceroy at Mari of the OB period belonging to the 18th century B.C.) mention Haran as an important crossroads. The main temple, È-ḪULḪUL, at Haran was a center for the worship of Sin, the Mesopotamian moon-god.

The Israelite's confession that "my father was a wandering Aramean" (Deut 26:5) suggests that their ancestors were either Aramean nomadic people or non-Semitic nomadic people who came to live in an Aramean environment in the Haran district. Terah and his family genealogically belonged to the Hebrew (or perhaps 'Apiru), who are the descendants of Eber in Gen 10:21, 25; but they had a close association with Arameans before or after coming to Aram-naharaim "Aram of two rivers (= Mesopotamia)." Terah and his family settled there for a considerably long time, so that Abraham could call the Haran region "my country" (Gen 24:4).

At the time of Terah and Abram, the culture of the people of NW Mesopotamia, in the region around Haran, was a mixture of Hurrian and Amorite elements on a Sumero-Akkadian foundation defined and illustrated by the Cappadocian tablets, the Mari documents, the Code of Hammurapi, the OB letters from Babylon, and the Nuzi tablets of the 15th century B.C. There is no positive evidence for defining the time of the earlier migration from Ur of the Chaldees to Haran. Moreover, the Chaldeans during the patriarchal periods seem to be rather nomadic raiders (Job 1:17) who lived near Haran or Edom; so the traditional site of Ur in S Mesopotamia may be reexamined as some seek the location near Haran; but the place is not identified yet.

After Terah's death Abraham migrated from Haran to Canaan when he was 75 years old (Gen 12:4–5), but the family of Nahor remained there, and his wife Milcah bore 8 children: Uz, Buz, Kemuel, Chesed, Hazo, Pildash, Jidlaph, and Bethuel (Gen 22:20–22). Eliezer brought Rebekah, daughter of Bethuel, from there (Genesis 24); and later Jacob fled there to live with Laban; there he married Laban's two daughters, Leah and Rachel; and there his 11 children were born.

At the time of Hammurapi (1728–1686 B.C.) Haran was

under an Amorite king, Asdi-takim. The alliance between this king of Haran and the kings of Zalmaqum and sheikhs and elders of the Benjaminites (mentioned in one of the Mari Letters), was concluded in the temple of the moon-god at Haran. In the MA period Adad-nirari I (1307–1275 B.C.) fortified the citadel of Haran, and Tiglath-pileser I (1115–1077 B.C.) embellished the temple É.ḪULḪUL of the moon-god. Because of its rebellion the city of Haran was destroyed by Asshur-dan III in 763 B.C., which event Sennacherib (704–681 B.C.) mentioned to intimidate Jerusalem (2 Kgs 19:12; Isa 37:12). The city was restored by Sargon II (721–705 B.C.), and the temple was repaired by Esarhaddon (675 B.C.) and by Ashurbanipal (668–627 B.C.). A letter to Ashurbanipal says that Esarhaddon "saw in the region of Harran a temple of cedarwood. Therein the god Sin was leaning on a staff, with two crowns on his head" (*ANET,* 450). After the fall of Nineveh (612 B.C.), Haran became the last capital of the NA Empire until its capture by the Babylonians in 609 B.C. The NB Empire restored the temple of the moon-god at Haran and appointed Nabonidus' mother as the high priestess of the temple. In the book of Ezekiel, Haran is mentioned as one of the famous commercial cities trading with Tyre (Ezek 27:23), but after then the city existed without particular relation to the biblical account until several centuries after the NT period when it fell into ruin. For further discussion, see *EncJud* 7: 1328–30; *NBD,* 504.

YOSHITAKA KOBAYASHI

HARARITE [Heb *hahărārî*]. A gentilic adjective describing the location or clan from which a number of David's mighty men came (2 Sam 23:11, 33). Most scholars feel that the adjective designates a location, although it has not been identified with certainty. On the basis of the appearance of the term *A-ra-ri* in the Amarna Letters, it has been identified with either a town in the S district of Judah near Hebron (Elliger *KlSchr,* 98) or the biblical Aroer in the Negeb (Albright 1943: 14). Others have argued that the location is in the Shephelah, since a Harite led a battle against the Philistines (2 Sam 23:11–12; *HDB* 2: 301). This assumes that the battle was fought near the border of Philistia and Israel and also that the Hararite's place of origin was in the same general area. Perhaps the simplest explanation is that of Gesenius, who argues that Hararite means "mountain dweller" (Heb *har* = mountain) (*BDB,* 251).

Three of David's mighty warriors were Hararites, one belonging to the group distinguished as "The Three" and two to the one known as "The Thirty." Shammah was a member of the former group. His father, Agee, was known as a Hararite (2 Sam 23:11; Heb *hārārî* is a contraction for *hahărārî*), and presumably he was too. Shammah played an important role in defeating the Philistines in a significant battle. The other two members were Shammah's son, Jonathan (reading with LXX: *huios* in 1 Chr 11:34; cf. LXX in 2 Sam 23:33), and Ahiam, whose father, Sharar (1 Chr 11:35 = *śākār*), is called the Hararite (Heb *hā'rārî* in 2 Sam 23:33 is a variant of *hahărārî*). See also DAVID'S CHAMPIONS.

STEPHEN G. DEMPSTER

HARBONA (PERSON) [Heb *ḥarbônâ; ḥarbônā'*]. See MEHUMAN (PERSON).

HARE. See ZOOLOGY (FAUNA).

HAREPH (PERSON) [Heb *harep*]. Son of Hur and "father of Beth-gader" (1 Chr 2:51). Beth-gader is a town, not a person. Hareph possibly means "autumn" or "maturity" (or "to scorn"). In the LXX it appears as *hari[e]m.* Reflecting the uncertainties of the textual tradition, the Peshitta reads "Abi, who was born in Gader" (see also the KJV). The name Hareph occurs in a fragment of a Calebite genealogy that the Chronicler (or the tradition before him) has broken up (1 Chr 2:18–20, 24, 50b–55; 4:4b). This name occurs nowhere else in biblical literature, and the town of which this person was supposedly the father is unidentified. Most interpreters think that it was in the vicinity of Bethlehem, a town which Salma, another son of Hur, also supposedly founded (Braun *1 Chronicles* WBC, 42).

CRAIG A. EVANS

HARHAIAH (PERSON) [Heb *harĕhăyâ*]. The father of Uzziel, one of those who worked on the wall of Jerusalem following the return from Babylonian exile (Neh 3:8). See UZZIEL. Since the root and meaning of the name are unknown (BDB, 354) and the word as it stands creates an awkward phrase, an emendation to *ḥeber* has been proposed, in which case this would be no proper name. The emendation would alter the phrase to "Uzziel, a son (member) of the guild of the goldsmiths" (cf. *IDB* 2: 525). Clines (*Ezra, Nehemiah, Esther* NCBC, 153) finds the proposed emendation attractive, since it would account for the plural form "goldsmiths." One hindrance in accepting the emendation is that in this same verse Hananiah is identified as "a son of the perfumers" and in 3:32 Malchijah is named as "a son of the goldsmiths," in both cases without the word *guild* being interjected.

MICHAEL L. RUFFIN

HARHAS (PERSON) [Heb *ḥarḥas*]. Var. HASRAH. Grandfather of Shallum, husband of the prophetess Huldah (2 Kgs 22:14). The name is unusual and may have resulted from metathesis. In the parallel text in 2 Chr 34:22, Shallum's grandfather is *Ḥasrâ,* which may be the proper form of the name.

PAULINE A. VIVIANO

HARHUR (PERSON) [Heb *ḥarḥûr*]. The name of a family of temple servants (Nethinim) who returned to Palestine with Zerubbabel shortly after 538 B.C.E., the end of the Babylonian exile. The name appears in Ezra 2:51 in the phrase "the sons of Harhur," where the temple servants are distinguished from the people of Israel, the priests, and the Levites. The parallel passage Neh 7:46–56 also lists "the sons of Harhur" (Neh 7:53).

In another parallel passage, 1 Esdr 5:29–32, it appears that the names Asur and Pharakim have replaced Harhur (1 Esdr 5:31). However, there are a sufficient number of discrepancies between the Ezra-Nehemiah and 1 Esdras lists to suggest that the absence of Harhur is not due to an intentional replacement; there is no known connection between Harhur and these other names which would occasion the suggested substitution.

STEVEN R. SWANSON

HARIF, HAR. See HAR HARIF (M.R. 107989).

HARIM (PERSON) [Heb *ḥārim*], Var. ANNAN; REHUM. **1.** Name of one of the 24 divisions of the priests in the time of David (1 Chr 24:8). Although the Chronicler attributes this division of the priests to David, most scholars regard the list as reflecting priestly organization from a later time, with estimates ranging from the late preexilic period (Myers *1 Chronicles* AB, 165–66) to ca. 300 B.C. (Williamson 1979: 251–68). See 3 below.

2. Name of a family of priests in the postexilic period who are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:39 = Neh 7:42 = 1 Esdr 5:25). Some from this family married foreign wives and later agreed to divorce them in response to Ezra's reform (Ezra 10:21). In both of these contexts, Harim is one of four priestly families listed. For discussion of the list in Ezra 2, see AKKUB.

3. Name of one of the priestly divisions in the postexilic period (Neh 12:15), whose representative signed the covenant document of Nehemiah in Neh 10:6—Eng 10:5. In both of these contexts, Harim is one of more than 20 priestly names listed. The virtual identity between the priestly divisions of Neh 12:12–21 and Neh 12:1–7 indicates that REHUM (Neh 12:3) is a variant of Harim caused by the transposition of the first two consonants. The priestly lists in Ezra 2:36–39; 10:18–22; Neh 10:3–9—Eng 10:2–8; 12:1–7, 12:21; and 1 Chr 24:7–19 provide evidence for tracing the development of 24 priestly divisions in the postexilic period. (See Myers *Ezra-Nehemiah* AB, 196; Kidner *Ezra-Nehemiah* TOTC, 122; Clines *Ezra, Nehemiah and Esther* NCBC, 223–24; Williamson *Ezra-Nehemiah* WBC, 359–61.)

Many do not regard the list and covenant of Nehemiah 10 as belonging originally in this context. Williamson (*Ezra-Nehemiah* WBC, 325–30) surveys various views about the origins of this list. He concludes that it was compiled from other lists in Ezra and Nehemiah in order to be attached to the terms of an agreement drawn up by Nehemiah following his reforms of Nehemiah 13. This document was then kept in the temple archives until being inserted into its present position. (See also Clines, 199–200; Myers *Ezra-Nehemiah* AB, 174–75; Jepsen 1954: 87–106.)

4. Name of a family of laypeople who are listed as returnees from Babylonian exile under the leadership of Zerubbabel and others (Ezra 2:32 = Neh 7:35). The presence of Harim in a section with many geographic names (Ezra 2:21–35) raises the possibility that this family's name was derived from a place rather than a person. (See Batten *Ezra and Nehemiah* ICC, 81; *IB* 3: 581; Williamson *Ezra-Nehemiah* WBC, 33–34.) Some from this family married foreign wives and later agreed to divorce them in response to Ezra's reform (Ezra 10:31 = 1 Esdr 9:32). 1 Esdras gives ANNAN as the name of the family, which could be the personal name by which it was known.

A member of this family assisted Nehemiah in rebuilding the walls of Jerusalem (Neh 3:11). That the list of builders is a partial one is evident from the reference in this verse (and also vv 19, 20, 30) to a "second section" without any previous notation of a first section (compare 3:4 and 21; 3:5 and 27). There is widespread agreement that the list came from independent archives, perhaps in the temple, and was incorporated into the Nehemiah memoirs by Nehemiah himself or by some other editor. (See Batten, 206–7; Clines, 149; Williamson *Ezra-Nehemiah* WBC, 199–202.)

The leader of this clan affixed the family name to the covenant document of Nehemiah in Neh 10:28—Eng 10:27.

CHANEY R. BERGDALL

HARIPH (PERSON) [Heb *ḥārîp*]. The head of an important Judahite family who returned after the Exile (Neh 7:24). He was one of those who sealed the covenant of reform (Neh 10:20—Eng 10:19), and the men of his family are said to have numbered 112 (Neh 7:24; cf. 1 Esdr 5:16).

There appears to be some confusion among the OT versions of the list of returnees. In Ezra 2:18 the name Jorah corresponds to Hariph. 1 Esdr 5:16 variants read Arseiphoureth (Gk *arsiphouris*; cf. *hariphou*). In each case the family is recorded as numbering 112 "sons." The name Hariph may have some connection with the gentilic (RSV Haruphite) of 1 Chr 12:6 (Heb K *hărîpî*, Q *hărûpî*). A possibly related name is known from Ugarit (Ug *ḥrpn*).

NORA A. WILLIAMS

HARMON (PLACE) [Heb *harmôn*). A place to which the leading women of Samaria are to be carried away (Amos

4:3). All efforts to discover the place named in only this one text have failed. Many modern scholars will repoint the word to read Hermon (Wolff *Joel, Amos* Hermeneia, 207). Mt. Hermon lies beyond Bashan (famed for the cattle used to characterize the apparently voluptuous women of 4:1), far to the N of Israel in the general direction of Damascus, but by virtue of its great height is easily seen from most higher elevations within Israel. To be cast here, it may be argued, is but another way of saying that they will be deported by enemies from the N. This argument is much more convincing that those suggesting other place names like the mountain of Remmon (LXX), the mountains of Armenia (Targums), or such specific places as the palace (KJV) or dunghill (NEB), and certainly more than those that would turn the place into an otherwise unknown goddess by the name Rimmonah. See also Harper *Amos and Hosea* ICC.

ELMER H. DYCK

HARMONY OF GOSPELS. A gospel harmony is a narrative life of Jesus constructed by combining or otherwise harmonizing the four different canonical gospel accounts of Matthew, Mark, Luke, and John. A gospel harmony rests on the proposition that the four canonical gospels are in fundamental or absolute substantive agreement *(consensus evangelistarum)* in their presentation of the life of Jesus.

The earliest known gospel harmony is that of Tatian, who wrote his *Diatessaron* in the latter part of the 2d century (Eus. *Hist. Eccl.* 4.29.6). Many of the basic questions associated with the text remain in dispute, including the original language (Greek or Syriac), its place of composition (Rome or E Syria), and the sources Tatian used (simply the four canonical gospels or an additional noncanonical source). Attempts to settle these and other issues have been hampered by the fact that Tatian's text survives in but one small Greek fragment (Kraeling 1935). Most of our knowledge of the text comes from the partially preserved Syriac text in Ephrem's *Commentary on the Diatessaron* (ed. Leloir), and various later translations and versions, including texts in Armenian, Arabic, Middle Persian, Old Latin, and Italian (for a concise listing of the relevant manuscripts, see Wünsch *TRE* 10, 628–29).

Though Tatian's *Diatessaron* continued to be translated, summarized, or otherwise adapted for popular readership (so, for example, the *Gesta Christi* of John Hus, or the medieval Jesus epic *Heliand*), no new gospel harmony seems to have appeared before the 15th century, when the reformer Johannes Gerson wrote his *Monotessaron.* Gerson's method was to follow the narrative outline of John, inserting harmonized versions of synoptic pericopes into contexts which he thought to be appropriate (Wünsch 1983: 15–20). Gerson's work marks the beginning of a period in which this genre enjoyed immense popularity. The next two centuries saw the publication of over 40 different gospel harmonies, including those of Lucinius (1525), Beringer (1526), Alber (1532), Osiander (1537), Jansen (1549), and perhaps the most ambitious effort within the genre, the *Harmonia evangelica,* begun by Chemnitz but finished and published by P. Leyser and J. Gerhard between 1593 and 1652. Chemnitz' plan, like that of Gerson, was to follow the outline of John, filling in the interstices with harmonized versions of synoptic pericopes. Thus each chapter begins with an explanation of the relative placement of each pericope. This is followed by the parallel gospel texts themselves, in both Greek and Latin, then a harmonized version of the text with explanatory notes to the harmonization, and finally a commentary upon the particular section under consideration (Wünsch *TRE* 10, 633–34).

The popularity of gospel harmonies continued for another century, but with the Enlightenment and the advent of more critical approaches to the life of Jesus, the scholarly energy required to produce a work on the level of the *Harmonia evangelica* was channeled to newer methods of reconstructing the life of Jesus that were not so intent upon producing accounts in absolute literal conformity with the canonical texts.

In the modern period the comparative function performed by gospel harmonies was taken up by various gospel synopses, which present the canonical gospels in parallel columns or lines but do not necessarily presume the dogmatic position that all four gospel accounts must be in substantive agreement. The most popular of these has been the *Synopsis Quattuor Evageliorum* compiled by the German scholar Kurt Aland. It presents the three Synoptic Gospels in parallel columns, as well as the Johannine parallels where such exist. The basic plan of the Aland synopsis is based upon the Markan order, including the longer sections in which Matthew and Luke create their own order as detours within this overall framework. Robert Funk's *New Gospel Parallels,* on the other hand, seeks to arrange the material in such a way that preserves the narrative sequence of each of the primary texts. It thus presents each of the gospels (including John and several extracanonical texts) consecutively, first Matthew in its entirety, with parallels from other gospel texts given in parallel vertical columns located to the right of the primary text, then Mark in its entirety with parallels, then Luke, and so forth. The result is a longer, more repetitious work, but one which may prove more useful for persons interested in a more literary-critical approach to the gospels.

STEPHEN J. PATTERSON

HARNEPHER (PERSON) [Heb *ḥarneper*]. A descendant of Asher, known only from the segmented genealogy of Asher in 1 Chr 7:30–40. The name appears in v 36 as

a son of Zophah, as a fifth-generation descendant of the eponymous tribal ancestor Asher. Although the genealogy suggests that Harnepher was a person, other names in the list, such as Shual, Zophah, Japhlet, and Shelesh/Shilshah, are known from their appearances elsewhere in the Bible to have been clan names and/or geographic designations. The summary in v 40 would seem to indicate that the names used to create the genealogy were derived from administrative lists used for purposes of army conscription and possibly also taxation. Accordingly, the names probably represent clans, villages, or regions associated with clans rather than historical individuals. The entire Asherite genealogy in 1 Chronicles 7 reflects groups living in the Asherite enclave in S Mt. Ephraim, not those inhabiting the Galilean territory of Asher (Edelman 1988; see ASHER; ASHURITES).

Harnepher is an Egyptian name meaning "(the deity) Horus is good." According to the legend of the winged disk written on the walls of the temple of Horus at Edfu, Horus was the champion of the sun-god Ra and was symbolized in the winged solar disk. Thus he was especially associated with war and the conquest of foreign enemies. Pharaoh was believed to be Horus incarnate and as such became Ra's champion whenever he undertook military campaigns (Watterson 1984: 107).

The most plausible explanation for the appearance of an Egyptian name in an administrative list that would have been derived from Judahite archival records is that Harnepher represents an Egyptian military garrison that was built within Judahite territory sometime during the brief period of Egyptian domination of Palestine under Psammetichus I and his successor, Neco II (Edelman 1988: 19). 2 Kgs 23:33–35 indicates that Judah was a vassal to Neco II; and as overlord, the pharaoh would have been free to establish garrisons within Judahite territory in S Mt. Ephraim to secure his interests. Judah's vassal status may already have been established during Psammethicus' reign (Miller and Hayes *HAIJ,* 388–90, 402). The underlying administrative list that included Harnepher as a part of the Judahite taxation/military conscription base therefore can probably be dated within the last four decades of Judah's existence as an independent state, ca. 630–587 B.C.E., during the reign of Josiah or one of his successors.

DIANA V. EDELMAN

HARNESS. See ZOOLOGY (FAUNA).

HAROD (PLACE) [Heb *ḥărod*]. **1.** The name of the spring by which Gideon made his camp before his battle against the Midianites (Judg 7:1). The name of the spring means "trembling," which is related to the first test to which Gideon subjected his men. It was at the spring that Gideon conducted his final test, excusing those who knelt down to drink. Traditionally, the spring is identified with that which flows today at Ain Jalud (M.R. 184217). At this site Gideon's camp would have overlooked the Midianites, who camped below the hill of Moreh.

2. The hometown of two of David's mighty men, Shammah and Elika (2 Sam 23:25). In this instance Harod should be understood as a town, not a physical feature. Given David's links with the S, most scholars (McCarter, *2 Samuel* AB, 497; *GTTOT,* 388) have suggested Khirbet el-Haredan (M.R. 178126), a few km SE of Jerusalem, as the location of this Harod. The question is complicated by the parallel list of the mighty men of David's army in 1 Chr 11:27, where Shammoth of Haror replaces Shammah and where Elika is dropped entirely. However, the final *reš* in Haror may be easily emended to *dalet;* however, it remains possible that Harod and Haror are distinct toponyms.

MELVIN HUNT

HAROEH (PERSON) [Heb *hārō'eh*]. Son of Shobal, founder of Kiriath-jearim (1 Chr 2:52). Haroeh means "the seer." Although the LXX apparently supports this reading *(haraa),* Curtis and Noth, followed by others (Williamson *Chronicles* NCBC, 55; Braun *1 Chronicles* WBC, 38), believe that the original reading was Reaiah [Heb *rē'āyāh*], as in 1 Chr 4:2. This is likely the case. The Peshitta also attests the corrupt state of the textual tradition (compare the KJV). 1 Chr 2:50b–55 is probably a fragment of a Calebite genealogy that the Chronicler (or the tradition before him) has broken up (see 1 Chr 2:18–20, 24; 4:4b). Reaiah probably means "vision of the Lord." Although the name occurs elsewhere in biblical literature (Ezra 2:47; Neh 7:50), nothing is known of this Reaiah, the son of Shobal.

CRAIG A. EVANS

HAROSHETH-HAGOIIM (PLACE) [Heb *ḥărošet haggōyim*]. The place where Sisera, the army commander of Jabin of Hazor, dwelt; the place from which his chariots went forth before the battle at Mt. Tabor; and the place toward which they fled after their defeat (Judg 4:2, 13, 16). The precise location of this site has never been established. Indeed, serious questions have been raised whether Harosheth-Hagoiim was a town at all. The LXX translates the term as "forests of the nations"; so Maisler (1953: 83) and Aharoni (*LBHG,* 221–23) have argued that, like the term *gĕlîl haggôyim* "Galilee of the nations," it refers to a forested region of N Israel which Sisera "ruled" (an alternative translation of the verb *yšb b*) on behalf of Jabin, controlling the seminomadic Israelite inhabitants (see GOIIM). This explanation, while superficially plausible, requires a chronological reversal of the battles of Deborah and Barak with those of Joshua and overlooks the statements (Judg 4:13–16) that Sisera marshaled his forces at Harosheth-Hagoiim and fled there after the battle.

However, it remains puzzling why Harosheth-Hagoiim is mentioned only here in all the ancient sources available to us, if in fact it was an important power in antiquity. Attempts to link Harosheth-Hagoiim with the *Muḫrashti* of the Amarna archives (Boling, *Judges* AB, 94) are not convincing. Proposed identifications with Khirbet el-Haritiyye

(M.R. 161236) and Tell Amr/Tel Geva Shemen (M.R. 159237) (*GTTOT*, 288; *RAB*, 147) are not supported by the archaeological evidence from the sites.

Recent archaeological studies (Gonen 1984; Oren 1984) have shown that beginning in the LB and continuing into Iron I, urban activity in Palestine declined, while Egyptian influence as far N as Beth-shan remained strong. It seems unlikely that the remaining Iron I Canaanite strongholds, although they were strong enough to resist the Israelites, retained the economic or social capacity to field major chariot forces on their own. Yet the OT makes no explicit reference to Egyptian activity in Palestine during the period of the judges. It may be possible that the dilemma posed by the enigmatic Harosheth-Hagoiim is an oblique reference to an Egyptian presence in the Jezreel valley.

MELVIN HUNT

HARP. See MUSIC AND MUSICAL INSTRUMENTS.

HARSHA (PERSON) [Heb *haršā*^{ʾ}]. Var. CHAREA. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:52 = Neh 7:54). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, the name of this family's ancestor appears as "Charea" (Gk *Charea*) in 1 Esdr 5:32. Differences such as this raise questions about the sources of and literary relationships among 1 Esdras, Ezra, and Nehemiah.

MICHAEL DAVID MCGEHEE

HARSHA, TEL. See TEL-HARSHA (PLACE).

HART. See ZOOLOGY (FAUNA).

HARUM (PERSON) [Heb *hārûm*]. A Judahite, the father of Aharhel and ancestor of the families of Aharhel (1 Chr 4:8; cf. Noth *IPN*, 241). Harum was apparently descended from Koz. Rudolph (*Chronicles* HAT, 30) concluded that the text is in disorder—since the line of Aharhel is traced back to Koz, how could the family also be descended from Harum? This objection is ungrounded, however, as Koz did not father the families *(mišpĕḥôt)* of Aharhel in one generation. In genealogies the concepts of *father* and *son* are used to refer to descent over varying numbers of generations. Harum, then, might have been a prominent descendant of Koz in the line which gave rise to the families of Aharhel. The Greek has *Iarim*.

KENNETH H. CUFFEY

HARUMAPH (PERSON) [Heb *ḥărûmap*]. The father of Jedaiah, one of those who worked on the wall of Jerusalem following the return from Babylonian exile (Neh 3:10). See JEDAIAH. Batten (*Ezra and Nehemiah* ICC, 212) notes the suggestion of Bertholet (*Esra und Nehemia* KHC, 100) that the name means "with a split nose" but maintains that it would have been a nickname. This translation sees the name as a combination of *ḥāram* and *^{ʾ}p*. Lev 21:19 provides an example of *ḥāram* being used to describe a facial disfiguration.

MICHAEL L. RUFFIN

HARUPHITE [Heb K *ḥārîpî*, Q *ḥărûpî*]. A descriptive adjective designating either the ethnic or family affiliation of Shephatiah, one of the ambidextrous warriors from the tribe of Benjamin who joined David during the period of his fleeing from Saul (1 Chr 12:6—Eng 12:5). The term probably designates an otherwise unknown locality, but it could be associated with the Calebite clan of Hareph (1 Chr 2:51) or the clan of Hariph (Neh 7:24; 10:20—Eng 10:19). The Chronicler has doubled the list of warriors who supported David (1 Chr 11:41b–12:40) beyond what was contained in the parallel narrative (2 Sam 23:8–39 = 1 Chr 11:10–41a); the source for these additional lists can only be a matter of conjecture. The long list reflects his concern to show "all Israel" united in support for David, a characteristic theme of the Chronicler's history. Within the immediate context (1 Chr 12:1–8—Eng 12:1–7) the Chronicler is concerned to show the support David enjoyed among Saul's kinsmen before Saul's death; the 23 Benjaminite warriors named here joined David while he was at Ziklag, the Philistine city given to David by Achish, king of Gath (1 Chr 12:1; 1 Sam 27:6). Ambidexterity or left-handedness among Benjaminites is also noted in Judg 3:15; 20:16.

RAYMOND B. DILLARD

HARVESTS, HARVESTING [Heb *qāṣîr*]. Harvesting (ingathering) is the culmination of the agricultural cycle followed immediately by the processing of crops and fruit into foodstuffs such as grain, wine, oil, and dried fruit. In a good year the season of ingathering was time for merrymaking (Judg 9:27; Isa 9:3; 16:9–10; Ps 126:5). A good agricultural year would have been one in which one ingathering activity did not end before another started (Amos 9:13).

The Gezer calendar, an ancient record of agricultural activities, designates five periods totaling seven months for ingathering activities, beginning with the harvesting of cereals. The first period, *yrḥ qṣr śᶜrym* (a month of harvesting barley), is named in the Bible *qĕṣîr śĕᶜorîm* (Ruth 2:23) and lasted from the spring equinox in mid-March to mid-April. This was followed by *yrḥ qṣr wkl* (a month of harvesting [wheat] and measuring [grain for taxes]) ending at the autumnal equinox in mid-May and mentioned in the Bible as *qĕṣîr ḥiṭṭîm* (Gen 30:14; Judg 15:1). The time of cereal

harvesting, referred to in the Bible as *qāṣîr* (Gen 8:22; Exod 34:21), opened with the festival of *pesaḥ/maṣṣôt* (Passover/Unleavened Bread) and ended with the festival of *šābuʿôt* (Weeks). These two periods of harvesting cereals were followed by *dayiš* (Lev 26:5), threshing and winnowing to separate the grain from the chaff.

Cereals were harvested during a hot period—an activity well described in Ruth 2. The ripe crops were either pulled out whole by hand or cut with a sickle (*maggāl* [Jer 50:16; Joel 4:13] or *ḥermēš* [Deut 16:9; 23:26]). At times, only the top of the stalk was cut, leaving the rest of the plant standing in the field for grazing animals. At other times, when straw was needed, more of the stalk was cut. Sickles were made either of segments of sharp flint chips attached with some adhesive to a bone or wooden frame or were made of metal (bronze, iron) with a wooden handle. The stalks were bound into sheaves and transported to the threshing floor for threshing and winnowing. From there the clean grain was transferred for storage in specially constructed pits or other facilities where it was stored in jars.

According to the Gezer calendar the two periods of cereal harvest were followed by a third period, *yrḥw zmr* (two months of grape harvesting [and wine making]), from mid-May to mid-July, mentioned in the Bible as *bāsîr* (Lev 26:5; Isa 24:13). The fourth period in the Gezer calendar, *yrḥ qṣ* (a month of [ingathering] summer fruit), extended into August and is referred to simply as *qayiṣ* in the Bible (Jer 40:10, 12; Amos 8:1–2). This was followed by *yrḥw ʾsp* (two months of ingathering [olives and pressing oil]), referred to as *ʾāsîp* in the Bible (Exod 23:16; 34:22). If it is correct that the Gezer calendar is a product of the N, then this period lasted there for two months, while in Judah it lasted only one month. The agricultural year closed with the autumn festival of *ʾāsîp/sukkôt* (Booths, or Tabernacles).

Part of these latter harvest periods entailed the processing and storage of the harvest produce. Thus wine making was part of grape harvesting. Because of the nature of grapes that disallows their transport over long distances, most winepresses were hewed in bedrock near the vineyard (Isa 5:2). After treading the grapes, the wine makers stored the juice in jars, which were kept in a cool place for fermentation. Dried fruits such as raisins, dates, and figs were made by simply placing them in the sun. When ready, they were pressed into cakes or strung on a string to facilitate storage and transport. Olive oil was produced by first crushing the olives by mortar and pestle and then placing them in wicker baskets on top of a collection basin with pressure applied from on top. The beam press, invented in the Iron II period, made oil pressing a profitable venture. The oil was then placed in jars for storage and transport.

ODED BOROWSKI

HASADIAH (PERSON) [Heb *ḥăsadyāh*]. The name of two men in the Bible. It means "God is kind" (*TPNAH*, 76, 161).

1. The sixth son of ZERUBBABEL, mentioned in 1 Chr 3:20. Hasadiah is part of a distinct list of Zerubbabel's offspring contained in v 20. Verse 19 lists his first two sons and a daughter. The distinctness of the list of *five* sons in v 20 is reinforced by the "tally" number, five, at the end of the verse. It is possible that the first three children listed in v 19 were born in Babylon and the following five in Palestine after the return, thus two lists (see Williamson *Chronicles* NCBC, 57).

2. The son of Hilkiah and the ancestor of Baruch, the son of Neriah and scribe of the prophet Jeremiah mentioned in Baruch 1:1.

RUSSELL FULLER

HASHABIAH (PERSON) [Heb *ḥašăbĕyāh*]. Var. ASIBIAS. **1.** The ancestor of Ethan, the Levite musician under David (1 Chr 6:30—Eng 6:45); he was a descendant of Merari, son of Levi (called Asebi in the LXX).

2. A Levite, the son of Jeduthun (1 Chr 25:3). 1 Chronicles records that David established 24 divisions of singers for the worship of the Lord, headed by the 24 sons of Asaph, Heman, and Jeduthun. Hashabiah with his sons and brothers, 12 men in all, received the 12th lot (1 Chr 25:19). He was also the ancestor of Shemaiah (1 Chr 9:14; Neh 11:15).

3. A prominent Hebronite ruler. At the time of David's death, he with his brothers ("men of ability") was ruling Israel W of Jordan on behalf of King David and on behalf of the cult in Jerusalem (1 Chr 26:30).

4. A leader of the tribe of Levi at time of David's death (1 Chr 27:17). He was the son of Kemuel (LXX ms B reads "the son of Samuel").

5. A chief of the Levites during the reign of Josiah. He and other leading Levites gathered and turned over to the other Levites lambs, kids, and bulls for the Great Passover under Josiah (2 Chr 35:9). In 1 Esdr 1:9 he and his fellows are called "captains over a thousand."

6. A leading priest in the time of Ezra, he is usually linked with Sherebiah (Ezra 8:19, 24; 1 Esdr 8:54—AV Assanias, NEB Assamias). He later set his seal on the renewal of the covenant (Ezra 10:11). Neh 3:17 lists a Hashabiah, the ruler of half the district of Keilah, who with his fellow Levites repaired part of the wall of Jerusalem. This individual is likely the same prominent Levite mentioned in 1 Esdr 8:48—Eng 8:48; and Neh 12:24.

7. An Israelite descended from Parosh who returned from Exile and put away his foreign wife under Ezra (1 Esdr 9:26; Ezra 10:25, an emendation of Malchijah based on the LXX reading). His name is spelled Asibias or Asabeias in 1 Esdr 9:26.

8. An Asaphite, the ancestor of Uzzi. Uzzi was the overseer of the Levites in Jerusalem during the time of Nehemiah (Neh 11:22).

9. The head of the priestly house of Hilkiah (Neh 12:21) under the high priest Joiakim, the son of Jeshua, who officiated after the return from Exile.

GARY S. SHOGREN

HASHABNAH (PERSON) [Heb *ḥăšabnâ*]. One of the chiefs of the people and a signatory to the covenant established by Ezra (Neh 10:26—Eng 10:25). An atten-

uated form of Hashabneiah, the name probably means "Yahweh has taken account of (me)" (Brockington *Ezra, Nehemiah and Esther* NCBC, 182).

FREDERICK W. SCHMIDT

HASHABNEIAH (PERSON) [Heb *ḥăšabnĕyāh*]. **1.** A man known only through association with his son Hattush (Neh 3:10). Hattush helped rebuild the walls of Jerusalem during the time of Nehemiah.

2. A Levite (Neh 9:5) who participated in the ceremonies preceding the "sealing" of the new covenant (Neh 9:38). These ceremonies included both communal confession and worship. According to Neh 9:5 Hashabneiah and other selected Levites called the assembly to join in a liturgical blessing of Yahweh prior to Ezra's prayer.

In Neh 9:5 the Syriac reads Hashabiah. Such a reading suggests that Hashabneiah might be identical with a certain Hashabiah mentioned elsewhere during this time (Ezra 8:19, 24; Neh 10:12—Eng 10:11; 11:22; 12:24).

TERRY L. BRENSINGER

HASHBADDANAH (PERSON) [Heb *ḥašbaddānâ*]. One of the men who stood on Ezra's left during the great public reading of the Law (Neh 8:4). Hashbaddanah was not designated as a Levite; his position at this event suggests that he was an influential or representative member of the Israelite laity.

TERRY L. BRENSINGER

HASHEM (PERSON) [Heb *hāšēm*]. One of David's mighty men of war (1 Chr 11:34) named in a list of warriors which the Chronicler adapted from 2 Sam 23:32. This earlier text, however, contains a slightly altered spelling of the name: JASHEN (Heb *yāšēn*). Mazar (1986: 95, n. 49) considers both these forms "to be corruptions of *ḥšm*, a name which appears in the genealogies of both Dan and Benjamin." Most scholars agree that "sons" (Heb *bĕnê*) should be omitted from the MT of 1 Chr 11:34 (and 2 Sam 23:32) as dittography, since it simply repeats the final consonants of the preceding word (Heb *hsʿlbny*). Moreover, LXX (Lucianic) omits "sons of" here, simply reading (Gk *iassai*) (McCarter *2 Samuel* AB, 492). However, LXX codices Vaticanus and Sinaiticus interpret the Heb *bĕnê* of 1 Chr 11:34 as a personal name, Gk *bennaias*, possibly from the Heb root *bny(h)*, which may reflect the omission of the appellative "son of" (Heb *bn*) in the hypothetical line Heb **bny bn hšm*, "Bani son of Hashem." Perhaps the list originally read "Jashen," as one of David's mighty men who supported his reign, beginning in Hebron and the Judean region.

JOHN C. ENDRES

HASHMONAH (PLACE) [Heb *hašmonâ*]. The 14th encampment of the Israelites, after leaving the Wilderness of Sinai, as listed in Num 33:29–30, where it is placed between Mithkah and Moseroth. The meaning of the site's name is unknown and does not contribute to determining its location. Suggestions advanced for its location include Qeseimeh on the Wâdī el-Hashim (Abel *GP*, 215; Simons *GTTOT*, 255–56; M.R. 099008), though the area NW of Kadesh-barnea has also been suggested (Palmer 1872: 419–20; M.R. 145025). Palmer (419–20) also suggested identifying it with the Heshmon of the Negeb of Judah in Josh 15:27.

For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai, see DOPHKAH.

JEFFREY R. ZORN

HASHUBAH (PERSON) [Heb *ḥăšūbâ*]. The third son of ZERUBBABEL. Hashubah appears in 1 Chr 3:20 at the head of the second group of Zerubbabel's children, who may have been born in Palestine (see Williamson *Chronicles* NCBC, 57). The name is based on the root *ḥšb* which means "to value," "consider," "think." Hashubah thus means "consideration." Note the related verbal element Hashub from the same root, which occurs frequently in names in levitical families in the postexilic period (e.g., HASHABIAH). Names formed on this root are frequent in Nehemiah and Chronicles. Newman (*IDB* 2: 536) considers Hashub a shortened form of the theophoric name Hashubyah—"Yah(weh) has considered." It is likely that Hashubah should also be related to these names.

The *BHS* suggests that *ḥăšūbâ* may be a corrupt rendering of *ʾaḥărê šûbô*, "after his return," meaning that the children of Zerubbabel in v 20 are "after his return," to Palestine, and that Hashubah is not one of them. If Hashubah is a name, then the *BHS* indicates that the form is doubtful and proposes *ḥăšābâ*, following the LXX^{A} *Aseba*.

RUSSELL FULLER

HASHUM (PERSON) [Heb *ḥašum*]. A postexilic name present throughout Ezra, Nehemiah, and 1 Esdras, whose occurrences suggest the identification of two separate individuals.

1. The progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:19 = Neh 7:22). His name is missing in the parallel account in 1 Esdr 5:17. He may be the same Hashum whose descendants divorced their foreign wives during Ezra's reform (Ezra 10:33; 1 Esdr 9:33 [Gk *asom*]).

2. The above instances of Hashum as an eponym suggest that it is another individual who participated in the assembly of the returned exiles when Ezra read the law of Moses to the people (Neh 8:4). In the parallel account of 1 Esdr 9:44, Lothsubus (Gk *Lōthasoubos*) occurs in place of Hashum. It also seems probable that the same Hashum

present at the reading of the law subsequently signed the pledge to keep the law (Neh 10:19—Eng 10:18). The difficulties in identifying individuals such as Hashum and his family raise questions about the sources of and literary relationships among Ezra, Nehemiah, and 1 Esdras.

MICHAEL DAVID MCGEHEE

HASIDEANS [Gk *Asidaioi*]. The name of a group of pious Jews noted for their loyalty to the Torah, some of whom united with the priest Mattathias and his sons in their resistance to the practices of the Seleucid rulers of Judah (1 Macc 2:42). The event which precipitated their joining Mattathias was the slaughter of a thousand Jews who had hidden in caves outside Jerusalem so they could practice their faith and who refused to fight on the Sabbath (even when attacked) for fear of breaking the law (2:29–38). Mattathias offered them a new principle, namely, that defensive action in the face of death was allowable, even on the Sabbath (2:41).

The importance of the Hasideans to the Maccabean Revolt can be seen in the report of the aspiring high priest Alcimus, who exaggerated their role by telling Demetrius I Soter (Seleucid ruler 162–150 B.C.E.) that the Hasideans, with Judas as their leader, had carried out the Jewish Revolt (2 Macc 14:6). Demetrius named Alcimus high priest and sent him along with Bacchides, the new governor of the area W of the Euphrates, with instructions to take vengeance on Israel for revolting. Perhaps the Hasideans were willing to accept Alcimus as high priest because he was an Aaronite, or perhaps they simply misread the political situation, thinking the time was right to get good terms. Either way they believed Alcimus when he promised them safe conduct for a conference and stood in the forefront of a group of scribes who sued for peace. Their trust proved ill founded, for Alcimus killed 60 of their number (1 Macc 7:12–16). They hastily returned to Judas to continue the war.

The origin of the Hasideans is obscure. The name derived from the Heb word *ḥăsîdîm,* usually translated "saints" (e.g., 1 Chr 6:41) or "faithful ones" (e.g., 1 Sam 2:9), which appears frequently in the OT, especially in the book of Psalms (e.g., Pss 30:5—Eng 30:4; 31:14—Eng 31:23; 37:28; 50:5; 52:11—Eng 52:9; 97:10; 149:1, 5, 9). Scholars agree that the Hasideans as a group preceded their withdrawal to the caves in the wilderness outside Jerusalem (1 Macc 2:29), even though the term does not appear in earlier literature as a designation for a particular group. Beckwith (1982: 17–22) hypothesizes that the movement originated ca. 330 B.C.E. in a Proto-Pharisaic reaction against the marriage of Manasses, brother of the high priest Jaddua, to a Samaritan princess, when a lay revolt forced Jaddua to remove his brother from office. A subsequent revolt in 251 resulted in the addition to the Hasideans of a priestly group, which eventually separated into Essenes and Sadducees (Beckwith, 41–42).

In any case the Hasideans formed a recognizable group at the time of the persecution by Antiochus Epiphanes. The name Hasidean does not appear subsequently as a title for a group. Instead, during the time Jonathan was the high priest, one finds mention of three distinct groups: Pharisees, Sadducees, and Essenes (see Jos. *Ant* 13.6.9 §171). Scholars are divided about which group descended from the Hasideans. Older scholars saw the Hasideans as the forerunners of the Pharisees, but never writers, acquainted with the Dead Sea Scrolls, often see the Essenes as their descendants (see Milik 1959: 80). Hengel (1974: 1.224–28) thinks both groups derived from the Hasideans, while Beckwith argues (41) that all three parties originated in a common movement against the negligence of the common people as well as the overt syncretism of the Hellenists.

Most writers agree that the split among the Hasideans occurred because of a dispute over the legitimacy of Jonathan's claims to the office of high priest. This dispute apparently stands behind the negative tone of 1 Macc 7:12–17, whose author sided with Jonathan against the Hasideans, whom he considered naive for trusting Alcimus. Modern scholars often conclude from this passage that the Hasideans were only concerned with religious law and not Jewish nationalism, but that conclusion overlooks the partisan nature of the passage, the political nature of the split among the parties involved, and the lengthy involvement of the Hasideans in the Maccabean Revolt.

PAUL L. REDDITT

HASIDIM [Gk *Asidaioi*]. The name of a group of participants in the Maccabean Revolt mentioned in 1 Macc 2:42; 7:14; and 2 Macc 14:6 (RSV "Hasideans"). The Greek appellation is a transliteration of the Hebrew *ḥăsîdîm* (Hasidim) or the Aramaic *ḥasîdayyā'*. While the name is rooted in the use of the term *ḥasîd* in the Hebrew Scriptures it is doubtful that Ps 149:1 or other references to *ḥăsîdîm* in the Psalms should be used as evidence of the group mentioned in 1 and 2 Maccabees. The appearance of the name in Gk transliteration does suggest that at least the translator of 1 Maccabees and the author of 2 Maccabees understood the term as a proper noun; hence any argument that claims these references merely allude to pious Jews in general must be rejected.

Any serious study of the Hasideans in antiquity must begin with an examination of the three passages in Maccabees where they receive mention (Davies 1977: 128; Collins 1977: 201–5). On the basis of a literary analysis, it has been demonstrated that the Hasideans of 1 Macc 2:42 are not the same persons as those who fled to the desert seeking righteousness and justice in 1 Macc 2:29. This connection has sometimes been used as evidence of the ascetic nature of the Hasideans, thereby providing justification for the hypothesis that the Essenes are one of the groups which arose out of the Hasideans (Black 1961: 16). The Hasideans in 1 Macc 2:42 are rather included as part of a description of the growth of the Hasmonean movement that begins with v 39 and ends with v 48, the major subject of which is Mattathias and his friends. The Hasi-

deans are included with others who join this popular revolt.

In 1 Macc 2:42 the Hasideans are described as a *synagōgē* (company) which consisted of "mighty warriors of Israel, every one who offered himself willingly for the law." While the Gk *ischyroi dynamei* is almost certainly a translation of the Heb *gibborê ḥayil,* it is not as clear that the RSV "warriors" is the proper translation. It is just as possible that this phrase should be translated "mighty men," with the author of this text wishing to point out that these Hasideans were a group of leading citizens of Judea who joined the forces of Mattathias in revolt. This company of leading citizens was devoted to that law which in 1 Macc 1:41–50 Antiochus IV had ordered the Jews to forget. Among the activities prohibited by the king were circumcision as well as the sacrifices and festivals which constituted the temple cult.

The purpose of the story concerning the Hasideans in 1 Macc 7:12–18 is to discount their significance. While Judas Maccabeus refuses to listen to the "peaceable but treacherous words" (7:10) sent by the messengers of Bacchides because they are accompanied by a large force, the Hasideans are prepared to negotiate, presumably in order to avert the catastrophe that Bacchides could perpetrate. Since this governor and friend of the king is accompanied by Alcimus, "a priest of the line of Aaron," the company of Hasideans, here said to be scribes, thinks that they can be trusted in negotiations. Bacchides swears an oath to them, "We will not seek to injure you or your friends." When the Hasideans trust him, he seizes 60 of them and kills them in one day. Having already invoked in 1 Macc 1:37 and 3:45 images of the gentile pollution and destruction of the sanctuary through allusions to Ps 79:1–3, the author of the Hasmonean history, citing Ps 79:2b–3 as Scripture, equates the Hasideans with those leaders of Jerusalem who in 1 Macc 1:30 believed the peaceable words of Antiochus IV's tax collector, who "suddenly fell upon the city, dealt it a severe blow, and destroyed many people in Israel." This historian wishes to discount the influence of this company of leading citizens, whom he calls scribes, by portraying them as naive. According to the Hasmonean historian, their viewpoint did not provide a credible basis for the future development of the Jewish state. This means that any simplistic presentation of the Hasideans as either pacifists who deviated from their basic ideology in 1 Macc 2:42 or as the religious wing of the revolution that broke ranks with the Hasmoneans when their religious objectives had been accomplished does not find support in these sources.

In 2 Macc 14:6 the Hasideans are described as a seditious group led by Judas Maccabeus. Since these charges are placed in the mouth of Alcimus, who wishes to be appointed to the high priesthood by Demetrius, the epitomist of this history is probably making positive statements about Judas and the Hasideans in a negative way (Doran 1981: 68–70). Since Judas is the hero of this work, which emphasizes his piety and his purity, we can see that the Hasideans are incorporated into the work to augment that portrait. His leadership of that body is meant to provide further evidence of Judas' pious persona.

While this group has frequently been considered to be the forerunner of both the Essenes and the Pharisees, there is no evidence in these references to support the Essene connection, even though those who in 1 Macc 2:29 flee to the desert in search of righteousness and justice could be from such a group. There is, furthermore, no evidence in these references which would support a hypothesis that the Hasideans were the authors of apocalyptic literature (cf. Plüger 1968: 8; Hengel 1974: 1.80, 175–80). The treatment of the Hasideans in this work does coincide with what we would expect the attitude of a Hasmonean historian to be toward the Pharisees.

In Talmudic literature there are also references to *ḥăsîdîm* (Hasidim) as well as to individuals who are designated *ḥasîd,* such as Honi and Hillel. Resolution of the extensive debate over whether any of these references applies to the body mentioned in 1 and 2 Maccabees should begin with an analysis of the passages which refer to the *ḥăsîdîm hārîʾšonîm* (the "early" or "first" Hasidim). An examination of *m. Ber.* 5:1; *t. B. Qam.* 2:6; *b. Nid.* 38ab; *b. Ned.* 10a; and *B. Menah.* 40b–41a shows that this group was used in the Talmudic tradition as example rather than as evidence of a divergent legal tradition (cf. Safrai 1977, 1985). The examples cited from these early Hasidim could reflect the way of life of a group of the Maccabean period prior to the formation of some of the major legal traditions. In Talmudic literature other stories concerning individuals designated as *hasîd* were added to the traditions concerning these early Hasidim.

JOHN KAMPEN

HASMONEAN DYNASTY. A family of high priests and kings descended from Mattathias, the father of JUDAS MACCABEUS. They were prominent in Judea from 165 until 37 B.C. and controlled it as rulers between 142 B.C. and 63 B.C. The name derives, according to Josephus, from that of the great-grandfather of Mattathias, in Gk *Asamōnaios* (*Ant* 12.263); and its original version, in Hebrew or Aramaic, is now generally held to reflect a place name, either Heshmon or Hashmonah. The name does not ap-

pear in the books of the Maccabees, but it is used several times in Josephus in slightly varying forms (*Ant* 14.490; 16.187; 20.139; 20.238; *Life* 4); and it is also found in Talmudic literature (*m. Mid.* 1:6; *b. Sabb.* 21b). The emergence of a name for the dynasty drawn from that of an early progenitor may be due to Hellenistic influence. The family belonged to the priestly course of Joarib (= Jehoiarib, 1 Chr 24:7; Joiarib, Neh 11:10), originated in Jerusalem, but had settled before the time of Mattathias in Modein, near Lydda (1 Macc 2:1).

Under the Hasmoneans, Judea became, in the period of Seleucid decline and before the rise of Rome, an independent power with a considerable influence on the politics of the region; her dimensions equaled those of the kingdom of David. The impact of their national experience under the Hasmoneans continued for the Jews through the classical era, and, indeed, far beyond. However, long-term stability was not secured. Externally, her geographic position made Palestine vulnerable; internally, the conflict between profane and sacred values was ever present; and major religious and political differences opened up within the community. The formation of parties and sects within Judaism is a major feature of the Hasmonean period; and although this made the period fruitful in cultural and religious terms, politically it was often deeply troubled. There were significant elements which found the hardening authority, the wealth, the sacrilegious habits and perhaps the Hellenizing style of the Hasmoneans wholly unacceptable. In the end the ruling family, too, fell prey to conflict and brought civil strife upon the nation.

The basis of Hasmonean ascendancy lay in Mattathias' act of rebellion in 167 B.C. against the anti-Jewish decrees of Antiochus IV Epiphanes, when the old man resisted the demand by an officer of Antiochus IV for pagan sacrifice at Modein and then escaped to the hills with his five sons. By the time of Mattathias' death in the next year, the family had drawn all the rebels to itself and organized resistance throughout the country. The military successes of Judas (the "Maccabee"), whose increasingly well-organized fighting force overcame several Syrian armies before meeting defeat, and his reoccupation and rededication of the temple in 165 B.C. made him and his surviving brothers the unchallenged leaders of the majority of the nation, apart from the Hellenists. *See also* MACCABEAN REVOLT.

A. The Powers and Titles of the Hasmoneans

1. The Emergence of the Dynasty. No official title is associated with Judas Maccabeus. The death-bed instructions ascribed to Mattathias have him declare Judas, in biblical style, to be the people's commander who would fight their battles for them; and another son, Simon, was to act as adviser. In fact, it is obvious that Judas' overall responsibility for the nation took on both military and political aspects: he appointed "leaders of the people, commanders of thousands, of hundreds, of fifties and of tens" (1 Macc 3:55); and after 164 B.C. he organized the priests to serve in the rededicated temple service. Yet in the documents from 2 Maccabees which record the dealings of Lysias, Antiochus IV's viceroy, after the king's death (chap. 11), there is no acknowledgement of Judas at all. Perhaps it was this very absence of formal position which led Josephus to the belief that Judas actually became high priest on the death of the Seleucid nominee, Alcimus (*Ant* 12.415, 419, 434). Yet this is not only unsupported by 1 Maccabees, where Alcimus is shown to have died *after* Judas (1 Macc 9:54–56), but contradicts Josephus' own statements elsewhere that the high priesthood was vacant for seven years at the end of Alcimus' tenure (*Ant* 20.237; *Life* 4). In any case Judas himself was killed in battle within a year.

Judas had been the third of Mattathias' five sons (1 Macc 2:4–5); the survivors put the youngest, Jonathan, in charge of rescuing the situation after Judas' death and defeat at Eleasa in 161–160 B.C. Jonathan, now, was to be "our ruler and commander and to fight our battles for us" (1 Macc 9:30). The decision to continue the struggle, with the ultimate aim of ousting both the Seleucid general Bacchides and the Jewish Hellenizers who still held Jerusalem, was entirely in the spirit of Judas' activities since 164. The new element in the position of the leader was the registering of a popular vote in his favor. Jonathan, though tried and tested in war, was an instinctive politician just as Judas had been a natural general, and the younger brother may well have seen the value of securing a popular mandate by way of substitute for Judas' charisma.

When, around 155 B.C., the Syrian general Bacchides came to terms with Jonathan, Jerusalem remained with the Hellenizers; yet Jonathan was not prevented from establishing himself at Michmash, a small place N of the city; there he "began to judge the people" (1 Macc 9:73). This probably amounts to recognition by the Seleucid monarch Demetrius I of a local fiefdom. Subsequent developments were startlingly rapid. Jonathan had fully grasped what opportunities the moment held for fishing in the troubled Seleucid waters to enhance his own position; the continuing rivalries among the Seleucids led them to vie with one another in offering privileges to Jonathan. The Hasmoneans' influence in Judea was evidently now such that Jonathan could deliver better support than could the "Hellenizers," and Demetrius was especially in need of troops. Once authorized to raise a proper army, Jonathan was able, in 152, to occupy and fortify Jerusalem, though the Akra (which we should understand therefore to have been a sealed-off section of the city rather than a mere fort) was still in the hands of Hellenizers and Seleucids. It remained for Jonathan's supreme position in Jerusalem and in the country to be signaled with the high priesthood. During

the disturbances of the 20 years before Jonathan, there had been either Hellenizing high priests or none, and the appointment of one of the rebel Maccabeus brothers was a momentous development. After the death of Demetrius, Jonathan received further grants, notably the position of provincial governor *(meridarch)*. Thus, the Maccabees, once the most unremitting of rebels, became willing dependents of one Seleucid after another, governing Judea by their favor.

Jonathan was careful also to look further afield, sending ambassadors to Rome to renew the friendship and alliance between Jews and Romans originally negotiated through Judas' envoys. Jonathan's ambassadors also gave expression to Judea's new self-consciousness as a Hellenistic state by visiting Sparta and securing letters that claimed kinship and ancient ties between the two peoples (see 1 Macc 12:1–23).

2. Simon. The work done by Jonathan made possible a formal declaration of independence under his successor, Simon (nicknamed Thassis). Here the history of the Hasmoneans as a dynasty may be said to begin. In the year 142, as 1 Macc 13:41–42 has it, "The yoke of the gentiles was taken away from Israel. And the people began to write on their records and their contacts, 'in the first year of Simon, the great high priest, general, and leader of the Jews.' " Simon had taken over directly from his elder brother and had been drawn into a similar course of action—a show of strength, followed by well-judged diplomatic feelers. Even before his brother's death, Trypho, a pretender to the Seleucid throne, had invaded Palestine from the NW. Negotiation with the usurping Trypho's rival, Demetrius II, had been the obvious move. From him, it would appear, came by letter the offer of peace, immunity from tribute, and remission of taxes or of tax arrears (it is not clear which). Simon's high priesthood was implicitly recognized by Demetrius; it may or may not have been a Seleucid grant in the first place. The freedom from tribute, in any case, now marked the autonomous status of Judea; it possessed a symbolic significance well captured in Josephus' accounts (*JW* 1.53; *Ant* 13.211). The announcement of the new chronological era was a statement of this, even if the era does not seem to have survived as a lasting basis of reckoning.

Simon was an excellent propagandist. He imprinted his achievement on the public mind with festival and ceremony. The literary record, which derives at least in part from a history of Simon's son and successor, John Hyrcanus, is tinged with flattery. Therefore, while Simon's achievement was an important one, the situation in Judea was by no means yet wholly resolved. Given the unsettled state of the Seleucid monarchy, Demetrius II's declaration did not guarantee the abandonment of future claims; it was not until the death of Antiochus VII Sidetes (in 129 B.C.) that claims to Jerusalem and the demand for tribute were finally abandoned. We may even doubt whether all the promises made to Simon actually bore fruit; for the right to issue coins, granted to him in a letter from Antiochus VII, after Demetrius II's imprisonment in 140/139 (1 Macc 15:6), seems never to have been exercised at all. There is a telling absence of any coinage of Simon's from the archaeological record.

What Simon accomplished was to impose his authority on the whole country and on Jerusalem as its capital. An early move, made in 141 B.C., was therefore to secure the surrender of the surviving garrison from the Akra, the city's Hellenistic base, which was probably on the W hill, though its location is still uncertain. From there, "They had sallied forth and polluted the precinct of the Temple" (Avigad 1984: 64–65). Since Jonathan had sealed off the zone with a wall, in an attempt to starve it out, his successor's task was to manage the expulsion. Choruses, hymns, and instruments as well as the traditional waving of palm branches accompanied the grand entry; and an annual festival was declared to commemorate the historic moment. The Hellenists as a faction were never heard of again. The reconstruction and walling of the city, begun by Jonathan, could now be pushed on (1 Macc 10:10–11; 13:10); and we should probably ascribe to Simon the inclusion, for the first time since the days of the First Temple, of the W hill as a living area within the city and of much of the completed circumference of the so-called "first wall." The planning of a spacious capital, its expansion over a difficult site, and the building of the wall are the enterprises of a self-confident ruler with substantial resources.

The year 140 saw another great moment: the assembled people declared Simon high priest, commander and ethnarch—head of the nation—of the Jews, "forever, until a trustworthy prophet shall arise" (1 Macc 14:41). The amalgam of powers was not new, but the change lay in the manner of their conferment; they were now internally sanctioned, and external approval was not deemed necessary. The Parthian invasion of Iran under Mithradates I probably emboldened the Jews to assert themselves, and it is possible that by the time of the people's decree Demetrius II was already in Parthian captivity. Simon's powers were as monarchic as the purple robe and gold clasp which he was to wear, even though the title king was avoided. His orders were not to be opposed, assemblies were not to be convened without his consent, all on pain of punishment if disobeyed; the unanimity of the popular decision was emphasized. On this Simon's position ultimately rested. It was endorsed by the new king, Antiochus VII, in a letter of 138 B.C. but not shaken by that king's rapid volte-face, his demands for the return of the Jerusalem citadal and other towns or else for the payment of tribute on them, or by his threat of war (1 Macc 15:2–9, 26–35).

The form of rule set up by the decree for Simon drew on traditional Jewish conceptions. Nonetheless, the people of Hasmonean Jerusalem were sufficiently influenced by the prevailing style in public affairs to have their declaration inscribed in bronze, just as a Greek city might do, and to display it in no less a place than the temple precinct and also in its treasury. The new Jewish state was thus visibly Hellenistic in at least some of its public forms. The mores of the ruler were also affected by this spirit, as is revealed by the manner of his death: the aged Simon was to be murdered within five years of the decree, together with two of his sons, as he feasted and drank in a fortress near Jericho. The assassin was his son-in-law, the wealthy and interestingly named Ptolemy, son of Abubus (Aboub), who was commander of the plain of Jericho (1 Macc 16:11) and had sought to involve other army officers in his conspiracy. This man does not appear to have been a Jew (*Ant* 13.234–

5); and on the failure of his attempt to gain the support of Antiochus VII for his coup, he fled to the court of a local dynast, Zenon Cotylas of the partly Hellenized city of Philadelphia (Amman).

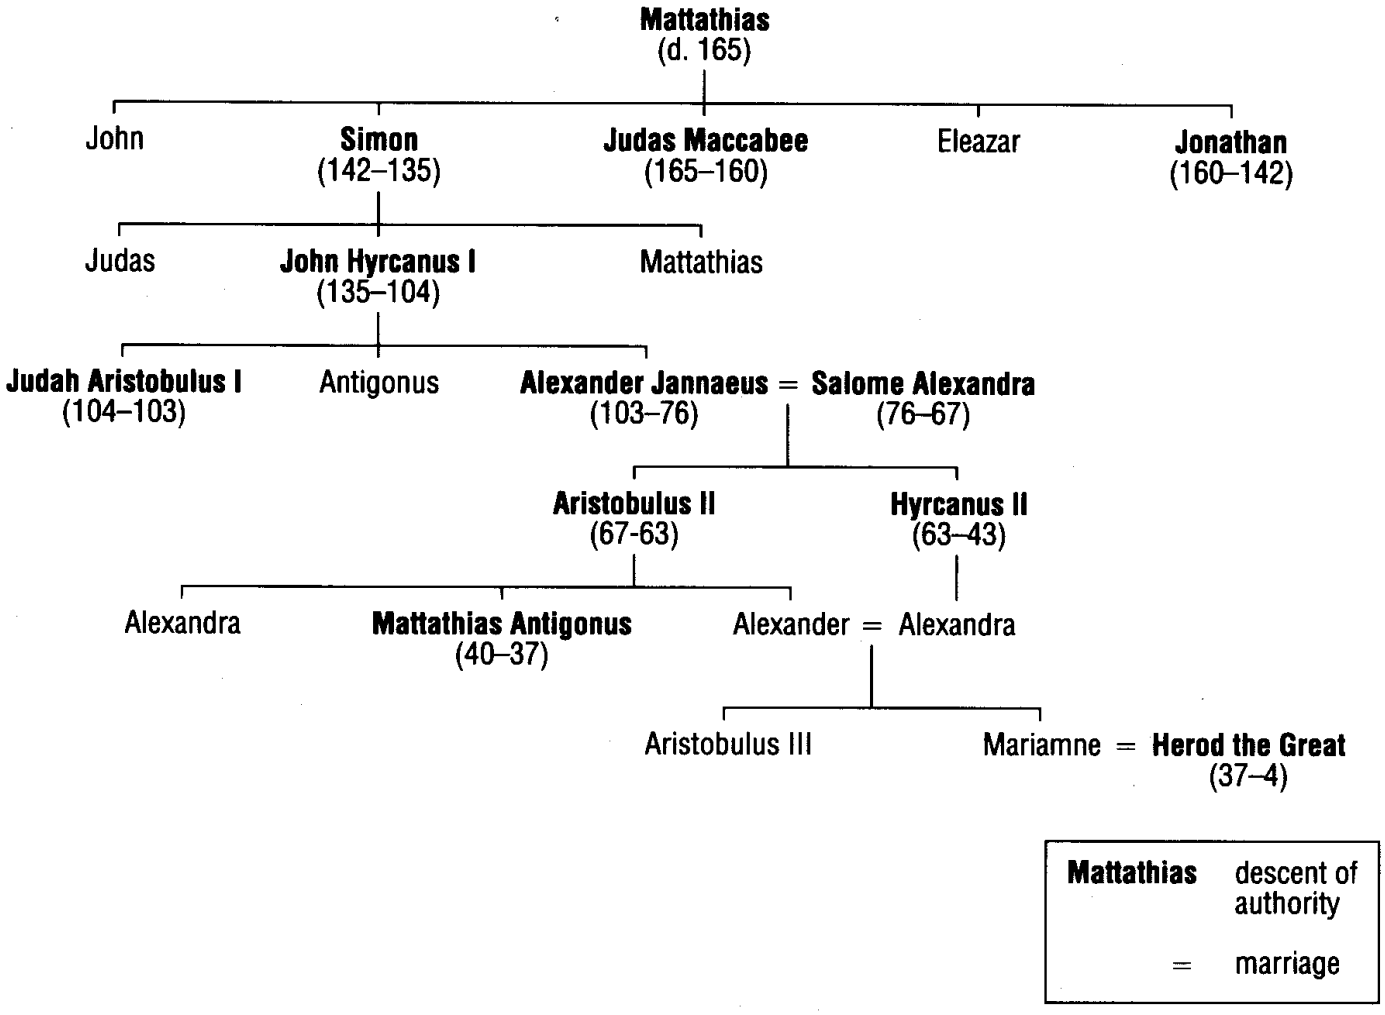
3. John Hyrcanus. John Hyrcanus, Simon's third son, who had already been governor of the important fortified town of Gezer, assumed the high priesthood on his father's death. This suggests that the latter post was designated as hereditary by the "forever" of Simon's investitute decree; and John was presumably already high priest when he sacrificed before setting out to attack Ptolemy. However, Josephus (*Ant* 13.230) does not clarify the mechanism of succession.

There would always be uneasiness and often contention surrounding the definition of Hasmonean sovereignty. The Jews more often than not nursed doubts about the fitness of any man's holding power of a kingly type. We may point to various ways in which Hyrcanus' rule was hedged about or challenged. Yet, in the first place, we should stress the very real importance of a 31-year tenure (135–104 B.C.), followed by an accepted dynastic succession. John is described as the nation's secular authority as well as the high priest; and his regime is named an *arche,* or "rule." Under John too we see an independent coinage, albeit limited to bronze; it is now established that these are the first coins to be minted by any Hasmonean. While Tyrian silver was confirmed in its role as the principal major currency in the area, filling the gap left by the Seleucid withdrawal, everyday needs were henceforward supplied by successive large issues of aniconic *pĕrûtôt,* their craftsmanship varying in precision and quality. Hyrcanus' coins carry two types of formulas, both written in an archaizing paleo-Hebrew script which visibly evoked the days of the First Temple. One group has "Johanan the high priest and the council (or community, Heb *ḥeber*) of the Jews" and another group has "Johanan the high priest head of the *ḥeber* of the Jews." Their relative dating is uncertain, but it may be reasonable on historical grounds to posit an initial reluctance by John to take on any title beyond the traditional high priesthood, followed later by the emergence of a cautious formula, which still gave the assembled people a high visibility in its wording. This caution, did not, however, prove sufficient to curb the strictures of the more punctilious religious elements.

4. Alexander Jannaeus. The political style of the later Hasmoneans acquired, in due course, further Hellenistic traits. Jannaeus called himself king, as well as high priest, in a juxtaposition quite unsanctioned by Jewish tradition; and he feasted in public with his concubines in a manner perhaps not totally alien to David and Solomon, but quite unacceptable in the Jewish high priesthood (*Ant* 13.380). The testamentary choice of his widow, Salome Alexandra, as successor, in preference to either of his sons, may also reflect Hellenistic influence.

Jannaeus was the next after Hyrcanus to issue a major coinage. He was less conservative, using Greek and Aramaic as well as Hebrew, and, on some types, openly advertising his kingship, either in words or with the star and diadem symbols. On his Hebrew coins, he gave his Hebrew name, Jonathan, rather than Alexander; and there were others on which he employed Hyrcanus' form of legend, referring only to the high priesthood and to the Jewish *ḥeber.* A group of overstruck coins, where "Jonathan the high priest and the *ḥeber* of the Jews" obliterates the earlier text on the obverse, is plausibly associated with the major crisis surrounding the Pharisees which occurred in his middle years (Meshorer 1982). The Greek and Aramaic coinage, on the other hand may well have been designed largely with the king's non-Jewish subjects in view, and first and foremost, for his mercenary soldiers. An undated lead issue and the light weight of most of Jannaeus' coins have been related to difficulties in meeting the troops' requirements for payment during the major campaigns (Ariel 1982).

B. The Hasmoneans as Conquerors



Simon's end in a soldiers' conspiracy had revealed, among other things, how the military base of Maccabean authority, far from diminishing with the end of the struggle for survival, had become institutionalized. Almost to the end the dynasty would remain a warrior dynasty. Peace was something to hope for; but even then, it was the security born of victory that was spoken of. Under Simon, it was said "each man sat under his own vine and under his own fig tree. The enemies in those days left their land and the enemy kings were crushed" (1 Macc 14:12–13). The dynasty's chronicler (as 1 Maccabees may fairly be dubbed) speaks with pride of the young men's appearance in their dazzling uniforms, and leaves us in no doubt that the regime's ideology contained a strong dose of militarism.

The largest territorial gains were to be made under Simon's successors. But the map had already changed significantly before the death of Simon. The Jewish entity of the Persian and early Hellenistic periods might be described as a small temple state. Now, with a strong army and enlarged aspirations, it had outgrown that model. Defensive needs had shaded imperceptibly into aggressive or punitive policies.

From the beginning the war against the Seleucids brought with it enmity with those local gentiles who lived beside the Jews, both within and outside Judea. The culmination came after Jonathan's kidnapping, when the surrounding peoples are said to have been enchanted with the possibility of destroying Judaism root and branch (1 Macc 12:53). The Maccabean wars are seen at this point quite simply as a struggle against the heathen; and it is impossible to distinguish in the leaders' activities between the vision of a holy and cleansing war, conceived of in biblical terms, and the real strategic need to weaken a threatening force. We can at any rate be sure that not all the local tribes were unfriendly during this period, for the Nabatean Arabs across the Jordan gave the Maccabees useful information more than once.

1. Jonathan. Jonathan's campaigns were undoubtedly well conceived and skillfully executed (see 1 Maccabees 10–11). Attacking the coastal strip, in the name first of Alexander Balas and then of Trypho, he mounted ferocious assaults on cities that did not open their gates, such as Ashdod, Joppa, and Gaza though Askalon, which did, was unharmed. The Philistine city of Ekron with its territory came to Jonathan by way of reward. Other lasting results of his activities were the permanent garrisoning of Beth-zur, on Judea's S line, the area's last remaining Seleu-

CHRONOLOGY OF THE HASMONEAN DYNASTY (165–4 B.C.)

HAS.01. Genealogy chart of Hasmonean dynasty. See also Fig. HER.04.

cid fortress apart from the Akra in Jerusalem; and, to the N, the gain by royal grants of three districts which had previously been reckoned part of Samaria. Moreover, quite apart from acquisition, Jonathan's geographic and economic horizons were expanded by far-flung campaigns against Demetrius II, which took him through the northernmost part of Galilee and into Lebanon.

2. Simon. It was left to Simon, as one of his first acts, permanently to settle Jews in Joppa, expelling the "idolatrous" inhabitants (1 Macc 13:11), or at any rate some part of them. This secured for his state a dependable outlet to the sea, as was amply appreciated at (or near) the time (cf. 1 Macc 12:43–48). Gezer (= Gazara), strategically placed at the edge of the Judean foothills and controlling Jerusalem's access to Joppa, was treated in the same way as that city (1 Macc 13:43–48). Recent archaeological information to emerge from Gezer suggests that occupation was abandoned around 100 B.C. (Reich and Geva 1981). The same pattern was revealed with the excavation of Beth-zur, similarly a town fortified by the Seleucids and taken over by the Maccabees, where there are signs of vigorous growth under Jonathan and Simon, with settlement spreading outside the old walls, but soon afterwards coming to an end altogether.

The territorial claims of Jonathan and Simon did not go untested. As soon as the new king, Antiochus VII, had disposed of the usurper Trypho, Simon's assistance became less important to him than the restoration of his lost revenues and of his authority in Palestine. His general, Cendebeus, was told to regain possession of the coastal strip and to attack Judea from Jamnia (1 Macc 15:38–40). Josephus, who is here independent of 1 Maccabees, has the commander under instruction also to seize the person of Simon (*Ant* 13.225). Simon is said to have put 20,000 men into the field and to have held the day.

3. John Hyrcanus. Simon's success against Cendebeus prompted Antiochus to invade and ravage the country; he then laid Jerusalem under the strongest of blockades (*JW* 1.61; *Ant* 13.236–46). Both Josephus and a parallel account in the Greek historian Diodorus (which contains a notably hostile account of the Jewish cult) indicate that Sidetes terminated the siege in an unexpected and gener-

ous manner, with conduct very different from that of Epiphanes some 30 years earlier. No garrison was installed in Jerusalem; only a symbolic section of wall was taken down; and Joppa, Gazara, and the other cities held by Simon were made subject to tribute, but not removed from Jewish control. Hyrcanus, who, according to Josephus (*JW* 1.61; *Ant* 13.249), had equipped himself with funds by rifling David's tomb, soon afterward set off with his army to accompany Sidetes into Parthia, where he was treated with courtesy. The collapse of the expedition, Sidetes' death in battle, the Seleucid abandonment of Iran, and the renewal of wars within the Seleucid dynasty finally left the Jewish king a free agent. It is on record that the payment of tribute now ceased permanently (*Ant* 13.273).

At the very moment, however, when the Hasmoneans' dependence upon the Seleucids came to an end, a rising power was looking with intensified interest toward Judea. A senatorial decree cited out of context in Josephus' *Antiquities* suggests that Antiochus Sidetes' abrupt withdrawal from Jerusalem was encouraged by a behind-the-scenes move of the Roman Senate (Rajak 1981). The possibility of a Seleucid revival at this stage will hardly have been welcome to Rome; and the document, responding to the complaints of a Jewish embassy about Antiochus' seizure of various territories in contravention of a previous decree, reiterates Rome's long-standing friendship and alliance with the Jews. It is the diplomatic activity accompanying this statement which will have had the desired effect, delivering a stiff warning to Antiochus.

Judas' famous treaty of 161 B.C. (there is no reason to doubt its historicity) had been renewed and widely publicized under Jonathan and again under Simon. During Hyrcanus' period of rule, there were altogether three reassertions of the relationship. It is probable that in the early days no more than a token gesture, based upon a limited conception of her advantage, had been intended by Rome; but by the 130s her interest in the E was much greater. And for the time being she could look indulgently on what the Hasmoneans were doing. This phase lasted until the end of Hyrcanus' rule, after which we hear of no more renewals (Rappaport 1968).

The extension of Jewish territory was vigorously pursued under Hyrcanus; and the dynasty's military capacity grew, especially after he introduced the practice of hiring foreign mercenaries. Nonetheless, it is important to point out that, of all the rulers, only Jannaeus pursued patently aggressive policies. Hyrcanus, to be sure, paved the way; but his activities were restricted to carefully judged campaigns with limited targets; and there were long periods when he was not at war.

Josephus gives a résumé of Hyrcanus' early wars, beginning in 129 B.C.: "As soon as he had heard of the death of Antiochus [Sidetes], Hyrcanus marched out against the cities of Syria, expecting to find them devoid of soldiers and of anyone able to rescue them, which was indeed the case" (*Ant* 13.254). This sweeping sentence heralds several important conquests (*Ant* 13.255–58): the capture of Medeba in Moab (S Jordan), together with the neighboring town of Samoga (or Samega); the Samaritan city of Shechem and the shrine on Mt. Gerizim; and, lastly, the Idumean cities of Adora and Marisa, to the S of Judea. The Idumeans are said to have accepted circumcision and adopted the Jewish law in order to retain their homeland.

Toward the end of his life, Hyrcanus returned to the Samaritan region; this time two of his sons laid siege to the Hellenized city of Samaria (*Ant* 13.275–83). The siege lasted a year; but neither the Samaritan population, nor Antiochus IX (Cyzicenus) who came to their aid, nor the two generals whom he later left behind there, nor even the troops supplied to Antiochus by Ptolemy Lathyrus could shake off Hyrcanus. In the end he effaced the whole settlement by the method, if this can be believed, of undermining its foundations. Scythopolis, the Greek city situated at the key point where the valley of Jezreel meets the Jordan valley, was taken immediately afterward. According to Josephus (*JW* 1.66) the city was razed to the ground and its inhabitants reduced to slavery, a rare case of enslavement being mentioned as a consequence of Hasmonean seizure.

The precise motivation behind these different campaigns is for the most part lost to us. To increase his resources may well have been a priority for Hyrcanus, given on the one hand, the agriculturally unproductive character of his homeland and, on the other, the demands of a new aristocracy in an enlarged city. Trading interests might help to explain the conflict with the Nabateans, formerly a friendly people, since they had long operated by controlling the roads, and Medeba was situated on the King's Highway, the great trade route which skirted the desert and linked the Red Sea with Damascus. The Samaritans had cut Judea off on the N, as the Idumeans had done on the S.

Hyrcanus' treatment of conquered territory followed, for the most part, the unremitting severity learned by his family through bitter necessity during their early struggles. Special vindictiveness was reserved for the Samaritans of Shechem. The book of *Jubilees*, thought by some to belong to this period (Mendels 1987), highlights the biblical story of the rape of Dinah and of her brothers' brutal punishment of the Shechemites; this interpretation of the text may well have been meant to justify Hyrcanus' treatment of Samaria/Shechem.

It is often asserted that destruction and expulsion were the preordained lot of all those who would not convert and that Hyrcanus (and equally his successor, Jannaeus) were seeking to secure for the entirety of their holdings a purely Jewish occupation. But our evidence does not justify this extreme view. The Judaization of Edom had its own special story. In the light of indications in the ancient narratives that this transformation was at least partly voluntary and of the attachment of the Idumeans to the Jewish cause at the time of the great revolt of A.D. 66–74, a certain affinity between the Jews and a significant element within Idumea seems probable. Unfortunately, we cannot know what caused the removal to Egypt of a community of persons with obvious Idumean names revealed to us in papyri (Rappaport 1977).

4. Aristobulus. During the single year of his rule, Aristobulus managed one enterprise. The outcome in this case too was the circumcision of at least a part of a defeated people, this time, the Ituraeans of the N, who were ordered to become Jewish or to move (*Ant* 13.318). This policy was perhaps determined by the preexistence of a

Jewish population in upper Galilee. Strabo, the Greek writer whom Josephus mentions by name at this point, actually praises Aristobulus for having served his nation well by its enlargement.

5. Alexander Jannaeus. Jannaeus overran numerous towns in the course of a stormy career, with dramatic advances and equally dramatic setbacks. He has gone down in history as the destroyer of Greek cities, as a ruthless opponent of paganism and indeed of Hellenism. Josephus, however, lists the conquered cities as ones belonging to Syrians, Idumeans, and Phoenicians (*Ant* 13: 395). What is involved is, simply, the achievement of Hasmonean control over the remaining parts of Palestine and over its surroundings—the coastal strip, Idumea, Samaria, Carmel, the Perea, Gaulanitis (the Golan), and Moab. Certainly, recalcitrant cities were not spared brutality: Josephus (*JW* 1.87) speaks of Jannaeus' reducing Gaza, Raphia, and Anthedon to servitude. But this brutality was matched by that of the other side and seems to have been more a means of reducing opposition or punishing the obdurate than a bid to Judaize whole populations by the sword. So, for example, Amathus in S Jordan was demolished because its ruler, Theodorus, would not meet Jannaeus in combat. Only in the case of the Transjordanian city of Pella do we hear that Jannaeus' troops wrecked the city because the inhabitants rejected the customs of the Jews (*Ant* 13.397). That vague phrase may be taken as referring to an attempt formally to transfer political control to a Jewish element. In general, ancient (and modern) allegations about the root and branch destruction of Greek cities by Jannaeus must be viewed as exaggerated, since many of those mentioned rapidly revived (Kasher 1988a: 133–62), while the context of those statements in Josephus shows that they originated in the propaganda surrounding the subsequent refoundation of the cities by Pompey and Gabinius: Pompey, the new Alexander, was to arrive as the savior of the "Greeks" of Syria and of Palestine.

The wars of King Alexander Jannaeus were dominated by pragmatic rather than by religious considerations. The coastal strip and the E bank of the Jordan, from Moab to the Golan, were now the central areas of attention: here his predecessors had established a limited foothold. The determining factor of the advance was a complex interaction, scarcely avoidable, with other rising powers in the region. With this came, perhaps, the lure of new commercial possibilities.

Thus, Jannaeus' opening venture was a major assault on the important port of Ptolemais (Akko). This went well, until it was cut short by the intervention from Cyprus of the deposed Egyptian king, Ptolemy Lathyrus. Jannaeus reached an accommodation with Lathyrus, which, in turn, was soon nullified by Jannaeus' own double-dealing: he was caught in secret negotiations with Lathyrus' mother, now ruling as Queen Cleopatra III (*Ant* 13.324–37). Lathyrus went on to inflict two major defeats on Jannaeus, one in the lower Galilee and one in the Jordan valley and then to invade Judea. Only Cleopatra's military intervention halted his advance. In Josephus' narrative Jannaeus' initial assault on Akko remains unexplained; but it is not improbable that Lathyrus had already before nursed hopes of using the city as a springboard into Palestine and thence back to his own kingdom, while Jannaeus, for his part, had seen the advantages of gratifying Cleopatra by forestalling her son (Stern 1981).

Lathyrus was eventually, though as it turned out temporarily, deflected by Cleopatra; and some time before her death in 101 B.C., she signed a treaty with Jannaeus at Scythopolis (*Ant* 13.355). That observers were struck by the queen's subsequent disengagement from the affairs of Palestine is revealed by a story in Josephus which tells how a prominent Egyptian Jew in her army flatly refused to cooperate with her unless she undertook to leave the Jews alone. Whatever her real considerations, her decision was an invitation to Jannaeus to move in and onward; and in the succeeding years he took not only the towns of the tyrants, but also, notably, Gadara, which was becoming a genuine center of Greek culture, and Gaza. The latter was the key to the S sector of the coastal strip; it was also an established ally and outlet of the Nabateans, whose trade was threatened by Jannaeus, not only at Gaza, but also, and perhaps more so, by his activities across the Jordan. During some eight or nine years the Nabateans, with the help of the Seleucid monarch, Demetrius III, fought with unexpected tenacity to retain their sphere of influence; and in battle they inflicted a serious defeat on the Hasmoneans deep inside Judea. But in the last years of his reign (83–76 B.C.), Jannaeus was able to redress the balance, so that he finished master of most of what lay between the Golan (in the N) and Moab (in the S), including such places of importance as Gerasa, and Gamala, and, as already mentioned, Pella. The country was secured by a network of virtually impregnable fortresses, of which Josephus names three: Hyrcania, Alexandreion, and Machaerus, all of them overlooking Transjordanian territory (*Ant* 13.417).

The new areas were an integral part of the kingdom which on his death the king bequeathed to his widow and successor, Salome Alexandra. The queen retained her husband's kingdom intact during her nine years of rule (76–67 B.C.), and she substantially increased the army; but Judea's power across the Jordan was to prove short-lived and to be replaced almost immediately by a very different arrangement, the group of cities founded or refounded by Pompey, which together became known as the Decapolis. The mixed character of these places had probably persisted throughout, and the enhanced Jewish presence of the Hasmonean period will have served in equal measure to Hellenize the Jews and to Judaize the region.

C. Opposition to the Hasmoneans

The Hasmoneans may have acted on behalf of the people, but this did not mean that they were acceptable to all. The shifting patterns of support and opposition to the ruling house are now in large part lost to us. We are, however, able, by combining with caution reports in Josephus, recollections in the Talmudic literature, and allusions in the Qumran texts to form some impression of the connections between various groupings and political events. Overall, the emergence of a military monarchy was bound to have social and religious repercussions in a tightly knit society, as Judea had been. The formation of sects which dissociated themselves to a greater or a lesser extent from other Jews, begun under the impact of earlier pressures, was undoubtedly accelerated by the political changes of this period.

It is in connection with the rule of Jonathan that Josephus first mentions the three major divisions, which he calls *haireseis* (sects) or "philosophies," that were in existence "at this time"—the Pharisees, the Sadducees, and the Essenes; he then offers a brief account of them (*Ant* 13.171–73). We may take it therefore that Josephus' view, derived perhaps from tradition, was that these groupings had come into their own during the early Hasmonean period; and this is wholly plausible. It is a pity that the author then goes on to describe the bone of contention between them in terms which have nothing to do with the context from which they emerged, because he has chosen at this point to focus on what might interest his Greek readers, that is to say, differences of philosophical standpoint.

1. The Essenes. We are fortunate that the evidence from Qumran bears witness to a more direct (though enigmatically expressed) response to contemporary affairs, on the part, at least, of the community which possessed the scrolls that were found in the caves near that site. In the present state of research there are few who still deny the identification of this community as a branch of the Essene sect (see ESSENES). The specifically sectarian documents found in the Qumran library (which include, in fact, some of the best known of all the Dead Sea Scrolls) energetically castigate the sect's enemies and emphatically justify its members' withdrawal from the main body of the nation. None of the encoded allusions to persons, times, or places is unequivocal. But among the many reconstructions that have been made, some have a fair degree of probability (Vermes 1981).

Three hundred and ninety years after the Exile to Babylon, a "plant root," sprung from "Aaron and Israel," made it their purpose to cast off the iniquity around them in what they perceived as an "age of wrath." After they had groped "like blind men" for 20 years (the round number looks like a symbolic one), the drama began to unfold with the appearance of the "Teacher of Righteousness," a certain priest who made them understand the nature of the gulf between themselves and that "congregation of traitors" which was firmly set in its unacceptable ways. By this time the public evils had greatly increased, under the influence of a "scoffer," who dealt in lies, abolished the moral boundaries, and misled the people by detaching them from the traditions of their forefathers, thus calling forth on them all the curses contained in the covenant. His followers, "seekers of smooth things," turned on the righteous few, persecuting and killing them. If we are also to attach to the Teacher of Righteousness the hymns of thanksgiving *(Hôdāyôt)* from the somewhat damaged *Hymn Scroll* (1QH), then it emerges that his own former friends and companions had been among those who rebelled. There was one powerful persecutor, a "Wicked Priest," who, though "called by the name of truth when he first arose," had betrayed God and defiled himself and the cult out of greed and pride so as to "build a city of vanity with blood" and to rob the poor of their possessions. He had in the end been put to death by his enemies. The elect saw themselves not only as guardians of the Law, but as priests, "sons of Zadok," who were ultimately to protect the temple from the utter defilement which those in charge had wrought in it. However, they had been driven for a period into exile, described again, it would seem, symbolically, as located in Damascus. There they lived a life based upon the new covenant, interpreting the Law punctiliously, in its ritual and its compassionate requirements. Living in perfect purity, they had to remain separate from the community and, especially, to avoid all contact with the temple cult as it existed. They looked forward to the imminent punishment of the traitors and rebels and to their own salvation.

It has been observed that the date of 390 years from the Exile, even if we take it as an approximation accommodated to traditional reckonings, takes us to the beginning of the Hellenizing crisis, early in the 2d century. The withdrawal to "Damascus"—that is to say, perhaps, to Qumran and similar places beside the Dead Sea—would seem, then, to happen at about the time of the Hellenistic reform in Jerusalem. An identification of the Wicked Priest with Jonathan the Hasmonean, who did indeed die at the hands of his gentile enemies, is plausible. The archaeological evidence offered by the community's installations at Qumran cannot confirm this chronology but is consistent with it to the extent of revealing one stratum which precedes that of the Hyrcanus-Jannaeus era. That there is no known historical personage with whom we can identify the Teacher of Righteousness is not wholly surprising: the bitter quarrels which were all-important to the history of the sect had no real claim to attention in the Hasmonean record; and both Teacher and followers had conveniently taken themselves out of sight of Jerusalem, probably without causing much disruption to public life. This should not, of course, stand in the way of our recognizing the historical importance of their action.

The sect's abhorrence of the ruling house did not come to an end with the withdrawal from Jerusalem; but when the Commentary on Nahum (4Q169) points the finger at a peculiarly cruel ruler, seemingly Jannaeus, who is dubbed "the furious young lion," it is made clear that the lion's prey consisted not, now, of the Qumran sectaries, but, instead, of the "seekers of smooth things," reasonably interpreted as the Pharisees. The damaged text seems to suggest that the crucifixion of the seekers by the king, by way of reprisal, shocked the sect, and added a new note of revulsion to their long-standing criticism of the Hasmoneans for the familiar vices of accumulating wealth, abusing power, and polluting all that was holy. It is noteworthy that, even from their exile, these Essenes kept an eye on Jerusalem; indeed, the Nahum Commentary's public awareness extends to a unique reference to the doings of a King Antiochus (apparently Epiphanes) and a King Demetrius (most likely Jannaeus' adversary, Demetrius III). In this respect, the sectaries cannot be described as disengaged. Nor did the sad fate of the "seekers of smooth things" under Jannaeus (if indeed he was the culprit) reduce any of the sectaries' animus against that group.

The *Temple Scroll* (11QT) presents the temple legislation from the Pentateuch with a number of additions, and within this context it finds room for a theory of Jewish kingship (Hengel, Charlesworth, and Mendels 1986). Here a Bible-based reaction to the Hasmonean style of rule stands out plainly (the document is most usually dated, from its description of the Jewish monarch, to the period of Hyrcanus): the king must be Jewish; he must not have

many horses; he must not make war in Egypt; he must not be polygamous; he must not acquire much silver and gold; his army must consist of Godfearers and is to protect him against foreigners; he must make all decisions in consultation with a council of 12 Israelites, 12 priests, and 22 Levites; he must marry a Jewish wife; his conduct in war must follow certain set patterns and must be preceded by a consultation by the high priest of the Urim and Thummim. The conclusion is a resounding warning, the contemporary meaning of which is undeniable: "The king whose heart and eyes have gone astray from my commandments shall never have one to sit on the throne of his fathers, for I will cut off his posterity forever so that it shall no more rule over Israel. But if he walk after my rules and keep my commandments and do that which is correct and good before me, no heir to the throne of the kingdom of Israel shall be cut off from among his sons forever" (col. 59).

2. The Pharisees. The nature of the other major groupings within Judaism and their relation to political developments is in some ways even more elusive. But it is clear that unlike the Essenes, the Pharisees did not turn their backs on Jerusalem, to criticize from afar; and there is great interest in the picture in Josephus of their regular involvement in direct opposition to the rulers. It is understandable, in the light of this opposition, that their influence should have spread through society. Josephus claims that by his day they had won wide popularity among the people and that their scholarly interpretations, as embodied in an oral law supplementing the Torah, dominated public practice. Throughout the Hasmonean period that influence was in the making.

The dynasty, whose authority would always depend on its beginnings as Israel's savior, showed understandable reluctance to break irrevocably with those who stood for piety and purity. Hyrcanus was in his early days a pupil and favorite of the Pharisees (*Ant* 13.289). His quarrel with them is couched in an anecdote which figures also in the Talmud (*b. Qidd.* 66a). The core of this story is the Pharisaic demand that Hyrcanus give up the high priesthood and retain only the temporal leadership. The underlying reason for the demand could be that the two functions had traditionally been separated or else that the Hasmonean house lacked the correct, Zadokite descent, or, again, that Hyrcanus outward-looking activities were polluting the temple. Josephus reports drastic results: Hyrcanus canceled the Pharisees' religious ordinances (to which he had evidently accorded binding force), punished their followers, and took up with the Sadducees. Josephus, furthermore, believed that the breach was never healed. Yet the hazy recollections of this ruler in Talmudic literature are favorable, and Josephus himself proceeds to sum him up as a man both fortunate and charismatic. It may well be that the image of special spirituality was one adopted by Hyrcanus to counter Pharisaic disapproval and that the historian reflects this projection when he says that Hyrcanus was honored by God in three separate ways: with the leadership, with the high priesthood, and with a prophet's power to make predictions (*Ant* 13.300). This last ability was exemplified in an episode, found in both Josephus (*Ant* 13.282) and Talmudic texts, which tells how Hyrcanus was busy about his high priestly duties when a voice from above *(bat-qôl)* brought him the news of his sons' victory over Antiochus Cyzicenus. While all three of Hyrcanus' roles are neatly united in this tale, the religious capacity has pride of place.

With Alexander Jannaeus the conflicts intensified greatly and gave rise to mass slaughter and to civil war. This time not the Pharisees but the Jewish masses in general are given as the king's opponents, and the reconstruction which puts the Pharisees at the forefront of the reaction rests on no more than a plausible conjecture. The Talmudic accounts of the flight of Simeon ben Shetah, one of the leading scholars of the era, may go some way to confirm that Jannaeus' quarrel was primarily with elements rigorous about the law, both written and oral, as we know the Pharisees to have been, and to show that politics and religion were not distinguishable spheres of activity (Efron 1987: 176–90). At this time objections seem, once again, to have been directed at the Hasmonean tenure of the high priesthood; in addition, since one popular outburst was the pelting of the king with the citrons carried at the Festival of Tabernacles, there would appear also to have been controversies about his holy day observances. For the rest it is hard for us to envisage how the slaughter of 6000 citizens could follow from the pelting, or what could have been the character of the ensuing troubles in which, between about 90 B.C. and 85 B.C., 50,000 people perished, while their surviving associates had to seek the protection of King Demetrius III (Eukairos). Six thousand of his subjects apparently changed sides twice before Jannaeus took his most appalling revenge of all, crucifying 800 of them in public and massacring their wives and children while, it was said, he feasted openly with his concubines. That this act sent ripples even to Qumran is hardly surprising. Josephus' assurance that the king, having disposed of all the troublemakers, "reigned thereafter in complete tranquility" (*Ant* 13.383), is not wholly believable, though he did recover somewhat from the military setbacks which also accompanied his middle years and which, no doubt, had been partly a consequence of the uprising within his own borders.

Yet even the dreadful deeds described by Josephus did not finally rupture the link between the Pharisees and the dynasty. Jannaeus, with striking pragmatism, concluded from his own extensive experience that the Pharisees were now a power in the land, without whom one could not govern securely. He allegedly left his widow and successor, the queen Salome Alexandra, with the instructions to placate them and to share power with them in the future (*Ant* 13.400–404). These concessions made them prepared, apparently, to go so far as honoring the corpse of Jannaeus.

D. The End of the Hasmoneans

During Alexandra's nine-year rule, the Pharisees are said by Josephus to have come to dominate public life. Talmudic tradition remembered the reign with affection, valuing it especially as the heyday of Simon, son of Shetah. But the Pharisees became, in their turn, objects of public resentment. Elements hostile to them rallied to the side of Alexandra's younger son, Aristobulus; and during her last illness they organized themselves to take over the country. His supporters included much of the priesthood (*Ant* 14.24); and it was that show of violence which persuaded

the elder brother, Hyrcanus, formally to cede the throne to the younger shortly after the queen's death. However, under the impact of the Roman presence in the area and of his Idumean adviser, Antipater (the father of Herod the Great), Hyrcanus' claim was soon revived and was eventually endorsed by Pompey when he arrived.

We cannot judge which sector of the population it was that presented itself to Pompey at Damascus in the spring of 63 B.C. and requested the restoration of the traditional system of rule under a high priest (*Ant* 14.41). Josephus describes this as the view of the "nation." Whatever the case, the sad day had arrived when these people preferred to deal with Rome rather than with either of the aspiring Hasmonean rulers. Those hopes in a solution from the outside very rapidly faded, however, once Pompey had wrested the Temple Mount from the forces of Aristobulus after a three month siege, had marched into the holy of holies, had imposed Roman tribute, and had taken many into slavery. Some of the *Psalms of Solomon* express the horror of the pious at that act of desecration, voicing the feelings of those people who had been repelled, like the Qumran settlers, by the greed, lawlessness, and arrogance of their own leaders. Here, too, we read of some who had at first welcomed Pompey, the invader from the west, "a man alien to our race" (*Pss. Sol.* 2:1–2).

This was the end of the Hasmoneans as a ruling dynasty. The sequel is known to us almost entirely from book 14 of Josephus' *Jewish Antiquities*. Aristobulus was taken to Rome as a prisoner, to be displayed in Pompey's triumph. Hyrcanus was allowed to remain as high priest and receive the title "ethnarch." Between 57 and 55 B.C. the reduced entity of Judea was divided by Gabinius, the Roman proconsul of Syria, into five administrative and fiscal districts. During this period several revolts were organized, either by Aristobulus or by one or more of his sons, who seemed to have little difficulty in escaping from their Roman captivity; but these were fielded, on behalf of Rome, by Hyrcanus with his increasingly energetic minister, Antipater. A further rebellion, under Pitholaus, was crushed by Cassius, in 51 B.C.

During the 40s the upheavals in Roman politics consigned Judea to constant instability, for the civil wars were fought out largely in the E. Julius Caesar, maneuvering against Pompey, released Aristobulus and perhaps hoped to reinstate him; but Aristobulus' sudden death necessitated a rapprochment between the dictator and the party of Hyrcanus, which now included Antipater's sons, the younger of whom was Herod. Hyrcanus' ethnarchy and high priesthood were confirmed. This state of affairs did not change during the ascendancy of Marc Antony, though Antipater himself was killed in disturbances.

But the Parthian invasion of Rome's E provinces in 40 B.C., which brought a Parthian army into Jerusalem, again reversed the situation. Hyrcanus was taken prisoner and had his ear mutilated to disqualify him from the high priesthood, while Herod fled to Rome. Antigonus, son of Aristobulus, was installed as king; and the Hasmonean dynasty was for a brief moment revived. He issued coins with Greek on the reverse and Hebrew on the obverse, styling himself, in Greek, King Antigonus, and, in Hebrew, Mattathias the high priest. One issue makes mention in the Hebrew also of the community *(heber)* of the Jews. The iconography is associated with the temple. Syria was torn between Romans and Parthians during the next three years, allowing Herod to engage in the reconquest of Palestine with Roman support. In 37 B.C. Jerusalem fell to Herod together with Sosius, the Roman general; and Antigonus was beheaded at Antioch on the orders of Antony. Earlier in the year, Herod had married Mariamne (Mariamme I), granddaughter of Aristobulus (through her father) as well as of Hyrcanus (through her mother), thus uniting and also superseding the two branches of the Hasmonean dynasty. Mariamne's death at the hands of her jealous husband occurred in 29 B.C., and the two sons of this marriage, Alexander and Aristobulus, fell under suspicion and were executed in the year 7 B.C.

That the dynasty was remembered with admiration by at least some sections of the Jewish aristocracy is shown by the pride with which the historian Josephus speaks of his Hasmonean ancestry in the introduction to his autobiography, a work published as late as the A.D. 90s (*Life* 2).

TESSA RAJAK

HASRAH (PERSON) [Heb *ḥasrā*]. Var. HARHAS. **1.** Grandfather of Shallum, the husband of Huldah the

prophetess (2 Chr 34:22 [LXX *chellēs*]). Harhas, a variant form of the name, appears in the parallel text of 2 Kgs 22:14.

2. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (1 Esdr 5:31 [Gk *Asara*]). He may be the same "keeper of the wardrobe" mentioned in 2 Chr 34:22 (= 2 Kgs 22:14). Although 1 Esdras is often assumed to have been compiled from Ezra and Nehemiah, the family of Hasrah does not appear among their lists of returning exiles (see Ezra 2:49; Neh 7:52). Omissions such as this raise questions about the sources of and the literary relationship among 1 Esdras, Ezra, and Nehemiah.

MICHAEL DAVID MCGEHEE

HASSENUAH (PERSON) [Heb *hassĕnû'â*]. The father of Judah, a Benjaminite and second in command over postexilic Jerusalem (Neh 11:9). In a related list Hassenuah is also described as the father of Hodaviah (1 Chr 9:7), but some scholars have argued that the record in 1 Chronicles has been corrupted (Curtis and Madsen *Chronicles* ICC, 171).

FREDERICK W. SCHMIDT

HASSHUB (PERSON) [Heb *haššûb*]. The name of several different persons mentioned in the OT.

1. The father of Shemalah, one of 284 Levites who agreed to settle in postexilic Jerusalem (Neh 11:15). His name appears in the parallel account in 1 Chr 9:14. According to the latter account he was a member of the Merari clan, but Nehemiah omits this information. This, like other differences in the two lists, suggests that there is no direct literary relationship between the two lists (contra Kellermann 1966: 208–27; and Mowinckel 1964: 146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (Schneider *Esra und Nehemia* HSAT, 42–43; Brockington *Ezra, Nehemiah and Esther* NCBC, 187; cf. Myers *Ezra, Nehemiah* AB, 185). In any event the differences at this point between the accounts provide no further evidence of use in resolving the problem. The name may be a shortened form of the name, *hšbyh*, meaning "Yahweh has considered" (*IDB* 2: 536).

2. The name of two men given responsibilities in the rebuilding of postexilic Jerusalem (Neh 3:11, 23). The first, described as the son of Pahath-moab, was charged with responsibility for rebuilding the wall "as far as" or, perhaps, "by" the Furnace Tower. (On the ambiguities of the Hebrew at this point, see Ehrlich 1914: 190; and Williamson *Ezra, Nehemiah* WBC, 197.) He may have already been responsible for reconstruction of other parts of the wall, since the writer describes this as the second section for which he (along with others) was responsible (Brockington, 138). The second Hasshub was charged with responsibility for rebuilding the wall in front of the dwelling he shared with someone named Benjamin (v 23). It is possible that the two men are actually one with two assignments, but it is impossible to be certain (*IDB* 2: 536).

3. A leader of the people and a signatory to the covenant established by Ezra (Neh 10:24).

FREDERICK W. SCHMIDT

HASSOPHERETH (PERSON) [Heb *hassōperet*]. The form in Ezra 2:55 for Sophereth. It is also the RSV rendering of the Gk *Assaphiōth* in 1 Esdr 5:33. See SOPHERETH (PERSON).

HASUPHA (PERSON) [Heb *ḥăśûpā'*]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:43 = Neh 7:46 = 1 Esdr 5:29).

MICHAEL DAVID MCGEHEE

HAT. See DRESS AND ORNAMENTATION.

HATHACH (PERSON) [Heb *hătāk*]. One of the eunuchs of King Ahasuerus appointed to attend to Queen Esther (Esth 4:5–12). Distressed with Mordecai's behavior when he learned of Haman's decree against the Jews in the empire, Esther sent her eunuch for some explanation. Mordecai returned her servant with a request urging the queen to go to the king and intercede for her people. Thus the Jews were delivered from Haman's plots against them. The deliverance was compared in the Targum to that of Daniel (Grossfeld 1984), and evidently some think that Hatach is called Daniel by the rabbi (Moore, *Esther* AB, 98). It has been claimed that the eunuch may have been a Jew (Haupt 1982), but his name has been assigned Persian origins meaning "the Good One" (*hataka* is *hat* plus *ka;* Gehman 1924) or "courier."

JOHN MCKENNA

HATHATH (PERSON) [Heb *ḥătat*]. A Judahite, the son of Othniel and grandson of Kenaz (1 Chr 4:13). Hathath's name appears in a list of descendants or relatives of Caleb (1 Chr 4:11–13). The exact nature of his relationship to Caleb remains unclear. 1 Chr 4:15 apparently traces back from Kenaz to ELAH to Caleb, making Hathath at least Caleb's great-great-grandson. Yet Josh 15:17 refers to "Othniel, the son of Kenaz, the brother of Caleb" (cf. Judg 1:13), thus indicating that Hathath is Caleb's grandnephew

(assuming that "the brother of Caleb" describes Kenaz and not Othniel). One could simply posit the existence of separate traditions. However, Myers (*1 Chronicles* AB. 26) suggests that a transposition of the "sons of Kenaz" with *ʾlh* (not as a name, "Elah," *ʾēlâ*, but the demonstrative pronoun, "these," *ʾēlleh*) may have occurred in 1 Chr 4:15, with the original text reading "these were the sons of Kenaz." However, this only accounts for the latter of the two occurrences of Elah in the verse. It is also possible that the name Kenaz was given to two people in the clan over a period of several generations, thus meaning that Caleb's grandson Kenaz, the son of Elah, was the grandnephew of another Kenaz, the brother of Caleb and grandfather of Hathath. The name probably meant "weakness," "weakling" (Noth *IPN*, 227; cf. *HALAT* for etymology). Both G^L and Vg insert a Meonothai as Hathath's brother (1 Chr 4:13).

KENNETH H. CUFFEY

HATIPHA (PERSON) [Heb *hăṭîpāʾ*]. A temple servant who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:54 = Neh 7:56 = 1 Esdr 5:32).

MICHAEL DAVID MCGEHEE

HATITA (PERSON) [Heb *hăṭîṭāʾ*]. A gatekeeper at the temple who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:42 = Neh 7:45 = 1 Esdr 5:28).

MICHAEL DAVID MCGEHEE

HATTIL (PERSON) [Heb *ḥaṭṭîl*]. A servant of Solomon who was the progenitor of a family which returned from Babylon with Zerubbabel (Ezra 2:57 [LXX *atil*] = Neh 7:59 [LXX *etēl*] = 1 Esdr 5:34 [LXX *agia*]).

MICHAEL DAVID MCGEHEE

HATTUSH (PERSON) [Heb *ḥaṭṭûš*]. **1.** The son of Shemaiah and a descendant of Zerubbabel who is mentioned in the list of exilic and postexilic descendants of David in 1 Chr 3:22. If, as seems likely, the phrase; ". . . sons of Shemaiah . . ." is to be deleted as a dittography in v 22 (see Williamson *Chronicles* NCBC, 58), then Shemaiah becomes the first son of Shecaniah and Hattush is his second son. The root *ḥṭš* is otherwise unattested in biblical Hebrew.

2. A descendant of David who accompanied Ezra on his return to Jerusalem (Ezra 8:2). The text of Ezra 8:2 is a disturbed reading; ". . . of the sons of David, Hattush, of the sons of Shecaniah, of the sons of . . ." The superior reading is preserved in LXX^A of 1 Esdr 8:29, which reads, "Hattush the son of Shecaniah." This reading agrees with the corrected text of 1 Chr 3:22, which deletes the phrase "sons of Shemaiah" in MT, and makes Hattush the second son of Shecaniah. It is uncertain whether the Hattush mentioned in Ezra 8:2 is identical to (1), because of the uncertainty of the date of Ezra's mission as well as the disturbed text of both Ezra 8:2 and 1 Chr 3:22; but it is quite possible.

3. The son of Hashabneiah (Heb *ḥăšabnĕyāh*), a man of Jerusalem who repaired a part of the walls under Nehemiah (Neh 9:5).

4. One of the priests who put his seal to the covenant of the postexilic community recorded in Nehemiah 10. He may be identical to the Hattush mentioned in Neh 12:2 who returned to Jerusalem with Zerubbabel and Jeshua.

RUSSELL FULLER

HATULA (M.R. 148137). A Natufian and Pre-Pottery Neolithic A (PPNA) site in the Shephelah near Latrun monastery. The site of Hatula is located on the S bank of Naḥal Nahshon close to its entrance to the plain of Aijalon. Its name is derived from the ruins of Hatula on a hill ca. 2.5 km to the E. The prehistoric remains are embedded in a brown alluvium covering an old river terrace 15 m above the present bed. The remains occupy an E-W orientation some 100 × 25 m along the lower edge of the rocky slope bodering the valley.

The site was discovered by Father Claude of Latrun monastery and was excavated during six seasons from 1980 by M. Lechevallier and A. Ronen. It contains two layers: Natufian and PPNA. The excavations have concentrated on the upper, PPNA layer, of which some 80 m^2 were uncovered. The underlying Natufian was reached in limited test pits which exposed approximately 10 m^2.

A. The Natufian

The Natufian remains occupy the lower half of the deposits covering the terrace, about 1 m of dark brown silty clay with small stones or calcareous fragments, with few stones larger than 3 cm. The archaeological remains are sparsely distributed in the entire thickness of the layer; but a major concentration exists at the bottom, near the calcareous crust *(nari)* which constitutes the local bedrock. Here is a rich living floor, 10 cm thick, with abundant flint industry and animal bones. A considerable length of time separated the Natufian and PPNA settlements, during which the site was unoccupied. The top of the Natufian bed served as the foundation of the Neolithic settlement; hence at this point the remains of the two periods may have mixed, with no way to distinguish them.

Among the lithics, flakes constitute some 66 percent of the knapping products, blades/bladelets form ca. 25 percent, and the remainder are cores and waste products. The cores are rather small; a good number among them were prepared by breaking a nodule into halves or quarters. The scarcity of nodules at the site indicates that prepared cores were imported from a flint source, probably from one of the conglomerates along the Nahshon river. Chief among the retouched tools are the microliths (57 percent), with lunates largely dominating. At Hatula, borers (ca. 9 percent) are the most numerous among all known Natufian sites. The borers have especially delicate, needlelike tips generally placed at an angle. Similar borers become very numerous in the PPNA. Other tools include retouched blades and flakes, grattoirs, burins, truncations, and a small number of sickle blades with sheen (0.2 percent). The size and shape of the lunates indicate a Late Natufian phase.

Nonlithic artifacts include a bone sickle fragment with a

groove 2.5 mm deep, a few bone awls (one with a pierced end), and a few pieces of ornament: beads, perforated seashell, and dentalium.

No structures or stone mortars have yet been discovered in the Natufian phase of Hatula. One burial, a female ca. 12 years old, without accompanying objects may belong to either the Natufian or Neolithic.

Table 1
Major Tool Types of Hatula (%)

	Natufian (N = 517)	*Khiamian (N = 705)*	*Sultanian (N = 610)*
Grattoirs	1.7	2.1	1.3
Burins	6.3	2.5	2.9
Borers	8.7	17.4	28.6
Backed blades	1.9	0.1	0.6
Truncatures	2.9	2.6	2.6
Denticulates & Notches	5.4	2.6	3.6
Sickle blades	0.19	1.4	1.8
Retouched pieces	13.0	18.8	27.9
Backed bladelets	22.0	8.8	9.1
Geometric Microliths	35.3	36.0	7.2
El Khiam Points	——	3.1	4.2
Celts	——	——	0. 8

B. The Neolithic

The layer of Neolithic remains is about 1 m thick and differs clearly from the underlying one. It is soft, of light brown color with white pockets. It is rich in stones of various sizes, dominated by those of 5–10 cm in diameter. Many of the stones are broken river pebbles, in our opinion, man-made breaks. The composition of the Neolithic layer and its structure closely resemble the deposits of a tell and likewise denote a strong anthropogenic influence. The upper part of the Neolithic layer was eroded, as indicated by the large number of artifacts found on the surface and by several Neolithic burials, which were originally dug to a certain depth but were found almost at surface level.

Two structures were unearthed in the Neolithic layer. Both are oval and were dug to form a shallow depression in the underlying sediment. One of the oval structures measures ca. 4 × 3 m. The depression was filled by a fine, loess-like yellow sediment, which seems to have been imported. In the yellow sediment were numerous concretions, yellow or orange in color, perhaps the remains of bricks or plaster from the roof or walls of this apparently adobe structure. The oval structure was subsequently (perhaps after a fire) filled with a 30-cm-thick, gray, ashy, soft sediment. In it a concentration of broken pebbles and numerous faunal remains was found.

The second structure measures ca. 5.5 × 4 m and was dug about 50 cm into the underlying deposit. The outer wall had a stone base, made of large cobbles in the S end and smaller ones in the rest of the periphery. The entrance, 1.4 m wide, was in the center of the E wall. The N end of the structure suffered from erosion. About 1 m W of this stone structure was a depression filled with a yellow deposit overlain by a gray, ashy layer rich in large bone fragments, similar to the situation described in the former structure. This depression was only partly excavated. Its precise relation to the stone structure is unclear—perhaps it was an adjacent working area (butchery or kitchen?).

Inside the stone structure and in the space separating the two depressions were numerous grinding implements, mortars and pestles made of limestone or basalt. The mortars and lithic concentrations indicate at least two superimposed floors.

The lithics are very similar to the Natufian ones, both in types and technique of manufacture. The major technical components—flakes, blade/bladelets, cores and waste—are represented in similar ratios to the Natufian series. The main differences are the presence of newly introduced El-Khiam arrowheads or points, the introduction of celts, and the considerable augmentation of borers (from 9 to 29 percent).

After the microliths (45 percent) borers constitute the most numerous tool type in the Neolithic of Hatula (29 percent). They are the same types as the Natufian ones. The El-Khiam points (4 percent) were made on carefully selected, thin blades with a width closely ranging around 10 mm. The notches which separate the stem from the top have a standard size around 5.5 mm. The butt is truncated, frequently concave. The presence of numerous El-Khiam points determines this assemblage as Khiamian. However, a few celts were also found at Hatula, specially located in the stone structure, an arrangement which gives a local Sultanian aspect to the industry. It remains to establish the precise chronological relationship between the "Sultanian" stone structure and the "Khiamian" adobe structure; this will determine whether these lithic facies denote functional or chronological differences.

Bone tools, mainly awls, are of the same type, but more abundant than in the Natufian. There are fine greenstone beads, with biconical perforations exceeding 40 mm in length. A few perforated seashell and dentalium beads are present here, as in the Natufian. Mortars and pestles are numerous in the Neolithic. The mortars are large slabs (ca. 30 × 30 × 20 cm) with a ca. 10-cm-deep depression and a diameter of 10 cm. The pestles are 10–15 cm long, with one end rounded and the other flat; the latter was held in the hand.

Four Neolithic inhumations were uncovered, all in flexed position. Only one had an accompanying object: a round, perforated, limestone bead near the chest.

Natufian fauna is largely dominated by gazelle (95 percent). Wild cattle and wild boar come next as food resources, followed by a few hares and sea fishes. Possibly mole rats and reptiles were also consumed, since several of these remains were charred; and test excavations failed to reveal mole rat and reptile bones outside the occupied area. Few carnivore remains were found in Hatula (fox and cat). Dog remains were not found, but their presence may be inferred from the small bones which were corroded in a way typical of a partial digestion by a dog. Isolated examples of deer, badger, polecat, and hedgehog were also present. A large quantity of birds, including aquatic species which require year-round water, completes the faunal remains.

The Neolithic has a faunal composition similar to that

of the Natufian but with a decreasing role of gazelle and an increase of fish and fowl in the diet.

C. Summary

The open-air site of Hatula was a permanent, or semi-permanent, village during the Late Natufian (ca. 12,000 years ago) and PPNA (9500 years ago). The almost total reliance on gazelle as staple food in the Natufian indicates highly specialized hunting strategies, if not a form of seasonal control. The situation changed in the Neolithic when the gazelle population seems to have diminished, with a correspondingly greater dependence on smaller game, mostly birds and fish. In many ways the PPNA material culture seems a direct continuation of the Natufian—an "Epi-Natufian." The scarcity of forest-dweller game and the presence of such humidity lovers as polecat, badger, and ducks constitute somewhat contradictory evidence, implying a large treeless country with a nearby lake or marsh. But we should remember that at this stage man was capable of altering his environment, and our evidence does not necessarily reflect solely natural conditions.

AVRAHAM RONEN
MONIQUE LECHEVALLIER

HAUSTAFELN. The German word *Haustafeln* ("tables of household rules") is a technical term used to designate lists of duties for members of a household. These lists were widely used in antiquity as part of the moral instruction given to individuals in regard to proper behavior toward the gods, the state, friends, fellow members of the household, and others. Examples of the lists, which vary widely in form and function, occur in the "unwritten laws" of popular Greek ethics (e.g., Aesch. *Supp.* 701–9; ps-Arist. *Rh. Al.* 1421b 37–40; ps-Isoc. *Demonicus* 16; Lycurg. *Leoc.* 15; Xen. *Mem.* 4.4.18–24), philosophical traditions (e.g., Cic. *Off.* 1.17.58; 3.15.63; Dio Chrys. *Or.* 4.91; DL 7.108, 119–20; 8.22–23; Epict. *Diss.* 2.10.1–23; 14.8; 17.31; Hierocles *apud* Stob. [cf. Malherbe 1986: 85–104]; Hor. *Ars P.* 312–16; ps-Plut. *De liberis educandis* 7E; Sen. *Ep.* 94.1), Hellenistic Judaism (Joseph. *AgAp* 2.190–210; Philo *Dec* 165–67; *Deo* 17, 19; *Hypo* 7.3, 14; *Post* 181; ps-Phocylides *Gnom.* 175–227), and early Christian literature.

The earliest, most complete Christian examples are Eph 5:21–6:9; Col 3:18–4:1; and 1 Pet 2:13–3:12. The principal interest of these NT *Haustafeln* is in the relationships between husbands and wives, parents and children, and masters and slaves. Wives are exhorted to be submissive to their husbands (Eph 5:22–24, 33; Col 3:18; 1 Pet 3:1, 5–6), children to be obedient to their parents (Eph 6:1–3; Col 3:20), and slaves to be subject to their masters (Eph 6:5–8; Col 3:22–25; 1 Pet 2:18–25). Husbands (Eph 5:25–33; Col 3:19; 1 Pet 3:7), fathers (Eph 6:4; Col 3:21), and masters (Eph 6:9; Col 4:1) are exhorted to be considerate and just and not to abuse the power of their dominant position. Later material that belongs to this tradition of instruction or is related to it includes 1 Tim 2:1–2, 8–15; 5:1–8; 6:1–2; Titus 2:1–10; 3:1–2; *1 Clem.* 1:3; 21:6–9; *Ign. Pol.* 4:1–6:1; Pol. *Phil.* 4:2–6:3; *Did.* 4:9–11; and *Barn.* 19:5–7. Some of the preceding texts (such as Pol. *Phil.* 4:2–6:3) are frequently called *Gemeindetafeln* ("tables of church rules") because they include instructions for groups within the church, "the household of God" (1 Tim 3:15).

Scholarly debate has centered on the issue of the origin and function of these lists of social duties. Whereas early research on the NT *Haustafeln* sought their origin in Stoicism (Weidinger 1928; Dibelius *Kolosser, Epheser, and Philemon* HNT, 48–50), Hellenistic Judaism (Crouch 1972), or even early Christianity itself (Schroeder 1959), recent studies derive them principally from the Hellenistic discussion of the topic "concerning household management" *(peri oikonomias),* especially as outlined by Aristotle (*Pol.* 1.1253b 1–14; cf. also *Eth. Nic.* 8.1160b, 23–1161a, 10) and developed by the Peripatetics and Neo-Pythagoreans (Lührmann 1975, 1980; Thraede 1977a, 1977b, 1980; Balch 1981, 1988). The function of the NT household codes is highly debated. Dibelius (48), for example, argues that the *Haustafeln* are parenetic in function and that they were adopted by early Christians when the hope for an imminent parousia began to wane. Crouch, on the other hand, argues that the Christian *Haustafel* reflects the nomistic tendencies of Deutero-Pauline Christianity and that it was formed to deal with the problem of social unrest within the Church occasioned by the egalitarian actions of women and slaves; it functioned therefore to combat the threat "to the stability of both the Church and the social order" (1972: 151). Elliott (1981: 208–20; 1986) contends that the *Haustafel* in 1 Peter is part of a sectarian strategy to foster the distinctive identity and solidarity of the Christian community as the household of God over against a hostile world that it still hopes to convert; that is, the code has an internal integrative function within the Church as well as an external missionary goal. Balch (1981, 1986), by contrast, maintains that the domestic code in 1 Peter represents an apologetic response to outsiders' criticisms that Christianity was socially irresponsible and domestically disruptive; the Petrine *Haustafel* encourages the Church's integration into Greco-Roman society by promoting the adoption of certain values of that culture. Balch's position is bolstered by the fact that the *Haustafeln* in Philo and Josephus have a similar apologetic function (cf. also Malherbe 1983: 50–53; 1989: 17).

Historically, the appearance of the *Haustafeln* in 1st-century Christianity reflects the theological conviction that the new life in Christ is to be lived within the framework of existing natural and social orders (Dahl 1965: 69). Modern Western society, however, differs markedly from the Greco-Roman culture that the household codes presuppose. These differences raise acute hermeneutical questions about the *Haustafeln* and their present theological relevance, especially in regard to the codes' acceptance of slavery as an institution (Laub 1982: 83–98) and their espousal of women's subordinate position (Schüssler Fiorenza 1984: 65–92; cf. also Müller 1983). In this regard it is important to interpret each of the *Haustafeln* individually; some of the codes do not simply assume the authority of the paterfamilias but also criticize aspects of it. For example, the *Haustafel* in 1 Peter rejects the ancient tradition that a wife was to fear her husband and acknowledge only his gods. In this tradition a wife was guilty of insubordination if she adopted a religion other than her husband's. 1 Peter (3:1–6) rejects these ideas, exhorting wives to maintain their Christian faith and not to be intimidated

by their husbands (cf. Balch 1984). See also HOUSEHOLD CODES.

JOHN T. FITZGERALD

HAVILAH (PERSON) [Heb *ḥawîlâ*]. Two individuals with this name, whose identities are closely associated with the place which bears this name, appear in the Bible. See also HAVILAH (PLACE).

1. A son of Cush listed in the so-called Table of Nations (Gen 10:7; 1 Chr 1:9).

2. A son of Joktan listed in the so-called Table of Nations (Gen 10:29; 1 Chr 1:23).

Havilah is the biblical form of the name of the large and old tribal federation of *Ḥaulān* in SW Arabia, which is divided into two or three branches. The identification originates from Niebuhr (1772: 292f.), who associated Ḥaulān to the SE of Ṣanʿāʾ with Havilah, the son of Joktan, and Ḥaulān to the W of Ṣaʿda with Havilah, the son of Cush. He found it remarkable that two tribal districts in different regions of Yemen have the same name and are also mentioned twice in the Table of Nations (Gen 10:7, 29).

Two tribal groups of Ḥaulān continue to exist today. The E (or S) branch are the Ḥaulān al-ʿĀliya or Ḥaulān al-Ṭiyāl, the territory of which extends from the E of Ṣanʿāʾ over Tanʿim to Ṣirwāḥ and into the Wâdī Ḏana just before reaching the oasis of Mārib. The N branch is the federation of the Ḥaulān bin ʿAmr or Ḥaulān Quḍāʿa, the territory of which lies to the NW of Ṣaʿda. The Ḥaulān were probably originally one single tribe, the territory of which was later separated when the Minaean realm arose and the Ḥāšid and Bakīl invaded the Yemenite highland and settled there. Place names in the region of these two tribes still indicate the former presence of the Ḥaulān. Also, in other parts of Yemen, dispersed groups of the Ḥaulān are encountered at a later date.

The earliest epigraphic attestation of Ḥaulān is to be found in the Old Sabean record of the ruler Karibʾil Watar, set up at Ṣirwāḥ, RES 3946,3, where vassals of a certain Yaʿṯuq of Ḥaulān *(ʾdm yʿṯq ḏhwln ḏyrrt)* are mentioned. In the Minaean inscription M 247 = RES 3022,2 from Barāqiš from the time about 340–330 B.C., the donors of the text give thanks to their gods for having saved them and their possessions from the raids which Sabaʾ and Ḥaulān undertook against them on the caravan route between Maʿīn and Ragmatum (Nagrān). Also in the Qatabanian inscription RES 4274,1 a member of Ḥaulān *(ḏhwln)* is attested as a person who makes a dedication to the goddess Aṯirat.

In the Sabean inscriptions from the time of the kings of Sabaʾ and Ḏū-Raydān there are numerous references to Ḥaulān, which can be subdivided into three different groups. The E branch is the tribe which settles around Ṣirwāḥ and is called the tribe Ḥaulān Ḥaḍilim (*śʿbn ḥwln ḥḍlm;* e.g., Iryānī 28,1); through common leaders it is closely connected with the tribe of Ṣirwāḥ and Hainān (*śʿbn ṣrwḥ wḥwln ḥḍlm whynn;* e.g., Fakhri 3,2). In the

genealogy of the N Ḥaulān around Ṣaʿda, which in Islamic times are the Ḥaulān bin ʿAmr, the older name Banū Ǧudād or al-Aǧdūd is still quoted by al-Hamdānī (1965: 143–45). In the inscriptions these are the tribe Ḥaulān Gudādim (*šʿln ḥwln gddm;* Ja 577,8) or the tribe Ḥaulān Gudādān (*šʿbn ḥwln gddn;* Umm Lailà 1,1–2) or the groups of Ḥaulān ʾAgdūdān (*ʿšr ḥwln ʾgddn;* Ja 658,13); the largeness of Ḥaulān is sometimes expressed by the plural *ʾšʿbn* placed in front of the name ("the tribes of Ḥaulān"; Ja 601,10) or by the designation "the tribes and groups of Ḥaulān Gudādim" (*ʾšʿb wʿšr ḥwln gddm;* Ja 616,12); their territory is the land of Ḥaulān Gudādim (*ʾrḍ ḥwln gddm;* Ja 2109,4) or Ḥaulān Gudādān (*ʾrḍ ḥwln gddn;* Ja 601,5) respectively, or the land of Ḥaulān ʾAgdūdān (*ʾrḍ ḥwln ʾgddn;* Ja 658,10). Once the term Ḥaulān Gudādatān (*ḥwln gddtn;* Ja 671,5) is found. In pre-Islamic times there existed in SE Yemen around the town of Waʿlān in the ancient district of Radmān a further branch of Ḥaulān, which is often attested in the inscriptions of the 2d and 3d centuries A.D., namely, the tribe of Radmān and Ḥaulān, the leaders of which came from the clan Maʿāhir and Ḏū-Ḥaulān (*bn mʿhr wḏḥwln ḏyl rdmn wḥwln;* e.g., RES 3958,1–2). See also HAVILAH (PLACE).

HAVILAH (PLACE) [Heb *ḥăwîlâ*]. The rich land surrounded by the river Pishon according to the story of the Garden of Eden (Gen 2:11). Its richness derives from the gold, resin bdellium, and onyx stones present there. All three of these products point to S Arabia as the location of Havilah, since S Arabia is the homeland of valuable resins and precious stones. According to Pliny (*HN* 12.23), the tree which yields bdellium also grows in Arabia, and the resin from *Commiphora mukul,* Arabic *muql,* is up to now a Yemenite product (cf. Schopen 1983: 176f.). Onyx (Arabic *ǧazʿ*) is found at all times in various places in Yemen; and among the sorts which were usually named after the places where they were found, there was also a "Ḥaulānite onyx" (al-Hamdānī 1884: 202–3). Among the gold mines of the Arabian peninsula, the mine of ʿAšam in the region of the Quḍāʿa is attested, the gold of which is red and excellent; also attested are the mines of al-Qufāʿa in the land of Ḥaulān, which yield gold of a superior quality (cf. al-Hamdānī 1968: 138–41). J. Halévy reports that, as an eyewitness in 1870 in Ṣirwāḥ in Ḥaulān, he saw Arabs washing gold and noted that gold was found in small grains in the sand and in the river bed (1872: 54). Since in Old South Arabic *ḏhb* does not only mean gold but also a type of incense, it is possible that *zāhāb ṭōb* in Gen 2:12 does not refer to "good gold" but rather to a fragrant resin (cf. de Langhe 1959: 493).

In Gen 25:18 *ḥăwîlâ,* which by the Israelites might have been connected with Heb *ḥôl,* "sand," designates presumably the SE desert border of the region where the Ishmaelites settled. From this fact and from the reference to the *Chaulotaîoi* by Eratosthenes (Strabo, *Geog.* 16.4.2), H. von Wissmann (1970: 905–80, esp. 947–54) concluded that there must have existed a colonial Sabean Ḥaulān in NW Arabia along the incense road before or perhaps still during the Minaean period in the oasis of Dedan. Probably this N Arabian *ḥăwîlâ* is to be distinguished from the S Arabian Ḥaulān and perhaps to be compared with the tribe of *ḥwlt,* which is repeatedly mentioned in the Safaitic inscriptions and which might be identified with the *Avalitae* of Pliny (*HN* 6.157) and the later Arabian tribe of *Ḥawāla.* Possibly the old biblical name of this region survives in the name of the N Arabian town of Ḥāʾil (cf. Knauf 1985: 64). The borders of the Ishmaelites in Gen 25:18 with the local destination *ḥăwîlâ* have also been taken over in 1 Sam 15:7 and transferred to the Amalekites.

It should also be noted that other less convincing identification of *ḥăwîlâ* have been proposed, e.g., in the central Arabian Yamāma, in NE Arabia at the Persian Gulf, or even with *Avalitēs* (*Periplus maris Erythraei* 7; Ptolemy, *Geog.* 4.7.10), the later Zaylaʿ at the NE African coast. For further bibliography, see Westermann (1984: 214–15).

HAVVOTH-JAIR (PLACE) [Heb *ḥawwōt yāʾîr*]. A region E of the Sea of Galilee comprising a group of Amorite cities granted by Moses to the half-tribe of Manasseh. The name Havvoth-jair occurs in six OT passages (Num 32:41; Deut 3:14; Josh 13:30; Judg 10:4; 1 Kgs 4:13; 1 Chr 2:23). The noun *ḥawwâ,* "village" (?), is found only in the six passages listed above and in all but one (Num 32:41) of its six occurrences only in the phrase *ḥawwōt yāʾîr,* "Havvoth-jair." The lexical isolation of the phrase places its Israelite origin in question.

The name has been appropriated in Hebrew by means of conflicting etiologies. The two pentateuchal instances of Havvoth-jair incorporate an etiology which derives the toponym from the capture of these villages by *yāʾîr benmĕnaššê,* "Jair the son of Manasseh" (Num 32:41; cf. "the Manassite," Deut 3:14 [RSV]), in the course of the Israelite acquisition of land E of the Jordan. The etiology interprets *ḥawwōt yāʾîr* as "villages of [the person] Jair." A similar

etiology (Judg 10:4) attaches the name to a Gileadite judge named Jair (on the text see Boling 1966: 295–96).

Just as the etiologies of the name differ, so also the number of cities included in the region, and its geographic associations, are variously given in the biblical texts. The etiologic narratives in the Pentateuch (Num 32:33; Deut 3:10–11, 13) and the topographic list in Joshua (13:30) associate Havvoth-jair with the kingdom of Og, the realm of which encompassed BASHAN. Deuteronomy (3:13–14) and the Deuteronomistic tradition (1 Kgs 4:13) further specify that the Bashan region overlapped "the whole region *(ḥebel)* of Argob" (Deut 3:4). The *ḥebel ʾargōb,* "region of Argob," is specified as the area captured by Jair and renamed eponymously (Deut 3:14). *See also* ARGOB (PLACE).

The Deuteronomistic traditions (Deut 3:13–14; Josh 13:30; 1 Kgs 4:13) agree that 60 cities comprised the region called Havvoth-jair, whereas Judg 10:4 presumes 30 cities, associated with the 30 sons of the judge Jair (the political significance of the kinship language is stressed by Boling *Judges* AB, 188). The Chronicler allots 23 cities to Jair (1 Chr 2:23); the cities of Havvoth-jair together with KENATH and its dependencies total 60 cities *(ʿîr)* taken by Geshur and Aram. The Solomonic administrative district centered at Ramoth-gilead included Havvoth-jair (1 Kgs 4:13), and 1 Chr 2:22 places the cities "in the land of Gilead." In the etiologic narratives Havvoth-jair seems to be distinguished from Gilead (see Aharoni *LBHG,* 209).

HAWK. See ZOOLOGY (FAUNA).

HAZAEL (PERSON) [Heb *ḥāzā(ḥ)ʾēl*]. Powerful king of Aram-Damascus between ca. 842–800 B.C.E., remembered by the Israelites as one of their most brutal enemies. Hazael is known from biblical and Assyrian sources, from an inscribed ivory fragment found at Arslan Tash (among booty seized by the Assyrians) which refers to him as "our lord, Hazael," and from a cylinder seal found at Aššur which mentions booty taken from Mallaḫu, one of his royal cities.

Hazael was a usurper to the throne of Aram. 2 Kgs 8:7–15 portrays him as a high official in the royal court who, after being told by the prophet Elisha that he was to become king of Aram, murdered the ailing king Ben-hadad and seized the throne. The annals of Shalmaneser III also indicate Hazael's status, calling him "the son of a nobody," i.e., a usurper. There is some question concerning the identity of the king that Hazael assassinated, and it is likely that the latter's name was Hadad-ʿizr, rather than Ben-hadad (see BEN-HADAD).

Following his seizure of the throne, Hazael began a campaign of aggression against Israel that was to characterize his entire reign. Before 841 B.C.E. Hazael and Joram of Israel were in conflict in Gilead (2 Kgs 8:28–29), and it was during these hostilities near Ramoth-Gilead that Joram was wounded and that Jehu began his revolution that resulted in the overthrow of the Omride dynasty (2 Kings 9).

The years between 841 and 836 were a period of serious trouble for Aram and Hazael. The powerful Syro-Palestinian coalition headed by Aram and Hamath, which had held back the advances of the Assyrian army of Shalmaneser III four times between 853 and 845, fell apart shortly after Hazael came to power. Hamath apparently made a separate peace with Shalmaneser, and the other partners appear to have pulled away from the alliance as well, leaving Aram alone to face the attack when Shalmaneser returned to Syria in 841. Hazael met the Assyrian army at Mt. Senir but was defeated. He withdrew into Damascus, which Shalmaneser besieged briefly but did not capture, although he devastated the orchards and farmland in the Damascus oasis. The Assyrians returned in 837 and perhaps also in 836 (cf. Pitard 1987: 149–50), but Aram held its own in these battles as well. After 836 Assyrian pressure abated; and Hazael recovered very quickly, turning his attention to the conquest of his S neighbors.

Biblical accounts indicate the extent of Hazael's attacks on Israel and Philistia. It appears that he annexed Israelite holdings E of the Jordan (2 Kgs 10:32–33) and decimated Israel's army, almost certainly making Israel into a vassal state. He also attacked Philistia (2 Kgs 12:17; 13:22 LXX) and Judah (2 Kgs 12:17–18), both of which also appear to have become vassals. There is no information on his relations with Ammon, Moab, and Edom; but it is likely that they too came under his sway. Although some scholars have suggested that Hazael was also able to subdue the major states in central and N Syria, there is actually no evidence of this. But the empire which he built in S Syria and Palestine was significant enough to make Aram-Damascus one of the leading states, and perhaps the dominant political power, of Syria during this period.

Few explicit details are known of the latter part of Hazael's reign besides the fact that he continued to dominate Israel through both Jehu's and Joahaz' reigns. Some scholars have identified the king of Aram called Marʾi in the inscriptions of Adad-nirari III (ca. 810–783 B.C.E.) with Hazael. These inscriptions describe Adad-nirari's attack on Damascus, which resulted in the surrender of Marʾi and the payment of a large tribute to the Assyrians. This campaign against Damascus, however, appears to have taken place in 796 B.C.E., some years after the death of Hazael, so that Marʾi should be identified with Hazael's son, Ben-hadad. Hazael appears to have died toward the end of the 9th century, in the last years of the reign of Joahaz of Israel (2 Kgs 13:22).

Hazael was one of the two most powerful kings of Aram-Damascus (along with Hadad-ʿizr, who ruled just before him), and he had a substantial impact on Israelite history. Israel's vivid memories of his harsh treatment of their people are well illustrated in the story of Elisha's fateful meeting with him (see esp. 2 Kgs 8:12).

WAYNE T. PITARD

HAZAIAH (PERSON) [Heb *ḥăzāyāh*]. The father of Colhozeh and an ancestor of Maaseiah, a descendant of Judah, and a provincial leader who agreed to settle in Jerusalem (Neh 11:5). Although a shortened or corrupt form of Maaseiah (i.e., Asaiah) is mentioned in the parallel list found in 1 Chronicles 9 (cf. v 5), Hazaiah is not. This, like other differences in the two lists, suggests that there is no direct literary relationship between the two lists (contra Kellermann 1966: 208–27; and Mowinckel 1964: 146–47). Some, however, have conjectured that both writers were dependent upon common archival materials (Schneider *Esra und Nehemia* HSAT, 42–43; Brockington, *Ezra, Nehemiah and Esther* NCBC, 187; cf. Myers *Ezra-Nehemiah* AB, 185). In any event the presence of Hazaiah in the list provides no further evidence of use in resolving the problem. Apart from the probable significance of the name itself ("Yahweh has seen"), nothing is known about this Judean patriarch (Brockington, 188).

FREDERICK W. SCHMIDT

HAZAR-ENAN (PLACE) [Heb *ḥăṣar ʿênān*]. Var. HAZAR-ENON. The northernmost town on the idealized border of the promised land (Num 34:9–10). As such it also figures in Ezekiel's eschatological vision of the boundaries of the restored Israel, and Ezekiel confirms its location in the vicinity of "the entrance to Hamath" (Ezek 47:17–18; 48:1). Some scholars (*IDB* 2: 538) identify it with the modern village of Hadr (M.R. 228299) at the foot of Mt. Hermon 11 miles E-NE of Dan. However, Aharoni (*LBHG*, 73, 486, see map 4) and Simons (*GTTOT*, 283f.) identify it with the important desert oasis of Qayatein (M.R. 360402), about 70 miles NE of Damascus and 60 miles E of Lebo-Hamath (modern Lebwe). The differences between the two identifications are significant. The latter identification envisions an idealized Israelite territory about 80 percent larger than what it would be if Hazar-enan were identified with Hadr (see also *MBA*, map 50).

GARY A. HERION

HAZAR-GADDAH (PLACE) [Heb *ḥăṣar gaddâ*]. A town in the tribal territory of Judah (Josh 15:27). Its location is unknown.

HAZAR-SHUAL (PLACE) [Heb *ḥăṣar šuʿāl*]. A settlement of the tribe of Simeon. Hazar-shual appears in Josh 15:28, where it is listed as part of the tribe of Judah, and in Josh 19:3, where it is a Simeonite settlement. It is also listed as a town in Simeon in 1 Chr 4:28. Since Simeon assimilated to Judah at an early date, it is recorded under both tribes. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the S kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Hazar-shual is in the southernmost district of Judah, the Negeb. It is also included in the list of settlements S of Jerusalem occupied by the exiles returning from Babylon in Neh 11:27.

The location of Hazar-shual is problematic. Its name, "the enclosure of the fox," is of no help in locating it. Hazar-shual occupies the same position in all three lists, between Moladah and Baalah/Balah/Bilhah (the latter three being variant spellings for the same site). This places it in the vicinity of Beer-sheba. Abel placed it at Khirbet el-Watan 4 km E of Beer-sheba (*GP*, 89.344; M.R. 137071), though Aharoni believes this site to be Moladah (*LBHG*, 410).

JEFFREY R. ZORN

HAZAR-SUSAH (PLACE) [Heb *ḥăṣar sûsāh*]. Var. HAZAR-SUSIM. A settlement of the tribe of Simeon. Hazar-susah appears once in Joshua (19:5), where it is listed as being one of the settlements occupied by the tribe of Simeon in the aftermath of the Conquest. 1 Chr 4:31 has the variant Hazar-susim. Since the tribe of Simeon was assimilated to that of Judah at an early date and most of the Simeonite towns are listed again clearly in the record of the Judean settlements in Josh 15:21–32, an explanation for its absence there is necessary.

In 19:5–6a the text reads: Ziklag, Beth-marcaboth, Hazar-susah, Beth-lebaoth; the parallel passage in 15:31–32a has: Ziklag, Madmannah, Sansannah, Lebaoth. Since these short sections of the list begin and end with the same towns (Lebaoth being a variant for Beth-lebaoth), it is very likely that the towns in between are also to be equated. An explanation for this difference is that Sansannah is the earlier name for the site. The name Hazar-susah, meaning "the enclosure of the mare," may have been given to it under Solomon, who is known to have trafficked in chariots and horses (1 Kgs 10:28–29).

If the equation of Hazar-susah and Sansannah is accepted, the older name for the site may be preserved at Khirbet esh-Shamsaniyat (Abel *GP*, 447; Aharoni *LBHG*, 439), 16 km NW of Beer-sheba (M.R. 140083), though commentators who do not accept this identification locate it at Sbalat Abu Susein (M.R. 103074), 4 km to the E of Tell el Farah (Abel, 344; Albright 1924: 158). Aharoni

reconstructs, with some plausibility, [Hazar]-susah on Ostracon 32 from Arad (*AI*, 60).

JEFFREY R. ZORN

HAZARMAVETH (PERSON) [Heb *ḥăṣarmāwet*]. A son of Joktan (Gen 10:26; 1 Chr 1:20) and hence the name of a S Arabian tribe (*śʿbn/ḥḍrmwt:* Ja 643,6) and of the country Ḥaḍramaut (*ʾrḍ/ḥḍrmwt:* YM 349,5) inhabited by it. The S Arabian genealogies, too, follow the biblical tradition in making Ḥaḍramaut a person and a son of Qaḥṭān, the ancestor of all S Arabs (al-Hamdānī 1954, 1: 51–52). On the other hand, however, taking into account the political situation of pre-Islamic Arabia, a younger Ḥaḍramaut as brother of Ḥimyar and son of Sabaʾ is inserted in the genealogy of Sabaʾ the younger one (al-Hamdānī 1954, 2: 105). In the Old South Arabic inscriptions of Ḥaḍramitic dialect, the name is always written in the form *ḥḍrmt* (e.g., RES 2693,1), likewise in Minaean (RES 2775,1; etc.); in the Sabean texts, however, it is mainly written *ḥḍrmwt* (CIS IV 540,65; etc.), rarely *ḥḍrmt* (e.g., BR-M.Bayḥān 5,7). Both forms occur also in Qatabanian (*ḥḍrmt* in the older text RES 4932,4; *ḥḍrmwt* in the late text RES 4336,3); once also the form *ḥḍrmtm* is found (in CIS IV 547,5 from Haram).

The pronunciation of the name in the country itself continues up to the present day in Ḥaḍramūt or Ḥaḍramōt respectively; this is in accordance with the forms of the name transmitted by Greek and Latin authors: *hadramuta* in Theophrast (*Hist. Pl.* 9.4.2), *chatramōtitai* in Strabo (*Geog.* 16.4.2), *Chatramotitae* and *Atramitae* in Pliny (*Nat. hist.* 6.154f.), *chatramōnitai* and *hadramitai* in Ptolemy (*Geog.* 6.7.25 and 10), *haṭramitai* in Uranios (*Arabica* III), and *chatramōtai* in Stephanos of Byzanz (*Ethnika* 689,12). In Arabic the name is, apart from dialectal variants, vocalized *Ḥaḍramaut,* which might also have been the pronunciation of the Sabean form *ḥḍrmwt.* This form has certainly been influenced by the popular etymology of the name as "abode of death," a new interpretation which arose from legends widespread in antiquity and deterring from the frankincense-growing region, since according to some records "this place was fearfully unhealthy and always fatal to those who work there" (*Periplus maris Erythraei* 29). Hebrew, too, followed this popular new interpretation, whereby **ḥăṣarmôt* postulated by the LXX *asarmoth* became *ḥăṣarmāwet* in the MT (cf. a parallel alteration of the vocalization of *ṣalmūt,* "darkness," to *ṣalmāwet,* "shadow of death"). A satisfying etymology of *ḥaḍramūt/ḥaḍramōt* could hitherto not be given; it is, however, certain, that *-ūt/-ōt* must be considered a suffix which occurs quite frequently in the toponymy of SE Arabia. The form of the relative adjective (Arabic *nisbah*) is in Sabean in the singular *ḥḍrmyn* (BR-Yanbug 47bis,2), which is equivalent to Arabic *al-Ḥaḍramī,* "the one from Ḥaḍramaut"; in the plural *ʾḥḍrn, ʾAḥḍūrān* (YM 390,7; etc.), and *ḥḍrmn* (CIS IV 140,5) are equivalent to Arabic *al-Ḥaḍārim.*

According to present-day usage the name Ḥaḍramaut, strictly speaking, designates the deeply incised valley which is approximately 170 km away from the S Arabian coast and extends from the confluence of the Wâdī Kasr until just E of the town of Tarīm. In the most comprehensive sense, however, as the name also was understood in antiquity, Ḥaḍramaut comprises the plateau and the coastal strip in the S of the large valley and in the W the catchment area of the tributary valleys of the Wâdī Ḥaḍramaut to the old capital Shabwa. In the N it included the range of mountains running into the large central Arabian desert, and in the E the region around the Wâdī Masīla, the continuation of Wâdī Ḥaḍramaut, as far as the country of the Mahra. While in the Old South Arabic inscriptions that whole region of the ancient kingdom of Ḥaḍramaut is designated as Ḥaḍramaut, the Wâdī Ḥaḍramaut properly speaking is called, at least in the Sabean inscriptions, *srrn, Sarīrān* (e.g., Iryānī 32,37f.: *kl/hgr/ḥḍrmwt/wsrrn,* "all towns of Ḥaḍramaut and Sarīrān").

Hardly anything is known about the earliest history of Ḥaḍramaut; numerous prehistoric findings, however, indicate that ancient settlements existed in the wadis, in which artificial irrigation may have been used as early as the end of the 2d millennium B.C. A dense population is to be assumed for the Wâdī Ḥaḍramaut and its tributary valleys, for the Wâdī Gurdān and Wâdī Maifaʿa as well as for the capital Shabwa and for the seaport Qanaʾ. Special importance was due to Ḥaḍramaut because of the possession of the frankincense-producing regions, which especially lay in present-day Dhofār, the ancient Saʾkalān, from where the valuable resin was brought either by an overland route or by sea via Qanaʾ to Shabwa, where the proper incense road to the Mediterranean Sea started.

The first attestation of Ḥaḍramaut is to be found in the Old Sabean inscription RES 3945,12f., a record of Karibʾil Watar, probably from the 7th century B.C., in which the Ḥaḍramite king Yadaʿʾil is mentioned as ally of the Sabean king. When in the 4th century B.C. the Minaeans started to control the caravan route to the N the king of Ḥaḍramaut had become (probably because of commercial interests) a confederate of Maʿīn, as the Minaean inscription M 30 (= RES 2775) testifies. The Ḥaḍramitic inscription RES 2687, which had been engraved on the wall barrier of al-Bināʾ at the communication road between the harbor Qanaʾ and the capital Shabwa toward the end of the 1st century B.C., gives account of the efforts which Ḥaḍramaut made at that time to defend its territory against the Himyarites, who had gained ground on the S coast. Otherwise the local inscriptions give us only scanty information about the political history of Ḥaḍramaut. The Ḥaḍramite kingdom reached its largest expansion after it had annexed the remaining parts of the former Qatabān in the W in the second half of the 2d century A.D. The following period is marked by continuous warfare and hostilities with the Sabeans and Himyarites, in the course of which in the first quarter of the 3d century the Sabean king Šaʿirum Autar even succeeded in capturing the Ḥaḍramite capital Shabwa. Toward the end of the 3d century, the Himyarite king Šammar Yuharʿiš conquered Ḥaḍramaut and united S Arabia to a large realm; henceforth he and his successors also bore the designation "king of Ḥaḍramaut" in their titles. Efforts of indigenous princes in the

following decades to regain the independence of Ḥaḍramaut met with failure.

W. W. MÜLLER

HAZAZON-TAMAR (PLACE) [Heb *ḥaṣāṣōn tāmār*]. In Gen 14:7 the locality at which the Amorites were defeated by Chedorlaomer and his allies. (See below on its mention in 2 Chr 20:2.) In the intinerary of those kings, it stands between "Enmishpat" (that is, Kadesh) and the valley of Siddim (that is, "the Salt Sea"). This should be compared with the tracing of the S border of the future land of Israel in Ezek 47:19–19; and 48:28: the E boundary, which runs along the Jordan and the Eastern Sea (Dead Sea), ends at Tamar, thence it turns to the waters of Meribath-kadesh and to the Great Sea, forming the S boundary of the land. This points to the identity of Hazazon-Tamar with Tamar, as believed, among others, by Aharoni (*LBHG,* 140, 142), who had located it at ʿAin Ḥuṣb, 32 km (20 miles) S-SW of the southernmost point of the Dead Sea (Aharoni 1963; *LBHG,* 55, 70). The author of Genesis 14, following his predilection for composite place names, called the site *ḥaṣāṣōn tāmār,* "the pebbly terrain of Tamar" (Borée 1968: 89, §23:12).

2 Chr 20:2, in a different connection identified Hazazon-Tamar with En-gedi, an oasis on the W shore of the Dead Sea, about halfway between its N and S points. This identification was probably caused by an association of *tāmār,* "date palm," with the renowned palm groves at En-gedi. It was followed by *Tg. Onq.,* which rendered Hazazontamar by *ʿēn-ǧēdî,* and by *Tg. Neof.,* which has *ʿn gdy tmry',* "En-gedi of the palms." But En-gedi lies too far N from the line of the march as understood by the author of Genesis 14.

HAZER-HATTICON (PLACE) [Heb *hāṣēr hattîkôn*]. The NE corner of Ezekiel's ideal boundary of Israel, located in the Hauran (Ezek 47:16). The unusual form coupled with the context of the passage has suggested to several scholars that this is another name for "Hazar-enon," (Ezek 47:17). Aharoni identifies the latter site with Qaryatein (M.R. 360402), a desert oasis E of Zedad (*LBHG,* 73).

RANDALL W. YOUNKER

HAZEROTH (PLACE) [Heb *ḥăṣērôt*]. The book of Numbers records the departure of Israel from Mt. Sinai (chaps. 1–10), the journey from Sinai to Kadesh (chaps. 10–21), and the journey from there to Transjordan (21–36). The Israelites were led by the ark and the pillar of cloud. At Taberah, they complained about their misfortunes (11:1–3). Then chap. 11 records the strong craving of the people for meat. The wind brought quail for them to eat, and they were struck with a great plague. The dead were buried at a place called Kibroth-hattavah, "Graves of Craving" (11:34). This has been identified with Rueiss el-Ebeirig. From there they journeyed on to Hazeroth and remained there (11:35). It was at Hazeroth that Miriam and Aaron spoke against Moses (chap. 12) because he had married a Cushite woman; and they asked if God's word was limited to Moses, claiming it came through themselves as well. Miriam got leprosy, but Aaron pleaded with Moses to pray for her. Moses did pray and Miriam was healed. After that the people traveled to the Wilderness of Paran (12:16), from which Moses sent spies to reconnoiter the land of Canaan in preparation for an invasion. Numbers 33 lists many stopping places. After Hazeroth (33:17) Israel traveled to Rithmah (site unknown), Rimmon-perez (possibly Naqb el-Biyar, W of Aqaba), Ezion-geber (v 35), and Kadesh (v 36).

If Mt. Sinai is in the S end of the Sinai peninsula (Jebel Musa) and if the Wilderness of Paran stretches from the Gulf of Aqaba NW into the N center of the peninsula, one would expect Hazeroth to be on the E side of the peninsula, where it is located by Wright and Filson (*WHAB,* 40, map V). They show Kadesh-barnea in the Wilderness of Zin, N-NW of Aqaba, ancient Ezion-geber, though Deut 1:19–23 says the spies were sent from Kadesh-barnea and Num 13:26 says they returned to Kadesh in Paran (Num 33:36 mentions Zin instead of Paran). Hazeroth is also listed in Deut 1:1, between Laban and Dizahab, both locations unknown. Hazeroth is usually identified with ʾAin el-Khadra or Hudra (Abel *GP* 2: 214), 35 km NE of Jebel Musa (Simons, *GTTOT,* 255–56). The identification was first suggested by Burckhardt, favorably entertained by Robinson (1856: 151), defended by Palmer (1872: 213–17), and adopted by others (Gray *Numbers* ICC, 119–20). Earlier, Keil and Delitzsch (n.d., 3: 74–75) noted the identification, Hazeroth = Bir et-Themmed, based on the hypothesis that the Israelites went from Sinai to Canaan

by the most direct route, through the desert from the Wâdī es-Sheikh into the Wâdī ez-Zuranuk. Gray cautions that identification based on the similarity of the names is inadequate. Hazeroth simply means enclosures, parks, settlements, courts, or villages. Aharoni (*LBHG,* 109) says courts are especially typical of the Negeb.

HENRY O. THOMPSON

HAZIEL (PERSON) [Heb *ḥăzî'ēl*]. A Gershonite Levite, presumably the son of Shimei and the brother of Shelomoth and Haran (1 Chr 23:6–7, 9a). Yet, oddly enough, when the four sons of Shimei are listed in the very next verse (1 Chr 23:10), Haziel and his two brothers are not among them. What is more, Haziel and his two brothers are curiously encaptioned as "the heads of the fathers' houses of Ladan" (1 Chr 23:9b), the latter clearly Shimei's brother (1 Chr 23:7; 26:21), although elsewhere the name Libni enters the picture (Exod 6:17; Num 3:18, 21; 1 Chr 6:2—Eng 6:17). Possibly the Shimei of 1 Chr 23:7, 10 and the Shimei of 1 Chr 23:9 are not the same person (Williamson *1 and 2 Chronicles* NCBC, 161). However, the caption itself in 1 Chr 23:9b may be a secondary gloss inserted to escape the difficulty raised by the twofold reference to Shimei. In this view the second Shimei of 1 Chr 23:10 is to be interpreted as a textual error for the once original name "Shelomoth," as the name "Jahath" (1 Chr 23:10–11) reoccurs as a son of Shelomoth in 1 Chr 24:22, although unfortunately this time from the line of Kohath through Izhar (see 1 Chr 6:3—Eng 6:18) and not from Gershon (Curtis *Chronicles* ICC, 264). On the other hand, the name Shimei earlier in 1 Chr 23:9a may represent a scribal error for one of the three sons of Ladan given in 1 Chr 23:8, justifying then the presence and current position of the aforementioned caption in 1 Chr 23:9b. In this regard, interestingly, the NEB regards the whole of the problematic phrase "The sons of Shimei: Shelemoth, Haziel, and Haran, three" as corrupt enough to be omitted completely. Still, the LXX traditions retain the name Haziel, in its present location, as either *(e)i(e)iel* or *aziel;* and so does the Vg, in the name Ozihel. If authentic to its position, the name Haziel refers to one of the Gershonite levitical courses (1 Chr 23:7–11) important to the postexilic situation. The Chronicler or possibly even a later redactor wished to attribute the origin and assignment of these postexilic courses, among others, to the authority and initiation of King David (Braun *1 Chronicles* WBC, 228, 231).

ROGER W. UITTI

HAZO (PERSON) [Heb *ḥăzô*]. A son of Nahor by Milcah (Gen 22:20–22). More precisely he was the fifth of eight from the union of Milcah and Nahor, although the latter had others from a concubine. Hazo was also a nephew of Abraham, who was a brother of Nahor. Hazo was possibly the eponym of a Nahorite family or clan. The genealogy of which he is part shows an Aramean band of 12 whose home territory was in the area NE of the Jordan and who apparently belonged to "Nahor" as a summarizing generic term (von Rad *Genesis* OTL, 245). Thus a league of 12 Aramean tribes is introduced, just as 25:13–16 lists 12 Ishmaelite tribes and Jacob/Israel becomes the father of 12 tribes in 35:23–26. While "Hazo" was a personal name and while it cannot be proven that it was the name of a place or region as well (Westermann 1985: 368), some believe it should probably be identified with the mountainous, uninviting region of Hazu in N Arabia. An inscription of Esarhaddon's Arabian campaign describes *Ḫazû* as hill country consisting of bluish *sangilmud*-stone and extending over a space of 20 miles (*RA* 1: 440). The region of Hazu is the coastal district of al-Ḥasā, located opposite the island of Bahrain (Simons *GTTOT,* 15).

EDWIN C. HOSTETTER

HAZOR (PLACE) [Heb *ḥāṣôr*]. **1.** A fortified town in N Galilee at the SW corner of the Huleh plain and N of the Sea of Galilee (M.R. 203269). Hazor stood at the crossroads of the main trade routes from Sidon to Beth-shan and from Damascus to Megiddo. It thus occupied the most strategic position in the region.

This strategic position is indicated by the prominence which Hazor receives in the story of the settlement of the land. Joshua 11 describes the "northern campaign" of Joshua, provoked by the coalition of the N cities under the leadership of Jabin, the king of Hazor, to oppose the Israelites. Hazor is said to be "the head of all those kingdoms" (Josh 11:10) and is destroyed by Joshua, the only one of the N cities said to receive such retribution (Josh 11:13). Hazor appears in the list of conquered cities (Josh 12:19) and is assigned to the tribe of Naphtali (Josh 19:36).

Hazor resurfaces as a source of trouble for Israel in Judges 4, where "Jabin, king of Canaan" threatens Israel by means of his army led by Sisera (Judg 4:2, 17). This threat was overcome by the prophetess and judge, DEBORAH, and her military counterpart, BARAK. This episode is recounted by Samuel in his farewell address to the nation (see 1 Sam 12:9). On the difficulties posed by the presence of Jabin in both the Joshua and Judges accounts, see JABIN.

Later Hazor is refortified by Solomon (1 Kgs 9:15) and is destroyed by Tiglath-pileser III of Assyria ca. 733 B.C.E. during the reign of Pekah (2 Kgs 15:29). Finally, the Maccabean warrior, Jonathan, defeated the Seleucid governor Demetrius II on the "plains of Hazor" (1 Macc 11:67).

The ruins of Hazor at modern Tell el-Qedah were first excavated by J. Garstang in 1928 and more thoroughly under the leadership of Y. Yadin over the course of several seasons from 1955 to 1969. The site is comprised of two areas: a mound of about 25 acres and a large area next to it of about 170 acres, the latter enclosed by steep slopes and earthworks. The large enclosed area was destroyed in

the 13th century B.C.E., about the time of the Israelite settlement (and never reoccupied), as was the mound next to it. On the debate about the identity of the ones who caused this destruction, see Gray 1966 and the articles by Yadin (who attributes the destruction to the Israelites), Fritz 1973 (who attributes the destruction to the Sea Peoples), and Aharoni 1970 (who believes the destruction reflects the events of Deborah, Barak, Jabin, and Sisera). The excavations at Hazor have also unveiled on the smaller mound building projects which date from the time of Solomon. On the dates of the various layers of settlement at Hazor, see conveniently the chart at Yadin 1976: 495. See also QEDAH, TELL EL-.

2. Another Hazor is mentioned in an oracle by Jeremiah (Jer 49:28–33), though it was apparently located in the desert. Nothing further is known about this Hazor.

3. Josh 15:23–25 mention several towns with the name "Hazor" in the Negeb region. Nothing further is known about these locations.

4. The returnees from the Exile are said to have settled in a "Hazor" in the tribal region of Benjamin (Neh 11:33). This is the only mention of such a location, and nothing further is known about it.

JEFFRIES M. HAMILTON

HAZOR-HADATTAH (PLACE) [Heb *ḥāṣôr ḥādattāh*]. A settlement of the tribe of Judah. Hazor-hadattah is only mentioned once, in Josh 15:25, where it is listed among the settlements occupied by Judah in the aftermath of the Conquest. Though the present literary context of the Judean town list is set in the period of Joshua, its original setting was as part of a post-Solomonic administrative division of the S kingdom. The date for the establishment of this system is debated, with suggestions ranging from the early 9th to the late 7th centuries B.C. Hazor-Hadattah is in the southernmost district of Judah, the Negeb.

The location of Hazor-hadattah is problematic. In the list it is placed between Bealoth and Kerioth-hezron. The second element of the name may be Aramaic for "new," and Hazor-hadattah would mean "New Hazor." Kerioth-hezron is qualified by "that is, Hazor." It seems that the author intended to make clear that he was referring to two towns in the same region with similar names. Even if this suggestion is correct, it does not explain why an Aramaic word was used in the town's name. Abel suggested a location in the region of el-Hudeira, 11.5 km NE of Arad (*GP*, 345; M.R. 170086). Eusebius placed it near Ashkelon, but this is too far to the W (*Onomast.* 20:4).

JEFFREY R. ZORN

HAZOROTH (PLACE). See HAZEROTH (PLACE).

HAZZELELPONI (PERSON) [Heb *haṣṣĕlelpônî*]. A woman listed in the genealogy of the tribe of Judah (1 Chr 4:3). She was the sister of Jezreel, Ishma, and Idbash. The LXX identifies Etam as their father ("these are the sons of Etam," *houtoi huioi Aitam*), while MT begins the verse with the statement "these are the father (singular) of Etam" (*wĕ'ēlleh 'ābî 'ētām*). Myers (*1 Chronicles* AB, 28) suggests that something has fallen out between "these" and "the father of Etam." Whatever was originally there provided the name(s) of the ancestor(s) of the people living at Etam to parallel the mention of Penuel, "the father of Gedor," and Ezer, "the father of Hushah" in v 4. Myers identifies Gedor, Hushah, and Etam as places in the vicinity of Bethlehem (cf. the designation of their father as "Hur, the first-born of Ephrathah, the father of Bethlehem" in v 4). Were this the case, Etam would not necessarily have been the father of Hazzelelponi (possibly a brother?). The *BHS* proposes that Hazzelelponi does not represent a name, but rather the letters are a garbled rendering of a gloss on the sequence of the names of the two wives in vv 5b and 6–7 (MT: *wĕšēm 'āḥôtām haṣṣĕlelpônî;* proposed: *hūṣṣab lipnê šēm 'āḥôtāh*). However, this is not likely in that it lacks manuscript support, requires changing the consonants and word order, and is too distant from the text of vv 6–7. Her name is missing entirely from the Syriac versions. Evidently the text of 1 Chr 4:3 has suffered some corruption Noth (*IPN*, 241).

The name probably means "he shades my face," incorporating the *Hip'il* of *ṣll* and *pānîm* (*HALAT* 244). The Vg has *Asalelphuni.*

HEALING, GIFTS OF [Gk *charismata iamatōn*]. Literally rendered, "gifts of healings," *charismata iamatōn* occurs three times in the NT, 1 Cor 12:9, 28, 30. The phenomenon is indicated by other terms elsewhere in Paul and in the NT.

A. Pauline References

1. The Corinthian Context. The noun used here for "healing," *iama,* is not used elsewhere in the NT. No reason has been advanced for understanding anything other than the usual meaning of the Gk word: healing, physical cure (BAGD 368). The other noun used in the NT for healing, *iasis,* also occurs only three times, in Luke 13:32 and in Acts 4:22 and 4:30, where the Lukan contexts illustrate the meaning with the miraculous physical restorations of the stooped woman (Luke 13:10–17), the dropsical man (Luke 14:1–6), and the lame beggar (Acts 3:1–10, the referent of 4:22 and model for 4:30, picking up on the "wonders and signs" motif of 2:19, 22, 43). Given Paul's association of *charismata* with *charis* (the grace of God; see Koenig 1972: 48–70), *charismata iamatōn* are precisely experienced as gifts of God, not simply as human abilities.

The peculiar double plural form of Paul's phrase, "gifts of healings," might suggest that he refers to the repeated phenomena of physical cures rather than an enduring personal gift for healing. However, since his point is that different persons have been given different gifts for the good of the community, the implication is that certain Christians have been given the special capacity to mediate physical cures on a regular basis. Hence *charismata iamatōn* is a stock phrase referring to a charism parallel to the eight other *charismata* (see 1:7; 7:7; 12:4,31) or *pneumatika* ("spiritual gifts"; 12:1; 14:1) listed by Paul in 1 Cor 12:8–10, or to the seven others listed (twice) at vv 28–31, or to the seven listed at Rom 12:6–8 (there described as *charismata* deriving from the *charis* ["favor"] "bestowed upon each of us"). Unlike glossolalia or prophecy (see 1 Corinthians 14), the gift of healing is simply alluded to as a fact of Christian life, and it never becomes a focus of Paul's pastoral concern.

2. Other Pauline References to the Gift. Scholars (see Gatzweiler 1961; Furnish *2 Corinthians* AB, 555–56) have recognized similar references to the experience of the gifts of healing in Pauline communities in Gal 3:5, Rom 15:19, and 2 Cor 12:12. As in 1 Corinthians 12, these contexts understand the healings as the work of the Spirit of God.

B. Non-Pauline References

1. Luke-Acts. Although all strata of the gospel tradition (Q, Mark, Matthew, Luke, John) witness to healing as a component of the activity of Jesus, it is Luke who comes closest to Paul in presenting that healing activity as a divine gift, as, for example, in 4:14–44, where Jesus' ministry is interpreted as an expression of divine endowment of the Spirit. When the verb *iaomai* ("I heal") is first used of Jesus, it is to say that "the power of the Lord [God] was with him to heal" (5:17). This Lukan interpretation of Jesus' healing as a kind of prophetic gift is most explicit at Acts 10:38, where the healing work is an effect of divine anointing with the Holy Spirit and power. Luke also understands healings in the ministry of the disciples according to the same model of prophetic gift. The healing activities of both Jesus and his disciples are called "signs and wonders" (Acts 2:19, 22, 43; 4:30; 5:12; 6:8; 14:3; 15:12), a stock OT phrase recalling the signs and wonders accompanying the first exodus (Acts 7:36; see Exod 7:3; Deut 4:34; 6:22; 26:8).

2. Hebrews. This letter summarizes Christian experience of God in language resonating with both Paul and Luke: ". . . God also bore witness by signs and wonders and various miracles *[dynameis]* and by gifts [*merismoi,* lit. "distributions"] of the Holy Spirit" (Heb 2:4).

3. James. James 5:14–16 is notable in that it describes prayer for physical healing without implying that it is a "charismatic" gift given to certain individuals. Rather it is occasioned by community prayer led by elders.

C. Contemporary Approaches

NT accounts of Jesus' healing activity and the gift of healing in the Christian community have been approached in a variety of ways in modern scholarship: in continuity with OT traditions of divine healing (e.g., Richardson 1941, Fuller 1963, and Brown 1971); from the historical perspective (van der Loos 1965, Kee 1986); form-critically (e.g., Achtemeier 1970, 1972); from the history-of-religious perspective (Smith 1971, Tiede 1972, Kee 1973 and 1986, Hull 1974); in continuity with later church history (Kelsey 1973); from the redaction-critical perspective (e.g., Held 1963 and Achtemeier 1975); as narratives with symbolic dimensions (Hamm 1986); and, increasingly, from the perspectives of the various social sciences (McCasland 1951, Hollenback 1981, Theissen 1983, and Pilch 1988).

HEAVE OFFERING. See SACRIFICE AND SACRIFICIAL OFFERINGS.

HEAVEN [Heb *šāmayim;* Gk *ouranos*]. In the Bible the word "heaven" is used to describe both a physical part of the universe and the dwelling place of God. In Hebrew the word for heaven is plural; the LXX usually translates the Hebrew word by a singular noun. In the NT both the singular and plural forms occur with no difference in meaning.

A. Heaven as a Physical Reality

In the Hebrew Bible "heaven" is sometimes used as a synonym for "firmament" (Heb *rāqîaʿ*) to describe the dome-shaped covering over the earth that separated the heavenly waters above from the earthly waters beneath (Gen 1:6–8; Ps 148:4). Heaven, or the firmament, was thought to be supported by pillars (Job 26:11) and had foundations (2 Sam 22:8) and windows. When the windows of heaven were opened, the waters above the firmament fell upon the earth as rain (Gen 7:11; 8:2; Isa 24:18). Through these windows God also poured out blessings upon the earth (Mal 3:10). The birds fly across the firmament (Gen 1:20; Deut 4:17) and the sun, moon, and stars were set in the firmament (Gen 1:14–18).

Whereas the firmament referred specifically to the canopy covering the earth, heaven often had a broader meaning, referring to all that was above the earth, including the firmament. Rain, snow, hail, and thunder come from heaven (Exod 9:22–35; Isa 55:10; Josh 10:11; Rev 11:19). Heaven contained the storehouses of the winds, the snow, and the hail (Job 37:9; 38:22; Ps 135:7; Jer 10:13).

Heaven is also a place for signs. God placed the rainbow in the heavens as a sign to Noah of the covenant which God made with him (Gen 9:12–17). God's power is displayed in the signs and wonders which are performed in heaven and on earth (Dan 6:27). Signs in the heavens also portend God's judgment on the earth, particularly the eschatological judgment (Joel 2:30–31; Matt 24:30; Luke 21:11, 25; Acts 2:19; Rev 15:1).

The phrase "heaven and earth" was used to denote the entire universe, the totality of God's creation (Gen 1:1; Deut 4:26; Ps 121:2; 146:6; Mark 13:31; Acts 17:24). Because heaven is a part of the created order, it too suffers the judgment of God. The heavens are shaken by the anger of God (2 Sam 22:8); the sun and moon will be darkened (Amos 8:9; Jer 4:23, 28; Isa 51:6; Mark 13:24–26; Rev 8:12); heaven and earth will pass away (Matt 24:35; Luke 16:17; 2 Pet 3:10; Rev 21:1). Eschatological hope envisioned a new heaven and earth (Isa 65:17; 66:22; 2 Pet 3:13; Rev 21:1).

B. Heaven as the Dwelling Place of God

Whereas the Israelites could speak of God as dwelling on Mount Sinai (Deut 33:2; Ps 68:17), in the temple (1 Kgs 8:12–13; Ps 68:17–18; Ezek 43:7), or in Zion (Ps 74:2; Isa 8:18; Joel 3:17, 21), the supreme abode of God was in heaven. In the heavenly palace or temple is God's throne, from which God reigns as king over heaven and earth (Isa 6:1; Ps 11:4). Heaven is God's throne and the earth God's footstool (Isa 66:1). From heaven, "above the circle of the earth," God looks down upon the earth, where the people appear as grasshoppers (Isa 40:22; Ps 102:19).

To describe God as dwelling in heaven is to recognize the transcendence of God, God's separateness from the created order. At times, some individuals within Israel wondered if the clouds of heaven shielded the earth from God; God was shut up in the heavens. Eliphaz accuses Job of thinking, "Is not God high in the heavens? See the highest stars, how lofty they are! Therefore you say, 'What does God know? Can he judge through the deep darkness? Thick clouds enwrap him, so that he does not see, and he walks on the vault of heaven' " (Job 22:12–14; cf. Lam 3:44). The author of Isa 64:1 calls on God to "rend the heavens and come down" in order to make God's power known.

Even the vast expanse of heaven, however, is not large enough to contain God (1 Kgs 8:27). The "God of heaven" (2 Chr 36:23; Ezra 1:2; Jonah 1:9) is also the God of earth, who on occasions was described as coming down from heaven to visit the earth (Gen 11:5, 7; Exod 19:18; Isa 64:3). Moreover, even with the belief in Yahweh's transcendence, Israel always saw God as one who was involved in the world which God had created. The whole history of God's dealing with the people of Israel and Judah demonstrated God's activity in the world. God dwelt not only in heaven, but also among God's people (Exod 29:45–46; 1 Kgs 6:13; Zech 2:10–11). The NT, which also speaks of God as residing in heaven (Matt 5:16; 6:9; Mark 11:25; Rev 3:12; 4:2), likewise emphasizes the presence of God in the world, with special emphasis given to God's dwelling in the Church, God's temple (1 Cor 3:16; Eph 2:21–22).

Since heaven is the abode of God, heaven is also the source and locus of salvation. The bread which fed the Israelites in the wilderness came from heaven (Exod 16:4). Blessings upon God's people come from heaven (Gen 49:25; Deut 33:13). Elijah is taken up into heaven in a whirlwind (2 Kgs 2:11). When the idea of life after death developed within Judaism, the location of such existence was often situated in heaven with God (*T. Ab.* 11:10; 2 Esdras 7; cf. Dan 12:2–3). The idea of heaven as the place of eternal reward for the faithful is well attested in the NT, which describes heaven as having many rooms (John 14:2), as containing the believer's eternal house (2 Cor 5:1–10), and as being the location of the believer's commonwealth (Phil 3:20; see also Heb 11:16; Rev 11:12).

Postexilic Jewish literature manifests an intense curiosity about the contents of heaven. Various writings describe heavenly visions or journeys of revered individuals such as Enoch, Abraham, and Baruch (*1 Enoch, 2 Enoch, Testament of Abraham, 3 Baruch*). The topography of heaven, the inhabitants of heaven, the places of judgment, as well as other heavenly secrets are revealed to these persons. Many of these writings describe heaven as containing various

levels, referred to as different heavens. The most popular number of heavens was seven. (Compare Paul's statement in 2 Cor 12:2 concerning the third heaven.) The various heavens contain not only the throne room of God, paradise (the intermediate reward for the righteous), and the eternal abode of the righteous, but in many cases one or more of the heavens also contain the places of punishment for the wicked.

Certain non-canonical Christian writings also contain elaborate descriptions of heaven (*The Apocalypse of Peter, The Apocalypse of Paul, The Ascension of Isaiah* 6–11). In the NT book of Revelation, John of Patmos describes his vision of God seated on the heavenly throne surrounded by various members of the heavenly court (Revelation 4–5). John's description of the New Jerusalem, which comes "down out of heaven from God" (Rev 21:1–22:5), has been the source for many later popular ideas about heaven.

MITCHELL G. REDDISH

HEAVEN, ASCENT TO. The motif of the journey to heaven is a vitally important phenomenon of ancient Mediterranean religions. There are five figures in the Bible who, according to standard Jewish and Christian interpretation, are reported to have ascended to heaven: Enoch (Gen 5:24); Elijah (2 Kgs 2:1–12); Jesus (Luke 24:51; Acts 1:9); Paul (2 Cor 12:2–4); and John (Rev 4:1). There are also four related accounts in which individuals behold the throne, or heavenly court, of Yahweh: Moses, Aaron, and the elders of Israel (Exod 24:9–11); Micaiah (1 Kgs 22:19–23); Isaiah (Isa 6:1–13); and Ezekiel (Ezekiel 1, 10). Finally, there is the scene in which an otherwise unidentified "son of man" comes before the throne of God in an apocalyptic vision of Daniel (Dan 7:11–14). The notion that mortals enter into, or behold, the realm of the immortal God (or gods) undergoes various complicated developments from the earlier ANE periods into the Hellenistic period. It is closely related to a number of other topics such as the descent or journey to the underworld of the dead (see DESCENT TO THE UNDERWORLD), the heavenly destiny of the immortal soul, the apotheosis or divinization of selected mortals (rulers, philosophers, divine men), and aspects of Greco-Roman, Jewish, and Christian mysticism. Sorting through this complex conceptual web and trying to understand these biblical texts with their contexts and complicated traditional development has occupied historians of ancient religions for the past 150 years (Bousset 1901; *ANRW* 23: 1333–94).

The motif of the heavenly journey can be divided into four basic types or categories, based upon the fundamental purpose or outcome of the ascent as reported in a given text. Generally speaking, the first two categories are more characteristic of the ANE or archaic period, which would include most texts of the Hebrew Bible (OT). The latter two categories are more typical of the Hellenistic period, which reflects the perspective of the NT.

A. Ascent as an Invasion of Heaven
B. Ascent to Receive Revelation
C. Ascent to Immortal Heavenly Life
D. Ascent as a Foretaste of the Heavenly World

A. Ascent as an Invasion of Heaven

In the cosmology reflected throughout most of the Hebrew Bible, mortal humankind belongs on earth, not in heaven, and at death descends below to the netherworld known as Sheol. Psalm 115 expresses this succinctly:

> The heaven's are the LORD's heavens,
> but the earth he has given to the sons of men.
> The dead do not praise the LORD,
> nor do any that go down into silence.
> But we will bless the LORD
> from this time forth and for evermore.

Generally speaking, just as there is no coming back from the dead, there is no idea or expectation that humans can go to heaven, a place reserved for God and his angelic attendants. This means that any report of a human being ascending to heaven would be seen as not only extraordinary, but often even as an intrusion or invasion of the divine realm. In an Akkadian text, Adapa, the son of Ea, attempts to ascend to heaven to obtain eternal life but is cast back down to earth (*ANET,* 101–3). A somewhat similar story is told of Etana, one of the legendary rulers of the Sumerian dynasty of Kish (*ANET,* 114–18). A direct protest against such an ascent is found in Isa 14:12–20 (compare Ezek 28:11–19). There the prideful King of Babylon, who wants to ascend to heaven and become like God, is cast down to the netherworld of worms and maggots (v 11). The ironic language of Prov 30:2–4 (compare Job 26; 38:1–42:6), though not a tale of ascent, emphasizes the contrast between the human and divine realms. A similar idea lies behind Deut 29:29 and 30:11–14. There is no need for one to ascend to heaven to learn the "secret things" which belong to God (compare Sir 3:21–22). Lucian's tale, *Icaromenippus,* though from the Roman imperial period, typifies this understanding of ascent to heaven as an invasion of the realm of the gods.

The accounts of Enoch and Elijah are best understood in this context. First and foremost, they are extraordinary. The normal fate, even of great heroes of the Hebrew Bible such as Abraham, Moses, and David, is death or "rest" in Sheol (Gen 25:7–9; Deut 34:6; 1 Kgs 2:10, cf Acts 2:29–34). Furthermore, both texts, particularly the one about Enoch, are ambiguous. Gen 5:24, from the P source, in lieu of recording Enoch's death, simply says "Enoch walked with God; and he was not, for God took him." The text does not say where he was taken. Though the bulk of later Jewish and Christian tradition understood this text as an ascent to heaven (*OTP* 1: 3–315; Tabor 1989), this was not universally the case (compare Heb 11:5, 13–16). The author might have had in mind a journey "beyond," to some special region on this earth (e.g., "Isles of the Blessed"), as in the cases of Gilgamesh's Utnapishtim or Menelaus in Homer. Such might also be the case with Elijah. Though it is clear he is taken from the earthly scene in a chariot of fire that rises to heaven like a whirlwind, the author might well have had in mind his removal or "retirement" to some remote area. If so, "heaven" in this text is equivalent to "sky," and the author does not intend to imply that Elijah joined Yahweh as an immortal in the heavenly court. This appears to be the understanding of the Chronicler, who reports that much later, Je-

horam, king of Judah, receives a letter written by Elijah (2 Chr 21:12–15).

B. Ascent to Receive Revelation

This type of ascent involves a "round trip" from earth to heaven and back again, or some visionary experience of the heavenly court from which one returns to normal experience (ascent/descent). In contrast to the previous type, the journey or experience is appraised most positively. The earth, not heaven, is still understood as the proper human place, so that the ascent remains a "visit," though not an intrusion, into the divine realm.

The complex literary traditions surrounding the ascent of Moses on Mount Sinai, now found in Exodus 24, though not explicitly referring to a journey to heaven, are closely related to this category. Moses (or alternatively Moses, Aaron, and the seventy elders), in ascending the mountain, enter the presence of God, the realm of the divine. He is given revelation in the form of heavenly tablets, then descends back to the mortal realm. Though he is not explicitly deified or enthroned, he becomes a semi-divine figure, eating and drinking in the divine presence and returning from the mountain with his face transformed like an immortal (Exod 24:11; 34:29–30). In later interpretation this was understood as full deification (see Philo, *vita Mos* 2.290–91; *virt.* 73–75; *Ezekiel the Tragedian* 668–82). The prophetic call of Isaiah is a further example of this same pattern (Isa 6:1–3). Since there is no specific reference to Isaiah being "taken up," this is a "visionary ascent," though the distinction between the two types is not always clear (see 2 Cor 12:2–4). He sees "The LORD sitting on a throne, high and lifted up . . ." (v 1). He is then given a message with a corresponding prophetic commission. As a mortal, he is out of place in the divine realm; he cries out "Woe is me! For I am lost; for I am a man of unclean lips . . . for my eyes have seen the King, the LORD of hosts!" (v 5). The throne visions of Ezekiel (Ezekiel 1, 10) should be compared here, as well as the scene before the throne of the "Ancient of Days" in Dan 7:14 where a "son of man" is given cosmic rulership over all nations. Micaiah's vision of the heavenly court also belongs under this category (1 Kgs 22:19–23). In all these texts the ascent or vision of the heavenly throne serves as a way of claiming the highest and most direct heavenly authority for the message. Such experiences are clearly evaluated as more noteworthy than the epiphany of an angelic messenger or receipt of a prophetic "word of the LORD."

Widengren (1950) has traced this motif of royal or prophetic enthronement (ascent, initiation into heavenly secrets, receipt of a divine commission) into later Jewish traditions involving kingship, prophetic commissions, and the revelation of secret heavenly lore. This understanding of ascent dominates one of the oldest sections of *1 Enoch,* the Book of the Watchers (chaps. 1–36). The legendary figure Enoch is taken through the heavenly realms and shown cosmic secrets, even appearing before God's lofty throne. The Greek version of the *Testament of Levi* (2d century B.C.E.) draws upon the ascent motif in a similar way, as does the Latin *Life of Adam and Eve* (1st century C.E.) and the *Apocalypse of Abraham.* In each of these texts the ascent to heaven functions as a vehicle of revelation, offering divine authority to the cosmological and eschatological lore the authors were expounding.

The closest non-Jewish, or Greek, parallel to this notion of ascent is probably Parmenides' *prooemium,* which survives in only a few fragments (Taran 1965). He tells of being taken in a chariot through the gate leading to daylight, where he is received and addressed by a goddess. On the whole, for Greeks in the archaic period, revelations came through epiphanies, oracles, dreams, omens, and signs of various sorts, not by being taken before the throne of Zeus. The fair number of Jewish (and Jewish-Christian) texts which make use of the ascent to heaven motif as a means of legitimating rival claims of revelation and authority is likely due to the polemics and party politics that characterized the Second Temple period. It became a characteristic way, in the Hellenistic period, of claiming "archaic" authority of the highest order, equal to a Enoch or Moses, for one's vision of things.

C. Ascent to Immortal Heavenly Life

This type of ascent to heaven is final or "one way": a mortal obtains immortality, or release from mortal conditions, through a permanent ascent to the heavenly realms. Broadly, there are two overlapping ideas involved here, both of which have been extensively investigated: first, that a hero, ruler, or extraordinary individual has obtained immortal heavenly existence (Farnell 1921; Guthrie 1950; Bieler 1935–36; Smith 1971; Gallagher 1982); and second, the more general idea that the souls of humankind, bound by mortal conditions, can obtain release to immortal heavenly life (Rhode 1925; Bousset 1901; Burkert 1985). The second is not merely a later democratization of the first; rather, the two exist side by side throughout the Hellenistic period. While they are distinct from one another, both are related to a fundamental shift in the perception of the proper human place. Increasingly in this period one encounters the notion that humans actually belong in heaven, with life on earth seen as either a "fall" or temporary subjection to mortal powers (Nilsson 1969: 96–185; *EncBrit* 8: 749–51).

The only candidates for such immortalization in the Hebrew Bible are Enoch and Elijah, though, as noted above, both texts are ambiguous. As early as the Maccabean period (2d century B.C.E.) Daniel speaks of the righteous dead being resurrected and "shining like the stars forever and ever," having obtained immortality (12:3). A similar notion is found in the Wisdom of Solomon, where the "souls of the righteous" are promised immortal life (3:1–9). Gradually, in Jewish and Christian texts of the Hellenistic period, the older idea of the dead reposing in Sheol forever is replaced with either a notion of the resurrection of the dead or the immortality of the soul or some combination of the two (Nickelsburg 1972). Both ideas involve the notion of a final ascent to heaven.

The NT reflects this Hellenistic perspective in which mortals can obtain heavenly immortality. Matthew 13:43, reflecting the language and influence of Daniel, asserts that "the righteous will shine like the sun in the kingdom of their Father." Eternal life is promised to the righteous throughout the NT corpus (Mark 9:42–48; Q [Matt 10:32–33 = Luke 12:8]; Matt 25:46; Acts 13:48; John 3:16; 14:1–3; Rom 6:23; Col 3:1–4; 1 Tim 1:16; Heb 12:22–23; Jas

1:12; 1 Pet 1:4; 2 Pet 1:4; 1 John 5:11; Jude 21; Rev 20). In most cases this involves ascent to heaven and life before the throne of God (1 Thess 4:13–18; Rev 7:9–17). According to the NT, the righteous of the OT, such as Abraham, Moses, and the prophets, are included in this promised resurrection to immortal heavenly life (Hebrews 11).

In the NT the ascent of Jesus to heaven is the paradigm for all those righteous mortals who follow. Just as he was raised from the dead, made immortal, and ascended to the Father, so will followers experience the same at his return (John 14:1–3; 1 Cor 15:20–28; Rom 8:29–30). The state of the righteous souls who have died prior to the time of the end and the resurrection and ascent to heaven is not always clear. Paul seems to prefer the metaphor of "sleep," which parallels the Hebrew Bible notion of Sheol (1 Thess 4:13; 5:10; 1 Cor 15:18–20). But in two places he might imply that these "souls" or "spirits" depart immediately at death and ascend to the presence of Christ in heaven (Phil 1: 21–24; 2 Cor 5:1–10). In Revelation the "souls of the martyrs" are pictured as under the altar, presumably in heaven, longing for their time of vindication (6:9–11). In distinction to both of these views, the story of the rich man and the beggar Lazarus, unique to Luke, pictures the Hadean world of the dead, which is below, not above, as a place in which rewards and punishments are already being experienced prior to the final resurrection and judgment (Luke 16:19–31). This latter text is more in keeping with other Jewish materials of the period which see the "dead" as conscious, but in the Hadean world below, awaiting the resurrection and last judgment (cf. Rev 20:11–15). There is no uniform NT view of the "state of the dead."

Surprisingly, an actual narrative account of the ascent of Jesus to heaven occurs only in Luke (24:51, but see textual variants; Acts 1:9). It is assumed in Matthew and Mark and spoken of in John (20:17) and Paul (Rom 8:34). A similar resurrection from the dead followed by bodily ascension to heaven is prophesied for the "two witnesses" in the book of Revelation (11:7–12). They are God's final prophets before the return of Christ and the last judgment.

The contrast between the NT and the Hebrew Bible regarding this expectation of ascent to heaven could not be more striking. Other than the doubtful examples of Enoch and Elijah, it is not until the book of Daniel, which is perhaps the latest text in the canon of the Hebrew Bible, that one finds any reference to mortals ascending to heavenly life (some would include Isa 26:19; Job 14:14–16 is a longing, not an affirmation). The NT is fully a part of the process of Hellenization in which notions of resurrection from the dead, immortality of the soul, and ascent to heaven were the norm rather than the exception.

D. Ascent as a Foretaste of the Heavenly World

This type of ascent involves a journey or "visit" to heaven which functions as a foretaste or anticipation of a final or permanent ascent to heavenly life. Though related to the second category, ascent to receive revelation, it is fundamentally different. For example, when Isaiah is taken before God's throne, though he receives a commission and experiences the glories of the heavenly world, there is no idea that he will return to that realm. He remains a mortal who dies and descends to Sheol with all the other dead.

The earliest example of this notion of ascent is in the Similitudes of Enoch (*1 Enoch* 37–71), probably dating from the 1st century B.C.E. In chapter 39 Enoch relates how he was taken to heaven. The experience transforms him (39:14) and he is told that he will later ascend to heaven permanently and receive glory and immortal heavenly life (chaps. 70–71). *2 Enoch* (Slavonic) also reflects a similar pattern. Enoch's journey through the seven heavens, which lasts 60 days (chaps. 1–20), is followed by a return to earth. The experience transforms him and functions in anticipation of his final translation to heaven. Christians later took up and elaborated this understanding of ascent from such Jewish models, as seen in texts such as the *Ascension of Isaiah.*

In the NT we have the striking firsthand account of Paul's own experience of ascent to Paradise (2 Cor 12:2–4). This text provides evidence for the actual "practice" of ascent to heaven in Jewish-Christian circles during this period, in contrast to a purely literary motif adopted to lend heavenly authority to a text. Obviously Paul's experience functions as a highly privileged foretaste of the heavenly glorification which he expected at the return of Christ (Tabor 1986).

There are definite links from the language and ideas of these Jewish texts from Second Temples times and the testimony of Paul to and the Tannaitic and Amoraic *Merkabah* (and later *Hekhalot*) traditions (Scholem 1960; Gruenwald 1980; Halperin 1980).

There are also examples of this type of ascent to heaven in non-Jewish/Christian materials. Perhaps the clearest is Cicero's report of the "Dream of Scipio Africanus" in his *Republic* (6. 9–26). The text was highly influential and functions as a kind of universal declaration of the gospel of astral immortality (Luck 1985). Scipio travels to the heavenly world above and returns with a revelation that all humans are immortal souls, trapped in mortal bodies, but potentially destined for heavenly life above. The gnostic text *Poimandres,* found in the *Corpus Hermeticum,* also fits this category of ascent. There is also an important text in the *Greek Magical Papyri,* mistakenly called the "Mithras Liturgy" (*PGM* 4. 624–750). It provides the initiate who desires to ascend to heaven with an actual guide for making the journey with all its dangers and potentials. There are Jewish texts such as *Hekhalot Rabbati* which have strong parallels with such magical materials, showing that we are dealing here with an international phenomenon of late antiquity (Smith 1963). It is also likely that the rites of initiation into certain of the so-called "mystery religions," such as that of Isis, involved such proleptic experiences of ascent to heaven (see Apuleius, *Metamorphoses* 11, and discussion of Tabor 1986: 89–92).

It is noteworthy that Paul's testimony in 2 Cor 12:2–4 remains our only firsthand autobiographical account of such an experience from the Second Temple period.

JAMES D. TABOR

HEAVEN, NEW. See NEW EARTH, NEW HEAVEN.

HEAVEN, QUEEN OF. See QUEEN OF HEAVEN (DEITY).

HEBER (PERSON)

[Heb *ḥeber*]. **1.** A son of Beriah, grandson of Asher, and ancestral head of the Heberites (Gen 46:17; Num 26:45; 1 Chr 7:31–32). Heber and his brother Malchiel are listed in the genealogies of Asher in Gen 46:17, Num 26:44–46—LXX 26:28–30, and 1 Chr 7:30–39. These lists vary in the number of sons of Asher mentioned, but all of them mention his daughter Serah and trace the next generation only through Beriah. Heber is not otherwise known, but apparently he was an important figure in the history of the tribe of Asher. In 1 Chr 7:30–39, which may have been drawn from a military census (Williamson *1 & 2 Chronicles* NCBC, 82), both Heber and Malchiel are listed as the sons of Beriah and grandsons of Asher, but the genealogy of Asher is continued only through Heber. Heber has three sons, Japhlet, Shomer, and Hotham, and a daughter, Shua. Grandchildren of Heber are listed for each of his sons: three sons through Japhlet (v 33), four sons through Shemer (= Shomer, v 34), and four sons through Helem (= Hotham, v 35). Heber's line is not traced further through Japhlet and Shermer/Shomer, but it is continued at least into a third generation of descendants through Zophah (vv 36–37), one of the four sons of Helem/Hotham, and perhaps even into a fourth generation if Ithran, one of eleven sons of Zophah, is the same as Jether (v 38), who has three sons. In 1 Chr 7:40 the summary statement on the descendants of Asher indicates considerable military importance, but there is no indication if this was true for all the generations listed or only some.

2. The Kenite ("smith") husband of Jael, and thus a descendant of Hobab (Jethro), the father-in-law of Moses (Judg 4:11). According to Judg 4:11, Heber had separated from the main group of the Kenites who were in the south (Judg 1:16) and moved his household to the "Oak in Zaanannim" near Kedesh (perhaps to be distinguished from the Kedesh of v 10). Judg 4:17 notes that while there he allied himself with Jabin, the king of Hazor, who had been harassing Israel for twenty years (Judg 4:3). Significantly, Jael is not mentioned in the reporting of either the movement or the alliance. Elsewhere in Judges 4–5, Heber is regularly subordinate to Jael, if he is mentioned at all ("Jael, wife of Heber" in 4:17, 21; 5:24, and simply "Jael" in 4:18, 22, and 5:6). From the viewpoint of Judges 4, Jael is treasonous to her husband, but in Judges 5 the narrator portrays Heber's actions as treasonous to Israel. As the battle unfolded, Sisera, Jabin's general, retreated to an allied household, but Jael's loyalties were elsewhere. She lavished attention on Sisera, providing milk when he asked for water, but, once asleep, she killed him inside her/Heber's tent. The narrator condemns Heber through silence, but in Deborah's song, where she is ironically termed the wife of Heber the Kenite, Jael is twice called blessed (Judg 5:24).

3. The father of Socoh, son of Mered and grandson of Ezrah the Judahite (1 Chr 4:18). This segment of the Judahites is not connected to the larger genealogy (1 Chr 4:1–20). Ezrah's father is not stated and the genealogy is extended only one generation beyond Heber. 1 Chr 4:17 mentions that Mered had married an Egyptian (Bithiah) who bore three children, and v 18 begins, "And his Judahite wife." The pronoun presumably refers to Mered. The Judahite wife is unnamed, but she bore three children: Jered, Heber, and Jekuthiel. The textual difficulty of having no subject in v 17 for "and she conceived" (Heb *wattahar*) may be solved by transposing v 186 to follow v 17a as in the RSV (Williamson *1–2 Chronicles* NCBC, 60).

4. The fourth of seven sons of Elpaal the Benjaminite. This Heber is mentioned only 1 Chr 8:17. His connection through his father Elpaal to the larger group is not clear, for the relationship of the Elpaal in vv 17–18 to the Elpaal of vv 11–12 is ambiguous. This segment of the Chronicler's genealogies appears to start with Shaharaim in 1 Chr 8:8. Shaharaim married Hushim, Baara, and Hodesh and divorced the first two, and from the union of Shaharaim and Hushim came Abitub and Elpaal (v 11). The genealogy continues through Elpaal, but the number of his sons is not entirely clear. Verse 12 lists Eber, Misham, and Shemed, and v 13 mentions Beriah and Shema, but their connection to Elpaal is interrupted by comments on Shemed's enterprises at the end of v 12. Presumably Beriah and Shema are to be included among the sons of Elpaal, for all the other names in the context are attached

to a parent. The ambiguity is, however, compounded in subsequent verses, for offspring are listed for Beriah (14–16), Elpaal (17–18, where Heber is listed), and Shimei (= Shema, 19–21). On this basis some commentators (see Williamson, *1–2 Chronicles* NCBC, 84–85) would insert Elpaal in v 13 between the references to Beriah and Shema, thus assuming that Elpaal named one of his sons Elpaal and that the total number of sons was six. In short, Heber's grandfather is not known clearly.

RICHARD W. NYSSE

HEBREW [Heb *ʿibrî*]. In English, generally synonymous with "Jew," but in the Hebrew Bible it mostly designates members of the Israelite nation.

The use of this expression is confined to certain parts of the OT, the story of Joseph (Genesis 37–50), the history of Israel in Egypt (Exodus 1–15), and 1 Samuel. Apart from these major narrative compositions the Hebrews are mentioned in a few other passages, notably in Gen 14:13, where Abraham is called a Hebrew; in the Book of the Covenant, Exod 21:2–11, which regulates the service of Hebrews who had been enslaved; and in texts dependent on this law (Deut 15:12; Jer 34:8–20; see Lemche 1976: 43–45, 51–53). Finally, in Jonah 1:9 the prophet describes himself as a Hebrew who has run away from his country. The last mentioned example is the only one where a person describes himself as a Hebrew, in all other instances they are described as such by other peoples, in the story of Joseph and in Exodus by the Egyptians, in 1 Samuel by the Philistines.

The etymology of the expression is not yet totally clear (see proposals in Loretz 1984: 235–48) and the possible derivation from the Akkadian expression *ḫabiru/ḫapiru,* thought to mean a population element of fugitives and outlaws, remains a subject of discussion. See HABIRU, HAPIRU. This discussion about the connection between Hebrews and *ḫabiru/ḫapiru* is, however, fundamental for understanding the ethnic term "Hebrew" in the OT. If this derivation is correct, it would hardly be reasonable to deny the significance of the more general ḫabiru/ḫapiru-movement in the ANE in the 2d millennium B.C. for the population processes in Palestine and adjacent areas which led to the formation of the Israelite society in the early Iron Age, just before 1000 B.C. (against Loretz 1984; cf. already Mendenhall 1962, and 1973: 122–41). Therefore the rise of the Israelite nation cannot be separated from the social upheavals during the Late Bronze Age, of which the ḫabiru/ḫapiru-movement is evidence. According to this view we shall have to reckon with a considerable element of ḫabiru/ḫapiru in Late Bronze Age Palestinian society as one of the single major factors behind the emergence of Israel.

Since the expression *ḫabiru/ḫapiru* evidently covers a social phenomenon, whereas Hebrew in the OT, with perhaps one exception (Exod 21:2–11, the law concerning Hebrew slaves), always stands for members of the Israelite people, a certain shift of meaning has taken place. It is, however, interesting to note how some aspects of the former social meaning of the expression have survived almost everywhere in the OT where the expression is used (Lemche 1979; see also Naʾaman 1986). Thus in the story of Joseph and in Exodus, the word "Hebrew" is always used to refer to the Israelite refugees in Egypt, in contradistinction to the local population or authorities, and in 1 Samuel only the Philistines speak about Hebrews, normally in a derogatory sense, to indicate runaway slaves or renegades (David, who is considered to have deserted his own master, King Saul, is thus styled by his Philistine superiors in 1 Sam 29:3). Even in such late texts as Gen 14:23 and Jonah 1:9, relicts of the former sociological meaning of the expression may be supposed to be behind the present usage.

Irrespective of the relative age of those texts in the OT which mention the Hebrews, it is therefore true to maintain that the OT usage is based on an old and historical tradition. On the other hand, it is hardly possible to argue that all instances are postexilic, or that the use of the expression also derives from such a late period as maintained by O. Loretz (1984: 271–75). First and foremost, in the postexilic and pre-Hellenistic periods, "Hebrew" was never understood as a general term denoting ordinary Israelites or Jews. Moreover, in Exod 21:2–11 we have a testimony of the survival in Israel of an age-long societal connection; here two distinct terms are used which in the Late Bronze Age indicated two different though interrelated social categories (the ḫabiru/ḫapiru and the ḫupšu [Heb *ḥopšî*] respectively, i.e., "peasants" according to general opinion [a variant interpretation is mentioned by Lemche 1975: 139–42, "copyholders," or simply "clients"]). These distinctions disappear completely from Near Eastern documents after the collapse of the Bronze Age social system.

Only in the Greco-Roman tradition did Gk *Ebraios* become the ordinary way of indicating Jews, and thereafter this tradition was taken over by the Christian Church and became a general way of designing members of the Jewish people. The three passages using the term Hebrew in the NT (2 Cor 11:22; Phil 3:5; Acts 6:1) do not enlarge the meaning of the expression. In 2 Corinthians and Philippians, Paul calls himself a Hebrew, thus indicating that he is a Hebrew-speaking Jew in contrast to those Jews whose language is Greek, or perhaps he wanted to distinguish between himself as a Jew and the Gentiles. In Acts the expression is applied to characterize the so-called Jewish Christian congregation.

HEBREW LANGUAGE. See LANGUAGES (HEBREW).

HEBREW NARRATIVE. See NARRATIVE, HEBREW.

HEBREW SCRIPTS. The study of the alphabetic scripts used to write the Hebrew language is a specialized field of palaeography, the study of ancient writing. To prevent confusion and to establish a common terminology, the definitions proposed by F. M. Cross (1961b: 189–90, nn. 4–5) have been adopted.

Hebrew script refers to the original Hebrew letter forms derived from the Phoenician alphabet and used throughout the First Temple Period. *Palaeo-Hebrew script* refers to the continued use of the Hebrew script after the loss of national sovereignty and in particular to the revived official use of the Palaeo-Hebrew script first noted in the late Persian period and continued into the Second Temple Period. Its last documented use is on the coins of the Bar Kokhba Revolt or the Second Jewish War against Rome (A.D. 132–135). However, Palaeo-Hebrew script survives until this day in the collateral branch known as the Samaritan script. *Jewish script* refers to the national script which developed from the Persian Aramaic script employed for official use throughout the Persian empire. This Jewish script is still used today.

A. Hebrew Script

The surviving examples of the Hebrew script were inscribed on durable materials such as stone, gems used for seals, jar handles, or clay bullae impressed by seals or written on ostraca with a carbon or iron salt ink. At present there is only one example of Hebrew script written on papyrus, found at the Wadi Murabba'ât. It is dated on the basis of palaeographic evidence to the mid-7th century B.C.

Some of the more important inscriptions include the Gezer Stone, the Siloam Inscription, and the tomb of the Royal Steward. The Gezer Stone is an agricultural calendar from the 10th century B.C. inscribed on limestone. It lists the months of the year by the tasks to be performed in that time period. The Siloam Inscription (late 8th century B.C.) records the joining of the tunnel of the aqueduct dug by Hezekiah to provide water for Jerusalem in the event of siege. The tomb inscription of the Royal Steward is from the same period and records the plea of the Steward to would-be grave robbers to leave his tomb alone as it contained no treasures, but simply the bones of him and his handmaiden.

Several collections of invoices or letters written on ostraca provide a base of evidence upon which palaeographic research depends. These include the Samaria Ostraca (8th century B.C.), the Arad Ostraca (8th to 6th century B.C.), and the Lachish Ostraca (6th century B.C.).

B. Palaeo-Hebrew Script

Aside from the discoveries in the caves of the Judean Desert, the bulk of surviving Palaeo-Hebrew inscriptions are found on stone, ostraca, and most extensively on the coins of the Hasmonaean rulers (circa 100–37 B.C.), the First Jewish War against Rome (A.D. 66–70), and the Second Jewish War against Rome (A.D. 132–135).

The importance of the manuscripts found at Qumran (the Dead Sea Scrolls) for the study of the biblical text, not to mention the history, culture, politics, and religion of Judea in 1st century B.C. and 1st century A.D., would be hard to overstate. This is especially true for the field of palaeography. Aside from manuscripts written exclusively in Palaeo-Hebrew Script or in Jewish Script, a number of manuscripts written in both Palaeo-Hebrew and Jewish Script have provided palaeographers with a key for developing a relative chronology for the evolution and use of the Palaeo-Hebrew script found in the manuscripts and in the nationalistic coinage of the Hasmonaean rulers and that of the leaders of the First and Second Jewish Wars against Rome.

A. Authorship

Although Hebrews is included in the Pauline corpus and was part of that corpus in its earliest attested form (P^{46}), it is certainly not a work of the apostle. This fact was recognized, largely on stylistic grounds, even in antiquity. Some patristic authors defended the traditional Pauline attribution with theories of scribal assistants such as Clement of Rome or Luke, but such hypotheses do not do justice to the very un-Pauline treatment of key themes, particularly those of law and faith. Numerous alternative candidates for authorship have been proposed. The most prominent have been Barnabas, to whom Tertullian assigned the work; Apollos, defended by Luther and many moderns; Priscilla, suggested by von Harnack; Epaphras; and Silas. Arguments for none are decisive, and Origen's judgment that "God only knows" who composed the work is sound.

B. Date

The latest possible date of composition is provided by the virtual citation of portions of Hebrews in *1 Clement*, conventionally dated to around 95 C.E. The earliest possible date is more difficult to determine. Several data suggest that a date prior to 60 C.E. is most unlikely. The author describes himself as among those who have received the message of salvation at second hand (2:3). His addressees have been believers for a considerable time (5:12). They have previously experienced persecution, reproach, and imprisonment (10:32–34). All of this indicates that some time has elapsed since their initial conversion (6:4).

Within the broad range of the years 60–95 C.E., various conjectures have been made about a more precise dating. References to the Jewish sacrificial cult in the present tense (9:6–10; 10:1–4), along with the lack of any mention of the destruction of the temple, have been taken as evidence of a date prior to 70 C.E., when the Jerusalem temple was destroyed. This argument, however, is inconclusive, since our author is not at all concerned with the Herodian temple. Rather, he deals with the desert tabernacle and argues exegetically from biblical data. Moreover, authors writing after 70 C.E., such as Josephus, Clement of Rome, and the compilers of the Mishnah, often refer to the temple as a present reality.

Attempts have been made to date the work by identifying the persecution mentioned. Thus, if the addressees were in Rome, the references to affliction and material loss (10:32–34), coupled with the remark that the addressees have not yet "resisted unto blood" (12:4), could indicate a date between the expulsion of Jews and Jewish Christians from Rome under Claudius and the bloody persecution under Nero. Yet even if the hypothesis of a Roman destination is accepted, the text could have been aimed at a segment of the community which did not bear the full brunt of Nero's persecution.

Attempts have also been made to date the work on the basis of its position within the development of early Christian doctrine. Unambiguous evidence for post-apostolic, "early Catholic" doctrinal or organizational principles are, however, lacking. Hence only a general time frame, from 60 to 90 C.E. can, with any degree of certainty, be determined as the date for Hebrews.

C. Addressees

The work itself gives no explicit indication of its intended readers. The title "To the Hebrews" is probably a later conjecture. The implication of that title, that the work was addressed to Jewish Christians, has often been defended, but that position is by no means certain. The extensive reliance upon the OT and the elaborate exegetical arguments which characterize the work indicate something about the author's background, but need say little about the addressees. Pauline letters such as Galatians or 1 Corinthians are certainly addressed to predominantly Gentile congregations but make extensive use of the OT and employ subtle exegesis. A major reason for assuming a Jewish-Christian readership is the assessment of the

problem which the author addresses, but the judgment that the work is an apology for Christianity designed to prevent a relapse to Judaism is dubious.

The location of the addressees is also problematic. Many ancient and some modern commentators have assumed that the intended recipients were in Jerusalem. Others have argued for Corinth, Asia Minor (particularly the Lycus valley), and Rome. The only relevant internal datum is the final greeting to the addressees by "those from Italy" (13:24). The phrase is commonly taken to mean that Italians living away from home send greetings to their place of origin. The phrase could, however, mean that "those of Italy," i.e., Italians at home, send their greetings someplace else. The former construal is somewhat more natural. Moreover, there are other indications of a connection with Rome, particularly the citation by *1 Clement* and a series of close parallels in theme and vocabulary with 1 Peter which was probably written from Rome (1 Pet 5:13). It is likely then that Hebrews was sent to the Roman Christian community or a segment of it by someone familiar with that community's theological traditions.

D. Genre, Structure, and Style

1. Genre. The literary riddle of Hebrews arises from the fact that it concludes in standard epistolary form (13:22–25) but lacks any epistolary introduction with greetings and indications of sender or recipients. Various attempts to explain this anomaly have been proposed, including the accidental loss or intentional deletion of the prescript or the secondary addition of the conclusion. Either alteration could have been occasioned by a desire to make Hebrews suitable for inclusion in the Pauline letter corpus. Deletion of the prescript could have eliminated embarrassing evidence of non-Pauline authorship. An added conclusion with its reference to a Timothy (13:23) could, on the other hand, have suggested Pauline authorship. Such hypotheses are, however, unconvincing. The elaborately structured rhetorical prologue (1:1–3) makes a suitable beginning to the work, and the casual reference to Timothy is too subtle a device for a pseudepigraphist. If this Timothy is indeed Paul's companion and collaborator, the reference indicates some loose connection between the author and the Pauline circle. The concluding greetings may well be an addition made by the author, in order to render his text suitable as an address to a distant congregation, but suspicions about the integrity of Hebrews, and especially of chap. 13, are unfounded.

In those concluding remarks the work is described as a "word of exhortation" (13:22). This designation aptly describes the bulk of the text and suggests that the most appropriate generic identification is a homily. This homily, with its regular alternation between expository argument and exhortation, includes well-defined segments which probably exemplify homiletic patterns and may be based upon independent sermons. Chaps. 3 and 4 provide a good instance. An introduction (3:1–6) announces the major theme to be treated. A scriptural text from Psalm 95 is cited (3:7–11). Expository comments follow, culminating in an exhortation (3:12–4:11). A rhetorical flourish on God's word rounds off the treatment (4:12–13). Precisely the same pattern is evident in chapters 8–10. An introduction (8:1–6) articulates a basic opposition between the "heavenly" and the "earthly" which will dominate what follows. A lengthy citation of Jer 31:31–34 suggests other important thematic oppositions. The themes enunciated in the introduction and citation are explored and carefully interwoven (9:1–10:10). A concluding flourish triumphantly summarizes the basic affirmation of the sermonette (10:11–18) while recalling the quotation from Jeremiah. In each case the text continues with a formula indicating what the author and addressees "have" (4:14; 10:19–21), which in turn serves as the basis for further hortatory remarks (4:14–16; 10:22–25). Other less well-defined units of scriptural exposition (2:5–18; 7:1–28; 12:1–13) replicate major elements in this homiletic pattern.

2. Structure. Analyzing the overall structure of the text is made difficult by the elaborate foreshadowing and interconnecting devices which the author uses and various proposals highlight one or another of these literary techniques. The following outline attempts to convey some of the work's complexity while suggesting the function of its various segments:

1:1–4: Exordium
- I. 1:5–2:18 Christ exalted and humiliated, a suitable High Priest
 - A. 1:5–14 Christ exalted above the angels
 - B. 2:1–4 Paraenetic interlude: hold fast
 - C. 2:5–18 Christ the savior, a faithful and merciful High Priest
- II. 3:1–5:10 Christ faithful and merciful
 - A. 3:1–4:13 A homily on faith
 - i. 3:1–6 Introduction: the faithful Christ and Moses
 - ii. 3:7–11 Citation of scripture: the faithless generation
 - iii. 3:12–4:11 Exposition
 - a. 3:12–19 The failure of faithlessness
 - b. 4:1–5 The nature of the promised "rest"
 - c. 4:6–11 Faithfully enter the rest "today"
 - iv. 4:12–13 Concluding flourish: God's powerful Word
 - B. 4:14–5:10 Christ the merciful High Priest
 - i. 4:14–16 Paraenetic prelude: hold fast and approach
 - ii. 5:1–5 The characteristics of high priests
 - iii. 5:6–10 Christ as High Priest "According to the Order of Melchizedek"
- III. 5:11–10:25 The difficult discourse
 - A. 5:11–6:20 Paraenetic prelude
 - i. 5:11–6:3 Progress to "maturity"
 - ii. 6:4–12 Warning and consolation
 - a. 6:4–8 The danger of failure
 - b. 6:9–12 Hopeful assurance
 - iii. 6:13–20 God's oath: a sure ground of hope
 - B. 7:1–28 Christ and Melchizedek
 - i. 7:1–3 Introduction and scriptural citation
 - ii. 7:4–25 Exposition
 - a. 7:4–10 Melchizedek superior to the Levites
 - b. 7:11–19 The new priest and the new order
 - c. 7:20–25 The priesthood confirmed with an oath
 - iii. 7:26–28 Concluding flourish on the eternal High Priest

C. 8:1–10:18 An exegetical homily on Christ's sacrificial act
i. 8:1–6 Introduction: earthly and heavenly sanctuaries
ii. 8:7–13 Citation of scripture: a new, interior covenant
iii. 9:1–10:10 Thematic exposition
a. 9:1–10 The old, earthly sacrifice
b. 9:11–14 The new, heavenly sacrifice
c. 9:15–22 The new covenant and its sacrifice
d. 9:23–28 The new, heavenly, unique sacrifice
e. 10:1–10 The new, earthly-heavenly sacrifice
iv. 10:11–18 Concluding flourish on Christ's sacrifice
D. 10:19–25 Paraenetic application: have faith, hope, and charity
IV. 10:26–12:13 Exhortation to faithful endurance
A. 10:26–38 Paraenetic prelude
i. 10:26–31 A new warning against failure
ii. 10:32–38 Recollection of faithful endurance
B. 11:1–40 An encomium on faith
i. 11:1–2 Introductory definition
ii. 11:2–7 Faith from creation to Noah
iii. 11:8–22 The faith of the patriarchs
a. 11:8–12 The faith of Abraham and Sarah
b. 11:13–16 Faith's goal: a heavenly home
c. 11:17–22 The faith of Isaac, Jacob, and Joseph
iv. 11:23–30 The faith of Moses and followers
v. 11:31–38 The faith of prophets and martyrs
vi. 11:39–40 Summary: faith perfected in Christians
C. 12:1–13 A homily on faithful endurance
i. 12:1–3 Jesus, the inaugurator and perfecter of faith's race
ii. 12:4–6 Citation of scripture
iii. 12:7–11 Suffering as discipline
iv. 12:12–13 Brace for the race
V. 12:14–13:21 Concluding exhortations
A. 12:14–17 Paraenetic prelude: a final warning against failure
B. 12:18–29 The serious, but encouraging situation
i. 12:18–24 Not Sinai, but a Heavenly Zion
ii. 12:25–30 An unshakable kingdom
C. 13:1–21 The life of the covenant
i. 13:1–6 Mutual responsibilities
ii. 13:7–19 The implications of Christ's sacrifice
13:20–25 Concluding benediction and greetings

3. Style. Within this carefully structured work the author deploys an abundance of rhetorical fitures, including alliteration (1:1; 2:1–4; 4:16; 10:11, 34; 11:17; 12:21); anaphora (chap. 11); antithesis (7:18–20; 7:23–24; 7:28; 10:11–12); assonance (1:1–3; 6:20; 10:26; 12:90); asyndeton (6:3; 7:26; 12:25); chiasm (2:8–9; 2:18; 4:16; 7:23–24; 10:38–39; 12:19); ellipse (7:19; 12:25); hendiadys (2:21; 5:2; 8:5; 12:18); hyperbaton (12:25); isocolon (1:3; 6:3; 7:26); litotes (4:15; 6:10; 7:20; 9:7); and paronomasia (9:16–18; 13:2). Various metaphors, derived from the standard rhetorical repertoire, grace the discourse. These include images taken from the sphere of education (5:12–14); agriculture (6:7–8; 12:11); seafaring (6:9; cf. 2:1); law (2:3–4; cf. also 6:16; 7:12, 22, 9:16–17); athletics (5:14; 12:1–3, 11–13); and sacrifice (4:12–13). Common rhetorical formulas of citation (2:6) and transition (5:11; 11:32) are used. Inferential particles, "for," "wherefore," "therefore," and "hence," are exceedingly common and lend a veneer of consequential argumentation, although the author operates more on the level of symbolic and verbal association than on that of logic.

The pace of the discourse is modulated, and there is a harmonious balance between lapidary, sometimes sententious phrases (2:16; 3:19; 4:9; 7:19; 9:16; 10:4, 18, 31; 11:1; 12:29; 13:1, 8); series of staccato questions (3:16–18) or exempla (chap. 11); and complex periods (1:1–4; 2:2–4, 8–9, 14–15; 5:7–10; 7:1–3; 9:6–10; 10:19–25; 12:1–2). The author deploys an extensive vocabulary, including a large number of terms (150, excluding proper names) not found elsewhere in the NT and many others (92) which appear in only one other text. Our author avoids monotony in his exhortations, where he alternates between hortatory subjunctives (4:1, 11, 14, 16; 6:1; 10:22–24; 12:1, 28; 13:13, 15) and imperatives (3:12, 13; 10:32, 35; 12:3, 7, 12, 14, 25; 13:1, 2, 3, 7, 9, 6, 17, 18, 24). The general tone of the discourse is similarly variegated, ranging from the solemnity of festive, quasi-poetic passages (4:8–9; 7:11–12; 10:2), to the playfulness of suggestive exegesis (7:9–10; 9:16–17).

E. The Aim of Hebrews

This subtle and elusive text has been construed in a variety of ways. Many of these construals focus on one or another element of the text to the exclusion of others and reconstruct the problem being addressed on the basis of a partial and selective reading of the data. A prominent feature of Hebrews is its frequent comparative arguments which contrast Christ or aspects of the dispensation which he inaugurated to individuals or institutions of the old covenant. Thus Christ as Son is shown to be "better" than the angels (1:5–14), Moses (3:1–6), Aaron (5:1–10), and the Levitical priests (7:1–28). His sacrifice is better than the sacrifices of the old sanctuary (9:1–14) and the covenant which he inaugurated is better than the first (8:7–13; 9:15–22; 12:24). Such comparisons have often been seen as the heart of the work, which would then be construed as a polemical or apologetic tract arguing for the superiority of Christianity to Judaism, its "fleshly ordinances" (7:18; 9:10), and its "diverse and strange teaching" (13:9). The major problem with this construal is that it ignores the parenetic sections of the text which evidence little, if any, concern with the attractions of traditional Judaism. The problem addressed would thus seem to be in inner-Christian one.

The expository sections of Hebrews have been construed to provide evidence for various doctrinal problems. The insistence on a high Christology (1:3; 7:3; 13:8) might suggest that the addressees had too "low" a view of Christ, and an inadequate comprehension of his heavenly, mediatorial role. Yet Hebrews insists quite as strongly on the genuine humanity of Christ (2:6–18; 5:7–8). One could argue with equal plausibility that Hebrews attempts to correct too "high" a Christology. All such attempts to find

a doctrinal problem behind Hebrews, which distantly reflect patristic use of Hebrews in Christological controversies, are equally unconvincing and rely on tendentious and one-sided interpretations of the work's doctrinal affirmations.

The same may be said of attempts to see Hebrews dealing with a sacramental problem. There are in the work vague references to baptism (6:4; 10:22) and even more vague allusions to the eucharist (13:10). Despite such meager material, allegorical readings of the discussion of Christ's sacrifice (9:11–10:10) have suggested that the author is advancing an apologetic interpretation of the eucharist. At the same time, the insistence on the unique quality of Christ's sacrifice (7:27; 9:26–28; 10:12) and the metaphorical use of cultic categories (13:15) have been construed as anti-sacramental polemic. These construals, which mirror debates about the Mass in the post-Reformation period, again find little support in the extensive parenetical sections of the work, and these sections must be considered in assessing its overall aims.

The parenetic sections contain a few rather general bits of information about the addressees and a series of interconnected exhortations which suggest what the author, at least, thought their problems to be. It is clear that they had undergone persecution (10:32–34) and likely that similar persecution was continuing or threatening (13:3). A major aim of Hebrews is to strengthen a community of believers in Christ in the face of opposition. This is certainly the major function of the exposition on faith in the final chapters. Faith is closely linked with "endurance" (10:36–39; 12:1–3). The catalogue of those who exemplified this virtue highlights the alienation which they experienced (11:9, 13–16, 26), culminates in a graphic description of the sufferings they endured (11:35–38), and prepares for the final dramatic portrait of Jesus as the martyr who inaugurated and perfected faith by his endurance (12:1–3). On the basis of this strand of Hebrews it might be fair to characterize the work not as the first *adversus Judaeos* tract but as the first exhortation to martyrdom.

Another datum on the addressees provided by the author's parenetic remarks is the notice that some members of the community addressed have withdrawn from fellowship (10:25; cf. 3:12). The extent and precise causes of such disaffection are not indicated, and it may well be that the author was not fully informed about them. Several elements in his parenesis, in addition to the external fact of persecution, suggest influences which may have been at work. The author's insistence on the assurance of a coming judgment (2:2–3; 6:8; 10:25, 29–31; 12:18–24, 26–29) and on the final revelation of Christ's lordship (2:8; 10:13) might indicate a weakening of faith due to the delay of the parousia. If this is indeed part of the perceived problem, it is addressed obliquely and indirectly. Other remarks by the author suggest that he is attempting to deal with a disaffection which has more diffuse roots. He thus refers to a potential neglect of the message of salvation (2:3) and, perhaps with a certain irony, argues that the addressees have through the course of time become sluggish or dull (5:11; 6:12). If such remarks reflect the actual situation of the addressees, a major element of their perceived problem would be the diminishing of the initial ardor of their Christian commitment. Such growing disaffection would be readily comprehensible in a community which had for some time accepted Jesus as the Christ, but was subject to external pressure and the disappointment of their first hopes.

Whatever the precise causes of the problem confronted by the author and whatever his perception of that problem, he is engaged in Hebrews in an attempt to revitalize the faith of his addressees and put their commitment on a more solid footing. To this end he deploys several parenetic devices, both negative and positive. On the one hand he issues a series of severe warnings, illustrating the dire consequences of apostasy (6:4–6; 10:26–31; 12:15–17; cf. 13:19–19; 4:11). These passages, which are regularly balanced by more positive, hopeful sentiments, are not so much condemnation of what has taken place as they are hypothetical sketches of where the community's tendencies could lead.

The more positive exhortations revolve around two related poles. On the one hand the author urges his addressees to "hold on," in particular to their "confession" (3:6, 14; 10:23; cf. 2:1). On the other, he urges movement, an approach either to the ultimately reliable source of support (4:16; 6:18–20; 10:19–22); to a deeper apprehension of their own faith (6:1); or to the "external" realm, where faith will be manifested in suffering (13:13). Characteristic of such faith will be both hope (3:6; 6:11; 7:19; 10:23) and a "boldness of speech" exercised before God and humanity (3:6; 4:16; 10:19, 35).

Although understanding the parenetic program of Hebrews is essential to comprehending the work's aims, the exhortations ought not to be seen in isolation. The author does not simply admonish his addressees and encourage them to a firmer commitment. He also attempts to secure that commitment through a deepened understanding of the person and work of the one who makes faith possible.

F. The Christology of Hebrews

1. The Eternal and Exalted Son. Woven into the first five chapters of Hebrews are several strands of Christological tradition which stand in some tension with one another. These strands probably reflect beliefs of the community addressed and constitute what the author refers to as its "confession" (3:1; 4:14; 10:23), that is, the faith which it professed in a variety of liturgical forms and settings. In the exordium there is a clear statement of a "high" Christology. Christ is affirmed to be the eternal Son, the agent of God's creative and sustaining activity and the final bearer of his word (1:1–4). These affirmations, like other high Christologies of the early Church, utilize imagery of the Wisdom tradition. That derivation is even clearer here than elsewhere in the NT, since the images of "effulgence" and "imprint" (1:3) are ultimately derived from Wis 7:25. Our author is probably not directly dependent on that work, but rather cites a modified form of an early Christian hymn. The forcefully stated high Christology is not confined to the exordium but is reflected at several points in the course of the text (7:3; 13:8). Nonetheless it is not the focal point of the Christology of Hebrews.

Immediately following the exordium stands another, probably traditional block of material with a different Christological perspective. In 1:5–13 is found a catena or

florilegium of scriptural citations, the original function of which was probably to celebrate the exaltation of Christ and his "session at the right hand" (Ps 110:1, Heb 1:13). How our author reconciled the eternality of the Son with his eschatological "begetting" (Ps 2:7, Heb 1:5) is unclear. It is likely that he interprets the exaltationist language of the catena in terms of the three-stage Christology of the exordium, but his concern is not to systematize and render coherent such diverse traditions. Rather, his effort is to make all these traditions more vital. As they stand, the Christological statements of the exordium and the catena together highlight the heavenly status of Christ.

2. The Suffering Son. The next block of Christological material (2:10–18) derives from yet other sources. Here Christ is presented as the leader of a new humanity who blazes the way for his brethren, with whom he shares "blood and flesh" (2:14), to the heavenly glory to which God has destined them (2:10). He accomplishes this through undertaking suffering and death, whereby he defeats the satanic forces who control death and make it fearsome (2:10, 14–15). The imagery of combat with the powers of hell and liberation of their captives is rooted in widespread classical myths of heroic deliverers. This imagery was adapted by Hellenistic Jews and appropriated by early Christians. As in the case of the other Christological patterns of the first two chapters, Hebrews will not further exploit the details of this imagery. In the perspective of the whole work this pericope serves to balance the affirmations of the exordium and the catena and to highlight the humanity of Christ. This focus is made clear by the introductory exegesis of Ps 8:5–7 (Heb 2:6–9), which may originally have been part of the traditional catena of chap. 1. Its language of "man" and "Son of man" could have evoked in antiquity, as in the history of exegesis, numerous Christological affirmations. For our author it serves to emphasize that the one who was Son from the first and who is exalted at God's right hand is a human being, whose exalted status results from the fact that he was "for a little while made lower than the angels."

3. The High Priest. At the conclusion of chap. 2 the author introduces a new Christological element. The eternal, exalted Son who suffered is, because of that suffering, a "merciful and faithful high priest" (2:17). This is the first intimation of the Christological category which will dominate the central expository section of Hebrews. As a title for Christ, it is unique to Hebrews among the writings of the NT. It is, however, unlikely that it was invented by the author. Scattered references to Christ as high priest in later Christian literature may attest to a traditional use. In Judaism there was widespread speculation on angelic figures who exercised priestly functions in the heavenly sanctuary. This speculative tradition, which also underlies Philo's elaborate allegories of the high priest and his presentation of the Logos as chief intermediary between God and humankind, was probably adopted in some Christian circles as a way of portraying Christ's role as heavenly intercessor. The title of high priest first deployed in Hebrews 2:17 is probably rooted in such a Christian appropriation of Jewish tradition. The image of Christ as heavenly intercessor (4:16; 7:25) reflects that traditional usage. The author builds his Christological exposition on this basis, but his treatment of Christ's priesthood is not confined to the dimensions of the traditional title.

The next development of the high priest motif (5:5–10) highlights the human suffering and resultant exaltation of Christ. At this point yet another Christological strand is interwoven. Here the author cites another verse from one of the traditional exaltation texts, Ps 110:4, the use of which verse is unattested elsewhere in the NT or in other early Christian literature not dependent on Hebrews. This verse, with its reference to a priesthood "after the order of Melchizedek," forms the basis for the exposition of chap. 7. Its citation here, however, raises the question of when Christ became high priest. The problem is analogous to that of the differing Christological perspectives of chaps. 1 and 2 and is to be resolved in a similar fashion. The author has inherited a tradition of Christ as high priest which focuses on Christ's heavenly status. The citation from Psalm 110 gives expression to that understanding of Christ's priesthood. For the author, however, the decisive priestly act is a very earthly one; hence Christ's priesthood is not confined to heaven. The tradition will undergo modification in the course of the exposition, and that modification begins here (5:7–10) with its graphic portrait of the human Christ at prayer, a portrait inspired not by accounts of the agony in Gethsemane, but by the language of the psalms developed in Hellenistic Jewish circles.

The next stage in the Christological development is the explanation in chap. 7 of what it means to be a high priest "according to the order of Melchizedek." The chapter interprets data from Psalm 110 and the only other scriptural reference to Melchizedek. Gen 14:17–20, and argues that Christ, as a priest of this order, is eternal and hence superior to Levitical priests. Only such an eternal or heavenly priest can provide "perfection" (7:11). The chapter may be influenced by the widespread speculation on the mysterious Melchizedek found in various sources, including Qumran fragments (11QMelch), apocrypha *(2 Enoch)*, Philo, and Gnostic sources (NHC IX,1 *Melchizedek: Pistis Sophia*), but Hebrews is restrained and limited in its use of the figure.

4. The High Priest's Sacrifice. The climax of the Christological development occurs in the complex exposition of the nature of Christ's "once for all self sacrifice" (7:27) which occupies chaps. 8–10. Here the death of Christ, which had often been understood as an atoning sacrifice, is presented as analogous to a specific sacrifice, that of the high priest on Yom Kippur (Day of Atonement). Employing categories which probably derive from popular Platonism used to interpret Jewish cultic institutions, the author presents Christ as effecting real atonement for sin by entering "through the spirit" (9:14) into the realm of the "true" and "heavenly" or ultimately real (8:2; 9:11–12; 9:23–24) where God himself is present. This imagery does not stand uninterpreted but is ultimately taken to be a symbolic expression of the conformity of Christ to God's will (10:5–10). The "heavenly" act is paradoxically, an earthly one, done in a body (10:10), but is heavenly because of its intentionality.

The model of the Yom Kippur ritual is dominant in chaps. 8–10, but it is not the only device used to interpret Christ's sacrificial death. His sacrifice is also seen to be a covenant-inaugurating event (9:15–22), which fulfills the

prediction of a new covenant made by Jeremiah (8:7–13; 10:16–17). The value of the victim guarantees the effective forgiveness promised under the covenant (8:12; 9:14; 10:17), while the disposition which makes Christ's sacrifice effective fulfills the promise of a new interior covenant (8:10; 10:10; 10:16). Furthermore, because Christ's death inaugurates a new covenant, it has direct implications for the behavior of members of that covenant who are called upon to follow Christ's exemplary self-sacrifice through their fidelity (12:1–3). Thus the Christological exposition is intimately related to the parenetic program of Hebrews.

G. The Soteriology of Hebrews

No other topic receives as much attention in the expository sections of Hebrews as does Christology. Other elements of early Christian belief are suggestively presented in images derived from the OT as they had been developed in Hellenistic Judaism, apocalyptic literature, and early Christian traditions.

The ultimate result of Christ's work is "salvation" (1:14; 2:3, 10; 5:9; 6:9; 9:28). This consists, negatively, of preservation from the fearful judgment (10:29–31) which will be manifested on the "day" (10:25) when heaven and earth will be removed (1:12; 12:26–28) by the God who is a "consuming fire" (12:29). More positively, salvation is a process of obtaining or inheriting God's "promises" (4:1; 6:17; 9:15; 10:36), which are to be fully realized in the "world to come" (2:5) when Christ's victory is complete (1:13; 2:8; 10:13), but can already be "tasted" now (6:5) in the "time of correction" (9:10). Such a foretaste is experienced in the life of the new covenant, where worshippers have their consciences cleansed (9:14; 10:2), experience "sanctification" (10:10) and thus, at least in a preliminary way, attain "perfection" (10:14). Yet as Christ's own perfection through suffering (5:8–9) was a process which culminated only in his exaltation (2:9), so the perfection of his followers is fully realized only when they too are led to glory (2:10). The nature and the goal of the salvific process find expression in the evocative image of the wandering people of God, aliens and sojourners on earth who seek for a "heavenly homeland" (11:13–16), a heavenly "city" founded by God himself (11:10); 12:22–24). That goal is further described with the image of "rest" (3:11; 4:3–6, 11), a designation derived from biblical accounts of Canaan, but widely interpreted in Jewish texts (*4 Ezra;* Philo) and Christian and Gnostic sources as an image of the heavenly realm or state which is the goal of the saved. The author's exegesis of Psalm 95 (4:3–10) offers a similar interpretation and equates the rest, which believers are promised, with a share in God's own festive sabbatical repose.

H. The Use of Scripture

The text with which the author works is clearly a form of the LXX. This is abundantly clear in the cases where his version differs markedly from the MT, and those differences are due to obvious translation errors or alternative readings attested in the LXX, such as "body" for "ears" in Ps 40:7 (Heb 10:5) or "staff" for "bed" in Gen 47:31 (Heb 11:21). In many cases the OT version cited in Hebrews does not correspond exactly to any extant witness to the LXX. This may be due to loose citation (cf. the varying citations of Jer 31:33–34 at 8:10–12 and 10:16–17), intentional alteration by the author (Ps 21:23 at 2:12 and Ps 95:7–11 at 3:9–10), or an otherwise unattested LXX text. Evidence for use of a Hebrew text is slender at best.

As consideration of Hebrews' Christology and soteriology indicates, the OT and its interpretation play a major role in developing the doctrinal perspectives of the work. The theoretical basis for that importance resides in the estimation of scripture as the word of God (1:1; 4:12–13) or of his holy spirit (3:7; 10:15). As such it has decisive significance for the contemporary listener (3:13; 4:7; 12:5–7). The key to understanding that word is the recognition that the God who spoke through the prophets has spoken eschatologically in his Son (1:2; 2:3). As for most other early Christians, the experience of and belief in Christ is the matrix within which the author's hermeneutic develops. Yet within that general framework, Hebrews displays remarkable boldness, subtlety, and technical sophistication in handling OT passages.

The Christological referent of scripture is clear in the traditional catena of 1:5–13 where common proof texts such as Ps 2:7 and 110:1 are taken not as addresses to an Israelite king but as divine oracles directed at Christ. The same principle underlies the application of the other, less common citations in the catena. A rather different Christological presupposition is evident in the citations from psalms and prophets at 2:12–13 and 10:5–10, where words of scripture are set on the lips of Jesus to give expression to fundamental aspects of his mission. These citations in fact are the only "sayings of Jesus" recorded in Hebrews. While the Jesus of "blood and flesh" (2:14), of the tribe of Judah (7:14), is of prime importance, traditions of his teaching play no explicit role. The conceit used here of attributing OT passages to Christ is not confined to Hebrews, but appears also in synoptic materials, particularly in the passion narratives. There is no explict development of a theory that Christ himself inspired the writers of the OT or that he spoke through them. Such theories, found in the second century, are rooted in elements of texts such as Hebrews, with its pre-existence Christology and attribution of OT texts to Christ.

Application of OT passages to Christ or to the contemporary situation usually involves taking them out of their original literary or historical contexts and construing them within a framework of the author's own devising (Ps 8:5–7 at 2:6–8; Ps 110:4 at 7:21; Ps 40:7–9 at 10:5–7). Yet occasionally the assumed original context plays a part in interpretation (3:7; 7:10).

Many texts are simply cited and given an interpretation from their new context in this discourse. For others, the author pays special attention to the vocabulary and syntax of the passage and argues exegetically. Thus in treating Ps 8:5–7, he exploits ambiguity to find a new referent for the "man" involved (2:8–9). In explicating the meaning of "rest" in Psalm 95, he employs the technique of "inference by analogy," utilizing Gen 2:2 (Heb 4:4–5); the argument, incidentally, works only on the basis of the Greek texts. In indicating the significance of Ps 110:4 and its references to Melchizedek, he again argues through appeal to another text (Gen 14:17–20) which is initially explicated both through etymology (7:2b, 3a) and through an argument

from silence (7:3b). Comparative and a fortiori arguments are common (1:4; 2:2–3; 7:22; 8:6; 9:14; 12:9–11). An important exegetical device is the discovery and resolution of oppositions either in scriptural texts or implied by them. Thus the promise of a new priesthood after the order of Melchizedek implies the rejection of the Levitical priesthood and its laws (7:11–12). The antithesis between eternal sacrifice and interior conformity to God's will is evident in Ps 40:7–9, and the enunciation of the latter is taken to be a principle which abrogates the former (10:8–9). The complex exposition of Jeremiah 31 in chaps. 8–10 is based in part on the oppositions between new and old, interior and external suggested by the citation from the prophet.

In addition to explicit citations of and exegetical arguments from scriptural texts, Hebrews frequently makes allusive use of scripture. This is most obvious in the case of Psalm 110, which surfaces throughout the text (1:13; 5:6; 8:1; 10:12; 12:2). The lengthy encomium on faith (chap. 11) has few actual citations but is throughout based on OT narratives and their legendary elaborations. The word of exhortation which is Hebrews is above all an attempt to make the word of God "living, active, and sharper than any two-edged sword" (4:12).

I. Hebrews and First-Century Religion

Numerous attempts have been made to understand Hebrews and its peculiar conceptuality on the basis of its affinities with various religious traditions, particularly within Judaism. The author has been seen as a disciple or opponent of Philo and the sort of sophisticated Hellenistic Judaism which he represents, as a thoroughgoing apocalyptist, and as an interpreter utilizing gnostic patterns of thought to make Christianity comprehensible in a Hellenistic environment. Each of these appraisals can find evidence within the discourse which points in the appropriate direction. None, however, provides a satisfactory overall evaluation of Hebrews.

1. Hebrews and Philo. Hebrews does share with Philo not only his Greek Bible but also a number of exegetical concerns, perspectives, and traditions. Most interesting and least noticed of these commonalities is the way in which the author uses cultic images to symbolize both ontological and psychological elements (chaps. 8–10). Another telling indication of affinity with Philo are certain halachic or legal positions, mentioned only in passing in Hebrews. Such, for example, is the remark that the high priest must offer daily sacrifice for himself and the people (7:27; cf. Philo, *Spec Leg* 1.131). Insofar as philosophical presuppositions affect the argument of Hebrews, here too the author displays some affinities with Philo and his Platonic interpretation of Judaism. Hebrews, however, is at most a distant cousin of Philo. The philosophical elements of this text are much more superficial and unsystematic than anything in Philo. In his handling of Scripture, the author of Hebrews does not represent the same degree of consistent and complex allegorization found in Philo. He does not try to develop, nor does he presuppose, the same elaborate theology or anthropology as does the Jewish philosopher and exegete. What most distinguishes him from Philo is the seriousness with which he treats eschatology, a subject which Philo generally avoids.

2. Hebrews and Qumran. The eschatological dimensions of Hebrews have often been taken as evidence of a relationship between the author and Jewish apocalyptists, especially the Essenes of Qumran. Other elements in his discourse point in this direction, including the eschatological presuppositions of some of his exegesis of the OT (1:2) and his priestly Messianism, which has some remote parallels in the doctrine of the two Messiahs at Qumran (1QS 9:11; 1QSa 2:12–15). Yet here again the parallels are often superficial. Hebrews' hermeneutics cannot simply be reduced to a Christianized version of the Qumran pesher, nor is the text's Christology merely a unified and baptized version of the expectation of the two Messiahs. Its roots are more complex and its elaboration more subtle. While Hebrews does maintain a lively eschatological expectation, it differs from that of Jewish apocalypticism in general and Qumran literature in particular in several important respects. Like most early Christians, the author understands the decisive eschatological event to have occurred already in the death and exaltation of Christ. As a result of that event salvation is understood not only as a future reality with cosmic or political dimensions, but as a process under way in the present as Christians, through faith, hope, and charity (10:22–24), follow the "new and living way" to God's presence opened by Christ (10:19–21). The primary implications of this eschatology are a life of prayer, service, and suffering in an alien world (13:13–16), rather than anxious withdrawal in expectation of final vindication.

3. Hebrews and Gnosticism. There are obvious dualisms in the work, an eschatological dualism of the two ages (2:5; 6:5) and the more metaphysical dualism of flesh and spirit (7:16; 9:9–10) which is connected with the dualism of earth and heaven (8:5; 9:11; 11:13–16). Such sharp contrasts have been taken as evidence of the author's gnostic background. To do so is to construe Gnosticism in far too broad a sense. In such passages the author displays his acceptance of various common elements of 1st-century Jewish and Christian cosmology. He is not, however, radically anti-cosmic in his perspectives as is classical Gnosticism. Neither does his Christology, even at its most mythic (2:10–16), have gnostic roots. What affinities there are between Hebrews and Gnosticism result from their common heritage in the Hellenistic Judaism of the 1st century.

Attempts to anchor the author of Hebrews in one or another strand of 1st-century religious history are generally unsatisfactory because they fail to recognize that the work is fundamentally the product of a Jewish-Christian rhetor, an individual who draws freely on a broad spectrum of legends, theological and philosophical patterns, scriptural interpretations, liturgical formulas, and oratorical commonplaces. He reshapes many of these and combines them in an imaginative way, not in order to effect a new systematic synthesis on any doctrinal issue, nor to reproduce in Christian terms the conceptual scheme of another religious tradition, but to affect the heart and will of his addressees.

4. Hebrews and the New Testament. This homilist displays affinities with many of his Christian contemporaries, but as he is not simply a representative of some general religious tradition, neither is he easily classified within the spectrum of the 1st-century Church. We have noted a possible indication of relationship with the Pauline circle, but the author is hardly a member of a Pauline "school" as

were the authors of Ephesians, Colossians, or the Pastoral Epistles. Unlike those texts, there is no appeal in Hebrews, either explicitly or through the device of pseudepigraphy, to the authority of the Apostle to the gentiles. Nor is there any intellectual indebtedness. The priestly Christology of Hebrews is quite different from anything in Paul. Like Paul, our author criticizes the Law (7:16–19), but on quite different grounds. For Paul the Law is either temporally limited (Gal 3:15–29) or an instrument of sin (Rom 6:20). For Hebrews the Law, conceived primarily in cultic terms, is simply ineffective. Like Paul, our author requires faith in order to attain salvation, but faith is not, as in Paul, the acceptance of God's gracious gift of righteousness (Rom 3:21–31) attained through the "faith of Jesus Christ" (Gal 2:16), but the hopeful fidelity which enables those who "participate in a heavenly calling" (3:1) to endure as Christ did (12:1–3). While faith in Hebrews has a Christological content expressed in the maintenance of the "confession," it is, more clearly than in Paul, an imitation of the faith imputed to Christ himself. If the author of Hebrews is indeed in the Pauline circle, he is a very independent member of that circle.

There are parallels between Hebrews and certain deutero-Pauline texts. The author of Colossians addressed a community in which some ill-defined objectionable belief or practice involving angels was at work (Col 2:18). Many scholars have found a similar problem behind the argument about Christ's superiority to angels in chap. 1 of Hebrews. Yet nothing in the hortatory portions of Hebrews suggests a problem of this sort in the community addressed. The argument of the first chapter is best understood as an expansion of the common imagery of Christ's exaltation, designed to highlight his heavenly status.

With Johannine Christianity Hebrews shares only the most general features. Attempts have been made to find the sources of Hebrews' Christology in the Fourth Gospel's overall conception of Christ as the mysterious revealer is far removed from Hebrews' high priest.

Many of the closest links to any other NT document are found in 1 Peter, another message of "exhortation" (5:12). Its Christology also combines traditions of the exaltation based on Psalm 110 (3:22) with an understanding of Christ's death as an atoning sacrifice (1:2, 19; 2:12–15) which cleanses conscience (3:16) and provides access to God (3:18). Hebrews (13:20) and 1 Peter (2:25; 5:5) also share the image of Christ as shepherd. The soteriological framework is also similar. Salvation for 1 Peter is the eschatological (4:7) attainment of a promised heavenly inheritance (1:4–5) which involves the glorification (1:11; 4:13; 5:4) of Christians. That glorification is to be attained through faithful endurance (1:6–9; 2:20), sharing the sufferings of Christ (4:13) and bearing the reproach of being Christian (4:14; Heb 11:26). The life of faith is also seen to involve many of the same particular virtues represented in Hebrews, including hospitality (4:9; Heb 13:2) and submission to authority (5:5; Heb 13:7, 17). Further parallels could be cited, but these suffice to show the extensive common tradition shared by both texts. While Hebrews is distinctive within the NT, it is clearly rooted in Christian traditions and in particular the traditions at home in the Roman community.

J. Canonization

Hebrews was accepted as Pauline in the Greek east, particularly among the Alexandrians (Pantaenus, Clement of Alexandria, and Eusebius) from the 2d century on. In the west, doubts about Pauline authorship, expressed by Tertullian, Hippolytus, and Irenaeus, contributed to a general neglect of the text in the first three centuries, and it is not mentioned in the Canon Muratori. By the end of the 4th century, however, the Pauline authorship and authoritative, canonical status of Hebrews became generally recognized in both east (Athanasius) and west (Lucifer of Cagliari, Prisicllian, and Ambrose). Jerome and Augustine both recognized that there had been doubts about the status and authorship of the text in the west; but primarily on the authority of the eastern tradition, they acknowledged Pauline authorship and accepted Hebrews as authoritative. That status remained unchallenged until the Reformation, when doubts were again expressed about Pauline authorship by Erasmus, Luther, and Calvin, but by that time the canonical status of the work was secure.

K. Conclusion

Despite its many enigmas and idiosyncrasies and a conceptuality and style of argument which is quite foreign to modern sensibilities, Hebrews is an elegant, sophisticated, and indeed powerful presentation of the Christian message. It is perhaps the most self-consciously rhetorical discourse of the NT and its unknown author one of the most imaginative figures of the early Church.

HAROLD W. ATTRIDGE

HEBREWS, GOSPEL OF THE. The title ascribed in antiquity to at least one and probably two Jewish-Christian narrative gospels that are extant in fragmentary form in a few quotations preserved in early church writings. Because of the scantiness of the citations and the uncertainty of their patristic source attributions, assessing these fragments is one of the most vexing problems in the study of early Christian literature. Determining the precise number of these gospels, identifying which fragments may plausibly belong to which text(s), appraising the nature and extent of those texts, and establishing the relationship of one gospel to another are extremely problematic tasks that continue to challenge scholars.

Jerome has preserved the most numerous references to and apparent quotations of *Gos. Heb.* In a series of writings that date from 386–415 C.E., he repeatedly maintained the view that there was only one Jewish-Christian gospel in existence, assigning all quotations known to him to this one document. When referring to this document Jerome regularly used variants of the title *Gos. Heb.*, which he regarded as the original "Hebrew" or Aramaic Gospel of Matthew. However, critical scholarship has determined that Jerome almost certainly never saw an actual copy of this document but most likely knew of its existence from citations he had taken from other early Christian writers. Moreover, it is quite certain that Jerome never translated such a gospel into Greek and Latin, as he avers, for he misquotes certain texts that he allegedly had translated and assigns to this gospel several pericopes whose wording and construction are manifestly impossible in a Semitic language. Thus, in spite of himself, Jerome attests to the existence both of a Greek *Gos. Heb.* and another Jewish-Christian gospel, one which appears to be closely related to or identical with an expanded version of Matthew's Gospel that was translated from Greek into Aramaic or Syriac. This expanded version of Matthew is customarily referred to today as the *Gospel of the Nazoreans,* a document whose original title is unknown but which seems to have been used since the 2d century C.E. by the Nazoreans, a group of Jewish Christians in W Syria. Although it is extremely difficult to identify with confidence which patristic quotations may belong to which gospel, it is not possible to assign all of the extant quotations to only one text. In fact there can be no doubt that another, completely different Jewish-Christian gospel was in circulation in the early Church, for Epiphanius (late in the 4th century) has preserved a few quotations of the so-called *Gospel of the Ebionites,* a harmony, composed in Greek, of the Gospels of Matthew and Luke (and, probably, the Gospel of Mark as well). Therefore, the testimony of Jerome notwithstanding, there were at least two and most likely three Jewish-Christian narrative gospels in antiquity, one of which was composed in Greek and entitled *Gos. Heb.*

Although the existence of *Gos. Heb.* is not in question, identifying its fragments and appraising its character remains difficult. In quoting the sources of this gospel, early Church writers repeatedly cited those texts incorrectly, attributed quotations to the wrong gospels, and interpreted what they did record in a biased manner. Jerome, for example, only exacerbates the confusion when he introduces a quotation that he alone has preserved as follows: "In the Gospel which the Nazoreans and Ebionites use, which we have recently translated from Hebrew into Greek, and which is called by most people the original (Gospel) of Matthew . . ." (*Comm. in Matt.* 2). Mistakes such as this have led to countless difficulties in our attempts to isolate and verify the gospel(s) in which these fragments belong. Nevertheless, if one distinguishes the fragments on the basis of their original language of composition, their form and content, their relationship to the gospels of the NT, and the groups said to have used a particular gospel, one can reconstruct a number of sayings and stories which may plausibly be ascribed to *Gos. Heb.* The discussion that follows is based on such a reconstruction, though it must remain tentative pending the discovery of new manuscripts.

Gos. Heb. is a syncretistic, Jewish-Christian document, composed in Greek, which presents traditions of Jesus' preexistence and coming into the world, his baptism and temptation, some of his sayings, and a resurrection appearance to his brother, James the Just. This is the Jewish-Christian gospel most frequently mentioned by name in the early Church; it is also the only one whose original title has been transmitted from antiquity. The title seems to indicate the identity of the group who used this gospel, and suggests that this was the gospel of predominantly Greek-speaking Jewish Christians. *Gos. Heb.* appears to have no connection with the so-called *Gospel of the Nazoreans* or *Gospel of the Ebionites,* for it displays no kinship with the Gospel of Matthew. It is instructive to note that the earliest and most important witnesses to the text of *Gos. Heb.* come from quotations in the writings of persons who lived in Alexandria, Egypt.

Although Eusebius (early in the 4th century) reports that Papias of Hierapolis (ca. 100–150 C.E.) expounded a story contained in *Gos. Heb.* (*Hist. Eccl.* 3.39.17), the ab-

sence of any citations of *Gos. Heb.* in the extant writings of Papias does not permit this reference to be used as a witness to the existence of the text. The first certain attestation of *Gos. Heb.* by name is documented in the late 2d century by Hegesippus (Eus. *Hist. Eccl.* 4.22.8), whose extracts from the text are no longer preserved. Eusebius lists this gospel among the "spurious" writings rejected by some members of the Church (*Hist. Eccl.* 3.25.5), though he does not quote from the text. If the reference to a *Gos. Heb.* in the recently discovered *Commentary on the Psalms* by Didymus the Blind (in the mid to late 4th century) can be properly assigned to our text and not to some other Jewish-Christian gospel, then Didymus provides additional testimony of an acquaintance with this gospel in Alexandrian circles. Fragmentary quotations are preserved in the writings of Clement of Alexandria (late in the 2d century), Origen (early in the 3d century), and, apparently, Cyril of Jerusalem (in the mid 3d century). Jerome (ca. 400 C.E.) also preserves several fragments, most if not all of which he probably reproduced from the writings of Origen. The extent of *Gos. Heb.* is no longer known. According to the list of "canonical" and "apocryphal" books drawn up by Nicephorus (Patriarch of Constantinople, 806–818 C.E.), *Gos. Heb.* contained 2200 lines, only 300 fewer than Matthew.

The report of a resurrection appearance of Jesus to his brother, James the Just (Jerome *De vir. inl.* 2), indicates the position of authority assigned to James in *Gos. Heb.* James was regarded as a leading figure of the Jewish-Christian church in Jerusalem (Gal 1:19; 2:9, 12; Acts 12:17; 15:13; 21:18), one of those named in Paul's list of persons accredited for having seen a vision of the risen Jesus (1 Cor 15:7). According to the account in *Gos. Heb.*, James was the first witness of the resurrection and thus its principal guarantor. He is so distinguished that he is said even to have taken part in the Last Supper of Jesus. The esteem in which James is held in this gospel may be used to locate the authority and secure the identity of the tradition of those communities which appealed to him as their leader.

The accounts of Jesus' preexistence and coming (Cyr. H. *Discourse on Mary Theotokos* 12a), baptism (Jerome *Comm. in Isa.* 4), and temptation (Origen *Jo.* 2.12.87) are abbreviated mythological narratives. They presuppose a myth of the descent of divine Wisdom, embodying herself definitively in a representative of the human race for the revelation and redemption of humankind (Sir 24:7; Wis 7:27). If it is proper to correlate those narratives with the most prominent saying in *Gos. Heb.* (Clem. *str.* 2.9.45.5; 5.14.96.3), then this gospel announces that Wisdom's "rest" can be found in Jesus and attained by those who seek her (Sir 6:28; 51:27; Wis 8:16). The fact that a variant of this saying is also preserved in the *Gospel of Thomas* (saying 2) indicates that it was a tradition at home in Egypt as well as in Syria. The other two sayings ascribed to *Gos. Heb.* (Jerome *Comm. in Eph.* 3; *Comm. in Ezek.* 6) permit the suggestion that a majority of the sayings in this gospel had the same parenetic character as those in the synoptic gospels.

The extant fragments of *Gos. Heb.* display no dependence on the NT or other early Christian literature. Unfortunately there is no way to determine the (in)dependent status of those portions of the text that are no longer preserved. The earliest possible date of the composition of *Gos. Heb.* would be in the middle of the 1st century, when sayings of and stories about Jesus began to be produced and collected in written form. The latest possible date would be the middle of the 2d century, shortly before the first recorded reference to this gospel by Hegesippus and attested quotations of it by Clement and Origen. Based on the parallels in the morphology of the tradition, an earlier date of composition seems more likely than a later one. Identifying the provenance of *Gos. Heb.* is difficult, though external attestations make Egypt an attractive option. For further discussion see *ANRW* 2/25/5: 3997–4033.

RON CAMERON

HEBRON (PERSON) [Heb *ḥebrôn*]. HEBRONITE. Of the seventy-two references to "Hebron" in the OT (there are none in the NT) and one in the Apocrypha (1 Macc 5:65), nine refer to a person rather than a place. The related patronymic "Hebronite(s)" [Heb *ḥebrônî*] appears six times.

1. The third son of Kohath and grandson of Levi (Exod 6:18; Num 3:19; 1 Chr 5:28,6:3—Eng 6:2,18; 1 Chr 23:12. Hebron was the brother of Amram, Izhar, and Uzziel, and the uncle of Moses, Aaron, and Miriam. Hebron's son Eliel, with eighty of his brethren, is numbered among the levitical families summoned by David to arrange for the transfer of the ark to Jerusalem (1 Chr 15:9). Four Hebronite family heads, of which Jeriah was chief, appear in the series of chapters in Chronicles (1 Chronicles 23–27) which ascribe to David's ingenuity the levitical patterns in

place in the postexilic period (1 Chr 23:19; 24:23; 26:31). There it is reported how the Hebronites Hashabiah and his brethren were given the oversight of Israel west of the Jordan "for all the work of the Lord and for the service of the king" (1 Chr 26:30). In David's last year as king a search was presumably conducted to find more Hebronites, and a sizable number were found in the levitical city of Jazer in Gilead (Josh 21:39; 1 Chr 6:66—Eng 6:81; 26:31; 29:27). David is said to have appointed Jerijah (variant of Jeriah above) and his number to have supervision over the tribes settled in Transjordan "for everything pertaining to God and for the affairs of the king" (1 Chr 26:32). Especially noteworthy here is the Chronicler's witness to a broader definition of and function of Kohathite Levites than the usual more sacral activities performed within the temple complex.

2. A Judahite, the son of Mareshah and grandson of Caleb (1 Chr 2:42 RSV). This manner of entry presupposes the adoption by the RSV of the textual emendation "Mareshah" [Heb *mārēšâ*] supplied from the second half of the verse, with the LXX *[marisa]*, in place of the name "Mesha" *[mêšāʿ]* in the MT, which reads literally: "And the sons of Caleb, the brother of Jerahmeel, were Mesha his firstborn—he was the father of Ziph—and the sons of Mareshah, the father of Hebron." The phrase "the father of" may actually refer to the founding of the cities Ziph and Hebron, as the NEB so interprets it (cf. also the use of the same phrase with respect to Ashhur, Shobal, Salma, and Hareph in the same context in 1 Chr 2:24; 2:50–52). There was indeed a nearby city by the name of Ziph (Josh 15:55), and the link between Caleb and the city of Hebron is well attested (Josh 14:13; 15:13; Judg 1:20). However, the "Hebron" in the very next verse (1 Chr 2:43) who is ascribed four sons (Korah, Tappuah, Rekem, and Shema) appears to be a person. Still another reconstruction of the text of 1 Chr 2:42 has been to make Caleb the father of "Mesha his firstborn son who was the father of Ziph whose son was Mareshah the father of Hebron" (Myers *1 Chronicles* AB, 11). By this more conjectural reconstruction, Hebron, while still the son of Mareshah, becomes the grandson of Ziph and the great-great-grandson of Caleb.

ROGER W. UITTI

HEBRON (PLACE) [Heb *ḥebrôn*]. An important city located on the crest (ca. 3350 ft. elev.) of the Judean mountain ridge ca. 19 mi. SSE of Jerusalem and ca. 23 mi. NE of Beer-sheba.

The ancient site (M.R. 159103) is strategically located on Jebel er-Rumeidah near where two routes coming from the Shephelah in the W, one via Lachish up the Adoraim ridge, and another following the Nahal Guvrin and ascending a ridge, intersect with the main N-S ridge route connecting Jerusalem and points N with Beer-sheba in the S. Another route leaves Hebron to the SE passing Carmel and Maon and then descending to Arad, the administrative center in the W Negeb.

The Canaanite city, which was built seven years prior to the establishment of Zoan (Gk. Tanis) in Egypt (Num 13:22), is also called Kiriath-arba (Gen 23:2, etc.) possibly after a notable ancestor of the Anakim (Josh 14:15; 15:13). Another suggested etymology assumes four villages connected with the city, hence, "City-of-Four" (Heb *ʾarba*, "four") (see Josh 15:54; 2 Sam 2:3). Kiriath-Arba was both the earlier as well as a later name for Hebron (see Neh 11:25).

Abraham lived in the vicinity for some time and eventually purchased a cave at Machpelah in the valley below in order to bury Sarah (Genesis 23). Later Abraham himself was buried there in the cave (Gen 25:9–10), as was Isaac (Gen 35:27–29).

Hebron was one of the cities which the twelve Israelites spies reconnoitered in Num 13:22. The biblical narrative indicates that the area just to the N of Hebron, the valley of Eshcol, was extraordinarily lush and fertile. Later, Hebron, under the leadership of king Hoham, joined a coalition of Amorite cities from the Shephelah and hill country headed by Adonizedek, king of Jerusalem. This coalition was formed against the Gibeonites, who had entered into an alliance with Israel after the fall of Ai (Josh 9–10). Under siege, the people of Gibeon invoked their treaty with Joshua and in response Israel marched all night, 3360 ft., up from Gilgal (Khirbet el-Mafjar?), surprising this Amorite coalition and routing them down the other side of the mountain by way of Beth Horon to the valley of Aijalon and beyond. In the aftermath of the battle of Aijalon, Hebron was conquered by Joshua (10:36–37). Joshua then deeded the city to his fellow veteran spy, Caleb (Josh 14:13). However, the city was later assigned to the Kohathites, who were Aaronic priests, as a levitical city (21:11–13) and designated a city of refuge (20:7; 21:13).

During Saul's reign, the people of Hebron were sympathetic toward David, who had cultivated a relationship with them (1 Sam 30:26–31). After Saul's death, the Lord instructed David to establish his rule in Hebron (2 Sam 2:1ff) where David reigned as king of Judah for seven and a half years (2:11; 5:5). By the end of that period David had proven his ability to consolidate the twelve tribes behind him. As a result the people of the northern tribes came to David at Hebron along with their tribal elders, and David was anointed king over all twelve of the tribes (5:1–4; 1 Chr 11:1–3). After this, David moved his capital to a more "neutral" site on the border of Benjamin: Jerusalem, a city which he had captured from the Jebusites and therefore called "the city of David" (5:7–12; 1 Chr 11:4–9).

Some years later, David's rebellious son Absalom established his base at Hebron and from there attempted a coup d'état and claimed the throne (2 Samuel 15).

The strategic location of Hebron is indicated yet again in 2 Chr 11:5–12, which reports that Rehoboam, concerned with protecting the southern flank, fortified a number of cities to the S and W of Jerusalem, including the administrative center, Hebron.

After the fall of Jerusalem to Nebuchadnezzar in 586 B.C., the Edomites (or Idumeans) extended their control almost to Beth-Zur, some 5 miles N of Hebron (1 Macc 24:33). After the return from Exile in Babylon, Jews moved back into many of the towns of Judah, then a Persian province, as well as Hebron and other towns in Idumea (Neh 11:25). By the end of the second century B.C. the Hasmoneans had conquered Idumea, including Hebron (1 Macc 5:65), and Judaized it (Josephus, *Ant* 13.257–

58) and named Antipater, who would be Herod the Great's grandfather, as governor.

On recommendation from Mark Antony, the Roman senate named the Idumean, Herod, "king of the Jews." Herod the Great (37–4 B.C.) built the beautiful enclosure which surrounds the cave of Machpelah to this day. This enclosure, or "haram," as it is called in Arabic, is of special interest because its architectural features, such as its large ashlar masonry (the largest stone is more than 24 ft long) and its pilasters, as well as its architectural proportions are almost identical to Herod's "haram" at the Temple Mount in Jerusalem (Vincent and Mackay 1923). The church structure on the "haram" over the caves was built during the Byzantine period.

PAUL WAYNE FERRIS JR.

HECATAEUS, PSEUDO-. The designation used to refer to one or more Jewish authors who are thought to have written pseudepigraphs attributed to the pagan author Hecataeus of Abdera.

Hecataeus of Abdera was a Hellenistic ethnographic historian who flourished around the time of Ptolemy I Soter (ca. 300 B.C.E.). He is credited with having written the grammatical work *On the Poetry of Homer and Hesiod,* as well as two ethnographic works, *On the Hyperboreans,* and *On the Egyptians.* Substantial portions of this last work are preserved in Diodorus Siculus' *World History* (Book 1). In other sections preserved by Diodorus (Book 40), Hecataeus treats various aspects of Jewish history and culture, including the emigration from Egypt and certain features of the Mosaic law. The treatment is remarkably accurate and generally positive in its assessment. It is also notable for containing the first documented reference to Moses in pagan literature.

It is widely believed that this material treating the Jews is from the hand of the pagan author Hecataeus. The major point of dispute has been whether it should be attributed to an earlier pagan author, the geographer Hecataeus of Miletus (ca. 500 B.C.E.), a position favored by Photius (9th century). This view, however, has not won acceptance, and consequently this material is reliably attributed to Hecataeus of Abdera.

In addition to these passages, however, there are other passages treating Jewish topics that are also attributed to Hecataeus but whose authenticity is disputed. Essentially, two such works are mentioned in ancient sources: *On the Jews* and *On Abraham (and the Egyptians).* Whether these were formal titles of the works or merely phrases describing their contents is not clear; probably the former.

A work devoted exclusively to the Jews, perhaps entitled *On the Jews,* attributed to Hecataeus of Abdera is first mentioned by Josephus (*AgAp* 1.22 §§183; 1.23 §214; cf. §205; later repeated in Eusebius *Praep. Evang.* 9.4.1) and later attested (perhaps independently) by Origen (*Cel.* 1.15). Clement possibly alludes to the work when he mentions "Hecataeus who composed histories . . ." (*Strom.* 5.14.113.1).

The content of this work is generally thought to be reflected in two passages from Josephus: *AgAp* 1.22 §§184–204 (portions of which are repeated in Eusebius *Praep. Evang.* 9.4.2–9) and *AgAp* 2.4 §§42–43 (extended by some scholars through §47).

In the first passage Josephus summarizes portions of the work and provides excerpts. He tells us that Hecataeus flourished in the time of Alexander the Great and Ptolemy I Soter and wrote a book devoted entirely to the Jews. Among the items selected from Hecataeus' account by Josephus are the following: the emigration of the Jews to Egypt after the battle of Gaza in 312 B.C.E.; an account of an elderly (high) priest Ezechias, otherwise unattested, who promotes emigration to Egypt as a good policy; the Jews' tenacious fidelity to their laws in the face of resistance and persecution, illustrated by specific examples from the time of Alexander; the populousness and population shifts resulting from the Jews' deportation to Babylon and subsequent migrations to Egypt and Phoenicia; a geographical description of Judea, Jerusalem, and the temple; the Jews' participation in the military campaigns of Alexander and his successors; and the account of Mosollamus, a shrewd Jewish archer, who bests a pagan diviner.

In the second passage (which Josephus attributes to Hecataeus without identifying the title of the work), Hecataeus is said to have reported that Alexander the Great gave the Jews the district of Samaria free of tribute in appreciation of their faithful service to him. This occurrence is not mentioned elsewhere.

Josephus also attributes to Hecataeus what appears to have been a separate work devoted to Abraham (*Ant* 1.2 §159; this passage is also repeated in Eusebius *Praep. Evang.* 9.16.3). Clement seems to refer (independently) to the same work, although he provides a longer title: *According to Abraham and the Egyptians* (*Strom.* 5.14.113.1; also repeated in Eusebius *Praep. Evang.* 13.13.40).

While Josephus only refers to the work, Clement provides an excerpt: a poetic passage attributed to Sophocles in which he confesses faith in the one true Creator God and concedes the error of idol worship and pagan sacrifice.

Besides the aforementioned references to actual works written by Hecataeus, there are other references that mention the figure Hecataeus, and his treatment of Jewish topics, yet without reference to a particular work, most notably *Let. Aris.* 31 (also quoted in Josephus *Ant* 12.4 §38 and Eusebius *Praep. Evang.* 8.3.3). Although ambiguous, this passage suggests that Hecataeus recognized the sacred character of the biblical writings and perhaps used this to account for the failure of other Greek authors to refer to them.

Assessments of the Pseudo-Hecataeus corpus (i.e., these several references to Hecataeus of Abdera, works attributed to him, and the summaries and excerpts from these works) have been numerous and widely divergent.

One point in which there is widespread agreement, however, is the pseudonymity of *On Abraham.* There is substantial agreement among scholars that such a work attributed to Hecataeus did exist in antiquity, but that it was written by a Jewish author. The author is variously designated as Pseudo-Hecataeus (*FrGrHist;* Collins 1983:

42–43, 137–41), Pseudo-Hecataeus II (Walter JSHRZ 1/2: 144–60), and Pseudo-Hecataeus III (Wacholder 1974: 263–73). Though only brief fragments survive, it certainly contained a pseudonymous poetic text attributed to Sophocles, and perhaps similar texts attributed to other Greek poets. Given the prominence of Hecataeus of Abdera, and the undisputed fact that he dealt with Jewish topics, the motivation for a Jewish author to write under his name is clear. Because of the brevity of the fragments, it is very difficult to suggest a date and provenance for this work. It is only known for certain that it predates Josephus, though it may have originated as early as the 1st century B.C.E.

If scholars are generally agreed about the pseudonymity of *On Abraham,* there is widespread disagreement about the authenticity of the statements summarized or quoted from *On the Jews.*

On the one hand, there is a well-established tradition of interpretation that finds it impossible to attribute these statements to the pagan author Hecataeus of Abdera. Even in antiquity, questions about the authenticity of the Hecataeus fragments were raised. According to Origen (*Cel.* 1.15), Herennius Philo found it difficult to believe that a pagan author could speak so positively about the Jews. Similar doubts continued into the modern period and led scholars to argue that *On the Jews* is a pseudonymous work written by Jewish author best designated Pseudo-Hecataeus. Among the reasons for seeing the work as pseudonymous are alleged anachronisms, including references to Jewish martyrdom, to the high priest Ezechias, to the practice of paying tithes to priests, and to Alexander's transfer of the district of Samaria to Jews. In various ways these have been seen to reflect a setting in the mid-2d century B.C.E. or later. Many modern scholars favor this view.

On the other hand, however, those defending the authenticity of the fragments insist that the evidence is ambiguous. Those who see no difficulty in attributing these passages to the pagan Hecataeus insist that there is no reason, in principle, that Jewish martyrdom could not have occurred during the late 4th and early 3d century, even if not with the frequency that it did during the Maccabean period. Moreover, certain numismatic evidence has been cited that points to the existence of a Jewish high priest named Hezekiah at a much earlier period. It is also argued that the precise details about the administration of the tithing system are not altogether clear. Certain other references that seem unlikely for a pagan author to make, e.g., the passage praising Jews for destroying pagan temples, are explained as later redactions by a Jewish author. Scholars who defend the passages as authentically Hecataean include Lewy, Tcherikover, Gager, Stern, Doran, and Collins.

Those who dispute the authenticity of the fragments and attribute *On the Jews* to a Jewish author have made several proposals concerning its authorship. One position sees a distinction in content, tone, and seriousness between *On the Jews* and *On Abraham.* The former work belongs to the genre of encomiastic ethnography and was probably written by a Palestinian Jewish priest who emigrated to Egypt in the aftermath of Antiochus IV Epiphanes' arrival in Palestine in 170–168 B.C.E. The references to Ezechias are regarded as thinly veiled references to Onias IV, who established the temple at Leontopolis. This is the work alluded to in *Let. Aris.* 31 and should be dated prior to the mid-2d century B.C.E.

This position is further refined by Walter, who attributes the work to a Jewish author whom he designates Pseudo-Hecataeus I. Walter sees no connection, however, between this work and the reference in *Let. Aris.* 31. Instead, he regards the latter as likely based on Hecataeus' *On the Egyptians.* Because of the probable anachronistic references in the surviving excerpts of *On the Jews,* Walter dates Pseudo-Hecataeus I towards the end of the 2d century B.C.E. The attention given to the Ptolemies leads him to propose an Alexandrian provenance for the work.

A further refinement is proposed by Wacholder (1974), who thinks the references in Josephus ordinarily attributed to a single work point to two separate works: an earlier work *On the Jews* written toward the end of the 4th century B.C.E. by Pseudo-Hecataeus I, a Jewish priest from Jerusalem, and a second work by a Jewish author whom he designates Pseudo-Hecataeus II, written sometime after *Let. Aris.* yet prior to Josephus (see further *HJP*^{2} 3/1: 671–77).

CARL R. HOLLADAY

HEGAI (PERSON) [Heb *hēgay; hēgeʾ*]. A eunuch in charge of one of the harems of king Ahasuerus (Esth 2:3, 8, 15). His specific office, "the keeper of the women" (Heb *šômēr hannāšîm*), entailed the supervision of a harem of virgin girls within the royal palace, in order to prepare them for eventual marriage to Ahasuerus as concubines. Their preparation consisted of a proper diet and continual bathings in aromatic substances (Esth 2:9–14). These bathings are said to have gone on for a full year (Esth 2:9–12), but this detail may be a satirical exaggeration on the part of the author. When Esther and the other virgins who were selected as possible replacements for the deposed queen Vashti were sent to Susa, they were placed in Hegay's care (Esth 2:8). Esther immediately became his favorite, and she received special treatment as well as advice on how to please the king (Esth 2:9, 15). The Heb *hēgay/hēgeʾ* appears to be a rendering of a Persian proper name derived from either the Sanskrit root, *āga,* meaning "eunuch," or Bactrian, *hugāo,* "one possessing beautiful cows," or perhaps Avestan, *haēk,* "the sprinkler" (Gehman 1924: 326 and Paton *Esther* ICC, 69). This name has been falsely equated by some to the contemporary name of *hēgias,* cited in Herodotus (9.33) and Ctesias (*Persians* 24)

(Gehman 1924: 326 and Paton, 69). Herodotus was referring to a Greek who was an enemy of Persia at the battle of Platea while Ctesias wrote of an Ephesian military officer of Ahasuerus. In both cases this name appears to be Greek and not Persian, and in any case the two sources mentioned are not making reference to the same *hēgay* of the book of Esther.

JOHN M. WIEBE

HEGEMONIDES (PERSON) [Gk *Hēgemonidēs*]. In 2 Macc 13:24 Hegemonides is left as governor over the area of Judea and its environs by Antiochus V Eupator (164–162 B.C.E.) as he rushes off to Ptolemais on the way to quell the revolt of Philip in Antioch. The absence of other uses of this term has caused many scholars to question whether it was the name of an actual person or even a proper noun (PW 14: 2598; Abel 1949: 456). It now seems quite probable that inscriptions from Dyme in Achaia on a monument to Antiochus IV, Queen Laodice, and the son Antiochus erected by *Hagēmonidas,* son of Zephorus, are a reference to the same person (Habicht 1958). The rare name on these inscriptions, dated between 170 and 164 B.C.E., suggests he was in a military position, perhaps a commander of Greek mercenaries, in Achaia prior to his appointment as governor in 162 B.C.E.

The area over which he was appointed as governor continues to be a matter of debate. While Ptolemais is readily identifiable as the biblical Acco, the land of the Gerrhenes *(tōn gerrēnōn)* is not as simple. While most commentators, following Grimm (1853: 191), propose Gerar in the Sinai SE of Gaza as the site, Abel points to Gerrha near Pelusium (1949: 456), and Goldstein suggests an area called Gerrha in the valley of Lebanon, later called Chalkis (*II Maccabees* AB, 468–69).

JOHN KAMPEN

HEGESIPPUS (PERSON) [Gk *hēgēsippos*]. A 2d-century Christian writer (b. before A.D. 130; d. between 180 and 192). Author of a work in five books (surviving only in fragments) entitled *Hypomnēmata ekklēsiastikōn praxeōn,* "Memoirs of the Acts of the Church," completed when Eleutherus was bishop of Rome (between 175 and 189). He set down oral traditions about the early 1st century Jerusalem Christian community and the earliest gnostic heretics, along with observations about other ecclesiastical matters down to his own time. He referred to Hadrian's favorite Antinous (d. 130) as someone who had lived during his own lifetime (Eus. *Hist. Eccl.* 4.8.2). The *Chronicon Pascale* says Hegesippus died during the reign of Commodus, that is, between 180 and 192 (Telfer 1960). At some time between ca. 154, when Anicetus became bishop of Rome, and the death of Eleutherus in 189, he traveled by sea to Rome—via Corinth, indicating that his home must have been in the E end of the Mediterranean world—and his *Memoirs* were completed at some time after this trip.

The actual passage in Hegesippus describing the visit (Eus. *Hist. Eccl.* 4.22.3) is ambiguous as to the time and length of the stay in Rome. The 4th century church historian Eusebius (*Hist. Eccl.* 4.11.7) interpreted it to mean that he came during the reign of Anicetus (ca. 154–166) and remained until that of Eleutherus (175–189), making a quite extended residency in the capital, but the odd construction of the passage could well mean instead that Hegesippus simply visited Rome briefly when Anicetus was bishop, took notes on the succession up to that point, then added the names of Soter and Eleutherus years later, after he had returned home and was preparing his final draft. Yet another interpretation of the peculiar syntax could be that Hegesippus had come and gone during the bishopric of Eleutherus, who had supplied information orally about his predecessors Anicetus and Soter, but that he wished his readers to know that obtaining an accurate list of the names of the earlier bishops had required independent research. The unanswerable question is whether Hegesippus's stay in Rome occurred during the time of Justin Martyr (fl. ca. 155–165), or Irenaeus (fl. ca. 177–190), or both.

The complete work survived in several Greek monasteries as late as the 16th–17th centuries, but only fragments exist today, nearly all preserved in Eusebius of Caesarea's *Church History* (see especially the quotations and paraphrases in Eus. *Hist. Eccl.* 2.23.4–18, parts of 3.5.2–3, 3.11.1–12.1, 3.16.1, 3.20.1–6, 3.32.1–8, 4.8.2, and 4.22.1–9).

Although some have attempted to call Hegesippus, rather than Eusebius of Caesarea, the Father of Church History, his work does not seem likely to have been a true continuous historical narrative. The account of the death of James the brother of the Lord, for example, was in the fifth and last book, far too late for a genuinely chronological presentation. Since *ekklēsiastikos* at that time frequently meant "orthodox" as opposed to heretical, the title of Hegesippus's work could equally well be translated as "Memoranda" or "Notes" (Turner 1918; Telfer 1960) "on an Orthodox Acts," with the target of attack being the various apocryphal acts of the apostles which began appearing in the 2d century (cf. Eus. *Hist. Eccl.* 4.22.9). Eusebius regarded it basically as a work defending "the orthodox kerygma" against heretical interpretations (Eus. *Hist. Eccl.* 4.7.15–8.2), both those of the apocryphal acts and those of the early gnostic theologians, from Simon to Marcion and Valentinus (*Hist. Eccl.* 4.22.5). A fragment of the *Memoirs* found in Photius seems clearly antignostic (Telfer 1960).

Hegesippus had access to certain traditions deriving from the early Jerusalem church. He described the death of James the brother of the Lord (Eus. *Hist. Eccl.* 2.23.4–18) and said that the Jerusalem community decided that the next leader of their church also had to be a blood relative of Jesus—Simon, the son of Joseph's brother Clo-

pas, eventually being chosen (Eus. *Hist. Eccl.* 3.11–12, 4.22.4). Two grandsons of Jesus' brother Judas also played important roles (Eus. *Hist. Eccl.* 3.20.1–6, 3.32.5–6). This suggests something like a Muslim caliphate in its conception (Stauffer 1952 gives Jewish and Roman antecedents for the dynastic approach), but Hegesippus in addition seems to have stressed that these leaders were not only related to Jesus but also, by that fact, were of the line of David (Eus. *Hist. Eccl.* 3.12, 3.20.1–2, 3.32.3–4). These early "bishops" of Jerusalem seem therefore to have been regarded as the Davidic dynasty of the end time. The oral traditions which Hegesippus recorded described the central kerygma preached by these kinsmen of the Lord: Jesus was the Messiah and the Son of Man, who would return to establish his earthly kingdom at the apocalyptic end of this world (Eus. *Hist. Eccl.* 2.23.10, 2.23.13, 3.20.4).

Hegesippus was the first Christian historiographer to introduce the (usually pernicious) notion of the fall of the church from its apostolic purity at a particular point in its history. In his case, he chose the death of the last blood relatives of Jesus during the reign of Trajan. Until then, he said, "they called the church virgin, for it had not been corrupted" (Eus. *Hist. Eccl.* 4.22.4, 3.32.7). Later theologians and church historians have dated the ravishing of the "pure and uncorrupted virgin" to the rise of *Frühkatholizismus,* the triumph of Constantine, or (in Pope Leo XIII's *Aeterni Patris*) to the Protestant Reformation.

Eusebius believed that Hegesippus was a convert from Judaism, because of his knowledge of Hebrew and Syriac and of the unwritten Jewish tradition, and because of his use of the Gospel according to the Hebrews (Eus. *Hist. Eccl.* 4.22.8). He might instead have been brought up in a kind of traditional E Mediterranean Christianity of still slightly Jewish slant, though certainly not the sort represented by the Judaizers whom Paul combatted, for he acknowledged the teachings of the church of Corinth and of Rome as identical to his own in all true essentials (Eus. *Hist. Eccl.* 4.22.1–3) and Eusebius regarded him as totally orthodox (*Hist. Eccl.* 4.7.15–8.2). He also used the LXX rather than the Hebrew text for the prophecy of James's martyrdom (Eus. *Hist. Eccl.* 2.23.15; Telfer 1960). Hegesippus did however describe the Sadducees, Pharisees, Samaritans, Essenes, and so on as those "among the children of Israel" who opposed "the tribe of Judah and the Messiah" (Eus. *Hist. Eccl.* 4.22.7), indicating that his version of Christianity preserved a strong sense of Jewish identity—members quite specifically of the tribe of Judah, who had been led originally by a Davidic episcopacy.

The passage preserved in Eus. *Hist. Eccl.* 4.22.3 has drawn much discussion. Hegesippus said that while in Rome, "*diadochēn epoiēsamēn* [literally, 'I made a succession'] until Anicetus, whose deacon was Eleutherus; Soter *diadechetai* ['succeeded'] Anicetus, and after him came Eleutherus." The older scholarship interpreted this to mean simply that Hegesippus researched and drew up a list of all the bishops of Rome, from Peter to Eleutherus. The more modern scholarship points out that "succession" in that context referred to continuity of teaching and identity of doctrines (Turner 1918). That Hegesippus put this in the form of a list of "bishops" in chronological order seems likely, however, given his treatment of the early Jerusalem church, so the older scholarship had a point, but it would be anachronistic to regard this as having been intended by him as a sacramental guarantee of an "apostolic succession" of ordination to the priesthood and the episcopacy. When pagan philosophers represented continuity of teaching by listing the noted leaders of a philosophical school in a chronological "succession" list, the issue was not sacramental efficacy but an attempt to show that the same philosophical positions had continued to be held through the entire history of that school.

The fragments of Hegesippus are important, in spite of the fact that he wrote fairly late in the second century, because he seems to represent contact with an oral or written tradition and a conservative Christian community that preserved many archaic features going back to the first century.

GLENN F. CHESNUT

HEGESIPPUS, PSEUDO-. The name given the anonymous author of a Latin account of the Jewish revolt against Rome in 66–73. Ambrose is most commonly assumed to be the author, but the arguments are not convincing. The title and author's name are missing from the earliest extant mss. (6th century), but internal evidence suggests a date of composition of ca. 370 C.E. and the probability that the author was a bilingual Antiochene, perhaps Evagrius, the translator of Athanasius' *Vita Antonii* and close friend of Jerome. His history, which seems to have been originally titled *De excidio Hierosolymitano,* relies heavily on Josephus without being a mere translation. The author also draws information from Livy, Suetonius, Tacitus, and other appropriate Greek and Roman sources to produce what E. M. Sanford called "substantially an independent book." In five books instead of Josephus' seven, it was often cited as a co-equal authority with Josephus in the Middle Ages, which read Josephus in Rufinus' translation. It contains apocryphal material about Peter, including some Simon Magus narratives and an early version of the "Quo vadis?" story (*De excid.* 3.2). The text of this story differs so dramatically from Ambrose's account (*Ser. contra Auxent.* 13) that the two could not have been written by the same author. This apocryphal material led to the association of this work with the Hegesippus (mentioned by

Eusebius) who wrote a history of the Church in the mid-2d century.

The author's main purpose is to show that God had withdrawn his favor from the Jews and that the destruction of the Temple in 70 C.E. was irreversible, the *supremum excidium* (this perhaps prompted by Julian the Apostate's abortive effort to rebuild the temple in 363). In his prologue, which is original and bears no resemblance to that of Josephus, he announces his intention to make "clear to the whole world—and this is an indication of the depravity of the race—that they brought their misfortunes on themselves." This theme reflects the 4th century church's claim to be the new Israel, heir to the OT promises. It is echoed in Ambrose, Jerome, John Chrysostom, and other Christian authors of the period.

Pseudo-Hegesippus supports his reinterpretation of history with biblical proof-texts. In 400 pages of printed text there are over 270 biblical quotations or allusions, some in the most unlikely or inappropriate places. In a speech put in the mouth of Titus as he besieged Jerusalem, there are allusions to Abraham's sacrifice of Isaac and Jephthah's sacrifice of his daughter (*De excid.* 4.41,2). In his speech urging the Jews not to begin the rebellion, Herod Agrippa reminds them to "let what is owed to Caesar be paid to Caesar" (2.9,1). Josephus, in his role as a character in the story, also quotes the NT when he urges his comrades not to commit suicide (3.17).

At other points the author makes additions to the biblical accounts. He refers (5.32) to Naboth as a prophet, a view shared by Jerome (*Comment. in Matt.* 21.35) and Ambrose (*Expos. in Lucam* 9.25). He also heightens the shame of Herodias' marriage to Herod Antipas by noting that she was carrying the child of her first husband Philip, Herod's brother, at the time (2.5,3). No other patristic source makes that claim.

These citations provide some insight into the thinking of the 4th century church and also a long-neglected textual witness. Comparison with the pre-Vulgate texts reveals that pseudo-Hegesippus' biblical quotations follow no single version. Since, as his use of Josephus demonstrates, he was capable of translating Greek, it seems most likely that he was working from a Greek text and not an early Latin version. His biblical citations could thus be considered a version in themselves, one dating from about the time Jerome was beginning the Vulgate. From Jerome's own writings (*Ep.* 5.3; *De vir. illus.* 125; *Vita Malchi* prol.) it is clear that he was in frequent and close contact with Evagrius at this time, even staying in his home for a while. Further study of pseudo-Hegesippus is needed to identify him; if he should prove to be Evagrius, comparison of his biblical citations with the Vulgate text could also prove illuminating.

ALBERT A. BELL, JR.

HEGLAM (PERSON) [Heb *heglām*]. A proper name equated with Gera in the RSV (1 Chr 8:7). Of the modern biblical translations only the RSV recognizes this verbal form as a proper name. Beck (*IDB* 2: 577–78) seemingly incorrectly identifies *heglām* as an ". . . alternative for the hypocoristic name Gera." The *Hip*ʿ*il* perfect form plus pronominal suffix can mean "caused them to be removed" or "carried them away into exile." The verbal form is used with *hu(w)*ʾ in the MT following a listing of three sons of Ehud in 1 Chr 8:7, Naaman, Ahijah, and Gera. These three sons are described as heads of families of the ones residing in Geba (8:6). They are given credit in this obscure reference, with Gera receiving chief emphasis, of deporting a group of Benjaminites from Geba to Manahath (8:6–7). Geba was one of the levitical cities of Benjamin as mentioned in Josh 21:17; 1 Chr 6:60; and Josh 18:24. It was located between Ai and Jerusalem some 6 miles NNE of the city of David close to Judah's N boundary. The city was an important site in the conflicts with the Philistines. The traditional site of Manahath is considered to be Malah, some 3 miles SW of Jerusalem (1 Chr 2:52–54).

The text is obviously difficult at this point. Scholars are divided as to whom, what, and where is actually being referred in vv 6–7 of 1 Chronicles 8. Slotki (1952: 47–48) suggests that perhaps Ehud is the subject of the verb *heglām* with the three sons as the objects. Myers (*1 Chronicles* AB, 60) speaks of the verses as defying explanation, but calls them a possible "garbled" version of the tradition reflected in Judges 20. Rudolph (*Chronikbücher* HAT, 79) considers that it is a reference to a movement of a portion of the Benjamin tribe to a site in Edom (1 Chr 1:40) in the postexilic period. Williamson (*Chronicles* NCBC, 83) points out that even though the sections of the Benjaminite genealogy move toward the postexilic time frame, not all material present must hail from this later period. Bartel (1969: 24–27) sees the narrative as being compressed and referring to the Benjaminites forcing indigenous inhabitants of Geba to relocate to Manahath in Judah (cf. 1 Chr. 2:52–54). Braun (*1 Chronicles* WBC, 127) suggests that a better translation of the verbal form *heglām* is "to emigrate." He states that this removes the difficulty of the exiler not being properly identified. He further suggests that the problem of period and circumstance remain at best obscure. However, he does suggest a possibility associated with Ehud, son of Gera, in Judg 3:12–4:11 in which action is taken against the Moabites. Braun feels that an event in the period of the Judges is the likely reference. This seems to be a situation in which one is forced to choose between a variety of speculative offerings. Given the current available options it may seem best to consider an emigration of some 9 miles from Geba to Malah associated with some military campaign at a time before the exile and likely as early as the period of the Judges.

G. EDWIN HARMON

ḤEGRA (26°47'N; 38°14'E). An ancient Nabatean settlement of the Roman era located in the Ḥijāz of Saudi Arabia. It is mentioned only rarely by classical authors, who locate it in the territory of the Nabatean king Obodas III on the Red Sea coast (Strabo 16.4.24 [782]); associate it with the Laeanitae, i.e., the Liḥyanites of Dedan (Pliny, *HN* 6.156), and in Arabia Felix (Ptolemy, *Geog.* 6.7.29). The site is identified with the ruins just S of the village of Madāʾin Ṣāliḥ about 15 km N of al-ʿUla (Dedan) and 110 km SW of Taymaʾ. It is generally assumed that a nearby port of similar name to the inland ruins once existed on the Red Sea coast, but it has never been located. During the late 19th century, the ruins were visited by C. M. Doughty, J. Euting, and C. Huber.

Recent surveys of the site have provided additional evidence of the history of the area (Winnett and Reed, *ARNA*, 42–53; Parr, Harding, and Dayton 1972), but the definitive study of the monuments and inscriptions of the settlement remains that of Jaussen and Savignac (1909; 1914). The only possible mention of the site in the Bible is Paul's reference to Hagar as representing "Mount Sinai in Arabia" (Gal 4:25); this has been interpreted as a cryptic allusion to the Nabatean settlement of Ḥegra (Gese 1967), but the proposal is not convincing (see Davies 1972).

The settlement remains unexcavated, and its ruins are disappointing, with only a few traces of the city walls and towers barely visible. Far more impressive is the spectacular necropolis surrounding the settlement, which rivals even that of Petra. It consists of some 79 tombs cut into the adjacent mountains, 31 of which have inscriptions dating from A.D. 1 to A.D. 75. They reveal the names and professions of their owners, most of whom represent a civic and military elite. Attempts to arrange the various types of tombs in a chronological scheme from the simple to the complex are defied by the information contained in the dedication inscriptions about their construction. The names of the artisans and stonecutters are mentioned in 16 of the inscriptions; most of them are members of a single family, that of ʿAbdʿObodat, which also possibly operated at Petra and Wadi Ramm (Schmidt-Colinet 1983). This artisan family's repertoire included different types of styled facades to satisfy the demands of the individuals who commissioned them; the elaborate and ornated types are reflections of social status and are contemporary with the simpler types. The architectural style of the facades has been associated with that of Ptolemaic Alexandria (Schmidt-Colinet 1980; McKenzie and Phippen 1987).

The first appearance of the village in ancient sources is in connection with the Arabian expedition of Aelius Gallus' Roman expedition in 26/25 B.C. The Roman enterprise was supported by 1000 Nabatean troops and 500 Jews. A Nabatean official named Syllaeus, the ambitious chancellor *(epitropos)* of the Nabatean king Obodas II (30–9 B.C.), served as guide for the forces that accompanied the Roman commander. After the disastrous campaign, the forces stopped at the port of Egra, located within the territory of Obodas' kingdom (Strabo 16.4.22–24). Later, at the death of the Nabatean king in 9 B.C., Syllaeus seized control of Nabatea with the approval of the Roman emperor Augustus. The challenge of his rule by Herod the Great's envoy, Nicolaus of Damascus, and the opposing Nabatean claimant, Aretas (IV), saw his prompt removal. It recently has been conjectured that Syllaeus was from the Ḥijāz and even owned property at Ḥegra. The single uncompleted facade of Qasr al-Bint at Ḥegra also has been associated with him, its unfinished state being explained by his execution in Rome in 6 B.C. (Schmidt-Colinet 1987: 147). If correct, this would make it earlier than any of the tombs dated by inscriptions, but the hypothesis is dependent on a chain of assumptions lacking any explicit evidence.

There is a unique Nabatean coin inscribed with the name *ḥgrʾ* evidently referring to the city. It has the head of a long-haired Aretas IV on the obverse, and a bell-like object with a handle on the reverse, just above the inscription. The coin has been interpreted as a commemoration issue for the founding of the city (Meshorer 1975: 53–54, no. 87). It is possible that Aretas IV developed the site in conjunction with the harbor village of the same name. Earlier evidence for the settlement is minimal (Parr, Harding, and Dayton 1972: 23). The cosmopolitan atmosphere of the settlement is reflected in inscriptions from the site by inhabitants from Aela (Aqaba), perhaps Edom (JS no. 138), Petra (no. 152), Moab (386), and S Syria (no. 226). One of the tombs (A8) is also for a Jew (no. 4 = CIS II, 219), and a sundial found at the settlement also dating from the 1st century A.D. is inscribed *mnsʾ br nṯn*, "Mannaseh son of Nathan" (Healey 1989). The Diwan sanctuary or cultic center in the Siq of Jabal Iṯhlib at Ḥegra contains graffiti petitioning the Nabatean gods of Dushara and Allāt, and also the Edomite Qos, and the Syrian deity Shaiʾ al-Qaum; there is also a reference to "Aʿara, god of Rabbel, who is in Boṣra," the city in the Ḥaurān that later became the capital of the Arabian province. Since the settlement is located on the incense route, Ḥegra was originally interpreted as a commercial entrepôt, but recently emphasis has been placed on its strategic importance as a military frontier settlement on the S borders of Nabatea (Negev 1976; Bowsher 1986).

During the accession year of the Nabatean king Rabbel II (A.D. 71–106), a rebellion against the royal house of Petra was led by Damasī, one of the scions of a prominent family at Ḥegra. The tribes of the Ḥaurān known from Safaitic inscriptions and probably former subjects of the Nabatean realm also supported the rebel cause (Winnett 1973). Both his father, Rabibʾel, and uncle, Ġanimū, the sons of a Damasippos, served as governors of Ḥegra and are known from inscriptions near Jauf (Dumat al-Jandal) in the Wadi Ṣirḥan (J. Milik and Starcky in Winnett and Reed *ARNA*, 142), explaining perhaps the N support for the rebel Damasī. The revolt appears to have been precipitated when Malikū, the younger brother of Damasī, was appointed governor of Ḥegra (JS no. 34) instead of him. The phrase "he who brought life and deliverance to his

people" in the royal titulary of Rabbel II perhaps refers to the quelling of the rebellion by the young monarch.

After A.D. 75, Ḥegra falls into obscurity. Its fate after the Roman annexation of Nabatea in A.D. 106 is equally difficult to determine. The hypothesis of R. Dussaud that Ḥegra was the center of a truncated Nabatean kingdom under the rule of a putative dynast named Malichus III, the son of Rabbel II, must now be rejected on the basis of new documentary evidence (Graf 1988: 176–77). The family of Damasippos continued to dwell at the Ḥegra until at least the 2d century A.D. Rabbinic sources appear to refer to the site in conjunction with Petra.

In the 2d and early 3d century, Roman auxilia—the *ala Gaetulorum* and an *ala dromedariorum*—and even a detachment of the Arabian legion of the *III Cyrenaica* served in the region. It is generally assumed that the settlement was abandoned during Diocletian's reorganization of the E frontier, but it is possible that it was never formally annexed after the Roman acquisition of Nabatea (Graf 1988). The silence about the Ḥijāz in official Roman documents such as the Peutinger Table and *Notitia Dignitatum* is noteworthy. The last datable Nabatean inscription indicates that Ḥegra was ruled by a man named ʿAdnon, whose brother ruled Tayma', descendants perhaps of a Jewish family (Stiehl 1970). Islamic sources provides the reason for the change in the name of the site to "Ṣāliḥ's villages." The Quran indicates that it was the Thamud who carved their houses out of the rock at the site. Other Arab sources characterized them as an idolatrous and rebellious people who rejected the prophet Ṣāliḥ, even slaying the camel he had conjured from the adjacent rocks to convince them of his divine mission. God then is said to have sent an earthquake to destroy the town and its inhabitants (Vidal 1971: 366). The ruins have never been excavated, but the Saudi Arabian Department of Antiquities has conducted several recent surveys of the environs and sponsored a preservation project for the ruins.

DAVID F. GRAF

HEIFER. A young cow, primarily one which has not given birth to a calf. This term is the usual translation of Hebrew *ʿeglâ* and occasionally of *pārâ*. A more precise translation of *ʿeglâ* would be "young cow," since an *ʿeglâ* may be a three year old animal (Gen 15:9) and may even be producing milk (so apparently in Isa 7:21–22; see Z. Zevit 1976: 384). Also, though contexts of certain passages suggest that *pārâ* may be translated "heifer," it should be kept in mind that this term indicates generally an adult female bovine (see R. Peter 1975).

The term *ʿeglâ* is found is several contexts in the OT.

(1) Young cows appear in agricultural contexts in capacities of plowing, threshing, and producing milk. Most of the instances in this category are metaphorical. Samson's party guests found out his riddle by "plowing with [his] young cow" (Jud 14:18). Babylon "gamboled like a young cow treading grain" when it spoiled Jerusalem (Jer 50:11). Ephraim was a trained young cow that "loved to thresh" (Hos 10:11). According to Isa 7:21–22, a young cow and two flock animals are to provide an abundance of milk.

(2) Young cows appear in various ritual contexts. Samuel was to take a young cow for a sacrifice at which David would be anointed king (1 Sam 16:2).

This type of animal is used in more unique ritual situations. Abraham divides a three year old young cow, along with other animals, in a covenant ceremony (Gen 15:9). A torch, probably representing God, passes between the pieces of the animals to establish the covenant with the patriarch.

In Deut 21:1–9 a unworked young cow is brought to a perennially flowing wadi where it is killed in a rite to remove pollution caused by a murder in which the culprit is not known. The killing of the cow has been interpreted as a sacrifice to the victim's ghost or underworld powers, the symbolic execution of the murderer, the representation of the penalty of the elders will suffer if their testimony that they had no part in the murder is false (cf. vv. 3–4, 6–8), the means of preventing the animal beset with guilt and pollution from returning to the community, or a reenactment of the murder which transfers blood pollution to an uninhabited area. The latter interpretation is preferable (see Wright 1987: 387–403; also Zevit 1976).

Also in a ritual context the term in the plural is used of bovine idols at Bethel (Hos 10:5).

(3) In miscellaneous contexts, "young cow" is found as a metaphor for Egypt (Jer 46:20). It is found as a constituent in the geographical name Eglath-shelishiyah (Isa 15:5; Jer

48:34; see EGLATH-SHELISHIYAH). Eglah was also the name of one of David's wives (2 Sam 3:5; 1 Chr 3:3).

The term *pārâ* has been construed occasionally as "heifer": (1) Many translate *pārâ ădummâ* in Num 9:2 (cf. vv. 5, 6, 9, 10) as "red heifer" rather than "red cow" because the context requiring an unworked animal suggests that the animal was young. Cf. the AV, RSV, JB and Greek.

(2) *Pārâ* in Hos 4:16, which compares Israel to a rebellious cow, has also been taken as "heifer" or "young cow" (see the translations mentioned above). This translation may be ultimately due to the influence of Hos 10:11 where Ephraim is metaphorically called a "young cow" (*ʿeglâ*).

(3) The LXX translates *pārôt* in Amos 4:1 as *damaleis* "young cows" or "heifers."

DAVID P. WRIGHT

HEIFER, RED. The animal slaughtered and burned to make ashes for purifying persons and objects from pollution by human corpses (Num 19). Though the context requiring an unworked animal for the rite implies that the animal is young (a "heifer"; cf. LXX *damalis*), the Heb. term *pārâ ădummâ* (v 2) literally means "Red Cow" (see HEIFER).

The rite of the Red Cow, found among the Priestly regulations of the Pentateuch, is unique in the OT. The legislation in Num 19:2–10, presented in terms of a revelation to Moses and Aaron, prescribes that the Israelites provide a perfect, unblemished red cow which has not been agriculturally worked. The cow is given to Eleazar, a priest, and Aaron's son who is next in line to become high priest, who takes it outside the camp. An anonymous slaughterer kills the animal under Eleazar's supervision. Eleazar then takes some of the blood and sprinkles it seven times in the direction of the front of the tent of meeting. An anonymous person, probably the same person who did the slaughtering, then burns the entire cow under Eleazar's supervision. When this is being done the priest throws cedar wood, hyssop, and scarlet thread into the fire. Finally, a pure person (this is someone other than the priest and the slaughterer/burner, since these are now impure; see below) then gathers the resulting ashes and stores them in a pure place outside the camp.

A main problem surrounding this rite is whether it is to be considered a sacrifice or an act of ritual slaughtering distinct from sacrifice. Certain features indicate that it is sacrificial. First, it is in fact called a *ḥaṭṭāʾt* (vv 9, 17), that is, a purgation sacrifice (otherwise known as a "sin offering"). Also, the sacrificial nature of the rite is underscored by the supervision and involvement of the priest Eleazar. His sprinkling of blood seven times toward the tent, which appears to be the means of initiating the ritual and consecrating the animal and its blood, particularly emphasizes the sacrificial nature of the ritual. Furthermore, the requirement of a female animal fits well with the requirement elsewhere that a *ḥaṭṭāʾt* of a lay individual be a female (Lev 4:28, 32; 5:6; Num 6:14; 15:27; the Red Cow, though provided by the community, is for lay individuals).

But though this evidence indicates that the rite is theoretically a sacrifice, other details show that it is very exceptional as such. Instead of being slaughtered at the altar at the sanctuary, the cow is killed outside the camp, apparently without an altar, in direct contradiction to general Priestly law (cf. Lev 17). The qualifications that the cow be perfect and unblemished are found in sacrificial rules (cf. Lev 22:17–25), but the additional qualification that it should not have had a yoke placed on it is not. This is found in cases which are not properly sacrifices (Deut 21:3; 1 Sam 6:7; Deut 15:19 has a similar requirement perhaps limited to firstborn sacrificial animals). That the cow is totally burnt is reminiscent of the total burning of a burnt offering (Lev 1:6–9, 12–13) or of the incineration of *ḥaṭṭāʾt* carcasses, whose blood is used in the Tent (Exod 29:14; Lev 4:11; 8:17; 9:11; 16:27, note the similarity of the list of parts here to that in Num 19:5; see also Lev 6:23; 10:18). But on second inspection it is really quite different. The burning of the holocaust is the means of making the offering, and the burning of *ḥaṭṭāʾt* carcasses is for the purpose of disposing of a impure sanctum. In Numbers the burning of the cow serves to provide ashes which will then later be used; it is not a means of offering or disposal. Finally the use of cedar, hyssop, and scarlet material is not found in sacrifice. The only other place where these three elements appear together is in the nonsacrificial rite for purification from scale disease (*ṣāraʿat;* see LEPROSY) in Lev 14:5–7, 51–52. There they are used as an instrument for applying purifying liquid, not burned, as in Numbers 19. These items certainly had symbolic meaning, but that meaning is unrecoverable (see Wefing 1981: 350 and Milgrom [1981] for explanation of these irregularities).

The goal of this unusual sacrificial procedure is to provide ashes for purifying persons and things from corpse contamination. Corpse contamination is one of the major impurities in the Priestly system of impurities. Persons or objects so polluted are impure for seven days and can pollute other persons and objects of a profane or common (i.e., nonholy) nature. See UNCLEAN AND CLEAN (OT). To purify from corpse contamination, the ashes obtained from the Red Cow rite are mixed with spring water (*mayim ḥayyîm;* Num 19:17). This water-ash mixture is called in vv 9, 13, 20, 21 *mê (han)niddâ* "water for purgation." See WATER FOR IMPURITY. A pure person dips hyssop in the water and sprinkles it on the corpse-contaminated persons or objects (v 18) once on third day of the period of impurity and again on the seventh day (v 19). In addition to sprinkling with the water for purgation, persons need to bathe and launder (in regular water) on the seventh day, and wait for evening, when they become pure (v 19). Noteworthy is the fact that Numbers 19 prescribes no seventh day ablutions for corpse contaminated objects that correspond to the laundering and bathing of people. Priestly legislation regularly has parallel purification procedures for persons and objects. This gap in the prescriptions was sensed by later editors

who consequently supplemented the law with Num 31:19–24 to provide the missing ablutions. According to this passage, objects that can endure fire (such as those of metal) are to be passed through fire. Other objects that cannot endure fire (organic items) are simply immersed in water (see Wright 1985).

One of the most striking things about the rite of the Red Cow and the ashes is that while they lead to the purification of those polluted by a corpse, they pollute pure people who participate in the preparing of the ashes or who touch the ashes or the water for purgation. The priest who supervises the burning of the cow is impure for one day and needs to launder and bathe (v 7). The one who burns the cow and the one who gathers its ashes are similarly impure (vv 8, 10). One who sprinkles the water for purgation or one who otherwise touches it becomes impure for one day (v 21). This paradox is explained by character of the Red Cow rite as a *ḥaṭṭā't* (see above). The purpose of other *ḥaṭṭā't* sacrifices is to purify; their blood is applied to various sancta in order to remove impurity from those sancta. The *ḥaṭṭā't* carcass and blood as a result become impure, even to the extent that they can pollute other persons and things (cf. Lev 6:20–21; 16:28). This explains the impurity of the Red Cow and its ashes. As a *ḥaṭṭā't* sacrifice it is impure and can pollute others (here it does so prospectively, before actual use in purification), but as an agent of purification it can purify those who are corpse contaminated (see Milgrom 1981).

Recent discussion has focused on the nature of the rite before its incorporation in the Priestly legislation in its final form. S. Wefing (1981) has argued mainly through a literary critical approach that originally the rite was a non-Israelite burnt offering. This was eventually incorporated into Israelite liturgy, not as a legitimate sacrifice, but as a sort of ordeal inveighing against pagan sacrifice. The *mê (han)niddâ,* which were added at this stage, were perhaps like the drinks for ordeal in Num 5:17–24 and Exod 32:20. Finally, late in the exilic period, the rite received its present form. The *mê (han)niddâ* lost their significance of ordeal and came to mean simply "water against impurity" or "water for purification." J. Milgrom argues from a more traditio-historical point of view that an earlier, non-Israelite, purgation rite for corpse defilement was taken over into the Priestly corpus and assimilated, as much as it could be, to its sacrificial system, particularly to that of the *ḥaṭṭā't* sacrifice. In this assimilation of the Red Cow rite to the *ḥaṭṭā't* scheme there was also a move made to reduce somewhat the strength of corpse contamination: according to Numbers 19 the impure person needs no first-day ablutions (contrast the scale diseased person's rite in Lev 14:8); the corpse-defiled person does not need to leave the camp (cf. a different law in Num 5:2–3); and no sacrifice is required (contrast Num 6:9–12; Ezek 44:25–27).

Later Jewish tradition devoted two tractates of the Mishnah to the issues of this ritual *(Para, Oholot).* The Temple Scroll developed the laws of corpse contamination in cols 49:5–50:19. For discussion of the Red Cow in postbiblical traditions, see Bowman 1958.

HEILSGESCHICTE. See THEOLOGY (BIBLICAL), HISTORY OF.

HEIR. See FAMILY.

HELAH (PERSON) [Heb *ḥel'â*]. One of two wives of Ashhur, listed in the family line of Judah (1 Chr 4:5, 7). Ashhur is identified as the ancestor of the people of Tekoa (v 5). Helah bore him Zereth, Izhar, and Ethnan (v 7). The other wife of Ashhur was Naarah. Her sons are listed in 4:6. In 1 Chr 4:5, Helah is named first, while in 4:6–7, Naarah's sons are recorded before Helah's (a chiastic arrangement).

Both wives' names are omitted in the Syriac of v 5. The name Helah apparently means "necklace." Noth (*IPN* 223; cf. *HALAT* 2: 302) points to *ḥălî* (pl. *ḥălā'îm*) and *ḥelyâ,* both of which refer to ornaments. See HAZZELELPONI regarding a proposed reading (in the *BHS* apparatus) of the end of v 3 as a gloss on the sequence of the names in vv 5–7.

KENNETH H. CUFFEY

HELAM (PLACE) [Heb *hēlām*]. A town in Transjordan ca. 40 miles E of the Sea of Galilee. In 2 Sam 10:1–10 we read that King David sent messengers to Hanun, king of the Ammonites, to comfort Hanun when his father Nahash died. Hanun insulted David's messengers. In preparation for war, Hanun hired Syrian mercenaries from Beth-rehob, Zobah, Maacah, and Tob. The Israelites under Joab defeated them all (vv 6–14). The Syrians regrouped. Hadadezer, king of Zobah (8:3), brought other Syrians from beyond the Euphrates and came to Helam (10:16). David and his troops went to Helam (v 17) and fought the Syrians. The army commander Shobach was struck and died and the Syrians were again defeated. They made peace with Israel and became subject (tribute payers?) to Israel. The same story is told in 1 Chronicles 19, but there is no mention of Helam. McCarter (*2 Samuel* AB, 269) notes Thenius' view of the Heb *hylm* as meaning "their army" (cf. Vulgate), but the LXX, Syr and Targ render it as a proper noun identical with *hl'mh* in v. 17. McCarter understands chapter 10 as a unit, though other commentators separate the Ammonites from the Aramaean wars and the vv 6–14 battle from the Helam battle. These views do not seem to affect the identification of Helam. Helam appears also in the LXX of Ezek 47:16 and 48:1 (Gk *Eliam*), but not in the Hebrew. In Ezekiel, the site is between Damascus and Hamath, not far from Hadadezer's main cities, Tebah and Berothai (2 Sam 8:8), from which David had taken large quantities of bronze as war loot.

Hoffmann identified Helam with Haleb, the city of Aleppo (Smith *Samuel* ICC, 316). Ewald connected it with Alamatha on the Euphrates as in Ptolemy's *Geography* 5.15 (Keil and Delitzsch, n.d.: 380). Ottosson (1969: 207) claims the Arameans would not have been threatened unless Helam was in Aramean territory. But McCarter (p. 273) and others consider this too far N. Shobach was invading Israelite territory or planning to, rather than waiting for David to come to Aramean territory.

The town of Alema, modern Alma, NE of Der'a in the plain of Hauran on the S border of Syria in N Transjordan is mentioned in 1 Macc 5:26, 35. Judas Maccabeus burned it after having liberated its Jewish prisoners. McCarter notes that in the Greek, Alema is preceded by *en*, "in," rather than *eis*, "at," which appears with the preceding places. The other places are "in" Helam, i.e., Helam is the name of a district in which the battle took place, rather than the actual siege of a city. The preceding site of Bosor is identified with Busr el-Hariri, 45 mi east of the Sea of Galilee. From an earlier date, the city name appears as *Hl'm* in the Egyptian Execration texts from ca. 1850 B.C., on a figurine now in Brussels (Albright 1941: 33).

HENRY O. THOMPSON

HELBAH (PLACE) [Heb *ḥelbâ*]. One of the towns from which the tribe of Asher failed to drive the Canaanite inhabitants (Judg 1:31). Earlier in the same verse the town of Ahlab is mentioned, and many scholars (*GP* 2:67; Boling, *Judges* AB, 455) argue that Helbah is either a dittographic error for or a variant spelling of Ahlab, the *Maḥalliba* of Sennacherib, which they locate at Kh. el-Mahalib (M.R. 172303). See AHLAB (PLACE).

Kallai argues that Helbah is an independent location, which he links with the *mēḥebel* of Josh 19:29 (RSV "Mahalab"), also mentioned in a description of the territory of Asher (*HGB*, 222). He argues that the initial *mem* of *mēḥebel* is really the preposition "from," so that the two names (Helbah and *Hebel) share the same consonants. On balance, it seems more probable that Helbah, Ahlab, and *mēḥebel* are all variants of the same name. See also MAHALAB (PLACE).

MELVIN HUNT

HELBON (PLACE) [Heb *ḥelbôn*]. A place mentioned in Ezekiel's lamentation over Tyre (Ezek 27:18). According to Ezekiel, Damascus traded wine from Helbon (as well as wool, and wine from Uzal) for Tyrian merchandise. There is almost universal agreement that this place is to be identified with modern Helbûn, located 11 miles N of Damascus (33°38'N; 36°15'E), an area where even today viticulture plays a prominent role in the local economy. Contemporaneous with Ezekiel, a Babylonian text indicates that Nebuchadnezzar had a predeliction for the wine from *mât helbûnim* (*ISBE* 2: 676). Strabo, in discussing the customs of the Persian kings (*Geog.* 15.3.22), notes how they adopted a fondness for "Chalymonian wine from Syria." The Gk *chalumōnion* perhaps reflects the original Semitic *ḥlbwn* (note the *b/m* interchange).

GARY A. HERION

HELDAI (PERSON) [Heb *ḥelday*]. Var. HELEB; HELED. **1.** One of twelve commanders supervising monthly courses of 24,000 men in the armed service of the king (1 Chr 27:1–15), Heldai was in charge of the course of the twelfth month (v 15). A Netophathite, that is, one from the town of Netophah in the hill country of Judah (1 Chr 2:54; Ezra 2:21–22), he is said to be "of Othniel," probably a reference to a family name, possibly descendants of the deliverer of the Israelites in Judg 3:7–11. This list of commanders and their functions is possibly a construct of its composer, since (a) no such monthly, conscripted, civilian army is mentioned elsewhere during David's reign; (b) the large figure of 288,000 men seems improbable; and (c) one of the commanders, Asahel (v 7), was dead before David had rule over all Israel (Williamson *1 and 2 Chronicles* NCBC, 174–75). However, the author/redactor's thesis, that David made preparations for the proper ongoing cultic and national life of Israel, as illustrated throughout chapters 23-27, draws on the fact that David took a census (cf. vv 23–24; chap 21) which could have been utilized for designing a monthly plan of conscription, a plan which would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

Because the names of the other eleven commanders appear again in the list of David's champions in 1 Chr 11:10–47 (= 2 Sam 23:8–39), it is probable that this Heldai is to be equated with Heled of 1 Chr 11:30 and Heleb of 2 Sam 23:29 and, therefore, was a member of this select class of warriors directly attached to the king for special assignments. ("Heldai" can be explained as an Aramized form of "Heled," while the name "Heleb" is probably a textual variant which arose because of the similarity of "b" *[bet]* with "d" *[dalet]* in the old Hebrew script; Meyers *Haggai and Zechariah* AB, 340).

2. A returned Babylonian exile who, according to an oracle to the prophet Zechariah, was to participate with the prophet in the symbolic crowning of the priest Joshua, a representative of a Messianic figure who would build the temple and rule upon the throne (Zech 6:9–15; vv 10 and 14). Due to the difficult language of the text, it is unclear if Heldai, along with Tobijah and Jedaiah, was to be taken along by Zechariah as a witness to this prophetic gesture (Mitchell *Haggai* ICC, 183–85) or if he was one from whom silver and gold were to be received in order to make the crowns which were used (Meyers *Haggai* AB, 337–38). The latter interpretation, which makes sense of the passage's stylistic difficulties rather than emending the text as the former interpretation does, is to be preferred. Reading with the latter interpretation, Heldai still probably functioned as a witness to the prophetic act, since the crown placed in the temple is to serve as a reminder to him and the others (v 14). Verse 14 in the Hebrew text has the name *ḥēlem*, "Helem," rather than Heldai. However, be-

cause of the presence again of Tobijah and Jedaiah, it is evident that "Helem" is either another name for Heldai or a spelling that arose due to textual corruption (see the variations for Heldai in 1. above). In the LXX, perhaps because of the symbolic nature of Zechariah's act, these names were read as appellatives.

Heldai is probably a secular name taken from the animal realm, meaning "mole" (*IPN,* 230).

RODNEY K. DUKE

HELEB (PERSON) [Heb *ḥēleb*]. See HELDAI (PERSON).

HELECH (PLACE) [Heb *ḥêlēk*]. Ezekiel 27 records an oracle against the city of Tyre, and in the oracle are references to foreign nationalities in Tyre's army--men from Persia, Lud, and Put, and men of Arvad (the island of Aradus, 125 miles N of Tyre) and Helech. These are usually taken to be foreign mercenaries, hired by Tyre to defend the city—"mercenaries from every country and allegiance to guard her walls and towers" says Eichrodt (*Ezekiel,* ET, OTL, 1970: 386) with some hyperbole. The RSV translates Helech as a place name, while LXX, Syriac, KJV, and ASV translate "thine army" from Heb *ḥyl,* "strength," "army" with the final letter understood as the feminine form of the pronoun "you" (Keil n.d.: 384; Eichrodt *Ezekiel,* ET, OTL, 1970: 379; Zimmerli 1983: 46). Simons' (*GTTOT,* 455) preference is that Ezekiel did not refer to a geographical or topographical name. Helech, like the Gamad or men of Gamad of v 11b in parallel, is also more like an appellative noun. With support from the LXX and Syriac and only a slight change in text, one can translate "the men of Arvad were your army (*ḥêlēk,* cf. v. 10) on your walls round about and watchmen (*šōmrîm* instead of *gammādîm*) on your towers." In contrast to Simons, Cooke (*Ezekiel* ICC, 300) thinks a proper noun is necessary.

If Helech is a place, it is probably the Assyrian *Hilakku,* the original "Cilicia" N of the Taurus mountains in SE Asia Minor, today's Turkey. These Cilicians were noted for their warlike character and would fit as mercenaries of Tyre. Hilakku is found in the records of Shalmaneser III (858–824). The Cilicians were conquered ca. 720 by Sargon II (721–705). The area revolted against Sennacherib in 696 and also against Esarhaddon (680–669), but ca. 668/7 they sent tribute to Assurbanipal (Mellink, *IDB* 2: 578).

The name appears later on coins of Tarsus in the 4th century. Cooke (*Ezekiel* ICC, 300) credits Halevy with the Helek/Hilakku identification, but thinks "the context implies a town nearer to Phoenicia." He notes Cornill's suggestion of Hethlon (Ezek 47:15; 48:1) near Hamath. Simons claimed the identification of *ḥêlēk* as Chalcis is only a guess based on assonance. Chalcis ad Belum (near Qinnesrin, SW of Aleppo) as well as Chalcis ad Libanum in the Syrian Beqaʾ (now ʾAngarr) are suggested sites, but they are too late in origin for this recognition in Ezekiel.

HELED (PERSON) [Heb *ḥēled*]. See HELDAI (PERSON).

HELEK (PERSON) [Heb *ḥēleq*]. HELEKITES. In Num 26:30 (RSV) Helek translates *ḥēleq,* which there appears as the name of a person, a son of Gilead (son of Machir, son of Manasseh). In Josh 17:2 (RSV), part of a description of the allotment of land to the tribe of Manasseh, Helek translates the phrase *bĕnê ḥēleq* ("children of Helek"), which is described in the text as a "clan" (*mišpāḥâ,* RSV "family"). In Joshua Helek is not identified as a son of Gilead but is a part of the tribe of Manasseh independent of Gilead.

In Num 26:30 Helek is named as part of a listing of the "sons of Joseph according to their families" (Num 26:28–37), and is specifically associated with a clan group of the same name (RSV: "the family of the Helekites" *[mišpaḥat haḥelqî]*). OT genealogies, such as that underlying the census report in Numbers 26, are often descriptions of the relations among social and ethnic groups under the guise of individual kinship relations. Perhaps then none of the references to Helek should be thought of as referring to an individual of that name, but rather to a clan group described as an individual to meet the needs of genealogical form.

This view is supported by the occurrence of the name Helek in five of the SamOstr (Reisner, Fisher, and Lyon 1924: 229–40). In these records Helek is not the name of a person. It is either the name of a clan, or, as Naʾaman (1986: 159) asserts, the name of an administrative district, albeit derived from an earlier clan name.

According to Boling (*Joshua* AB, 406–15), Joshua 17 places Helek among the clans of Manasseh located W of the Jordan. The Samaria Ostraca are widely seen to point to a location west of the Jordan for Helek (e.g., *LBHG,* 315–27). Num 26:30, on the other hand, by associating Helek with Gilead, suggests a location east of the Jordan. That Helek was located west of the Jordan is widely accepted, however. The genealogy in Numbers is usually explained as a result of literary development of the genealogical texts (Noth *Numbers* OTL, 206–207), or a combination of literary development and changes in the societal relations mirrored in the genealogies (*LBHG,* 222).

Although Helek in the OT probably refers to a group, not an individual, the use of Helek as a personal name in ancient Israel is attested on three bullae (clay document seals) from late 7th or early 6th century B.C.E. Judah (Avigad 1986: 56, 73, 96). As a personal name it is probably a shortened form of the theophoric name Hilkiyahu (HILKIAH).

RICHARD D. WEIS

HELEM (PERSON) [Heb *hēlem*]. **1.** An Asherite, the father of Zophah, Imna, Shelesh, and Amal (1 Chr 7:35). BHS suggests that the MT of 1 Chr 7:35a "and the son of

Helem his brother" should be amended to read "and the sons of Hotham his brother." The context (1 Chr 7:32–35) and some textual witnesses (several medieval Heb mss, LXX Lucian recension, Vg) support this significant change, which, incidentally, is adopted totally by the NEB but only partially by the RSV (no name change). With the acceptance of this proposed textual emendation, "Helem" of 1 Chr 7:35 becomes the same person as "Hotham" in 1 Chr 7:32. See HOTHAM. In some early editions of the RSV (1952/53) the name was erroneously printed as "Heler."

2. An exile who returned from Babylon (MT Zech 6:14), also called Heldai (RSV, Zech 6:10, 14; see n. i). See HELDAI. He was one of at least three prime donors from whom the prophet Zechariah took silver and gold, either to make a "crown" for Joshua, the postexilic high priest (RSV), or perhaps more originally for Zerubbabel, the governor of Judah and descendant of the house of David (see ZERUBBABEL), whose name was then subsequently expunged in the face of political realities (see also NEB 1 Chr 6:11, n. g). Still, as the present MT reads the noun in the plural, "crowns," perhaps even the idea of two crowns, a silver crown for Joshua and a gold crown for Zerubbabel, should be seriously entertained (Cohen 1957: 292). To be sure, Zech 4:1–6a, and 10b–14, if not also 6:12–13, envision the postexilic community as reconstituted under a dual leadership, an idea still fully present in the later Essene Jewish community uncovered at Khirbet Qumran. In MT Zech 6:10 Heldai, Tobijah, and Jedaiah contribute the metals which were then taken to the house of Josiah, the son of Zephaniah; in MT Zech 6:14, when the same persons are noted again, two of the former names turn out differently, viz., as "Helem and Hen (= Josiah), the son of Zephaniah." Nevertheless, since both these variants, Hen and Helem, are shorter than their counterparts in 6:10, the suggestion has been made to understand the names Helem and Hen as nicknames rather than as inexplicable textual deviations (Petersen *Haggai and Zechariah* OTL, 278). Oddly, in the LXX, though, except for the name Josiah, there is no mention of any proper names in this context whatsoever. The citation of the name Helem and the other names in the text has served to document for posterity the wholesome participation of those newly returned from exile in the important work of postexilic cultic reconstruction and in the recognition of the validity of Zechariah's own ministry and word of promise. In this vein, one recent interpreter of Zech 6:9–15 has gone so far as to view the making and placing of a crown on Joshua's head and then in the temple as one comprehensive prophetic symbolic action: in her view, the three returnees from Babylon were taken as witnesses to the house of Josiah where the precious metals were fashioned into a single "double-ringed" royal tiara, which prior to its being deposited in the rebuilt temple was placed symbolically upon Joshua's head as a temporary "stand-in" for the longed-for Branch from the house of David who would come one day to wear it (Achtemeier *Nahum-Malachi* IBC, 130–32).

ROGER W. UITTI

HELENA (PERSON). Flavia Iulia Helena (*CIL* VI 1134) is said to have been born, probably in the year 248, in a place called Drepanum in Bithynia (Proc. *Aedif.* 5. 2, 1–5), renamed after her death Helenopolis (*Chron. Pasch.* 527). She was of humble origin (Eutropius, *Brev.* 10. 2; Zosimus, *Hist. Nova* 2.8.2) and may have been working as a serving girl at an inn (Ambrosius, *De Obitu Theodosii,* 42) when Constantius Chlorus met her. The difference in their social status was probably the reason that there is no unequivocal evidence of a formal marriage. Of their union was born, in 273, the future emperor Constantine the Great. Their relationship probably came to an end in 289, when, for political reasons, Constantius married Theodora, daughter of the Augustus Maximian. From 289 until Constantine's rise to power in 306 the sources are silent about Helena. From about the year 306 she lived as a *nobilissima femina* (*RIC* VII, 493–94) at or in the neighborhood of Constantine's court. Her first residence was in all likelihood the northern capital of the Empire, Trier. The vast corpus of medieval legends seems to go back to an early tradition attesting the connection between Helena and Trier (Ewig 1956–58; Linder 1975: 84–93). Frescoes found on a ceiling underneath the cathedral of Trier after the Second World War, in a part of the imperial palace known as the *domus Helenae,* allows a similar inference (Weber 1984). One of the paintings is in fact a portrait of Helena herself. Some time after Constantine's victory over Maxentius (312) Helena moved to Rome, where she lived in the *Palatium Sessorianum* in the SE part of the city. This palace, including its neighboring extramural territory, the *fundus Laurentus* (*Lib. Pont.* 1, 183, Deichmann and Tschira 1957: 66–81), was her personal property. Inscriptions (*CIL* VI 1134; *CIL* VI 1135; *CIL* VI 1136) found near the *Palatium* provide evidence for Helena's presence and activities in Rome. One inscription of special interest states that Helena had *thermae* repaired which had been damaged by fire (*CIL* VI 1136).

Following her son, Helena acquired an interest in the Christian faith and was converted by Constantine (Eus. *Vita C.* 3. 47). She was sympathetic to Arianism (Athanasius, *Hist. Ar.* 4. 1–2). Literary sources are not the only proof of her conversion: the transformation of one of the rooms of the *Palatium Sessorianum* into a chapel in the 320s is another strong indication (Krautheimer 1967: 130). This *basilica Heleniana quae dicitur Sessorium* (*Lib. Pont.* 1. 196) later became known as S. Croce in Gerusalemme. When Constantine had become sole ruler after his victory over Licinius in 324, he bestowed on his mother the title *Augusta* (*RIC* VII, 45, 69). By doing this he made her one of the most important and prestigious women of the Empire. After Fausta's murder by her imperial husband (326), Helena became the most influential woman at Constantine's court. In the same year she undertook a journey to the eastern provinces of the Empire. Eusebius, bishop of Caesarea, informs us well about her activities in Palestine (*Vita C.* 3. 42–47). Her travels through the Holy Land are represented by Eusebius as a pilgrimage. He is full of praise for her piety and her charity. She gave lavishly to cities, to certain groups of soldiery, and to the naked and the helpless poor: obviously she could spend as much money from the public treasury as she thought fit. She naturally donated large amounts of money to the churches

she frequented, even to those in the tiniest places. Prisoners and forced laborers in the mines were freed at her orders, and exiles were recalled. She is most famous for the dedication of two churches in the Holy Land: the Church of Nativity in Bethlehem, built over the very cave where Christ was born, and the Church of Ascension on the Mount of Olives. At the end of the year 327 or early in 328, shortly after her return from the Holy Land, Helena died, at the age of about eighty years, in the presence of her son, probably in Nicomedia (Eus. *Vita C.* 3. 46). Accompanied by a large military escort her corpse was transported to Rome, where she was buried in a porphyry sarcophagus (now in the Vatican Museum) in a mausoleum at the Via Labicana not far from her palace in Rome (Eus. *Vita C.* 3. 47; Deichmann and Tschira 1957).

Whereas the historical evidence for Helena is scanty, the legendary data are abundant. Already at the end of the 4th century and in the first half of the 5th century several versions of a legend had emerged in which the discovery of the true Cross was ascribed to Helena. The legend probably originated in Jerusalem. Since the 340s at least the Cross was venerated there, and parts of it had already been distributed over the world (Frolow 1961: 155–65), but its discovery was not attributed to anybody until in 395 Ambrosius mentioned Helena as the finder of the Cross. Shortly afterward the legend is recorded by several other Latin writers (Rufinus, *Hist. Eccl.* 10. 7–8; Paulinus of Nola, *Epist.* 31. 4–6; Sulpicius Severus, *Chron.* 2. 33–34) and some time later by Greek church-historians (Theodoretus, *Hist. Eccl.* 7. 18; Socrates, *Hist. Eccl.* 1. 17; Sozomenus, *Hist. Eccl.* 2. 1).

A divine vision urges Helena to go to Jerusalem in search of the Cross. A sign from heaven shows her the place where the Cross is buried. Excavations at Golgotha result in the discovery of three crosses: that of Christ and those of the two criminals. The *titulus*, reading in Greek, Latin, and Hebrew: "Jesus of Nazareth, King of the Jews," which Pontius Pilatus had attached to Jesus' cross (John 19: 19–20) is also found, but it had become detached from the Cross. The three crosses lie in a heap, and it is impossible to identify the true one. Macarius, bishop of Jerusalem, inspired by a divine message, helps to reveal which is Christ's Cross. By bringing the crosses into contact with a dead or dying person the true Cross is identified. The touch of two of these crosses has no effect, but on the contact with the third cross the person is healed/resurrected. This is a miracle that could be performed only with the true Cross. Later on Helena also found the nails by which Christ had been fixed to the Cross. She sent them to Constantine to be used in a diadem and a bridle and so fulfilled Zacharias' prophecy (Zacharias 14:20). This is briefly the main version of the legend of Helena, as told by the various Latin and Greek authors.

Another version, transmitted in Syriac, Greek, and Latin, introduces a Jew called Judas who, with some initial reluctance, helps Helena to find the Cross and the nails. Impressed by the power of the Christian God, Judas is converted and adopts the name Cyriacus. Eventually he is to become a bishop of Jerusalem and dies a martyr's death in the reign of Julian the Apostate (Straubinger 1912: 1–81). This version became very popular in the Middle Ages.

A third version of the legend of the discovery of the Cross, the so-called Protonike legend, is of Syrian origin. It was inserted in the Edessan *Doctrina Addai* but continued also to circulate independently or in connection with the Judas-Cyriacus version. It relates events that are supposed to have taken place in the 1st century A.D. In this version the Cross was found by Protonike, wife of the emperor Claudius (Nestle 1889; Lipsius 1880: 67–92). Although Helena does not figure in this version, there are such striking similarities between the two legends that the legend of Protonike should be regarded as a derivative of that of Helena.

The attribution to Helena of the discovery of the Cross has made her one of the most famous women of early Christianity. Her journey to Palestine served as a model for future pilgrims (Hunt 1984: 49) and the legends of her devotion provided an example for many a Byzantine empress. The Church canonized her for her pious deeds. Her commemoration is on August 18.

JAN W. DRIJVERS

HELEPH (PLACE) [Heb *hēlep*]. The first place mentioned in the description of the territory of Naphtali (Josh 19:33). Both the LXX rendering of the name (Gk *meeleph*) and the explanation in the Talmud (*j. Meg.* 1:1, 70a) imply that the prefixed *mem* is part of the name. The context, however, shows that this *mem* has its usual meaning (MT *mēḥēlep,* "from Heleph"), and that Heleph is the starting point of Naphtali's S border, which is described E from the Mt. Tabor area to the Jordan (while Aznoth-Tabor is the starting point of the W border described from Mt. Tabor northward). Saarisalo (1927: 98, 122) has suggested identifying Heleph with Kh. ʿIrbadah (M.R. 189236) 4 km NW of Mt. Tabor. Pottery of the 9th–8th centuries B.C.E. has been found at the site (Gal 1982: 19), situated at the point where the E-W route, "Darb el-Hawarneh" (Oded 1971), meets the main N-S route, often called the "Way of the Sea." Located close to this site is Kh. et-Tuggar, which

contains remains of caravanseries from Turkish and earlier periods.

RAFAEL FRANKEL

HELEZ (PERSON) [Heb *heleṣ*]. **1.** One of David's champions, a select class of warriors directly attached to the king for special assignments, named in the parallel lists of 2 Sam 23:8–39 (v 26) and 1 Chr 11:10–47 (v 27). Although of high repute, he is distinguished from the more elite warriors (vv 8–23 and 11–25, respectively) listed before his grouping. In 2 Sam 23:26 he is called a Paltite, often assumed to refer to Beth-pelet in the Negeb of Judah (*NHT,* 369), whereas in 1 Chr 11:27 he, as well as Ahijah (v 36), is designated a Pelonite, either a gentilic name with an unidentified referent or a textual corruption.

The same Helez appears to be mentioned in a list of commanders found in 1 Chr 27:1–15 (v 10), since this list mentions eleven other mighty men found in 1 Chr 11:10–47. (However, here Helez, "the Pelonite," is also said to be "of the sons of Ephraim," a designation which would conflict with the interpretation that Helez of 2 Sam 23:26 is from Beth-pelet in Judah.) These commanders were each in charge of a monthly course of 24,000 men in the armed service of the king; Helez being in charge of the seventh month. This list of commanders and their functions is possibly a construct of its composer, since (a) no such monthly, conscripted civilian army is mentioned elsewhere during David's reign; (b) the large figure of 288,000 men is improbable; and (c) one of the commanders, Asahel (v 7) was dead before David had rule over all Israel (Williamson *Chronicles* NCBC, 174–75). However, the thesis that David made preparations for the proper ongoing cultic and national life of Israel, as illustrated throughout chap. 23–27, draws on the fact that David took a census (cf. vv 23–24; chap 21) which could have been utilized for designing a monthly plan of conscription, a plan which would have been analogous to Solomon's monthly courses for his provision (1 Kgs 4:7–19).

2. The son of Azariah and father of Eleasah, occurring in the diverse genealogical material of the tribe of Judah (1 Chr 2:3–4:23; 2:39) in the introductory lists and genealogies of the books of Chronicles (1 Chronicles 1–9).

Helez is possibly an abbreviated form, missing a theophoric element, for, "Yahweh has drawn out *(Qal)* / delivered *(Pi'el)*" as in the extrabiblical *ḥlṣyhw* (*TPNAH,* 94) or the Phoenician *ḥlṣb'l,* "Baal has drawn out" (*IPN,* 180).

RODNEY K. DUKE

HELI (PERSON) [Gk *Hēli*]. The father of Joseph and son of Matthat, according to Luke's genealogy tying Joseph, the "supposed father" of Jesus, to descent from Adam and God (Luke 3:23). D omits Heli, substituting a genealogy adopted from Matt 1:6–15 for Luke 3:23–31. Heli (some mss and versions read Gk *ēli,* as well as an *-ei* ending), as the father of Joseph, occurs nowhere else in the biblical documents, including Matthew's genealogy, as a relative of Jesus, although the name is found elsewhere in the OT as Gk *ēli* and Heb *'ly* (1 Sam 1:3 etc.) (Fitzmyer *Luke 1–9* AB, 500). Kuhn (1923: 208–209, 211) argues that two seemingly parallel lists of names—Luke 3:23–36 (Jesus to Mattathias) and 3:29–31 (Joshua/Jesus to Mattatha)—were originally identical, the first perhaps reflecting a Hebrew context and the second, in an Aramaic context, tracing Mary's line of descent (since it does not mention Joseph as Jesus' father). Heli in the first list corresponds to Eliezer in the second list. Kuhn posits that Eliezer perhaps is derived from Heli appearing as Heb *zr' 'ly,* meaning "of the seed of Eli," but later misunderstood and corrupted to Heb *'ly'zr,* with the result that Eli was named as an ancestor of Jesus in both lines. Few scholars have found this suggestion plausible. Strack and Billerbeck (Str-B 2:155; cf. Kuhn 1923: 209–10 n. 1) cite a Miriam the daughter of Eli in *j. Hag.* 2:77d, 50, who could have been identified with Mary, Jesus' mother, making Eli Joseph's father-in-law. But this is rightly rejected (see also Marshall *Luke* NIGTC, 162). More attention has been directed toward harmonizing Matthat as the father of Heli in Luke 3:23–24 with Matthan as the father of Jacob in Matt 1:15. See MATTHAT #2 for discussion. A few late mss include "of Jacob" after Joseph and before "of Heli" in Luke 3:23.

STANLEY E. PORTER

HELIODORUS (PERSON) [Gk *Hēliodōros*]. According to 2 Maccabees 3, Heliodorus, an official of the Seleucid court, was sent by Seleucus IV Philopater to confiscate funds from the Temple in Jerusalem. Simon, the administrator of the Temple, conspired with the Seleucid governor of Coele Syria and Phoenicia, Apollonius, to convince Seleucus to seek funds deposited in the Temple. While in the Temple treasury, Heliodorus encounters an apparition in the form of a rider wearing golden armor on a horse and two youths who strike Heliodorus repeatedly. Heliodorus is saved by the prayers of the high priest Onias III. Admonished by the reappearance of the two youths to show gratitude for his life, Heliodorus offers sacrifice to God and returns to Seleucus with news of the power of the Jewish God. Appian mentions Heliodorus as an officer of the Syrian court who masterminded the conspiracy to assassinate Seleucus and install himself as king (*Sur* 45). In Appian's history Heliodorus' conspiracy is thwarted by Eumenes and Attalus, who make Antiochus Epiphanes king. With respect to the account of 2 Maccabees 3, Bickerman identified two separate versions which were merged (1939: 21–35). Version A contains the story of the horse and rider (vv 24–25) and version B includes the account of the two youths who flog Heliodorus (vv 26–28). *4 Macc.* 3:19–4:14 roughly parallels Bickerman's version A although it is not Heliodorus but Apollonius who enters the Temple and is attacked by several figures on horseback. It

is noteworthy that the account in 2 Maccabees 3 deems Heliodorus' attempted appropriation of Temple funds reprehensible, but not his presence in the Temple. Zeitlin noted that as *4 Macc.* 3:11 relates that Apollonius collapsed in the Court of the Gentiles (which did not exist), the author of *4 Maccabees* was more sensitive to the issue of the defilement of the Temple, whereas 2 Maccabees focuses on the attempted theft (1954: 122, n. 12 and 126, no. 27). Goldstein suggests that the Temple treasury was located on the Temple mount but was not part of the complex forbidden to gentiles (*II Maccabees* AB, 209). This thesis is supported by Josephus, who indicates that the outer court of the Temple was open to all individuals, including foreigners (*AgAp* 2.103). That Heliodorus offered sacrifice to God was also not unknown. Josephus records that Alexander the Great also made sacrifice (*Ant.* 11.8.5 §336). It is possible that as Heliodorus was contemplating a political coup, he found it politic to curry favor with the Jewish high priest.

MICHAEL E. HARDWICK

HELIOPOLIS (PLACE) [Heb *bêt šemeš*]. A city of Egypt mentioned by Jeremiah in an oracle of doom directed against the Egyptians (Jer 43:13). The Hebrew here (lit. "house of the sun [which is in the land of Egypt]") clearly echoes the Gk form *Heliopolis*, "city of Helios (the sun)," so called from the worship of solar deities peculiar to the city. In Egyptian the town was called *Iwnw*, "pillar town," a form reflected in Akk *Ānа*, Coptic *Ōn*, and Heb *ʾôn/ʾāwen* (Ezek 30:17), which LXX renders *Helioupoleus*). The ancient city is now identified with Tell Hisn in Matariyeh, a N suburb of Cairo. See also SUN, CITY OF THE.

Heliopolis was the metropolis of the 13th nome of Lower Egypt, occupied as early as predynastic times (Debono 1954), with extensive building operations carried out throughout the Old Kingdom. Although never a center of political power, the local high priesthood ("the greatest of seers") became influential early in the Old Kingdom and maintained itself throughout most of Egyptian history (Moursi 1972; Daressy 1916). The principal deity was Re-harakhty (*RÄR*, 269), but Atum figured more prominently in Heliopolitan theology (Myśliwiec 1978). Attached to the figure of Atum were the "Nine" (Ennead), i.e., Atum himself and the eight deities descended from him, the whole providing both the framework of solar creation and the mythological genealogy of the king. By the end of the 4th Dyn. Pharaoh had become "son of Re," and the theology of Heliopolis had involved itself in the legitimation of kingship (Anthes 1954; 1959). In the Pyramid Texts (see *AEL* I: 29–50) of the late 5th through 8th Dynasties (ca. 2450–2180 B.C.) the dominance of the cult of Re was complete (Faulkner 1969), and (at one level) its antipathy to Osiris and his cycle most marked (Griffiths 1980: 99–107). This theological importance of the town and its gods continued through the Middle Kingdom when the solar cult was clearly the informing principle behind the Coffin Texts. Likewise in the fields of art and architecture, style, repertoire, and construction techniques seem to have owed a great deal to Heliopolitan prototypes (Gasse 1981).

During the 2d millennium B.C. royal construction was lavished upon the site. Senwosret I rebuilt the temple of Re-Harakhty and contributed an obelisk and a palace (El-Banna 1981). Whether the Hyksos built the earthen embankment there is a moot point (Kemp, *AESH*, 157) but they certainly continued the worship of Re. Under Thutmose III two obelisks (now in London and New York) were erected, the enclosure wall was restored, and various gates were added (Radwan 1981); Amenophis II and Thutmose IV contributed some decoration, and Amenophis III erected a temple to Horus (Bakry 1967). Akhenaten built a temple called *Wṯs-itn* ("Elevating the Sun disc") somewhere on the site (Habachi, 1971). The Ramesside kings built extensively at Heliopolis: temples (Sety I, Rameses II, Merenptah, Rameses III, and Rameses IV; see Saleh 1981–83; Bakry 1967), chapels for Mnevis (Rameses II, Rameses VII), royal mortuary installations (Rameses IX), and storehouses (Rameses III). During the 20th Dyn. the city reached its apogee in material wealth, owning 12,963 chattels, 45,544 head of cattle, 64 plantations, over 100,000 acres of farmland, and 103 Egyptian towns.

Geography dictated that Heliopolis' main orientation should be S towards Kher-aha (modern Fustat), whence proceeded the Heliopolis canal which passed W of the town. The topography of the site itself centers upon the main enclosure, 1100 × 475 m. The principal and most ancient temple belonged to the sun-god Re (-Harakhty) and was associated with an artificial mound of sand and a sacred lake. Adjacent thereto stood the "Mansion of the *benben*-stone" (a truncated obelisk sacred to the sun-god; *KG*, 380) focusing upon a monumental staircase and window for viewing the sun. Of equal antiquity, and particularly concerned with the legitimation of kingship (Anthes 1959: 192–93; Griffiths 1980: 178–9), was the "Great Mansion," or the "Mansion of the Prince," associated with the creator Atum (El-Banna 1985: 149–63; Mysliwiec 1978). Here stood the *išd*-tree, on the leaves of which the king's name and annals were inscribed (Redford 1986: 82), while acacia and willow trees were also revered in their own shrines. On the N side of the site stood some sort of installation dedicated to the "Souls of Heliopolis," divine manifestations of the powers of the place, while on the S, west of the canal, was the temple of Saosis and Hathor, mistress of Hetpet. Sacred animals associated with the solar cults and worshipped at Heliopolis included the phoenix, *bnw*, revered in the "Mansion of the Phoenix," and the black bull Mnevis, "Re's replica, who elevates Truth to Atum" (Myśliwiec 1978, I: 33ff, 78–79). The latter possessed a formal burial ground NE of the city.

Throughout the New Kingdom, Heliopolis occupied a prominent place in the theology of kingship. Kings were considered the image of the sun-god on earth. The coronation was supposed to take place at Heliopolis, and the well-known motif of Atum affixing the crown in the presence of the *išd*-tree is of Heliopolitan inspiration (Myśliwiec, 1980). Princes might enjoy appointment as high priest of Re, while kings could assume the appellative

"Heliopolitan ruler" in imitation of Atum (Myśliwiec 1978, II: 99).

Heliopolis suffered in the foreign invasions of the 20th Dyn., and before the close of the New Kingdom it had already begun to decline (Osing 1983). At the end of the 20th Dyn. (ca. 1080 B.C.) are reports of lawless acts perpetrated by the inhabitants (Caminos 1977). Although Osorkon I (ca. 900 B.C.) lavished gifts on its temples, a century later Heliopolis had sunk to a mere dependency of neighboring Athribis as an appendage of the crown prince. With the visit of Piankhy in the late 8th century, the fortunes and reputation of Heliopolis revived, and the Saite period (664–525 B.C.) marked its last brief restoration, a period contemporaneous with the oracles of Jeremiah and Ezekiel. It was then that the priests of Heliopolis gained a reputation for intellectual and "scientific" pursuits (cf. Strabo xvii.1.29). Solon is supposed to have studied under Psenophis of Heliopolis (Plut. *Sol.* 113) and Pythagoras with an Oinouphis from the same town. The tradition to which Strabo and Apion fell heir made Moses a priest of Heliopolis (Redford 1986: 284–88), and the same late prominence of the city may account for its presence in the Pentateuch (Gen 41:45, 50; 46:20; Exod 1:11 [LXX]).

Strabo found Heliopolis mostly deserted in his day (1st cent. B.C.), the temples in ruins and only a few priests performing the cult (xvii.1.27–29). Allusions in Chaeremon and Plutarch, both 1st cent. A.D., undoubtedly derive from earlier sources. In 640 A.D. Heliopolis was the site of one of the decisive battles in the Islamic conquest of Egypt.

DONALD B. REDFORD

HELIOS (DEITY). Although the Gk sun-god *(Helios)* was not one of the great Olympian deities, it rose by way of the history and politics of religion to become, as the focus of a philosophical theology, an imperial god. In this latter form lies its significance for Judaism and Christianity.

A. Classical Greece

The sun was the object of only marginal veneration by Greeks, although the sun enjoyed respect as a symbol of life. Socrates is said to have called upon the sun each morning (Plato *Symp.* 220d). Metaphorically the sun often represents life, and death represents the sun's departure; injustice is brought by the sun into "the light of day." The seasons, day and night, and nature all originate from the sun. Love, happiness, and freedom can be referred to as "sun." Goodness and truth are related to it. The Greeks were aware that the sun was the object of worship by non-Greeks, i.e., the barbarians (Plato *Leg.*, 10.887 e; *Cra.* 397c). As a deity the sun-god functioned for the Greeks primarily as a witness to oaths (Hom. *Il.* 11.30; *Od.* 5. 184) and as a patron of justice and law (already characteristic of the sun-god in the ancient East). The sun's universal presence promises protection and security. Offerings made as part of an oath were accompanied by prayer to Zeus, the sun, the waters, and the earth (Hom. *Il.* 3.268ff.) and Zeus, the earth, and the sun were frequently addressed in this context. For Aeschylus, the sun is the witness to the trials of Prometheus (*PV* 5.88ff.). Yet another function of the sun-god was healing, especially for blindness. The sun was the god of the vision given at birth; at the same time, the sun could send blindness as a penalty.

The cult of Helios was centered especially in Rhodes, where the sun-god (Helios) was considered the "Lord of the Island" (Pindar *Isthm.* 7). A temple to the sun was found there, and "sun-festivals" (Gk *Aleieia* or *Aleia*), with games, competitions, sacrifices, and processions, were celebrated. The Colossus of Rhodes was the sun. Additional cult centers are known to have been located in Laconia, Argolis, Elis, Athens (as god of oaths), Apollonia (Illyria), and Crete. In Corinth the sun was considered the main deity of the fortress, which was known as the City of the Sun and minted coins showing the sun-god as a charioteer driving four horses. The kiss of the hand, prostration, and sacrifices of white sheep and horses were cultic acts associated with the sun cult.

The legends and myths associated with the sun-god are largely of late origin. The deity's father was said to have been the Titan Hyperion (but also Zeus and Hephaestus); his mother was the Titan Theia or Europhaessa; his sister was Selene (the Moon). His spouse was variously given as Perse, Antiope, and Selene (!); his lover as Leukothea, Clytia; his children as Selene (!), Eos (Dawn), and Circe (according to Homer). The sacred sheep and cattle of the sun were known already to Homer (*Od.* 1.8–9; 11.108ff.; 12.127ff., 260ff.) In late antiquity the Phoenix legend was

linked to the sun (cf. *1 Clem.* 25). In literature and art the sun-god is initially portrayed as a "wanderer" (Homer), then as riding on a chariot drawn by horses. Originally symbolized by the sun-disk above his head, the Sun was later identified by a wreath of rays (from about the 5th century B.C. until the end of the ancient world). Because, possibly under Egyptian influence, the sun's nightly journey from the west back to the east was portrayed as taking place in a ship (in the form of a kettle or chalice), a boat or a bowl also served as an emblem for Helios.

B. Hellenistic Era and Late Antiquity.

The late antique sun cult had its antecedents in the Hellenistic era. Both foreign, oriental sun-worship and astrological teachings, on the one hand, and new philosophical ideas (especially in Stoicism), on the other, contributed to the emergence of the sun-god (Helios) as a universal deity (Aion). The ancient image of the sun owed much to these, above all his being considered equal to other deities, especially Apollo (himself an oriental sun-god), Pluto, Dionysos (through Orphism), and the oriental deities Sarapis and Mithras. Cleanthes (331/30–232/31 B.C.) was the first to mention the sun as the director (Gk *Hegemon*) of the cosmos (cf. Diog. Laert. 7.139). In this way the sun became the highest principle, the prime source for the world of matter and spirit (cf. Poseidonios and Pliny). Helios originated as a fiery substance, the intellect *(nus)* and soul of the cosmos from which all human souls have arisen like rays of the sun. This "theologia solaris" had monotheistic tendencies (in the utopian sun-state of Jambulos only the sun was worshipped) but remained primarily on the level of philosophy and theology until, probably through the Julian calendar reform carried out by Augustus (46 B.C.), it became a cultic religion (according to Nilsson 1933). The sun-god then began to play a larger role in popular religion. This is indicated by magical texts, which cite a number of hymns to the sun that illustrate the "syncretistic" spirit of the cult (*PGM* [ed. Preisendanz] 1.315–25 [Betz 11]; 3.198–229 [Betz 23–24]; 4.436–61 [Betz 46]; 4.939–48 [Betz 56–57]; 4.1957–89 [Betz 72]; 8.74–81 [Betz 47]). The public role of sun-worship was augmented by the expansive penetration of the Syrian-Arabic sun cult (especially Bel of Emesa) that was firmly established in Rome by the Severan dynasty (193–235). The final step was the creation of the imperial cult of the *Sol Invictus* by Aurelian in 274. The calendar firmly established the festival of the *dies natalis Solis invicti* (Dec. 25) in the Roman Empire.

A variety of evidence for growing veneration of the sun since the 1st and 2d centuries can be cited: Plutarch considered Apollo/Helios as the highest god; Apollonius of Tyana (1st century) prayed regularly to Helios; Mesomedes, one of Hadrian's freedmen, composed hymns to the sun; the Hermetic writings, drawing on ancient Egyptian tradition, are familiar with the sun as the ruling director of the world (especially Tractate XVI); Helios and Apollo dominate the well known novel "Aithiopica" of Heliodorus (3d century), the son of a priest of the sun-god from Emesa (Homs). The 31st Homeric hymn, probably also dating from this period, is dedicated to the sun-god and concludes with the petition, "Hail to you, Lord! Freely bestow on me substance that cheers the heart." The Orphic hymn to the sun (no. 8) is also probably best understood as coming from this period. In it the sun-god is addressed as lord of light, life, and the seasons and as the cosmic, all-encompassing eye of justice, "immortal Zeus," "Lord of the World," and "Light of Life" (ed. and trans. A. Athanassakis).

The time was ripe for the identification of other gods with the sun, a sort of "solarization" of the Pantheon. In this process Apollo and Dionysos followed the path already taken by the Egyptian deity Sarapis and the pseudo-Iranian god Mithras. The Roman emperors began to add "New Sun" to their titles, beginning with Caligula (37–41), then Nero (54–68), who had a statue to the sun placed in front of his palace and minted the first coins carrying an image of the emperor crowned by rays of the sun. Caracalla (211–17) and Elagabalus (218–22) were called *Helioi.* All of this pointed to the victory of the *Sol invictus* as the focal point of the political imperial ideology as described above. Emperor Julian (360–63) was a firm adherent of the sun cult, as his famous speech to "King Sun" (*Or.* 4) makes clear. The monotheistic trend in Julian owed something to both resistance to and influence by Christian ideas. The sun is the highest being, binding the invisible (intellectual) and visible world together, and has salvific significance as the creator of humans and the refuge of souls that originated from him.

The 4th and 5th centuries brought what was probably the height of the solar religion. The late- or neoplatonic philosophy owed as much to it as did the (heathen) emperors. In his *Saturnalia* (1.17–23), Macrobius (ca. 400) developed a monotheistic teaching on the sun-god that had a pantheistic tint: Helios/Apollos is not only the supreme Lord, power, and inner mover of the intellectual and material world, but he is also linked to all the old and new gods. Such neoplatonists as Libanius, Iamblichus, and Proclus (who wrote a hymn to the sun-god) were likewise taken in by this sun cult, as were most of the contemporary intellectuals. Indeed, Christianity in the west understood its *Soter Christus* as *Sol Salutis* and, in contrast to the Greek east, retained the sun-day of the ancient solar calendar. Churches were thus oriented toward the east in a manner corresponding to the Helios temples. What was being lost in the sun cult, however, was restored by the new religion: a more popular orientation, which was missing in the politically abstract sun theology.

C. Judaism

The so-called OT (in the form of the LXX) refers to apostasy into worship of the sun (LXX: *Helios*), e.g. Deut 4:19, 17:3; Ezek 8:16; 2 Kgs 23:5 (Baal = *Helios*), but uses the word "sun" solely metaphorically or symbolically. God is not directly described as sun, but his eyes are brighter than the sun (Sir 23:28) and his throne is like the sun (Ps 89[88]:37). God's wisdom *(Sophia)* is greater than the sun (Wis 7:92). God established the sun and thus brought light into being (1 Kgs 8:12; Ps 18[19]:5, 73[74]:16; Gen 1:3–4). With God's help Joshua was able to interrupt the sun's journey (Josh 10:12–13). Sun and moon (Selene) are called upon to praise God in Dan 3:62 (LXX). In Mal 3:20 (LXX) the promise of salvation to God's people is called the "sun of righteousness" (*helios dikaiosyne;* see also Isa 30:26).

This situation helps explain why a mosaic with the sun

and the planets has been found in the 3d-century synagogue at Hammath-Tiberius (Levine 1982: 8, 66). If this is to be interpreted as an indication of how Judaism, at least in terms of art, could not ignore the sun cult, then an even earlier indication of the way the sun had entered the terminology of a Greek-speaking and -thinking Jew of this era is found in Philo of Alexandria (1st century). Philo gives the sun the title "Great King" (*Op* 56), corresponding to contemporary royal ideology and portrays it as the center of the planets (*Heres* 222–23) as found on the aforementioned mosaic. The "flaming sword" of Gen 3:24 in one instance is interpreted allegorically as applying to the revolution of the heavens, in another instance is applied to the sun (*Cher* 21–25). Philo even goes beyond the scriptures to compare God, the Lord *(Hegemon)* of the world, with the sun (*Somn.* I.87), whose rays go forth to enlighten humans (*Somn.* I.112–14). In the same way that God separated light from darkness, so the sun creates day and night. Allegorically the Bible is placed in the service of the solar theology by describing human understanding *(nus),* sense-perception *(aisthesis),* and also the "Word" *(logos)* of God" as sun (*Cher.* 1.77–86, commenting on Gen 28:11, 32:31; 19:23–24). It is not suprising then that Philo ascribes a sort of sun-worship to the Therapeutae (*Vita Cont* 89]. Josephus writes similarly of the Essenes (*JW* 2.8.5). Finally, an entire Greek prayer to the sun-god (Helios) is included in the magical "Book of Secrets" (*Sefer ha-Razim* 99–100).

D. Christianity

Early Christian writings, like the OT, make no mention of sun-worship. "Sun" is used metaphorically, allegorically, or symbolically for "light" and "brightness" (Rev 12:1, 19:7). Here it is the natural sun that is playing a role. The end of the world brings with it the extinguishing of the sun (Acts 2:20; Rev 6:12; Mark 13:24; and elsewhere). In the New Jerusalem no sun will be needed (Rev 21:23, 22:5; *Ep. Barn.* 15:5). Christ is the Light of the World (John 8:12), but his divine appearance is brighter than the sun (Acts 26:13, cf. *Ep. Barn.* 5:10; Matt 17:3). The star of Bethlehem is also brighter than the sun (*Ign. Eph.* 19:2). The righteous shall shine like the sun (Matt 13:43), i.e., they will be transformed into light (cf. Matt 17:3 on Christ).

The Apostolic writings and those of the Church Fathers emphasize the createdness of the heavenly bodies (cf. *1 Clem.* 20:3). The sun's divinity is denied on the basis of scripture and reason (*LPGL,* 605–606). In metaphors and allegories "sun" is a favored word, used figuratively for the most diverse matters of early Christian faith: for God himself; for the Trinity (the sun and its rays as a proof of the unity of the Trinity); for the "Father," the "Son" (with reference to Mal 3:20 and/or 4:2), and the "Holy Spirit"; for the Church (as proof of her endurance); for Mary and the apostles; and for spiritual life in general. The passion of Christ is interpreted as sunset, the resurrection as dawn. Christ is the *sol salutis,* the sun of salvation, who takes up the ancient sun piety and returns it to its "natural" foundations. In Christianity the Helios cult has been overcome, although this does not mean that the pagan role of the sun does not from time to time reappear (in astrology, magic, alchemy). It survives in our planetary week and the eastward orientation of many churches even today.

KURT RUDOLPH
Trans. Dennis Martin

HELKAI (PERSON) [Heb *ḥelqāy*]. A priest who is of the House of Meraioth in the days of the High Priest Joiakim, son of Jeshua (Neh 12:15). The name means "My portion is Yahu" and perhaps is contracted from *ḥelqāyyâhū.*

GARY C. AUGUSTIN

HELKATH (PLACE) [Heb *ḥelqāt*]. The third city in the tribe of Asher given to the Levites. In Josh 21:31 the name of the city is *ḥelqāt,* but that name does not appear in the parallel 1 Chr 6 list. Instead, the third city given to the Levites in Asher is *ḥûqōq* (6:60) (—Eng 6:75). There is no other reference to Hukok in the OT. Albright (1945: 71) explains the two readings by maintaining there was confusion in the consonantal text which later also occurred in the vocalization. Besides occurring in the Levitical city list, Helkath also appears in the Joshua allotment list to Asher (19:25). The first extrabiblical reference to Helkath is in

the Thutmose III list of towns. Helkath *ḥ-r-q-t* is 112 on the topographical list of conquered cities on the temple wall at Karnak. There is no agreement concerning the identification of Helkath, although it is usually associated with either Tell el-Qassis or Tell el-Harbaj.

Tell el-Qassis (M.R. 160232) has been identified as Helkath by Aharoni (1959: 151) and most recently by Boling (*Joshua* AB, 494). It is located on an outlying spur of the Galilean foothills at the extreme NW end of the Esdraelon Plain. The Kishon flows through a narrow corridor just E of Qassis into the Plain of Acco. At Qassis, the river is a small stream, but throughout history it has provided a life support for the Esdraelon Plain. Tell el-Qassis is located on a significant trade route between Acco and Jokneam/Megiddo/Taanach/Beth-shan. This trunk road is important in Palestinian geography, for nowhere is the land higher than 110 m above sea level, and the slopes are gradual. The importance of this pass cannot be overemphasized in the history of ancient Israel.

The 19th century geographer M. V. Guérin (1880: Map) did not visit Tell el-Qassis, but he identified "Tell el Kasis" on his map. Robinson (1874: 114) makes only passing reference to "Tell Kusis" as it stood in relationship to Tell esh-Shemmâm. The first geographer to write of his experiences at Qassis was G. A. Smith (1899: 380–81). Smith was intrigued by the location of "Tell el Kasis" in the Plain of Esdraelon and carefully described its history.

Numerous surveys, soundings, and excavations have been conducted at Tell el-Qassis. A long occupational history has been reconstructed starting in the EB and extending to the Arabic period. Periods in evidence at Tell el-Qassis include EB, MB, LB, Iron I, Iron II, Hellenistic, Roman/Byzantine, and Arabic. The Yokneam Regional Project (Ben-Tor et al. 1981: 137–64) has found evidence of EB I, EB III (when the entire site was occupied), MB, Iron Age I, Iron Age II, Persian, and Hellenistic periods. The pottery that became the corpus of the Levitical city survey contained EB, LB, Iron I, Iron II, Hellenistic, Roman, Byzantine, and Arabic sherds.

The alternative identification for Helkath is Tell el-Harbaj (M.R. 158240). This site has been identified as the Levitical city Helkath by Alt (1929: 39), Abel (*GP* 2: 66), and Wright (*WHAB*, 128). Harbaj is located on a tributary which joins the Kishon 2 km to the W of the tell. It is just N of the narrow corridor separating the Plain of Acco and Plain of Esdraelon. It stood on one of the major roads in ancient Israel, the route from Egypt towards Acco, which followed the inland route around Carmel. Although the Plain of Acco was important as a major trade route, the forces which controlled it belonged to Galilee. The tell lies near the S border of the Plain of Acco, some 18 km S of the ancient harbor at Acco.

Harbaj is a low mound that has a gentle uniform slope rising decidedly on all sides from the relatively flat valley floor. One of the first geographers to visit the tell was Guérin in 1875. In 1922, Garstang directed an excavation at Tell el-Harbaj, in which he found only Bronze Age occupation (1922: 10–14). In a brief campaign in 1923, Garstang (1924: 45–46) found some Neolithic and early Iron Age material. In the 1930s many surface surveys were conducted at el-Harbaj, but the only pottery identified was from the Iron and Medieval Ages.

The next survey was conducted by the Levitical City Survey in 1971 (Peterson 1977: 37–55). They found pottery from the 10th–7th centuries, Hellenistic, Roman, and Arabic periods. Although Tell el-Harbaj has been identified by some as biblical Harosheth, the geographical evidence points to Harbaj as biblical Helkath. The fact that Harbaj is one of the most southern tells in the Plain of Acco, located just N of the pass connecting the Plain of Acco with the Esdraelon Plain, supports its identification as a Levitical city in the tribe of Asher.

JOHN L. PETERSON

HELKATH-HAZZURIM (PLACE) [Heb *ḥelqaṯ haṣṣūrîm*]. The name of a piece of ground close to the pool of Gibeon where soldiers of David and Ishbosheth, twelve representative warriors from each side, met and fought in one-to-one combat. Abner, commander of Saul's army, said to Joab, "Now let the young men arise and make sport before us." And Joab, general of the army of David, consented to it. If it really meant "making sport," they really were "treacherous" combatants (as translated in LXX). If it was a delegate combat, like that of David and Goliath, it was certainly not the cause célèbre. The battle continued because neither side won the combat.

This place name is found in 2 Sam 2:16, but its meaning is unclear and problematic because there are many interpretations for it, even if there is a story of etymological derivation. Young translated this GN as the "field of rocks," but its meaning is unlikely to be "field of rocks" because it is difficult to seek the reason why "the rocks" are related to the story of this one-to-one group combat. Some see a possibility of "(sharp) rocks" in the sense of "flint (knives)," but *haṣṣūrîm* probably does not mean "flint"; the Hebrew word for "flint" is regularly *ḥallāmîš* (Deut 8:15; 32:13; Ps 114:8; Isa 50:7). Even if *ṣōr*, "sharp stone" (Exod 4:25), which Zipporah used for the tradi-

tional circumcision may actually be "flint stone knife," the twenty-four warriors of Joab and Abner probably did not use such flint knives because they were good for cutting, but not so much for thrusting or piercing the human body. It is doubtful that they all used flint knives as daggers at the time of David because they are easily broken.

Some see the possibility to translate "field of (sword)-edges," but this interpretation is also less likely. The common word for the sword-edge is *peh,* literally "mouth."

A slight change of a vowel makes a translation of "the place of opposers" or "the portion of adversaries" *(ḥelqat haṣṣārîm).* By an emendation of a consonant *ḥelqat haṣṣiddîm* offers another plausible interpretation "the place of the sides." The LXX translation "the portion of the treacherous ones" and the Syriac transcription *ḥaqlat-ṣadan* suggest the original Hebrew as *ḥelqat haṣṣādîm* "the field of the hunters," but it is difficult to find the meaning of "treacherousness" in "hunting."

HELLENISM. From its first usage, the term "Hellenism" has meant a variety of things generally pertaining to Greek culture and its impact on the non-Greek world after the conquests of Alexander the Great (ca. 333–323 B.C.). The Judeans were not immune to this impact, and consequently Hellenism had some impact upon Jewish religion.

 3. Early Christianity and Hellenism
 4. The NT Becoming Literature

A. The Concept and Its Definition

The concept of Hellenism originated in modern historiography; it must be distinguished from its usage in antiquity *(hellenismós).* The modern historiographical concept has its own history since Joseph Justus Scaliger (1540–1609) identified the "Hellenists" of Acts 6:1 as Jews who used Greek as the language in their synagogue. Similarly, Claudius Salmasius (1588–1653) called the language of the Greek Bible *lingua hellenistica* (see Laqueur 1925; Momigliano 1977: 307–323). Taking his clues from J. G. Herder (1744–1803) and J. G. Hamann (1730–1788), J. G. Droysen (1808–1884) made the term "Hellenism" *(Hellenismus)* a historiographical technical term to designate an epoch ranging from Alexander the Great (356–323 B.C.E.) to Roman Imperial rule (ca. 30 B.C.E.). Droysen understood Hellenism to be the mixture of the world of Greece with that of the Orient, a mixture that became the preparation for Christianity. Julius Kaerst (1857–1930), on the other hand, emphasized the expansion of Greek culture in the Mediterranean as a phenomenon of intellectual history *(Geistesgeschichte).* Richard Laqueur (1881–1959) took Hellenism to be the transformation of the ethnic-national culture of Greece into a universal culture and civilization. According to him, "hellenistic man" transcended the traditions of his people: "hellenistic man" became the bearer and promoter of a world culture believed to be identical with progress. As a program of cultural expansion Hellenism held the potential for new cultural creativity as well as for deep-seated conflicts with the older national cultures.

In the late 20th century, scholarship turned from grand concepts to specialized research. The work of M. Rostovtzeff was devoted to the developments of social history. Carl Schneider's informative but problematic survey (1967–69) treated the history of culture (see the critical review by Murray, 1969). Imaginative overviews were contributed by Toynbee (1959) and Adorno (1977). Whereas the standard work of Will (1966–1967) is concerned with political history, other scholars focused their attention on special areas such as the history of culture, art, philosophy, and religion (see Bickerman 1976–85; 1985a; Grimal 1968; Préaux 1978; Long and Sedley 1987, with bibliography).

Present research is especially interested in the explorations of the history of Hellenistic religion and, closely connected with it, that of Hellenistic philosophy. Based on the foundational studies by Hermann Usener (1834–1905), Albrecht Dieterich (1866–1908), and Richard Reitzenstein (1861–1931), this research has produced a wealth of publications (see the monograph series RVV, EPRO, and also *ANRW*). For Hellenistic religions no up-to-date survey exists, after the comprehensive works by Prümm (1954) and Nilsson (1974) have become outdated. The steady increase in textual materials and artifacts attributable to excavations makes it difficult to stay abreast of the advancements of scholarship (see for American scholarship Danker [1988, with bibliography]; for journal articles, reports, surveys, and lexica especially, PW, *KlPauly, RAC* [with its supplements and *JAC*], *ANRW,* and the bibliographies in *Gnomon* and *L'Années philologiques*).

B. In the OT/Hebrew Bible

The problem of Hellenism in regard to the OT/Hebrew Bible must be distinguished from the NT. By far the largest part of the OT is pre-Hellenistic in origin and character; it is written in Hebrew or Aramaic. Confrontation with Hellenism, however, had occurred even before the final formation of the canon. Reflections of this encounter with Hellenism can be seen in linguistic, redactional, and thematic phenomena.

1. Greek Translations. The Greek translations of the LXX originated over a considerable period of time, contrary to the legend contained in the *Epistle of Aristeas* (see *HJP*^{2} 3/1: 677–87), according to which the whole translation of the Hebrew Bible was accomplished by 72 translators in 72 days. It was known even at the time of the *Epistle of Aristeas* (see sections 312–16) that such a translation carried with it the dangers of illegitimate Hellenization. The fact is that at numerous places the LXX is not merely a translation of the Hebrew or Aramaic text, but a trans-

formation into Gk language and thought. Only later translators such as AQUILA, SYMMACHUS, and THEODOTION were concerned with a systematic approach to close literal rendering (see Goshen-Gottstein 1983; *HJP*[2] 3/1: 142–49, 470–504; Tov, *ANRW* 2/20/1: 121–89).

2. Hellenistic Influences. Presently scholarship is divided on the question to what extent Hellenistic influences have determined the *composition* and *redaction* of OT literature (see Smith 1971). At any rate, from the beginning the intellectual and religious confrontation between Judaism and Hellenism has led to the composition or revision of entire books. This literary confrontation begins with the book of Daniel and includes the entire corpus of the Apocrypha and the Hellenistic-Jewish literature.

3. Confrontation with Hellenism. Thematically, the confrontation with Hellenism can be seen from the preferred literary genres. These include the proverbial collections (see PROVERBS, BOOK OF; ECCLESIASTES, BOOK OF; WISDOM OF BEN-SIRA; SOLOMON, WISDOM OF), the apocalyptic literature, and historiographical works (Hengel 1974; 1976; Momigliano 1975; 1977; Nickelsburg 1981; Kaiser 1982; Collins 1983; *HJP*[2]; *ANRW* 2/20/1–2; Hoffmann 1988).

Present scholarship has frequently discussed the possibility of Hellenistic influences, especially those of Gk philosophy, but these discussions have often been hampered by conceptional limitations such as merely external takeover of terms or doctrines. While such takeovers can be identified, the confrontation with Hellenistic ideas went much deeper and found foremost expression indirectly in allusions and theological counterproposals.

A classic example of this debate has been the investigation of the Wisdom of Solomon, esp. 2:1–20; 7:1–6; 13–15, as the studies by Larcher (1969; 1983–85), Reese (1970), Gilbert (1978), Georgi (1980), and Winston (*Wisdom of Solomon* AB) have shown. The differences between these scholars can to a large extent be explained from their differing methodological presuppositions (see also the careful account of the evidence in Theiler 1982: 2.283–85). The increased interest in the individuality of authors is characteristically Hellenistic also (see, e.g., Braun 1973 on Qoheleth; Stadelmann 1980 on Ben Sirach).

A further phase of development was initiated in Hellenistic-Jewish literature, when the "hebraic peripatetic" Aristobulus (see ARISTOBULUS) attempted to harmonize the holy scriptures with Gk philosophy; he was indeed convinced that the Gk philosophers depended on the "philosophy of the Hebrews" (Aristobulus, Fragment 3, preserved in Eusebius, *Praep. ev.* 13.12.1–2; see Walter 1964; Hengel 1974; *HJP*[2] 3/1: 579–87; Droge 1989).

4. Subsequent Literary History. The presence of the OT in the post-OT literature (see APOCRYPHA and PSEUDEPIGRAPHA) and in the NT literature (see below, section C) must be seen in the light of these general presuppositions as well as in accordance with the theological ideas of the individual authors of those writings. On the whole it can be said that the post-OT literature, including the NT, does *not* presuppose the closing of the canon, although its authority is acknowledged. Quotations and other references to the OT in the later literature represent a complicated and very diverse phenomenon. There are not only explicit quotations, but also a broad stream of traditions drawn upon in written and oral form (e.g., traditions of proverbs and maxims, stories, liturgical materials). This literature has its original purpose to a large degree in the debates with Hellenism about the question of the Jewish religion.

Consequently, the presence of the OT in the NT is not a direct but a mediated one: it is mediated through the Judaism at the time of Jesus and the early Church. Although the NT interprets OT passages differently and not uniformly, the authority of the OT is in principle acknowledged. This acknowledgment can be stated in formulaic expressions such as "the law and the prophets" (Matt 5:17; 7:12; etc.) or by the concept of "Scripture" *(graphē)*. References to the OT in the NT include explicit quotations (see NEW TESTAMENT, OT QUOTATIONS IN) and a very diversified stream of doctrinal and liturgical traditions. The quotations are always according to the LXX, although the text often differs from the LXX versions known to us. The Heb text is declared binding only in Matt 5:16 (= Luke 16:17), coming from an early layer of tradition showing Christian confrontation with Hellenism (see below, section C.3.b.). Hellenistic as it certainly is, the NT uses the OT as a tool in the debates with Hellenism as it pertains to issues of theological thought, religious and ethical practice, and general cultural customs and behavior.

C. In the NT

1. Application of the Concept. When the concept of Hellenism is applied to the NT, several aspects should be distinguished. In regard to the historical epoch, the NT is as such Hellenistic. Droysen's interpretation of Hellenism as mixture should be applied first to Judaism in the Hellenistic environment (see Tcherikover; Hengel). Early Christianity, however, was not simply an extension of Hellenistic Judaism. Granting that there was high degree of continuity, the NT was the product of a new mixture. On the other side, the NT itself proved to be a powerful agent furthering the expansion of Hellenism. Thus all NT authors were Hellenistic people as Laqueur had characterized them. The expansion of Christianity, however, could not simply ride on the waves of an expanding world culture. As Momigliano put it (1975: 10–11):

> What accentuates the peculiar physiognomy of Hellenistic civilization is the special role two foreign groups—Jews and Romans—came to play in it. The Jews basically remained convinced of the superiority of their beliefs and ways of life and fought for them. Yet they continuously compared their own ideas with Greek ideas, made propaganda for their own beliefs, absorbing many Greek notions and customs in the process—and ultimately found themselves involved in that general confrontation of Greek and Jewish values which we call Christianity. The Romans never took their intellectual relations with Hellenism so seriously. They acted from a position of power and effortlessly preserved a strong feeling of their own identity and superiority. They paid the Greeks to teach them their wisdom and often did not have to pay because they were their slaves.

Christianity thus became the intellectual and spiritual battleground on which the confrontation between Judaism and Hellenism was fought with unprecedented intensity. In the NT the earliest and most decisive phase of this confrontation had become literature. The texts are documents indicating not only the beginning of a long historical struggle but also containing the main principles, goals, and limits which determined the Christian transformation of Hellenism and the formation of a new European culture as well as the history of Christianity.

2. The History of Research. a. The Language. The language of the NT was the primary reason that the study of Hellenism was connected with the NT from the very beginning. This peculiar language became the first object of scholarship, that is, the grammar, the idioms, and the lexicology of the so-called *koinē*. Of special importance were the works of Adolf Deissmann (1866–1937).

The most important NT grammars in use today are those by Radermacher (1925) and Blass, Debrunner, and Rehkopf (BDR). *A Greek-English Lexicon to the New Testament* has found international recognition. The monumental *TDNT* was started by G. Kittel in 1933 and completed by G. Friedrich in 1979. Despite its unevenness and tendentiousness, this lexicon has proved to be an irreplaceable source of information. The *EWNT*, edited by H. Balz and G. Schneider (1979, 1981, 1983), and C. Spicq's *Notes de lexicographie néotestamentaire* (Fribourg and Göttingen, 1978–1982) are to be used as supplements to Bauer's *Lexicon* and the *TDNT*.

b. The Observations Literature. In the 17th and 18th centuries an entire literature often called "observations literature" was devoted to investigating the relations between Hellenism and the NT. These studies, following the example of the great Hugo Grotius (1583–1645), collected parallel passages from Greek and Latin literature for the illumination of NT texts (see Delling 1963; van Unnik 1973–83, 2: 194–214). The most important work of this genre is the critical edition of the NT, supplied with a vast collection of parallel materials, by J. J. Wettstein (1693–1754), published in 1751–52. References to classical parallels began in the NT itself (Acts 17:28; 5:29; 26:14; 1 Cor 15:33). Comparative studies and the interpretation of parallels was a concern also throughout the patristic period, but it was the era of encyclopedias that was characterized by systematic attempts at collection. At the time of Wettstein a similar work by G. D. Kypke (1755) appeared. Older contributions were collected in the seven volumes of the *Critici Sacri* 1660 (excerpts from Laurentius Valla, Desiderius Erasmus, Joseph Justus Scaliger, Isaac Casaubonus, Hugo Grotius, and others). In the 19th century there was only one more work of this kind, *Spermaticós Logos* by Edmund Spiess, in 1871.

c. Paul's Rhetoric. For the question of the relationship between the NT and Hellenism, investigations of the rhetoric of the Apostle Paul played a major role. This question was discussed by Paul himself in his confrontations with his Corinthian adversaries (see Betz 1972; 1985; 1986), but commentators have taken the matter up continuously until modern times.

In antiquity, Augustine commented on Paul's rhetoric in his *De doctrina Christiana* (4.31–47), and in the Reformation period it was Melanchthon (see Betz, *Galatians* Hermeneia, 14). In the 18th century, systematic studies appeared, e.g., Karl Ludwig Bauer (1782) and Herman Johan Royaard's Utrecht dissertation (1818; for references see Betz, *2 Corinthians 8–9* Hermeneia, 129–130; 1986: 16–21); in the 19th century this type of study ceased. The end of the century, however, witnessed the strange controversy between the philologist E. Norden (1868–1941) and the NT scholar G. Heinrici (1844–1915). Heinrici, who knew his classical authors well, has pointed to a wealth of classical parallels in his commentary on 2 Corinthians (1887), which Norden sharply attacked (1898), a standard work still today. Norden's aim was to put the Apostle Paul into Judaism, which he described as "unhellenic" and "educationally impoverished." Norden's pathetic and resentful attack, quite in conformity with the Zeitgeist, became influential in NT circles. This fact was not altered by Heinrici's rebuttal, well documented and convincing, in the 2d edition of his commentary (*2 Corinthians* Meyer, 436–58). Norden had found little support among other scholars and tried to amend things (Norden 1898: 3–4 of the supplement). The subsequent investigations by J. Weiss (1863–1914) and R. Bultmann (1884–1976), later also of H. Windisch (1881–1935) finally refuted Norden, but the question is still alive today (see Betz 1986; Schmeller 1987).

d. The Corpus Hellenisticum. The study of the relationships between Hellenism and early Christianity became the objective of the international research project of the Corpus Hellenisticum Novi Testamenti. This project was first suggested by Heinrici shortly before his death in 1915. In the course of the century the project has undergone vast changes in method and outlook attributable to shifts in scholarship generally. While the project is still being continued, its objective is being pursued in many other forms as well (see Betz, *TRE* 15: 23–24; see also CORPUS HELLENISTICUM NOVI TESTAMENTI). In principle, there is no longer any question about the necessity of this research. The NT and other early Christian literature cannot be interpreted in a scholarly justifiable way unless it is understood in its relationships with the language, literature, religion, culture, and civilization of its Hellenistic (including the Jewish) environment.

The problems, however, which make this research so difficult, should not be underestimated. The fields of study relevant to the enterprise have expanded since World War II in unprecedented measures; simultaneously the methods have become extremely diversified and refined, not only in NT studies but in the study of antiquity as a whole. All this has occurred at a time when theological education has seriously deteriorated in quality, so that there are fewer and fewer researchers qualified for the tasks at hand. Therefore the number of workers in this vineyard is small while the tasks are many. Moreover, the idea held at earlier times that NT scholars should merely exploit the results of scholarship in the fields of classical antiquity has to be given up. Rather, NT scholars have to make genuine contributions to these fields, and they have to learn to collaborate with scholars in the fields of classical antiquity. This collaboration, which had led to the great scholarly production in the 18th and 19th centuries, has in fact been resumed, and the first benefits have become apparent.

Another idea to be shelved is that of the mechanical

gathering of raw data. Rather, the data to be collected must be studied in the contexts of larger phenomena and problems, within which the NT literature will then be seen in its specific contours. Given these presuppositions, the assembling of data and their interpretation continue to present exciting challenges to NT scholarship. These investigations of course form the foundations for the problems of hermeneutics in the contemporary situation.

3. Early Christianity and Hellenism. a. The Languages of the Early Christians. The primary characteristic for Hellenism is the language; secondarily it is the way of life, education, and ethos mediated through that language. Typical is the description of a Hellenized Jew in Josephus (*AgAp* 1.180), by way of a quotation from Clearchus of Soli: "He was a Greek not only by his language but also by his soul." With regard to its language, the NT is certainly Greek. By contrast, earlier hypotheses, according to which parts of the NT were taken to be translations from the Hebrew or Aramaic, have not been substantiated. Even in view of peculiar linguistic phenomena in NT Greek, Semitic influences are difficult to prove and less frequent than one would expect (see Fitzmyer 1979). Influences of a Semitic background are also difficult to distinguish from peculiarities of *koinē* Greek attributable to regional dialect. And the Latinisms, stemming from the language of the military, the law-courts and commerce, are signs of Hellenization.

One of the most intractable problems is that of determining which language was spoken by the early Christians. For the NT, even in its oldest layers of tradition, it is taken for granted that Jesus and his disciples spoke Greek in their daily life. Whether this assumption is merely naiveté on the part of the NT writers or whether it conforms to actual facts is no longer discernible. Among the NT authors it is only the Gk historian Luke who is interested in the language problem. According to him, Paul spoke Greek with the Roman authorities (Acts 21:37) but Hebrew with the people of Jerusalem (Acts 21:40; 22:2). Even the heavenly voice occurring to Paul (Acts 26:14) was in Hebrew. The Church, however, is, thanks to the gift of the Holy Spirit (Acts 2:8–11), pluralistic in its use of languages. This view is the result of Luke's interests as a Christian Hellenist.

The evidence coming from the NT and from extra-NT sources reveals that in 1st-century Palestine, while Aramaic was still the preferred language, Greek was also widely used, not only in the Hellenized cities but also among farmers and craftsmen in the countryside. The knowledge and use of Hebrew was clearly on the retreat and limited to smaller circles (see Lieberman 1962; 1965; Sevenster 1968; Rabin 1976; Mussies 1976: 1040–64; Fitzmyer 1979; *HJP*^{2} 2: 20–28, 74–80).

In regard to the NT, two special problems must be faced. First, did Jesus of Nazareth speak only Aramaic, or did he speak Greek as well? In view of the fact that Greek was widely spoken in Palestine at the time, its knowledge cannot be denied to Jesus, who came from the bilingual area of Galilee (see Freyne 1988: 171–72). Such knowledge must not, however, be confused with one's preference in daily life. If Jesus taught in Aramaic or in mishnaic Hebrew, which has been assumed but cannot be proved, his teachings must have been translated into Greek even at the earliest level of the tradition (see Barr 1970; Jeremias 1971: 1–37; Rabin 1976: 1036–39; *HJP*^{2} 2: 79–80). The second main problem is, which language did the so-called Hellenists in Acts speak (Acts 6:1; 9:29; 11:20)? Most likely these Hellenists were Hellenized and therefore Greek-speaking Jews. Does that mean that they spoke only Greek? Such a conclusion would be hard to prove (see Fitzmyer 1979: 36–37; Hengel 1983: 3–11).

b. The Conflict with Hellenism. If the NT is a Hellenistic document with regard to its language, the question remains whether it is Hellenistic also according to its "soul." To a certain degree this question is one of definition, and one of whose definition it is. The definition given in Ps.-Clementine *Homilies* 11.6 (a Greek is everyone who does not observe the Torah, no matter whether he or she is of Jewish or Greek origin) merely reflects the particular situation of Jewish Christianity. The question raised in the NT as the decisive issue however, is what it really means to observe the Torah.

(1) Judaism in the NT Period. In the NT period, Judaism consisted of a large variety of different groups and movements of a partly political and partly religious nature. All of these groups and movements took positions with regard to Hellenism, whereby the range of possibilities was considerable. Whereas, e.g., Philo of Alexandria went as far as he could in accommodating himself to Hellenism, the Qumran sect tried to isolate itself from it. Between these extremes many different compromises existed. The question of the limits of Jewish accommodation was raised, but no unanimous answer was given. See HERESY AND ORTHODOXY IN THE NT.

(2) The Jesus Movement. The movement initiated by Jesus of Nazareth was anti-Hellenistic. So much at least seems to be clear in spite of the dearth of reliable data. Even the little we know about John the Baptist suggests his anti-Hellenistic tendencies. His opposition against Herod Antipas, his death as a martyr, and his messianic-apocalyptic message were reactions against Hellenization of Judaism. The ritual of baptism, the origin of which has not yet been sufficiently clarified, served as a means of demarcation between faithful Jews and those whose religion had been corrupted as a result of Hellenism. On the whole, the historical Jesus appears to have shared the anti-Hellenistic sentiments of his mentor. In the eyes of Jesus, Hellenism was represented in Palestine by the Roman occupation and by the Jewish authorities imposed on the Jews by Rome. Although the Christian gospel writers who were Hellenists themselves have done their best to tone down these anti-Hellenistic sentiments, Jesus' rejectionist attitudes are clearly stated in the tradition (see, e.g., Mark 12:15–22 and parallels, and the Passion Narratives as a whole). Jesus' rejection of the Hellenized Jewish authorities is well attested in old source materials (e.g., Mark 8:15; 12:13; Luke 13:31–33). Jesus' critique of other Jewish movements follows tendencies of John the Baptist and other anti-Hellenistic movements (see, e.g., Matt 11:2–19; the laments over the towns of Galilee [Matt 11:20–23] and over Jerusalem [Matt 23:37–38]). The fact that Jesus was crucified as a messianic revolutionary is a sure indication of his anti-Roman and thus anti-Hellenistic attitude (on the inscription on the cross, see Mark 15:26 and parallels; John 19:19–22; Blinzler 1969: 367–68; Sanders 1985: 294–

318). The gospel writers, however, have correctly maintained that Jesus did not see himself as a militant revolutionist (see Cullmann 1970; Hengel 1971). He probably reacted to the external superiority of the Roman power by the conviction of his religious and moral superiority as a Jew. He may have avoided contacts with Gentiles whenever possible. The title of Messiah when applied to Jesus in the gospels is always the result of Christian interpretation and accompanied by a rejection of political and military ambitions and expectations (see Luke 24:19–27; John 6:14–15; and the Passion Narratives entirely).

(3) The Origin of Hellenistic Christianity. The question then arises: how, given this anti-Hellenistic attitude of Jesus, could Hellenistic Christianity have come into existence? Historically, it is improbable that Jesus himself had initiated the opening toward the Gentiles, although the gospel writers suggest it (see Mark 7:24–30 and parallels; Matt 8:5–13 and parallels; Luke 10:30–38; 17:16; John 4:4–26, 39–40; 8:48). While these suggestions reflect later retrospective construction, the sources themselves indicate that the early Christian mission to the Gentiles was a new phase in the history of the Church. This new mission, however, had some connection with the historical Jesus. His openness toward the *am hā'āreṣ* and the so-called "sinners and tax collectors" (Matt 11:19 and parallels; see Braun 1969, 2: 18–23, 38 n. 1; *TDNT* 8: 103–105; *EWNT* 3: 835–38) seems to have prepared the mission toward the non-Jewish world. This corresponds also with Jesus' anti-Pharisaic understanding of the Torah. His rejection of asceticism, his reinterpretation of purity concepts (see esp. Mark 7:15) and sabbath observances, and his rejection of esotericism and ritual formalism will have made it easier for his disciples to establish relations with non-Jews. If Jesus' understanding of the Torah could be interpreted by his disciples partly as intensification and partly as relaxation, the roots for both interpretations should be seen in his teaching and conduct.

The sources also reveal that the mission to the Gentiles was not the result of careful planning, but it was characterized by erratic developments and confusion, while planning occurred mostly in hindsight. For the transition to Gentile Christianity, the fringe areas of Galilee, Decapolis, Samaria, Syria, and Nabatea (Arabia) seem to have played an important role (Acts 1:8; 2:9–11). There is also the question whether in these areas Jews were always clearly distinguished from non-Jews. Moreover, the sources mention again and again the role of military personnel (Mark 15:39–40 and parallels; Matt 8:5–13; Acts 10:1–2; etc.). Whatever the role of the "Hellenists" (Acts 6:1; 9:29; 11:20), it must have been an important one (see Hengel 1983: 1–29; Schneider 1979: 215–40). They were most likely Greek-speaking Jews from the Diaspora who had settled in Jerusalem and had joined (in their entirety?) the Christian Church. The fact that they were forced out of the city (Acts 8:1–3) is evidence that they were Hellenized. Stephen's speech (Acts 6:13–14; 7:1–53), even if not historical, may at least provide the general contours of their views. Caution is, however, needed in view of the tendency of Acts to attribute to the "Hellenists" all of the mission to the Gentiles. Hengel's hypothesis that the "Hellenists" were responsible for the translation of Jesus' message into Greek has no support in the sources (Hengel 1983: 26–29).

(4) The Gentile-Christian Mission. The Christian mission to the Gentiles must be seen in connection with the phenomenon of missionary religions typical of Hellenism. Especially, non-Christian religions such as those of Isis and Osiris or Mithras deliberately set out to gather devotees and build worldwide reputation. Membership in "world religions" based on voluntary association became customary alongside participation in local, ethnic, and national cults. In Judaism especially the Hellenistic Diaspora carried out its mission among non-Jews. In conjunction with it, an entire propaganda literature developed which applied the commonplace of the superior "wisdom of the barbarians" to Judaism and offered it as the religion that fits best the conditions of the Hellenistic world (see *HJP*^{2} 3/1: 150–76). This mission also resulted in a transformation of Judaism itself. By emphasizing monotheism, law, ethics, and eschatology, this literature accommodated itself and responded to demands made by Gk philosophers for the reformation of religion. While the conversations with Gk philosophy occurred mostly indirectly, Hellenistic Jewish wisdom was most sympathetic to the Socratic, the middle-Platonic, and the Stoic traditions. By contrast, Epicureanism was almost unanimously rejected. Compared with Diaspora Judaism, Palestinian Judaism joined the proselyte movement only hesitantly; later it became more and more anti-Hellenistic and isolationistic. The tensions thus arising between the different branches of Judaism also entered into early Christianity, which at the early stages of its history was connected with the proselyte movement. The gentile Christian mission was therefore mostly a matter of the Diaspora (Acts 2:11; 6:5; 13:43). The mission kerygma (1 Thess 1:9–10) addressed in particular the so-called "god-fearers" (Acts 13:43, 50; 16:14; etc.; see *TDNT* 6: 727–44; *HJP*^{2} 3/1: 162–76).

In Palestinian Jewish Christianity the mission to the gentiles remained disputed. No doubt its critics could appeal to the example of Jesus himself (cf. Matt 15:24; 23:15). On the other hand, the Jewish missionaries going to the Gentiles referred to experiences of miracles and ecstatic enthusiasm, experiences the problems of which would soon become manifest.

The inner Christian tensions can be seen in the Sermon on the Mount (Matt 5:3–7:27; see SERMON ON THE MOUNT), a source from the middle of the 1st century C.E. reflecting Jewish-Christian theology. In the Sermon, the gentile world is presented negatively, and assimilation is rejected (5:47; 6:7, 32). Law-free gentile Christianity is repudiated (5:17; 7:21–23). At the time, however, a separation between the Jesus movement and gentile Christianity is not yet seen as an ecclesiological problem, but only the threat to the salvation of the Gentiles is underscored.

The conference at Jerusalem (Gal 2:1–10; Acts 15) presupposes, on the one hand, a deepening of the conflict but, on the other hand, the recognition of the unity of the church as a demand implicit in the gospel itself. The conflict reached the point of crisis when Jewish-Christian particularists insisted on Torah and circumcision as Jewish (and Christian) symbols of identity. By contrast the gentile Christians defended the missionary kerygma, faith in Jesus Christ, baptism, and the new Christian ethos as sufficient for salvation. The basic question was whether the purpose of the mission to the Gentiles was their incorporation as

converts into Judaism or whether gentile Christianity possessed their own status due to the salvation in Christ. The particularists must have designated as evils of Hellenization precisely those achievements which the Gentiles were so proud of. On the other hand, the gentile Christians rejected the demands of the Jewish rigorists as forms of judaization. Faced with this threat of split, the idea of the unity of the church, taken apparently to be the consequence of monotheism (Gal 2:8), proved to be the antidote and led to the division of only the mission fields, not the Church itself. Barnabas and Paul were sent to the Gentiles, Peter to the Jews—this was the formula negotiated in Jerusalem (Gal 2:8–9; cf. the mission instruction Matt 10:5–6; also Betz, *Galatians* Hermeneia, 97–101).

Clearly, dividing the mission fields was a compromise. Paul interpreted it in the sense that the gentile mission was in principle recognized as legitimate and that only for reasons of ethnic sensitivity a special status was granted to the Jews. The result was that gentile Christianity was finally separated from Judaism. The particularist party, called "false brothers" by Paul (Gal 2:4), refused to support the compromise. The so-called "pillars" (James, Peter, and John), however, attempted to steer a kind of middle course, the duration of which was short. Jewish Christianity had to make a choice between Judaism and gentile Christianity (called by Paul the "Israel of God" [Gal 6:17]). The choice became final during the famous Antioch episode (Gal 2:11–14). This inner Christian conflict continued throughout the history of the ancient Church as the opposition between the Catholic Church and Jewish-Christian "heresies" (see Lüdemann 1983).

(5) Pauline Christianity. After the conflict with Peter in Antioch (Gal 2:11–14; see *Galatians* Hermeneia, 103–112) Paul became the key figure in gentile Christianity, the "apostle of the Gentiles" (Rom 11:13; see Lüdemann 1984). Paul's background was the Hellenistic-Jewish diaspora. According to Acts, he inherited from his ancestors the citizenship of Tarsus in Cilicia (Acts 9:11, 30; 11:25; 21:39; 22:3; see *HJP*^{2} 3/1: 33–34). The *cognomen* Paulos, most probably given him at birth (cf. Acts 7:58; 8:1, 3 etc.) points to the family's civic pride and consciousness which no doubt expressed itself also in giving young Paul a respectable education. *Religiously,* however, the family as well as Paul himself must have belonged to those who were opposed to a Hellenizing of the Jewish religion, the so-called "Hebrews" (Phil 3:5–6; Gal 1:14; Acts 22:3; 26:6). The claim, however, that he studied at Jerusalem under Gamaliel (Acts 22:3; 26:4; see *HJP*^{2} 2: 367–68) and that he had a knowledge of Hebrew (Acts 21:40; 22:2; 26:14) cannot be sustained. The extant letters of the apostle do not contain signs of a knowledge of Hebrew; the occurrence of loanwords such as *abba, maranatha,* etc., cannot be used as evidence for the knowledge of Hebrew (a similar situation exists for Philo of Alexandria, while that of Josephus is different (see *HJP*^{2} 2: 80; 3/1: 479, n. 27; 3/2: 873–74). These loanwords came to Paul through the liturgy and tradition of early Christianity. It should also be remembered that we possess practically no information about the cultural milieu and educational facilities of diaspora Pharisees.

In his pre-Christian period, Paul's "zeal" was concerned about the strict observance of the Torah (Phil 3:5–6; Gal 1:14; 5:3; Acts 22:3; 23:6); it thus was directed against Hellenizing tendencies to abolish the Torah. Because early Christian communities had opened themselves up to these Hellenizing tendencies, Paul persecuted them (Gal 1:13, 23; Phil 3:6; 1 Cor 15:9; Acts 8:3; 9:1–2; 22:4–5, 19; 26:10–11; see *HJP*^{2} 3/1: 119). His persecution seems to have been limited to the law-free diaspora Christianity (at Damascus, Acts 9:2; 22:5; 26:12, 20) and it did not extend to the law-abiding Christians in Judea (differently Acts 8:1–3; 22:19–20; 26:10–11). Paul's so-called "conversion" (Gal 1:15–16; 1 Cor 9:1; 15:8; see *Galatians* Hermeneia, 62–72) also fundamentally changed his attitude toward Hellenization. From the anti-Hellenistic Pharisees Paul turned to the Hellenizing Jewish Christians of the Diaspora. Even his descriptions of his conversion and vocation as a missionary to the Gentiles are characteristically Hellenistic; the same is true in the somewhat different accounts in Acts 9:3–29; 22:3–21; 26:9–20. Further interpretations of his experience by Paul himself employ concepts characteristic of Hellenistic mystery cults (e.g., Phil 3:7–11; 2 Cor 4:4–6). Yet Paul did not simply embrace Hellenism while ignoring the problems. Rather, his own theology was shaped by confrontations with Christian developments which in his view were illegitimate forms of Hellenization. The decisive points of these debates are reflected in Paul's letters, in which he argues against opponents of various persuasions, some of them at least based on misinterpretations of his own message.

In the eyes of his Jewish-Christian rivals and opponents Paul was doubtless an apostate. See HERESY AND ORTHODOXY IN THE NT. In fact, Paul himself had to struggle hard to steer his churches away from becoming "paganized." Paganizing tendencies were carried on by people who took Paul's message and pushed it further toward extreme Hellenization, which would in the final analysis destroy the very gospel he was preaching. The struggle proved difficult because in its nascent state the formation of gentile Christian identity possessed no firm and agreed standards yet. Paul himself did not enter into these controversies with his ideas completely worked out, but his theology took shape gradually as he attempted to come to grips with ever-changing new experiences and oppositional viewpoints. See PAUL. Unquestionably the greatest challenge for Paul resulted from his founding of the church in Corinth. In Corinth he had succeeded in carrying the Christian mission to the cultured and wealthy citizens of this prosperous and cosmopolitan city. Their acceptance of the gospel went hand in hand with their consistent assimilating it to and melting it in with Hellenistic religiosity. Thus, baptism and eucharist became transformed in analogy to Hellenistic mystery rituals (1 Cor 1:13–17; 15:29; 11:17–34). The traditional Jewish-Christian ethos was replaced by the big-city lifestyle. Besides material wealth, the congregation enjoyed a plethora of spiritual gifts (1 Cor 1:5; 2 Cor 8:7–9; 9:11; see Betz 1986). Ecstatic and enthusiastic experiences provided a new set of values. The relationship between Christianity and other religions was regulated in the spirit of Hellenistic enlightenment and polytheistic practice (1 Cor 8:1–11:1). In regard to morality there seems to have been an attitude of "live and let live": libertinism was tolerated (1 Corinthians 5–6) just as was radical asceticism (1 Corinthi-

ans 7). Setting aside the older ethical catalogs (1 Cor 5:9–11; 6:9–10; 2 Cor 12:20; see *Galatians* Hermeneia, 281–88) was justified by appealing to the notion of "freedom" (1 Cor 7:21–22; 9:1–23; 10:29; 2 Cor 3:17): where there is freedom, "everything is permitted to me" (1 Cor 6:12; 10:23). The basic assumption for this "freedom" was of course that liberation from the old religions was taken to mean also the end of the myth of the last judgment (1 Cor 6:9; 15:12, 50).

The fact that factions existed in the community (1 Cor 1:10–17; 3:3–23) shows, however, that extreme Hellenization of the Christian faith was not acceptable to all members. The center of the problem was the conflict between the older Jewish-Christian heritage and the newly forming Hellenistic-Christian identity.

The significance of Paul for the question of Hellenism was that he was the first to understand the problems raised by the Corinthians in their deeper theological dimensions and that he had the courage to face those problems. He felt confronted by the alternatives of either integrating the new Corinthian experiences and insights into a conception of Christian existence and lifestyle, or having to witness the disintegration of the churches founded by him. The Corinthian letters are the literary fixation of this profound encounter with the central issues of Hellenistic religiosity and morality. These letters testify to the emergence of Paul's theology (at least prior to Romans).

Paul addresses the Corinthians programmatically as Greeks (1 Cor 1:22). As Greeks they are accustomed and indeed expected to ask for "wisdom." What does the gospel yield in terms of wisdom? His answer is that a rich intellectual inventory (1 Cor 1:5) is not by itself wisdom, but that it is first of all important to distinguish the "wisdom of this world," which is no wisdom at all but folly, from the "wisdom of God," which to the superficial appears as folly. Real wisdom, and that is indeed what the "wisdom of God" is, becomes evident in its application to the concrete problems of life. The argument for this claim is carried through in 1 Corinthians. Its main thrust is to convince the Corinthians that *agapē* is the foundation and content of the Christian faith and as such, true wisdom, which is able to stand the tests of daily life (1 Cor 8:1, 13:1–13; 14:1–5; etc.). Paul does not identify himself with any of the Corinthian parties, but by taking up the major Corinthian problems case after case he demonstrates in what way Christian love is also the wisdom of God. An entire course of education can be seen to run through the letters of 1 and 2 Corinthians, a course that passes through tumultuous confrontations before it is resolved and reconciliation is achieved. The completion of the collection for the church of Jerusalem (1 Cor 16:1–4; 2 Corinthians 8 and 9; Rom 15:25–32) plays a major role in these developments (see Betz, *2 Corinthians 8–9,* Hermeneia).

(6) Paul's Opponents. As one would expect, Paul's opponents spread the accusation that he not only abolished the law but also negated the reality of sin (Rom 3:5–8:31; 6:1; Matt 5:17; 7:21–23). Behind this defamation is again the claim of illegitimate Hellenization and indeed "paganization": as a result of Paul's teaching, gentile Christianity would be doomed to fall back into paganism and would, as unredeemed, again be juxtaposed to Judaism. Paul confronted these objections in his letter to the Romans. He began his defense of his gospel (Rom 1:16–17) with an incisive critique of Hellenistic religion, culture, and morality (1:18–32) as well as of non-Christian Judaism (2:1–29), in order then to turn to the unfolding of the notion of a "true Judaism," which he had introduced already in Gal 6:17. In this argument Christianity is shown to be the universal church, in which the law is not abolished (7:12) and sin is not negated (7:13–25), but in which the world is defeated (8:31–39). In chapters 9–11 Paul demonstrates that the church is not opposed to but rooted in Judaism, and that both will find their eschatological fulfillment through God's grace and mercy.

(7) Developments After Paul. The conflicts concerning Hellenization in the Deutero-Pauline Epistles and the Pastoral Epistles continued after Paul. In these letters the debates about Hellenism coincide with those about heresy versus orthodoxy. Each of these texts discusses in its own way the problems of accommodation to and separation from Hellenism.

(8) The Gospels and the Book of Acts. The Gospels and the book of Acts originated in connection with the problem of how best to communicate the life and teaching of Jesus as well as the beginnings of the church to the Hellenistically oriented. In this literature the christology of Jesus as "divine man," contained already in the pre-synoptic miracle-story tradition, was reinterpreted in accordance with the theology of the evangelists (see Betz, *RAC* 12: 234–312). In the Gospel of Mark the teachings, miracles, and crucifixion of Jesus are presented as a "mystery" (Mark 4:11), a concept familiar to Hellenistic religious thinking. The Gospel of Matthew combines the gentile Christian Gospel of Mark with traditions derived from older Jewish Christianity. The Gospel of John debates the issues of Hellenism in its confrontation with Gnosticism. In the Gospel of Luke and the book of Acts the author recommends Christianity as the religion best suited for the Hellenistic world.

4. The NT Becoming Literature. Part of the phenomenon of Hellenism as it applies to the NT is the way in which it became literature. This process can be studied in the NT itself, but investigations have long been hampered by outdated ideas and concepts. Most important in this regard is the application of the category of literature to the NT (see Aune 1987; 1988). For a long time scholarship was influenced by Franz Overbeck's distinction between Christian "primitive literature" *(christliche Urliteratur)* and patristic literature, with only the latter to be properly called "literature." This concept of literature, the history and problems of which have yet to be studied adequately, has shaped subsequent NT scholarship, especially form criticism, redaction criticism, and genre research. Even the recent comprehensive history of early Christian literature by Vielhauer (1975) is based on Overbeck.

In regard to the epistolary literature, the distinction between "real letter" and "artistic, literary letter" (which has been common since Adolf Deissmann) is no longer usable (see Doty 1973; Aune 1988: 85–105; Malherbe 1988). The authentic letters of Paul include Romans, 1 and 2 Corinthians, Galatians, Philippians, 1 Thessalonians, and Philemon; in the case of Romans, 2 Corinthians, and Philippians, many scholars assume combinations of fragments by later redactors. The interpretation of Paul's letter

writing in the context of ancient epistolography and rhetoric is still in its beginning stages, but detailed analyses have been presented by Betz (*Galatians* Hermeneia; *2 Corinthians 8–9* Hermeneia) and others that demonstrate formal composition in accordance with Gk epistolography and rhetoric (see also Hübner 1984; Aune 1987: 158–225). The pseudepigraphical letters include 2 Thessalonians, Colossians, Ephesians, the Pastoral Epistles, Hebrews, the Catholic Epistles, and the letters contained in Acts 15:23–29 and Rev 2:1–3:22. 2 Thessalonians, Colossians, and Ephesians imitate Paul's letter writing and therefore presuppose that his letters have become literary prototypes. (See Holland 1987 on 2 Thessalonians and Donelson 1986 on the Pastoral Epistles.)

The Gospels were interpreted in terms of ancient literature first by K. L. Schmidt, M. Dibelius, and R. Bultmann, but their main interest was directed toward the smaller literary forms; redaction criticism later focused on the overarching work of the gospel writers. Recent attention shows renewed interest in the question of the gospel as literary genre (see Aune 1987: 17–76; 1988: 107–26; Talbert 1977; 1988: 53–73 with bibliography). It was Dibelius' aim to interpret the book of Acts as part of ancient literature. He was followed by many others, so that today scholarship agrees that the author of Luke-Acts must be regarded as one of the major historians of the Hellenistic age, along with Polybius, Plutarch, Josephus, and Tacitus. The book of Revelation has also been studied in terms of its literary nature, composition, and genre. (For the state of this research and bibliography see Collins 1983; Hellholm 1989).

HELLENISTIC SYNAGOGAL PRAYERS.

See PRAYERS, HELLENISTIC SYNAGOGAL.

HELLENISTS

[Gk *hellēnistai*]. The term used in Acts (6:1; 9:29) to designate Jews living in Jerusalem but originally connected with Diaspora Judaism and characterized by the use of Greek as their principle language, especially for worship and scripture.

The traditional understanding of the Hellenists as Greek-speaking Jews is first found in Chrysostom (*Hom. 14 in Acts* 6:1 and *Hom. 21 in Acts* 9:29). This has been expanded in recent years to an understanding of them as Diaspora Jews, acculturated in the Greek language, who returned to live in Jerusalem, forming their own synagogues and community relationships. There remained a degree of separation from Aramaic-speaking Jews even though the boundaries were not rigid, as some Greek-speaking Jews may have known Aramaic, and Aramaic-speaking Jews almost certainly knew some Greek. Some of these Jews, returning with a sense of awe for their ancestral customs, had staunchly conservative attitudes toward the Law and Temple, e.g., Acts 6:8–9 and 9:29. Others experienced dissonance between Diaspora theological emphases and the ethos of Palestinian legal observance and the Temple cult. They may have found Christian preaching attractive. Some of these Greek-speaking Jews were converted along with Jews who spoke Aramaic, perhaps as early as Pentecost, forming parallel Christian worshipping communities that reflected the distinctions known in the larger Jewish community.

That Luke understood the term in this manner seems certain. The Seven (6:5), usually taken to be representatives of the Hellenists, are Jewish Christians (Hengel 1983: 6). When dispersed (11:19) the Hellenists preach at first only to Jews. The conversion of the gentile Cornelius (Acts 10), is a unique event which is the precedent for the conversion of all gentiles (Acts 15). For Luke the Hellenists in Acts 6:1 are Christian Jews, while in 9:29 they represent the larger group of Diaspora Jews who have not converted.

Since *hellēnistēs* does not occur in any extant literature before Acts and does not occur again with regularity outside of literature influenced by Acts, until the 3d century it is the context of Acts which must be the primary determinant in establishing its meaning. But what can be gleaned from the etymological derivation of the term appears to confirm the meaning "Greek-speaking." *Hellēnistēs* is formed from the verb *hellēnizō*, which usually means "speak Greek" (Hengel 1983: 9). But it must be recognized that most verbs derived from national names mean to live by that group's national customs; e.g., *Ioudaïzō*, "live by Jewish customs," Gal 2:14.

It seems historically implausible that there could have been a gentile segment of the Christian community in Jerusalem at this early date large enough to have caused problems with daily food rations or to have been in a position to attempt to kill Paul (9:29). Luke's theology does not in this case obscure a different historical reality.

There are three main dissenting opinions. Cadbury (1933: 59–74) argued that the Hellenists were gentiles. Most of his points have been answered above, except for the variant reading at 11:20. Here *hellēnistas*, the majority reading, clearly means "Greeks." Thus most commentators and versions adopt the minority reading *hellēnas*. But it is possible that a scribe, having gotten used to Luke's uncommon *hellēnistēs*, repeated it here when the original read *hellēnas*, "Greeks" (Hengel 1983: 8). If the majority reading is original it may still attest to the meaning "speak Greek," but with a variable racial connotation which must be taken from the context. Blackman (1937: 524–25) argued that the Hellenists were proselytes, but in the list of the Seven only Nicolaus is designated as such. Others have argued that the Hellenists represent a syncretistic fringe group in Judaism, but this fails to account for the archconservatism of Stephen's (6:9) and Paul's (9:29) opponents.

It is important that in the consensus of recent scholarship the Hellenists of Acts 6:1 acquire an immense significance in the development of the early Church. Robin Scroggs (1968: 177) has termed their community "the mother of Western Christianity." Of course Palestine had been subject to a process of Hellenization at least since its conquest by Alexander. But the local persistence of Aramaic as the primary language of acculturation means that it is still useful to distinguish between a Palestinian sphere and the larger Hellenistic world. Thus it is now thought that it was this community of Christian Hellenists who accelerated the transferal of the Jesus tradition from Aramaic into Greek, who helped bring Christian theology fully into the realm of Greek thought freed from Aramaic pre-acculturation, who were instrumental in moving Christianity from its Palestinian setting into the urban culture of the larger Empire, who first saw the implications of Jesus' resurrection for a Law-free Gospel for the gentiles (and for Jews), and who were the bridge between Jesus and Paul. These Christian Hellenists were the founders of Christian mission outside Palestine, and a theological tradition capable of articulating a gospel for the Greco-Roman world.

HELMET. See WEAPONS AND IMPLEMENTS OF WARFARE.

HELON (PERSON) [Heb *ḥēlōn*]. The father of the chief (*nāśî'*, Num 2:7) Eliab of the tribe of Zebulon. Of the five times that Helon is mentioned in the OT, each occurs in a tribal list where his mark of distinction is his status as the father of Eliab. Under the leadership of Helon's son Eliab, the tribe of Zebulon participated in the census of Israelite fighting men carried out by Moses (Num 1:9, 30–31), presented its offerings on the third day of the twelve-day celebration of the dedication of the altar (Num 7:24, 29), took its proper place on the E side of the tabernacle in the Israelite camp (Num 2:7), and assumed its position in the order of march at the Israelites' departure from Mt. Sinai (Num 10:16). The name "Helon" means "the strong one," which appears simply to refer to the bodily strength of the one bearing the name (*IPN*, 225).

DALE F. LAUNDERVILLE

HEM. See DRESS AND ORNAMENTATION.

HEMAN (PERSON) [Heb *hêmān*]. Var. HOMAM. The name of three men in the OT.

1. A clan name in the genealogy of Seir the Horite mentioned in Gen 36:22. If Heman is read here, then his origin would be among the clans of the earliest known inhabitants of this region of Seir (Edom). However, this reading of the name appears in the RSV, GNB, and Douay versions. The MT, KJV, NEB, NAB, and many others read, more correctly, Hemam *(hêmām)*, who is identified in the Horite genealogy as a son of Lotan. The name "Hemam" only appears in Gen 36:22; however, in the parallel genealogical list of 1 Chr 1:39, the name is written Homam. Unlike the clans of Israel, the Horite clans did not permanently inherit a dwelling place. They were ultimately dispossessed from the land of Seir (Edom) by the encroaching "sons of Esau" (Deut 2:12–22). This conquest is paired in the text with the conquest of Canaan by the Israelite tribes.

2. One of the three sons of Mahol in 1 Kgs 5:11 (Eng 4:31). This designation may not reflect family relationship, but rather serve as a title, "sons of the dance" (compare "daughters of music" in Eccl 12:4), reflecting their role in the temple worship. Heman, and his brothers Calcol and

Darda, plus Ethan the Ezrahite, were proverbial wisemen of Israel. The unsurpassed wisdom of king Solomon was demonstrated by comparison with that of the sages of the east, of Egypt, and of these four men. In the Judahite genealogical list of 1 Chr 2:6 these four are described as the sons of Zerah. This connection may be the result of the Chronicler identifying the name Zerah with Ezrahite in the superscriptions to Psalms 88 and 89.

3. A son of Joel in the genealogical list of the temple guild in 1 Chr 6:18–32 (Eng 6:33–38). Twenty-two generations of this family are traced through the Levite tribe. Such attention to detail added authority to their leadership in the Second Temple period as well as providing a sense of continuity of service back to the origins of the covenant with God. In 1 Chr 15:16–17, David instructed the "chiefs of the Levites" to appoint musicians to perform during religious celebrations. It is noted that Heman the son of Joel was so appointed, and in 6:19 he is said, along with Asaph and Ethan, to be among those who "sound bronze cymbals." In 1 Chr 16:41–42, Heman and Jeduthun are described as sounding trumpets and cymbals in accompaniment to sacred songs. Similarly, 2 Chr 5:12 describes a grand procession taking the ark of the covenant into the temple accompanied by ranks of priests and the levitical singers and musicians including Heman, Jeduthun, and Asaph.

An expanded role for Heman and the other musicians is found in 1 Chr 25:1. Here they are said to "prophesy with lyres, with harps, and with cymbals" (compare Elisha's use of a musician in 2 Kgs 3:15). This role as prophet is further enhanced in 25:5 where Heman is described as the "king's seer" (see the parenthetical insertion regarding "the seer" in 1 Sam 9:9 and the designation of Gad as the "visionary of David in 2 Sam 24:11). It may be that originally the guild of musicians associated with Heman, Asaph, and Jeduthun began as a prophetic group and later was absorbed into the corps of temple musicians. However, Wilson (1980: 294) suggests that the Chronicler recognized prophecy as a regular part of the Levites' cultic role. "Visionaries" were thus not to be assigned to just one period of Israelite history.

VICTOR H. MATTHEWS

HEMDAN (PERSON) [Heb *ḥemdān*]. Var. HAMRAN. A son of Dishon (Gen 36:26; 1 Chr 1:41), which makes him a grandson of "Seir, the Horite" (Gen 36:20). See also HORITES. The genealogical list Gen 36:20–28 belongs to the most ancient traditions in Genesis 36 (Weippert 1971). Together with Gen 36:10–14, the list describes the Edomite tribal system in the 7th century B.C. (Knauf 1989: 10–11, n. 45, 61–63). The name is attested in Sabaic (Harding 1971: 200) and Arabic (*Ḥamdân;* Littmann 1921: 9). It can be interpreted as "object of desire" (cf. Dan 11:37). In 1 Chr 1:41, *ḥmdn* is misspelled as *ḥmrn*, a name that occurs in Safaitic and Qatabanian (Harding 1971: 201).

HENA (PLACE) [Heb *hēnaʿ*]. Assyria under Shalmaneser V (726–722) and Sargon II (721–705) conquered Samaria and took tribute from Judah's king Ahaz (733–727). Hezekiah (727–698) continued the tribute, but when Sargon died, Hezekiah rebelled against Assyria. The Assyrian King Sennacherib (704–681) attacked Judah and captured many cities (2 Kgs 18:13). He sent three Assyrian officials to confer with the leaders of Judah. One, the Rabshakeh, argued that the situation was hopeless. To illustrate his point, he asked (v 34), "Where are the gods of Hamath and Arpad? Where are the gods of Sepharvaim, Hena, and Ivvah?" The officials returned to Sennacherib, who sent them back with another message, including the words of 19:13, "Where is the king of Hamath, the king of Arpad, the king of the city of Sepharvaim, the king of Hena, or the king of Ivvah?" The story is repeated in Isa 36–37 where 37:13 records the same question of 2 Kgs 19:13. These were apparently places the Assyrians had conquered and the city gods had been unable to save them; the city kings were gone, presumably dead. Hena may have been in upper Mesopotamia, judging by the listing with Hamath (modern Hama, on the Orontes River, 120 miles N of Damascus), Arpad (Arfad, Tell Rif'at, 19 miles N of Aleppo), Sepharvaim (Ezek 47:16, Sibraim between Hamath and Damascus, near Homs; but Astour, *IDBSup,* 807, suggests Saparda in Media). Simons (*GTTOT,* 367) says the site is unknown.

The name simply means "low land." Scholars have pointed out that Hena and Ivvah do not appear in Isa 36:19, a parallel to or a repetition of 2 Kgs 18:34. After the question about the gods of Sepharvaim is the question, "Have they delivered Samaria out of my hand?" Hena and Ivvah do not appear in a somewhat similar list in 2 Kgs 17:24, which says the king of Assyria brought colonists (exiles) from Babylon, Cutha, Avva, Hamath, and Sepharvaim. This has led some scholars to claim that Hena and Ivvah are not geographical places at all. Astour claims there are no traces of toponyms of Hena and Ivvah any-

where in the ancient Near East. The "names" are due to dittography in the original phrase about the perverse king of the Sapardians. Gray (*Kings* OTL, ²1970: 677) omits the *hēnaᶜ wĕᶜiwwâ* of MT with the Greek (BL) and Isaiah 36. The Targum takes them as the *Hipᶜil* of *nuaᶜ* and *Piᶜel* of *ᶜawa,* meaning "He sent them wandering and caused them to stray." Symmachus in the parallel passage in Isa 37:13 reads "displaced and humiliated them," reading *ᶜinna* for MT *ᶜiwwâ.* G(L) and L read *wĕʾayyēh ʾĕlōhê ʾereṣ šōmrôn,* "and where are the gods of the land of Samaria," which is suggested by the immediate sequel. A reference to Samaria is natural after its recent fall rather than a reference to more distant places. Gray (p. 684) translated v 34, "Where are the gods of Hamath and Arpad? Where are the gods of Sibraim and where were the gods of the land of Samaria that they should deliver Samaria from my hand?" The gods of these Syrian peoples could not be expected to deliver Samaria; hence Lucian's reading "where are the gods of Samaria?" is demanded before the final phrase (unless, of course, Hena and Ivvah are actual places). In 2 Kgs 19:13, Gray (p. 686) omits *sĕparwāyim hēnaᶜ wĕᶜiwwâ* as a mere echo of 18:34.

Earlier Cheyne (*EncBib* 2: 2016) claimed Hena and Ivvah were imaginary names. "Underlying this is a witty editorial suggestion that the existence of cities called *hnᶜ* and *ᶜwh* respectively has passed out of mind (cf Ps 9:6[7]). for [Hena and Ivah] clearly means 'he has driven away and overturned' (so Tg, Sym)." He would drop Hena out of the text. Hommel (1898: 330–31) though that these were divine names. Hena is the Arabic star-name al-hanᶜa, and Ivvah is al-ᶜawwa, the 6th and 13th stations of the moon. Delitzsch (1877: 97) noted also that if Hena and Ivvah are words, the phrase means "he has taken away and overthrown," but he thought they were the names of cities whose location is unknown. Hena is hardly the well-known Avatho on the Euphrates as Gesenius, Niebuhr, and others supposed. Gehman (1970: 378) noted the common identification with Anah on the Euphrates at 42° E longitude. Ivvah (2 Kgs 18:34; 19:13 RSV) may be the same as Avva in 2 Kgs 17:24, which was a town and has been identified with Tell Kafr 'Aya on the Orontes, SW of Homs. Thus Hena would be in the same vicinity, i.e., somewhere near Damascus, an area familiar to the inhabitants of Jerusalem. Thus the Rabshakeh's analogy makes sense—Jerusalem will be destroyed; her God will not help her; her king will be killed—just like Hena and these cities near Damascus, whose fate was already known to the people of Jerusalem.

HENRY O. THOMPSON

HENADAD (PERSON) [Heb *ḥēnādād*]. This name means literally, "the grace of Hadad," Hadad being the West Semitic storm-god (cf. Benhadad of Syria). Similar names are found in Ugaritic, such as *ḥnbᶜl,* "the grace of Baal," and *ḥnil,* "the grace of El." Henadad was the patronym of a family group among the Levites. The "sons of Henadad," i.e., members of this family group, were among those charged with overseeing the repairs of the house of the Lord (Ezra 3:9). Henadad, mentioned in connection with the restoration of Jerusalem under Nehemiah (Neh 3:18, 24; cf. also Ezra 3:9), and with the sealing of Nehemiah's covenant (Neh 10:10–—Eng 10:9), was of this same family group.

D. G. SCHLEY

HENNA. See PERFUMES AND SPICES; FLORA.

HEPHER (PERSON) [Heb *ḥēper*]. HEPHERITES. Three people in the OT bear this name. The noun is probably related to the West Semitic root *ḥpr,* meaning "to dig, search for" (cf. Ar *ḥafara,* Aram *ḥēpar*), hence *ḥēper* would refer to something dug, such as a well. In postbiblical Hebrew *ḥēper* refers to "grave digging," an obvious later restriction to one kind of hole (cf. Jastrow 1903: 493 for references).

1. The head of the clan (properly Heb *mišpaḥâ,* which is midway between a family and a clan) of the Hepherites (Heb *haḥeprî*) in the tribe of Manasseh. He is also identified as the father of Zelophehad, whose daughters were given their father's inheritance in the absence of a male heir (see Num 26:32, 33; 27:1; 17:2, 3). See HEPHER (PLACE).

2. One of the sons of Naarah, a clan of Judah (1 Chr 4:6).

3. One of the mighty men (Heb *gibbôrîm*) of David in 1 Chr 11:36. Note that the parallel passage in 2 Samuel 23 differs in some respects from the Chronicler's list, including omitting any mention of Hepher. Some textual corruption of either or both passages is possible (cf. the discussion in Hertzberg *I and II Samuel* OTL, 402–408; Williamson *1 and 2 Chronicles* NCBC, 101–4), although it also seems possible that the two lists come from different sources representing the composition of David's mighty men at different times.

H. ELDON CLEM

HEPHER (PLACE) [Heb *ḥēper*]. A town located in the tribal territory of Manasseh, first appearing alongside Tappuah in the list of defeated Canaanite kings (Josh 12:17). Hence, the editor of the book of Joshua testifies that Hepher was a Canaanite city-state. But the credibility and dating of this list has been questioned and debated by different scholars (Noth 1935; Aharoni 1976). Most scholars place the origin of the list within the context of the Iron I period, but Fritz (1969) has suggested a date in the United Monarchy. The appearance of the sites in the list in pairs, usually in the same geographic vicinity, and the identification of Tappuah in the Manassite territory in the central mountain region may serve as a preliminary guideline for locating the city of Hepher nearby. The term "the land of Hepher," which appears in the Solomonic district

list (1 Kgs 4:10), apparently refers to a geographic definition of the area of jurisdiction of a Canaanite city-state. In this sense the Hebrew term *ʾereṣ* (land) is similar to the Akkadian term *mat,* which also appears as a definition for the territorial area of cities, families, and tribes. The Bible contains some examples of this term, in reference to Canaanite cities: "the land of Shechem" (Gen 34:1–2; 10:21); "the land of Tappuah" (Josh 17:8); "the land of Cabul" (Josh 19:27; 1 Kgs 9:13).

These two references define Hepher as a city-state, a description typical of the LB period. Its location should be sought within the bounds of the 3d Solomonic district, of which "the land of Hepher" is a part. According to Albright (1925), the district belonged to the Manassite inheritance in the hill country. However, Alt (1932) and Aharoni (1976) placed it in the Sharon plain of the coastal region. Following this latter placement Mazar suggested identifying Hepher with Tel Ifshar (M.R. 141197) in the central Sharon, while Alt suggested that Arubboth, the capital of the district, was located at Tel Assawir (M.R. 151210) in the N part of the same plain. From the outset these identifications presented great difficulties: Tel Ifshar is a small site, unfit to have been a Canaanite city-state; and Tell Assawir contained no remains from the 10th century. Another problem with placing the 3d district in the Sharon plain is the fact that the territories of the granddaughters of Hepher—the daughters of Zelophehad, according to the genealogical lists—were located in the NE of the Manasseh hill country; thus the "land of Hepher," if in the Sharon, is too far W from his "granddaughter's" allotments.

In 1978 a detailed archaeological survey of the Manassite allotment W of the Jordan was begun. With the identification of Arubboth at Kh. el-Hamam (M.R. 163201) near the Dothan valley, it became apparent that Hepher and the "land of Hepher" should be sought in the hill-country nucleus of Manasseh. As a result of the survey, Zertal (1984) suggested a new identification for the city-state of Hepher at Tell el-Muhaffar (M.R. 170205), located at the N fringes of the Dothan valley. The survey established that settlement on this large tel, which lies upon a good water source and near the international route which connected the coast and the valley of Jezreel (cf. Gen 37:25; *ANET,* 235), began during the EB I–II period. The settlement dwindled during the MB and LB periods, but an additional flourishing of the settlement was during the Iron I–II periods.

The name of the fortified tell was also well preserved. In the British PEF maps, the site is named Umm el-Haffeh, whereas in later maps it appears with its full name, Mu-Haffar. The rarity of the root *ḥpr/ḥfr* in the lexicon of Palestinian place-names supports the idea that the original name was preserved in the above. Therefore it seems that the original territory of the "land of Hepher" included the area of the Dothan valley, originally the area belonging to the Canaanite city-state of Hepher.

In the genealogical lists of Manasseh (Josh 17:2), the Canaanite Hepher appears as the son of Manasseh, along with Shechem, Shemida, Helek, Asriel, and Abiezer. See HEPHER (PERSON). The list continues with Zelophehad, son of Hepher, and his daughters: Milka, Mahla, Hogla, Noah, and Tirza. The Samaria Ostraca indicate that all these were subdivisions within Manassite territory; therefore, the term "the land of Hepher" during the Israelite settlement period apparently expanded to include all the territories in the NE area of Manasseh, from Wadi Fariʿah and S of it to the Gilboa range in the N, including the E valleys of the Shechem Sincline. Lemaire (1977) and others have suggested identifying these areas as the territories of the daughters of Zelophohad. The archaeological survey conducted by Zertal showed that the earliest Iron I settlements in Manasseh were located in the desert fringe and the E valleys near the Jordan. This conclusion is based upon the presence of the early cooking pot type A, which is dated to the 14–13th centuries B.C.E., from which developed the later "Israelite" cooking pot type B, typical to the 12–11th centuries B.C.E.

In light of the results of the survey, Zertal suggested identifying the territory of Tirzah at Wadi Fariʿah, of Mahlah in Wadi Malih, of Milcah in the Sanur Valley (10 miles N of Nablus) of Hoglah in the vicinity of Yasid (M.R. 176189), and of Noah possibly in the Zebabde valley (7 miles N of Tirzah; already suggested by Lemaire). This division appropriately defines the final development of the term "the land of Hepher" during the period of the United Monarchy, as it appears in the Solomonic district list.

HEPHZIBAH (PERSON) [Heb *hepṣî-bāh*]. Mother of Manasseh, king of Judah (2 Kgs 21:1). Hephzibah's name occurs in her son's regnal formula in 2 Kings but is omitted from the parallel account in 2 Chr 33:1. She is the only queen mother for whom no information is given concerning either her father or her place of origin. Her name, which means "my delight is in her," appears in Isa 62:4 as a symbolic name for the restored Zion. See also MANASSEH, KING OF JUDAH; QUEEN.

LINDA S. SCHEARING

HEPTAPEGON (M.R. 200251). A term (Gk *Heptapegon*), which specifically refers to several still-existing springs near the NW bank of Lake Kinneret. These springs flow between the foot of the hills of the Mount of Beatitudes and the bank of the lake in a rocky area that is situated 2 miles to the SW of Talhum-Capernaum and on

the NE side of Tell ʿOreimeh (i.e., the ancient city of Kinneret, from which the name of the lake is derived). Between Tell ʿOreimeh and the springs, Wadi Jamus widens out, forming a small plain.

The name "Heptapegon," which means "seven fountains," does not occur in the writings of the NT and is attested only beginning from the 9th century, although the name is implied in the Latin texts of the 4th century *(Septem Fontes)*. The Arabic pronunciation et-Tabgha derives directly from "Heptapegon," where *hep* has been changed into *et* by assimilation with the following consonant, and *tapegon* is contracted to *tabgha* with the normal shift of *p* to *b;* the *a* ending probably derives from the plural feminine substantive *heptapegai* instead of from the neuter singular of the substantive adjective *heptapegon*. The Arabic name et-Tabgha, or simply TABGHA is still in use, along with the modern Hebrew name ʿEin Sheba, and is a safe assurance of the identification of the site.

According to Josephus, the spring (*pege* in the singular) was commonly called Capernaum ("the inhabitants call it Capernaum": *JW* 3.519). This designation, the most ancient, is explained by the fact that Capernaum was in the 1st century A.D. the installation closest to the springs. It is also recorded in the Middle Ages that the limited area around the springs was called Tabula (cf., the Florentine map of the 13th century).

A. Research and Excavations

Many travelers and topographers of the past century, in their impassioned research on Capernaum, have stopped at et-Tabgha and have described in particular the springs and the hydraulic installations connnected with them, ignoring, however, the existence of the sacred Christian buildings. The systematic excavations since 1932 have revealed the presence of three churches built by the Byzantines in memory of three important events of the gospel accounts—the multiplication of loaves and fishes (Matt 14:13–21), the Sermon on the Mount (Matt 5:1–11), and the appearance of the resurrected Jesus (John 21:1–24).

The three sanctuaries were constructed in the late 4th century and were of modest proportions. Toward the end of the 5th century the little Church of the Multiplication of Loaves and Fishes was replaced by a much larger church which had mosaic pavements with scenes of exceptional artistic merit. The mosaic of the Chapel of the Sermon on the Mount was also partially remodeled. With the Persian invasion at the beginning of the 7th century, the Church of the Multiplication and the Church of the Sermon on the Mount fell gradually into ruins, and only the rustic little chapel on the traditional site of the appearance of the resurrected Jesus remained functional until the period of the Crusades.

B. The Heptapegon at the Time of the Gospels

The Heptapegon is of interest to biblical scholars because the site was near, and directly dependent upon Capernaum, "the city of Jesus" (Matt 9:1), and because the Christian communities located at this place the three important events mentioned above. The reliability of these traditions cannot be quickly dismissed, especially after the recent excavations of Capernaum have indicated both the uninterrupted presence there of a strong community of Jewish Christians in the first centuries of the Christian era, and their pronounced interest for the preservation of traditions. Furthermore, archaeological research, and especially that of 1968, not only has uncovered in the limited area of the springs certain elements consonant with the topographical data in the gospel accounts, but it has helped further to re-create the physical environment.

One thing is clear: in the area of the springs of et-Tabgha, there has never been a village, much less an urban center, in spite of what some explorers of the last century have suggested. According to them the Heptapegon was at the time of Jesus an industrial suburb of Capernaum, or even the place of Bethsaida of Galilee. Only in one place have some silos been found excavated in the rock presupposing a farmhouse. Although the initial date of its construction escapes us, it must date before the 2d century A.D. In addition, the Heptapegon was separate from the urban centers: between the Heptapegon and the entrance of the Jordan river at the N of the lake, the only village was Capernaum, two miles away from the Heptapegon, while along the W shore of the lake there existed no installations between the Heptapegon and Magdala (with the possible exception of Tell Hunud where, however, the pottery gathered on the surface does not predate the 3d century A.D.).

Besides being a "solitary" place, the Heptapegon consists of a vast area of land that is completely rocky and inadequate for agriculture but much more adapted for an assembly of a great multitude. The rocks on the surface were exploited, beginning in the 2d century A.D., as a source of white limestone, much more precious than the basalt which is abundant in the area of the lake. The small plain however, along the Wadi Jamus, to the W of the springs, lent itself well to cultivation. It is to this arable area that the pilgrims refer to when they spoke of a level field where many olives and palms grew.

At the time of the Jesus, the abundant springwater flowed in the lake and was utilized only in part to irrigate the fertile valley of Ginnosar through canals which now are very difficult to locate. These waters still attract a great quantity of fish so that the shores of the lake between the Heptapegon and Capernaum are the richest for fishermen. Only in the 4th century A.D. was a more rational and efficient system of irrigation created: several springs in fact were channeled into gigantic cisterns from which canals carried the water in various directions. In more recent times the springwater has been used to propel many mills, some of which have remained in use until as recently as fifty years ago.

The Heptapegon, although it is a solitary place and for the most part rocky, was easily accessible both by the lake it bordered and by land, since it was crossed by a very important imperial road; this road passed from Beth-shan to Damascus, turning from Tell ʿOreimeh toward et-Tabgha. This road was still functional in the 4th century and is recorded by the pilgrim Eteria.

All evidence seems to corroborate the events of the gospels and the ancient Christian tradition which located them in the restricted area of the Heptapegon.

STANISLAO LOFFREDA

HERAKLES (DEITY). The most popular and the most complex of the ancient Greek heroes, Herakles (a theophorous name meaning "glory of Hera") was reportedly the son of Zeus and the mortal woman Alcmene. Herakles was prominent in four areas of Greek and Roman culture: folklore, cult, art, and literature. He is mentioned several times in the oldest extant Greek compositions, the *Iliad* and the *Odyssey* (Galinsky 1972: 9–22). Archaeologists have discovered artistic representations of his exploits which date to the 8th century B.C. According to Nilsson (1932: 187–220), the Herakles cycle (along with the other major Greek mythological cycles) can be traced back to the Mycenaean period (ca. 1550–1150 B.C.). Iconographic evidence from the ANE, dating as far back as the 3d millennium B.C., provides evidence for the popularity of such Herakles-like figures as Ninurta, the son of the storm god Enlil (Burkert 1979: 80–83). A hero with club, bow, and lionskin (the traditional costume of the Greek Herakles, which appears after ca. 650 B.C.) is depicted on Sumerian cylinder seals. Burkert traces the figure of Herakles back even further to a neolithic and EB age figure who is not primarily a warrior fighting other warriors but rather a "master of animals" (Burkert 1979: 83–98). According to the *interpretatio Graeca* ("Greek interpretation") which prevailed from the 5th century B.C., in which certain barbarian deities were seen as Greek gods under various aliases, Herakles was identified with the Tyrian god Melgart, whose worship spread to the Decapolis, Cyprus, Egypt, and Carthage (Herodotus 2.44; 2 Macc 4:19; Joseph. *AgAp* 1.118–19; *Ant* 8.146; Arr. *Anab.* 2.16.1–8; Arist. *Or.* 40.10; cf. Teixidor 1977: 34–35). At Palmyra, Herakles was identified with the Mesopotamian ruler of the dead Nergal (Seyrig 1945). In one of the surviving fragments of Cleodemus or Malchus (Holladay 1983: 245–59), possibly a Jew or a convert to Judaism, the author claims that two of the sons of Abraham by Keturah, Aphran and Apher, joined Herakles to fight Antaeus in Libya, one of Herakles traditional *parerga* (Diod. Sic. 4.17.4–5). Herakles later married the daughter of Aphran, who bore a son named Diodorus.

Herakles differed from other Greek heroes (such as Perseus, Theseus, Odysseus, Oedipus, and Amphiaraus) in that he had no tomb which might serve as a center for his cult. This feature was quite unusual, since the Greek term *heros* (usually simply transliterated into English as "hero") was a term for a mortal who received worship at his tomb as a local earth deity after death. In part the widespread popularity of Herakles was due to the fact that his worship was not localized by not being limited to the site of a tomb. Despite the fact that he had particular associations with Tiryns and Thebes, neither city ever claimed to possess his remains.

The worship of Herakles had two quite different forms, each characterized by a distinctive sacrificial protocol (Guthrie 1950: 229–31). In some places he was honored as a hero, while at other places he was worshipped as an Olympic god (Herodotus 2.44). Pindar combined these two perceptions by describing Herakles as a "hero-god" (*Nem.* 3.22), by which he meant a hero who had become an Olympic deity as a reward for his labors. The dual nature of Herakles is also reflected in a famous passage in *Odyssey* 11.601f., where Odysseus sees, during his tour of Hades, "the phantom of mighty Herakles; but he himself is with the immortal gods." Another reason for Herakles' enormous popularity was the fact that he was a mortal who through his own striving had become a god, thereby breaking the barrier between mortality and immortality so rigidly maintained in ancient Greek religious thought (Guthrie 1950: 239).

The most extensive ancient syntheses of Herakles legends are found in Diodorus Siculus 4.8–53 and Apollodorus 2.4.5–2.8.5. These and other ancient mythographers divided the adventures of Herakles into three categories. First came the Twelve Labors (Brommer 1986), the so-called canonical tasks assigned to Herakles by king Eurystheus of Tiryns (to purify him for killing his wife Megara and her children during an insane rampage), which can be subdivided geographically into a *Peloponesian group* (of six): (1) The Nemean Lion, (2) The Lernaean Hydra, (3) The Erymanthian Boar, (4) The Ceryneian Hind, (5) The Stymphalian Birds, and (6) The Stables of Augeas; an *eastern group* (of three): (7) The Cretan Bull, (8) The Thracian Horses (Mares of Diomedes), and (9) The Girdle of Hippolyta; and a *western group* (of three): (10) The Cattle of Geryon, (11) The Apples of Hesperides, and (12) Cerberus (descent and return from Hades).

Second came the *Parerga,* or "subsidiary activities," the so-called "noncanonical" adventures, some of which punctuate the Twelve Labors; others were narrated after the completion of the Twelve Labor, but all were considered incidental to them (Brommer 1984).

Third came military expeditions during which Herakles both conquered and civilized the world. It was this final type of activity which made Herakles popular as a paradigm of the king and victorious conqueror with whom many Hellenistic kings and Roman emperors and generals identified.

These three types of adventures were framed by stories of Herakles' birth and youth on the one hand and death by self-immolation on the other. Shortly after Zeus had impregnated Alcmene disguised as her husband (compressing three nights into one), Amphitryon himself arrived home and also had sexual relations with Alcmene. Consequently she bore twins, Alcides (the original name of Herakles), son of Zeus, and Iphicles, son of Amphitryon. Hera, a patron of Eurystheus and adversary of Herakles, sent a serpent to destroy the infant Herakles, but the infant hero strangled it. By the 5th century B.C., Herakles' labors were understood allegorically, and as tasks which he took on voluntarily. In line with this understanding Prodicus (a contemporary of Socrates) lectured on the allegory of Herakles' Choice (Xenophon 2.1.34), pre-

sented as a testing or temptation scene. Two women, personifications of Vice and Virtue, appeared to Herakles. The former tried to persuade him to follow the easy road of ease and pleasure, while the latter urged him to take the rough road of hardship and struggle. Herakles chose the latter, and so became an example for Stoics and Cynics, as well as others. Herakles' death was the result of a tragic accident. His wife Deianira gave him a garment which had been anointed with the blood of the dying centaur Nessus. Though she thought the blood was an aphrodisiac, in reality it was a poison. Suffering greatly, Herakles had a funeral pyre constructed on Mount Oeta. According to the version of the myth in Apollodorus (2.7.7; trans. Simpson), "While the pyre was burning a cloud is said to have enveloped Heracles and to have raised him up to heaven with a crash thunder. Thenceforth he was immortal" (cf. Sen. *Her. O.* 1966–69).

Samson (as a theophorous name meaning "man of the sun"), an Israelite leader with superhuman strength, performed many fantastic feats, many of which have parallels in Greek and Mesopotamian legends of figures like Herakles, Ninurta, and Gilgamesh. In a series of articles, O. Margalith has argued that the Biblical figure of Samson is associated with a pastiche of adventures drawn from a LB Age cycle of Herakles legends as well as other Greek mythical themes and motifs (1986a; 1986b; 1987). The Herakles legends, he argues, were mediated to the Israelites by their Philistine neighbors. Samson's slaying of a lion barehanded to win the favor of a maiden (Judg 14:5–9), for example, is a motif missing from the ancient Near East but common in Greek folklore (Margalith 1987). The birth story of Samson in Judg 13:2–24 consists of three motifs common in Greek myth: a barren mother, the intervention of a supernatural being, and a miraculous birth (Margalith 1986b). Some of Margalith's parallels are weak, such as his contention that the sacrifice of Samson's parents in Judg 13:15–20, in which they supposedly see Samson's divine father ascend to heaven in flames, was influenced by the story of Herakles' fiery apotheosis on Mount Oeta (Margalith 1986b). Augustine provides evidence that early Christians also connected Samson with Herakles (*Civ. Dei* 18.19), and Samson is depicted as Herakles in the frescoes of the Via Latina catacomb (Simon 1981: 86–96; Malherbe *RAC* 14: 581–83).

Early Christians recognized parallels between Herakles and Jesus but considered the former to be based on the imitation of the latter (Just. *1 Apol.* 21.1; *Dial.* 69.3; Or. *Cels.* 3.22, 42). Several modern scholars have noted the striking similarities between the legends of Herakles (and other Greek heroes) and the life of Jesus as presented in the canonical Gospels (surveys in Simon 1955: 49–74 and Malherbe *RAC* 14: 568–72). Pfister (1937) proposed that the author of the "Urevangelium," from which the Synoptic Gospels were derived (in itself an improbable hypothesis), was heavily influenced by a Cynic-Stoic life of Herakles. Pfister's proposal received a devastating critique by Rose (1938), who nevertheless conceded that the legendary features of the Gospels (virgin birth, miracles, resurrection, ascension) in many cases were influenced by ancient conceptions of the divine hero or divine man. Toynbee listed twenty-four parallels between Herakles and Christ (1939: 465–76), yet suggested that the influence of the former upon the latter was through "folk memory."

There is evidence which suggests the possible influence of Herakles imagery on the formation of aspects of the Christology of Hebrews (Aune 1990). Though Jesus was the Son of God, he learned obedience through suffering (Heb 5:8) and provides an example for Christians (Heb 12:3–4). Similarly Aelius Aristides heard a divine voice exhorting him "to endure the present circumstances, since Herakles also endured his, although he was the son of Zeus" (*Or.* 40.22; trans. Behr), and others considered Herakles' divine sonship as a metaphor referring to his "education" in toil and suffering (Dio Chrys. *Or.* 2.78; Epict. 2.16.14). Since Jesus has passed through the heavens and experienced human weakness, he is able to help those who pray to him (Heb 4:14–16). Similarly Dio Chrysostom is critical of the many common people "who pray to him [Herakles] that they may not themselves suffer—to him who in his labours suffered exceedingly great" (*Or.* 40.16; LCL trans. with modifications). Both Jesus (Heb 5:8–9; 10:5–10) and Herakles (*DL* 6.2; Diod. Sic. 4.11.1; Epict. 2.16.44) are hailed as examples of obedience to their divine fathers. Finally, just as Jesus' heavenly enthronement is achieved through his suffering and death (Heb 2:9; 12:2), so the apotheosis of Herakles is seen as the consequence of his life of obedience, suffering, and virtue (Lucian *Deor. conc.* 6; Dion. Hal. *Ant. Rom.* 1.40). These and other parallels suggest that the author of Hebrews thought that many of the functions of Herakles as a Hellenistic savior figure were even more applicable to the mission and achievement of Jesus. See also HERCULES (DEITY).

HERBS. See FLORA.

HERCULES (DEITY) [Gk *Hēraklēs*]. The Greek figure who is honored in quadrennial games at Tyre to which Jason in 2 Macc 4:19–20 sends a delegation with three hundred drachmas of silver to offer sacrifices in the opening ceremonies. While the Greek term *pentaetērikou* literally would mean quinquennial, an inclusive method of counting was employed (Goldstein *II Maccabees* AB, 232). Known in Greek texts as "Heracles," Hercules is the Roman name given to this figure regarded in Greek literature as both hero and god. See also HERAKLES (DEITY). Heracles cults were spread throughout almost all the Greek world (Burkert 1985: 208–211). Both Strabo (16.2.23) and Arrian (2.16.2; 2.24.5; 3.6.1) give ample attestation to the major importance of this cult at Tyre. By the time of Herodotus (2.44) this Greek divinity is already connected with the Phoenician god Melqart.

While the wording of the account varies considerably in the manuscripts, the essential elements of the event remain the same. The 300 drachmas of silver mentioned in the story were a sufficient amount to buy an ox for sacrifice (Habicht *2 Makkabäerbuch* JSHRZ, 218), so later Latin and Syriac versions which read "3,300" reflect the inflation rate (Goldstein, 233). Goldstein is probably correct to argue that Jason viewed the sacrifice as a non-religious "admission fee" (pp. 232–33). Jason sent the envoys because King Antiochus IV Epiphanes (175–164 B.C.E.) was present and to establish Jerusalem's reputation as a Hellenistic city. In this chapter on the conflict over the Hellenization of Jerusalem, the envoys of Jason are used as an example of Jewish resistance to its religious demands. The Jewish delegation has some qualms about offering a sacrifice to a Greek god; they use the money given them for the purchase of an offering to pay for the construction of galleys *(triēreōn)* for the king instead. There is no indication that this decision presented a problem for the Hellenistic officials in Tyre.

Josephus (*Ant* 1.240–41) notes that Cleodemus Malchus in his history of the Jews says that the sons of Abraham aided Heracles in his battle against Libya, and that Heracles later married Abraham's granddaughter. From Menander he gets the information that Hiram, King of Tyre, erected new temples to Heracles (*Ant* 8.146, *AgAp* 1.118–19). Megasthenes is cited as arguing that the accomplishments of Nebuchadnezzar were greater than those of Heracles (*Ant* 10.227, *AgAp* 1.144).

JOHN KAMPEN

HERDSMAN [Heb *nōqēd*]. A term that denotes the work of shepherding small cattle (sheep and goats), and possibly specified the care of a choice breed of sheep. The Ar *naqad* refers to a species of small sheep producing abundant wool, and the shepherd of this animal was a *naqqad.* The Akk *nāqidu* was used of shepherds of cattle, sheep, and goats, and even of mankind; sometimes the term was used of the overseers of herdsmen. The word *nōqēd* is used twice in the OT: "King Mesha of Moab was a sheep breeder" *(nōqēd;* 2 Kgs 3:4) and Amos was "among the shepherds *(nōqēdîm)* of Tekoa" (Amos 1:1). As a *nōqēd* Mesha operated a profitable business; his annual tribute to the king of Israel was 100,000 lambs and the wool of 100,000 rams (2 Kgs 3:4). The care of such large numbers of sheep would have required many shepherds serving under Mesha. At Ugarit the *nqd* was a known functionary appearing in lists with priests and others of the nobility, and he presumably held an official position (*ANET,* 141b; see *UT,* 78, 447). The Ugaritic material raises the question of whether Amos should be regarded as different from the ordinary shepherd, as more like Mesha, a prosperous businessman. He may have occupied a professional status under the king or the temple which obligated him to supply them with flocks, to pay taxes, or even to fulfill a military role; he would have also enjoyed certain privileges that came with employment by the royal house (Hammershaimb 1970: 17–18; Cutler and Macdonald 1977: 25–27; Craigie 1982: 30–33). It has also been proposed that the title *nōqēd* as applied to Amos meant he held a position as some kind of cult functionary, even a hepatoscoper (see Bic 1951; cf. Murtonen 1952).

JACK W. VANCIL

HERES, ASCENT OF (PLACE) [Heb *maʿălēh heḥāres*]. The place E of the Jordan River by which Gideon returned from capturing the Midianite kings Zebah and Zalmunna (Judg 8:13). The text is problematic. First the presence of the definite article before *ḥeres* argues against Heres being a proper last name, but perhaps the word "sun" (BDB, 357); thus Gideon returned from the battle "before the sun arose" (although *maʿălēh* is not the normal word to indicate the path of the sun). Second, both Aquila and Symmachus presuppose *millĕmaʿlâ hĕhārîm,* "from up on top of the mountains."

GARY A. HERION

HERESH (PERSON) [Heb *hereš*]. A Levite who lived in Jerusalem after the return from Babylonian exile (1 Chr 9:15). Heresh is listed in 1 Chr 9:15 as a descendant of Asaph, the head of one of the three families of levitical singers appointed by David (1 Chr 15:16–17, 25:1–8) and the author of several Psalms (Psalms 50, 73–83). Heresh probably followed in his ancestor's footsteps as a levitical singer. The parallel passage in Nehemiah (11:15–18) does not list Heresh but does indicate that other descendants of Asaph lived in Jerusalem at that time (11:17). Braun (*1 Chronicles* WBC, 136) has suggested that the author of 1 Chronicles 9 may have had access to other traditions than did the author of Nehemiah; or he may have updated the list in Nehemiah 11 by adding the names of prominent families of his own day.

ROBERT C. DUNSTON

HERESY AND ORTHODOXY IN THE NT.

The issue of whether or not particular religious expressions conformed to established norms and/or doctrines was certainly important within early Judaism and early Christianity. However, it is important to note that at early stages "established norms" by definition did not exist. For early Judaism of the Greco-Roman period, diversity was prevalent, with various forms of Judaisms each understanding themselves to be the true successor to biblical "Israel." See JUDAISM (GRECO-ROMAN PERIOD).

The origins of Christianity are bound up with theological controversies surrounding true and false doctrine, controversies occurring first within Judaism and subsequently within Christianity. The NT as a literary manifestation is the result of these debates. See CANON (NT). Debates about true and false doctrine are thus presupposed in the NT, although the recorded material is only a cross-section of what must have occurred in the real life of the early Church.

A. Concept and Terminology

A. Concept and Terminology

Complementary to orthodoxy, the concept of heresy includes authoritative doctrines both theoretical (interpretations of Scripture; theology) and practical (rituals, ethics, organization) in content. The decision about what should be accepted as orthodox or rejected as heretical depended to a large extent on the viewpoint of the respective author(s) of a given text, that is, on doctrinal presuppositions and traditions as well as on concrete situations. The traditional definition of heresy as an arbitrary deviation by a minority from a doctrinal norm represented and safeguarded institutionally by a majority cannot be applied to primitive Christianity, a caveat correctly recognized in 1934 by Walter Bauer (Bauer 1971; see *TRE* 5: 317–19). The facts, however, are considerably more complicated than Bauer had presupposed and cannot be abstracted into one formula or rule.

The notion of heresy in the Christian sense of the word did not exist at the beginning; its gradual inception and development can be seen in the NT. Acts knows the notion of *hairesis* ("party," "sect") in the neutral sense, used by and derived from the Greek philosophical schools (see Glucker 1978: 166–225). According to Acts, the Jewish religious parties of the Sadducees (5:17) and the Pharisees (15:5; 26:5) are to be classified under this name. For the Jews in Acts, the Christian movement is nothing but another *hairesis* (24:5, 14; 28:22). Paul is shown to have changed parties from the Pharisees (26:5) to the "Nazoraeans" (24:14; 28:22). In the eyes of the Jews, the term *hairesis* takes on the connotation of "heresy" (24:5); but for the author of Acts, the early Church was "orthodox" in both Christian and Jewish terms. In the letters of Paul, the use of the terminology vacillates between the two meanings "heresy" and "schism," and he thereby introduces these terms into early Christian language and thought: *hairesis* points to divisive parties within the congregations, but at times it can also mean "heresy" (Gal 5:20; 1 Cor 11:18–19). In the post-apostolic period, the word always designates "heresy," in opposition to the "right" doctrine advocated by the author of the text (Titus 3:10; 2 Pet 2:1; Ign *Eph.* 6:2; Ign *Trall.* 6:1; *1 Clem.* 14:2; etc.). See *EWNT* 1: 96–97; *TRE* 14: 313–318; *RAC* 13: 248–97; *TDNT* 1: 180–85.

B. History

1. John the Baptist. Although there is little reliable information, the movement of John the Baptist apparently originated from debates in Judaism on true and false doctrine pertaining to the very essence of the Jewish religion. The phenomenology of John the Baptist, his message of repentence *(tĕšûbâ)*, and his ritual of baptism had their origin and purpose in a return to "true" Judaism, not simply in political opposition to the ruling authorities. When Jesus had himself baptized by John (Mark 1:9–11 and par.), the act itself was a confession by Jesus that he had accepted John's message as orthodox in the Jewish sense. At some point (after the arrest and death of the Baptist), Jesus proceeded on his own (Mark 1:14; 6:17–29) and called disciples, among whom were former disciples of John. Since Jesus' own message and conduct were, despite a large degree of agreement, considerably different from John's, debates over the issues must have ensued. Such debates may also have been the reason why not all of John's disciples jointed Jesus: in fact, the Baptist's movement continued to exist parallel to and in competition with Christianity. This competition is reflected in the NT, where differences between the Christian conduct and doctrines and those of the Baptists's followers are settled (Mark 1:7–8 par.; Mark 2:18–22 par.; Acts 13:24–25; 19:1–7), or where literary sources and traditions from the Baptist's own movement are taken over and integrated into the gospels (Matthew 1–2; Luke 1; John 1). Thus was John the Baptist given the place as a legitimate forerunner of Jesus.

2. Jesus of Nazareth. From the beginning, the appear-

ance of Jesus was a matter of controversy. Jesus was a self-conscious and conscientious Jew. His understanding of the Torah and of God's will and activity was in his view orthodox, but in the eyes of his opponents it was heretical (Braun 1969). Jesus' preaching of repentence (Mark 1:14–15 par.) was directed against other practices of Torah obedience ("pseudo-orthodoxy") and, by implication, against an erroneous understanding of the Jewish religion as such (see Matt 21:28–31; Luke 13:1–5). Jesus' critique focused on the teaching of the scribes and Pharisees, whereas other Jewish movements received little attention. This rather one-sided approach seems to imply that Jesus agreed with much of what those whom he attacked espoused. In his critique against current practices of Temple worship, he largely shared the view of the Qumran sect; yet contrary to Qumran and other rigorists in Judaism, Jesus held a positive view of the religion of the ordinary Jewish person. The controversies over Jesus seem to have targeted his combination of Torah observance and love of neighbor (see Mark 12:28–34 par.), an emphasis resulting in the different positions he took on cultic purity, observance of the Sabbath, prayer, marriage, and possessions. Moreover, on this basis he also strongly opposed the summary expulsion of the so-called tax collectors and sinners (Mark 2:15–16; Matt 11:19 par.; Luke 15:1–2, 18:9–14) as well as of the prostitutes (Matt 21:31–32; cf. Luke 15:30).

The condemnation of Jesus as a heretic by other Jewish parties is not reported by the earliest layers of the synoptic tradition. The accusation, however, that John the Baptist was possessed by a demon (Matt 11:18–19) was also turned against Jesus. Statements such as "he has the Beelzebul" or "through the prince of the demons he expels the (lower) demons" (Mark 3:22 par.; Matt 10:25; cf. Mark 11:27–33 par.) classify Jesus as a magician and thus initiate a kind of "negative christology" that has its advocates even in the present (see Smith 1978; Betz, *RAC* 12: 235–36, 251).

That Jesus was regarded to be a heretic is reflected first in Jewish-Christian sources or layers of NT tradition; the accusation apparently stems from a developed christology and soteriology. The Jewish-Christian Sermon on the Mount defends the theology of Jesus against the charge of apostasy (Matt 5:17–20; 7:21–23). In the synoptic controversy stories, Jesus appears in debates with opposing Pharisees, each charging the other with heresy (see Bultmann 1968: 39–55). The confession of Jesus as Messiah and Son of God (Mark 14:61–62 par.; Matt 22:41–46 par.) is, in the eyes of his opponents, evidence of heresy not only on the part of the Church but also on Jesus' part (see the summary in John 7–8). It is in these traditions that we first encounter the explanation that Jesus was crucified because he was a heretic (Mark 14:63–64 par.; John 10:33; 19:7; cf. Acts 7:54–60). This explanation also justified the expulsion of the Christians from the Synagogue (John 9:22; 12:42; 16:2).

3. Paul and his Opponents. Paul began as an orthodox Pharisee (Phil 3:5; Acts 23:6; 26:5; cf. Gal 1:13–14) who persecuted early Christian groups for their heresy (Gal 1:13, 23; 1 Cor 15:9; Phil 3:6; Acts 8:3; 9:1, 21; 22:4, 19; 26:10–11). See PAUL. Subsequent to his vision of Christ (Gal 1:16; 1 Cor 9:1; 15:8), Paul joined a Jewish-Christian community; soon, however, he and his gospel free of the law became suspect in the eyes of more conservative Jewish-Christians. Yet Paul and Barnabas succeeded at the Conference at Jerusalem (Gal 2:1–10) in clearing themselves from suspicion and obtaining approval of the so-called "pillars" of the Jerusalem church, although a conservative minority (the so-called "false brothers") remained among the opposition (Betz, *Galatians* Hermeneia, 81–103; Dunn 1982; Lüdemann 1980–83, vol. 2). In other words, the inner-Jewish problem of heresy and orthodoxy had become an inner-Christian problem.

The Conflict at Antioch (Gal 2:11–14; see *Galatians* Hermeneia, 103–12; Kieffer 1982; Dunn 1983; Holtz 1986) indicates that the dilemma of the Jewish Christians associated with Paul and Peter surrounded the necessity to decide between orthodoxy in the Jewish sense or orthodoxy in the Christian sense. The majority at Antioch decided against Paul, and, as a result, those Jewish Christians who so decided declared him a heretic. The inevitable resultant split in the Church remained associated with Paul's name. Later Jewish Christianity persisted in a somewhat stereotyped anti-Paulinism (see Lüdemann 1980–83, vol. 2), but the main Church (*Grosskirche*) secured Paul's orthodoxy (see Lindemann 1979), in particular by publishing his letters.

C. Literature

1. The Sermon on the Mount. The Sermon on the Mount (Matt 5:3–7:27) originated in Jewish Christianity and presents the teachings of Jesus in the form of an epitome. Sayings of Jesus are critically selected and arranged so as to ward off the accusation that they reflect what is believed to be gentile Christian heresy. The teaching of Jesus is defended as orthodox in the Jewish sense (5:17–20; 7:12). See SERMON ON THE MOUNT/PLAIN.

2. The Letters of Paul. The letters of Paul owe their existence to the threat of heresy in his churches. The letters presuppose a situational context in which debates occurred on appropriate and inappropriate Christian doctrine and conduct. In all his letters Paul struggles against suspicion and actual accusations of heresy to prevent his churches from drifting into heresy and to defend his theology and conduct as right. Paul himself is therefore responsible for initiating what later became orthodox Paulinism.

In Galatians, the apostle defends himself and his gospel against competing Jewish-Christian missionaries who have tried with astonishing success to persuade the Galatians that his message and status are inferior. His apology before the Galatians is the first known attempt to demonstrate the orthodoxy of the Pauline gospel in the Christian sense of the term (see *Galatians,* Hermeneia).

In Romans, Paul presents this defense again in a much expanded and changed form. These changes apparently stem from a number of factors: anti-Pauline propaganda in Rome (Rom 3:5–8, 31; 6:1–2), internal discussions among both Paul's collaborators and other Christian communities about Paul's theological positions, the fact that Paul addressed a church which he did not found and which subscribed to non-Pauline theological ideas, and the forthcoming journey to Jerusalem to deliver the collection for the poor. As Paul had indicated in Gal 6:16 ("the Israel of God"), for him, orthodoxy in both the Christian and the Jewish sense are one and the same; this assumption he

points out in greater detail in Rom 2:17–29. Non-Christian Judaism, however, must not simply be written off as a loss; the apostle presents coexistence between the two religions as the new challenge for the Church (especially Romans 9–11) to demonstrate its own orthodoxy.

The letters to the Corinthians present an apparently confusing situation. In 1 Corinthians, Paul reacts to the problems in the Church caused by party factions (1 Cor 1:10; 11:18; 12:25). There can be little doubt that the parties named have had their own theological outlook, but not much can be inferred concerning their peculiar theologies. Paul assumes a mediating position, identifying himself with none of the parties, not even the Pauline party. It should no longer be denied that some of the theological tendencies of the parties tend toward Gnosticism.

The letter fragments assembled in 2 Corinthians indicate a conflict markedly inflamed since the writing of 1 Corinthians. The issue has shifted from party factionalism to alleged inadequacies on the part of Paul and his apostolate. In all probability the anti-Pauline opposition in 2 Corinthians has been reinforced, or even taken over, by other adversaries who have invaded the Corinthian church (see Georgi 1986), and these adversaries may have contributed a new assessment of Paul's alleged inadequacies (2 Cor 10:10; 11:6; 12:1–10). The apostle defends himself without success in a first apology, fragments of which are extant in 2 Cor 2:14–6:13; 7:2–4. A second apology, replete with irony and satire (2 Cor 10:1–13:10), connected with a visit from Titus, changes the Corinthians' mind.

A letter of reconciliation (2 Cor 1:1–2:13; 7:5–16; 13:11–13) follows the second apology. Here Paul expresses his joy over the resolution of the conflict and justifies his taking a hard line in the previous letter. The letter fragments 2 Corinthians 8 and 9, designed to reorganize the financial collection for Jerusalem which had collapsed because of the crisis, followed the reconciliation (see Betz, *2 Corinthians 8–9* Hermeneia). 2 Cor 6:14–7:1 is an interpolated fragment of non-Pauline origin and is anti-Pauline in tendency; it is a succinct statement of a theology Paul's opponents might have held (see Betz 1973). Apparently the redactor of the letter corpus of 2 Corinthians, who seems to represent a Pauline orthodoxy of a later time, took the fragment 6:14–7:1 as Pauline, thereby reflecting the decline in perception regarding the finer points of the apostle's theology. Similar developments must be assumed for the collection of the letter fragments in Philippians (see Köster 1961–62).

3. Pauline Pseudepigrapha. Continued battles against heretics and the establishing of a Pauline orthodoxy was the preoccupation and goal of Paul's disciples who authored the pseudepigraphical letters of Colossians, Ephesians, 2 Thessalonians, and the Pastorals (1 and 2 Timothy, Titus). This literature is at the same time distinguished by new developments and new confrontations in theology and Church life.

Colossians develops Paul's concept of the Church as the body of Christ into a speculative cosmology in order to refute as heretical a cult of astral mysteries which called itself "philosophy" (Col 2:8). Also involved in a debate with heretics (Eph 4:14–19), Ephesians emphasized the historical and cosmic nature of the universal Church; here the epistle reveals points of contact with Acts, from which it otherwise differs fundamentally. 2 Thessalonians is a commentary on 1 Thessalonians in epistolary form; its author reinterprets the authentic letter of 1 Thessalonians in terms of a later Paulinism committed to an apocalyptic time schedule and opposed to rival Paulinists perhaps inspired by Gnosticism (see Holland 1987). In second-generation Christianity, Christian apocalypticism, once the product of heretical developments seen from the perspective of non-Christian Judaism, became an important weapon used by the Church against the threat of Gnosticism. Evidence for this development is found in later writings of the NT, especially in 2 Peter and in Epistles of John.

4. The Gospels. Each in its own way, the Synoptic Gospels are the products of early Christian debates about heresy and orthodoxy. At least this much can be said, although precise information is extremely limited. The Gospel of Mark combines in a work of intriguing literary quality heterogeneous traditions and sources showing incipient heretical tendencies, interpreting them to fashion a new statement of Christian orthodoxy, entitled "the gospel" (see Weeden 1968; on the titles, see Hengel 1984). The Gospel of Matthew preserves the traditions of an older Jewish Christianity and secures their orthodoxy by embedding them in an ecumenical theology (Matt 28:18–20). The Gospel of John contains evidence of diverse controversies about orthodox and heretical interpretations of the Jesus tradition and the Christian faith. What these debates were we can only guess from the texts, just as the beginning of the Johannine church, from which this gospel came, remains obscure because of lack of information. Conflicts with the Jews, however, as well as with gnostic tendencies, and points of contact with other early Christian church branches can still be recognized. Perhaps the redactor of the Fourth Gospel is identical with the author of the First Epistle of John, an antidocetic polemic identifying and refuting heretical points of doctrine (see especially 1 John 2:18–27; 4:1–5); 2 John 7; 3 John 9–10). The Gospel of Luke, together with the Acts of the Apostles, is marked by strong apologetic tendencies. According to Luke, the beginning period of the Church was free from heresies, presumably in contrast to the situation in his time.

5. The Book of Revelation. The Apocalypse of John takes issue against heretics at several points (Rev 2:6, 9, 14–15, 20–24; 3:9), but concrete information concerning these heresies (Nicolaitans, the prophetess Jezebel, the "synagogue of Satan") is almost completely lacking. As an apocalyptic book, the Apocalypse of John is itself the product of conflicts with Jewish apocalypticism and perhaps Gnosticism. In later Church history the Revelation of John became the preferred text for new apocalyptic movements inside as well as outside the established institutions of Christianity.

HANS DIETER BETZ

HERETH (PLACE) [Heb *ḥāret*]. Hereth is mentioned only once in the Bible, as the forested place to which the fugitive David goes after he departs the stronghold of Moab on the advice of Gad the prophet. This occurs as David is leaving his parents in Moab, out of harm's way, as he flees from Saul. One version of the LXX renders the place as *sareik.* Its site is unknown, though some (*IDB* 2: 583 and McCarter *1 Samuel* AB, 357) propose modern Kharas as the location of Hereth. This identification is strengthened by the fact that subsequent events in the narrative occur at the town of Keilah, where David defeats the Philistines and is pursued by Saul (1 Sam 23:1–13). Keilah is identified with modern Khirbet Qîlā (McCarter *1 Samuel* AB, 370), which is near Kharas (*IDB* 2: 583). In any case, David's removal to Hereth in Judah at the urging of Gad can be taken as a divine reassurance that David is under the protection of YHWH even in the heart of Saul's Judah (so Hertzberg *1 and 2 Samuel* OTL, 185).

JEFFRIES M. HAMILTON

HERITAGE. See FAMILY.

HERMAS (PERSON) [Gk *Hermas*]. A Roman Christian who received greetings from Paul in Romans 16:14. He was probably a gentile Christian (Lampe *StadtrChr,* 58) because Paul usually made specific mention of persons in the list of Romans 16 who were Jewish-Christian "kins(wo)men" (Rom 16: 7, 11, 21). The latter term is absent from his other letters, but in Romans, after chaps. 9–11 (cf. 9:3), Paul shows interest in emphasizing Christians' ties to Israel. It therefore can be assumed that he applied and omitted the label "kins(wo)man" purposefully in Romans 16. (The only exception is Aquila at the beginning of the list; so many other characteristics were reported about him that his Jewish background was passed over. See also MARY (PERSON) #7 and RUFUS.)

A member of a Roman house-church, Hermas, and four other members were quoted by name, while the other participants in the house-church were mentioned only generally as "brethren who are with them." The five persons therefore may have played leading roles in the house-

church. The name "Hermas" occurs only six times according to the epigraphical and literary sources from the city of Rome (Lampe *StadtrChr,* 139–41). Since the name was not common there, it probably indicates that Hermas had immigrated to Rome.

PETER LAMPE

HERMAS' THE SHEPHERD. The early Christian document *Hermas,* or *Shepherd of Hermas,* was known to the early Church Fathers. The Muratorian canon, a list of canonical books from about the 3d century, says Hermas was written by the brother of Pius, Bishop of Rome, about 140–154. Despite much speculation, the author remains unknown. It was written in Rome and involves the Roman church. The document was composed over a longer period of time. Visions I–IV were composed during a threatened persecution, probably under Trajan (the Clement of 8:3 could be Clement of Rome). Vision V–Similitude VIII and Similitude X were written perhaps by the same author to describe repentance to Christians who were wavering. Similitude IX was written to unify the entire work and to threaten those who had been disloyal. This last phase must have occurred before Irenaeus (ca. 175). A preferred date would be 140. On the basis of this internal analysis multiple authorship seems necessary (Giet 1963), though the work could have been composed by one person over a long period of time (Joly 1958).

There are no complete Greek texts of Hermas. The great 4th-century manuscript of the Greek Bible, Codex Sinaiticus, contains only the first fourth of Hermas (to 31:6). Codex Athous, a 15th-century copy, lacks 107:3–114:5, while Papyrus 129, a 3d-century papyrus at the University of Michigan, contains most of the Similitudes (51:8–82:1). When all the texts are put together, 107:3–114:5 is still missing and must be supplied by the Latin text in the Vulgate.

Hermas consists of five Visions, twelve Mandates, and ten Similitudes. In the first Vision, Hermas has a desire for a certain woman, Rhoda, and then is accosted by an elderly woman (the Church) about his sin. In the second Vision, Hermas receives a revelation in the form of a book. When the meaning of writing is revealed to Hermas, he learns repentance is possible. Hermas sees the Church as a tower in the third Vision. The tower is built on a foundation of apostles, bishops, teachers, and deacons, though a variety of stones reflects the diversity of the Church. The fourth Vision takes the form of an apocalypse in which the Church is threatened by an unusual beast which foreshadows a great tribulation. The first four visions involve the elect lady as the revelator. In the fifth vision a shepherd appears to Hermas in order to introduce the Mandates and Similitudes. This vision introduces the work entitled "Shepherd." All of the visions are written in the form of a Jewish apocalypse, with the presence of a revelator, a mysterious revelation and explanation, and an unworthy or foolish recipient.

The twelve Mandates consist of admonitions regarding faith, innocence, truthfulness, chastity, repentance, patience, ill temper, self-control, doublemindedness, grief, cheerfulness, and evil desire. The Mandates take the form of a Jewish-Hellenistic homily, with a revelator (the Shepherd), the diminutivized recipient (Hermas), a commandment, a homily on the commandment, and appropriate blessings and curses.

The ten Similitudes are analogies or parables with similar concerns. The Similitudes build analogies on two cities, trees, vineyards, shepherds, sticks, mountains, a tower, and a garment. The parables are unlike the NT parables. They resemble more those of *Enoch:* the revelator tells a parable, the recipient asks for an explanation, and the revelator responds with an interpretation.

Hermas reflects a local type concern for morality much like the *Epistle of Barnabas* and the *Didache.* Like them, Hermas contains a Two-Way theology (36–39), though his system depends on two angels rather than two impulses (36:1) and he stresses self-control more than right choice. As in other Two-Way systems doublemindedness *(dipsuchia)* and doubt are the primary sins (39:1–12).

From the beginning Hermas was caught in a struggle over repentance. Hermas speaks for the possibility of one postbaptismal repentance. Even within the document some argue against any repentance for the Christian (31:1), while others count on the continuing mercy of God (43:4). Hermas holds to both—a strict morality with a merciful God (31:2–7).

The christology of Hermas has often been called adoptionist (see chap. 59). There is little christological reflection in the book. Most NT christological functions are performed by angels or the Holy Spirit (12:1; 25:2). The complete dwelling of the Spirit in the Son so pleased God that the Son was taken as a divine partner (59:5–7).

The *Shepherd of Hermas* paints a remarkable picture of the 2d-century church at Rome (Osiek 1983). We find among the Christians good and evil, faith and hypocrisy, wealth and poverty—all the qualities of everyday Christian life. The Church is not in danger, but it has reached certain interior accommodations. In addition to postbaptismal repentance, for example, in the parable of the elm and the vine (Similitude II) the elm tree, representing the wealthy of the congregation, gives financial support to the congregation, while the vine supported by the elm, represents the poor, who pray for the congregation.

The form of Visions, Mandates, and Similitudes share much with similar Jewish material, yet direct use of either Hebrew Scriptures or NT can only be lightly attested. Many of the analogies, such as the garment, the willow, the elm and vine, and the empty jars, have no biblical counterpart. A number of significant details, such as the elderly woman of Vision II, or the virgins of Similitude IX, come from the Greco-Roman milieu.

GRAYDON F. SNYDER

HERMENEUTICS. In the most general terms, hermeneutics can be described as the "art of understanding." Used in its narrower sense, hermeneutics can refer to the method and techniques used to interpret written texts. In a wider sense, it can refer to the conditions which make understanding possible and even to the process of understanding as a whole. In theology, it is usually used in contrast to exegesis—the former is understood as the theory, the latter as the practice of interpretation.

The etymology of the term "hermeneutics" is uncertain. The verbs "say" and "speak" seem to convey the basic connotations. It is contained in the name of Hermes, who in Greek mythology acts as the messenger and spokesman of the gods. He is seen as the inventor of speech and writing, and from this association a variety of meanings developed. The most important of these are "speech" as the faculty of logical formulation and articulate expression, "translation" as the ability to channel meaning from one medium or context to another, and "commentary" as the clarification of the obscure or unfamiliar.

A. General and Specific Hermeneutics
B. Development of Biblical Hermeneutics
C. Elements of an Effective Hermeneutic for Biblical Texts
D. The Hermeneutical Process

A. General and Specific Hermeneutics

Hermeneutics as a general philosophical enterprise should be distinguished from specialized forms like legal and theological hermeneutics, which were designed to interpret a specific corpus of texts or to meet a special need. General hermeneutics traces its origins back to antiquity. In his *Peri hermeneias* (On interpretation), Aristotle deals with the logic of statements. This approach, which treats hermeneutical problems as belonging to the domain of logic, dominated the sporadic treatment of the subject up to the 18th century. It was only with the work of Schleiermacher that a truly general hermeneutics emerged.

Instead of concentrating on technical rules governing the interpretation of texts, Schleiermacher shifted the focus to the preconditions which make understanding possible. Misunderstanding is a universal problem which threatens all forms of communication and therefore calls for a general hermeneutical theory. The root cause for misunderstanding lies in the individuality of the writer or reader. Although language presupposes shared conventions between persons, the unique experience of the individual cannot be expressed adequately through this medium. The receiver therefore needs help to reproduce the meaning of the sender in his or her own consciousness. The task of hermeneutics is to provide this help. Schleiermacher distinguishes between grammatical and technical (or psychological) interpretation. The former is only a preparatory step for the latter, which represents understanding in the full sense of the word.

The idea of a general hermeneutics for all forms of communication was taken a step further by Dilthey when he applied it to the phenomenon of history. Understanding has to do not only with linguistic communication, but with historical consciousness. Both the possibility and problems of understanding are rooted in this consciousness. On the one hand it provides a link with the past, on the other hand it causes an experience of alienation. Understanding requires a conscious effort to overcome this historical distance. The interpreter must transpose himself or herself out of the present time frame to that of the past. Understanding is a *Nacherleben* (re-experience) of an original *Erlebnis* (experience). The re-experience is never identical with the original, but it is co-determined by the interpreter's own historical horizon. Nonetheless through historical consciousness the interpreter has access to the past as expressed in the tradition and cultural manifestations of the past. The text to be interpreted is not only that of linguistic communication, but of the whole of humanity's cultural heritage in which is contained the interpretive experience of the past. To interpret this heritage, the social and human sciences require a distinctive method—that of *Verstehen* (understanding) in contrast to *Erklären* (explaining), the method of the natural sciences.

The horizon of hermeneutics is expanded further by Heidegger. For Schleiermacher the focus is still on the individual and problems related to interpersonal communication. Dilthey takes it a step further by introducing an epistemological perspective and includes history and tradition as part of his reflection in an effort to explore the hermeneutical dimensions of historical consciousness. For Heidegger the hermeneutical problem is even more encompassing and fundamental; it is essentially ontological in nature. Interpretation is the modus in which reality appears; it is constitutive for being itself. A person's existence comes into being by an act of interpretation. Reality is the text which is to be interpreted and this reality includes a person's own existence. The hallmark of the interpretation process is historicity, which is ongoing in nature. In this historical context, Heidegger develops his concept of the hermeneutical circle. To begin with, interpretation never starts with a clean slate. The interpreter brings a certain pre-understanding to the process. This pre-understanding is challenged when new possibilities for existence are exposed through the event of understanding, which leads to a modification or revision of the interpreter's self-understanding. Finally, the modified understanding becomes the new pre-understanding in the next phase of the process. In conjunction with the hermeneutical circle, Heidegger posits that the communication of existential possibilities through language is fundamental to human existence. Consequently the notion of language as the house of being is developed. The attempt to understand, to discover possibilities for existence, is therefore one of the driving forces behind human history.

From its traditional meaning as the technical rules governing interpretation, the scope of hermeneutics has thus widened to include communicative, epistemological, and finally ontological dimensions. To mark this transition, "hermeneutics" is sometimes reserved for the narrower meaning, while "hermeneutic" is used to indicate the wider sense of the term.

For Gadamer, the insight of Heidegger that propositional truth should be counterpoised with a different kind of truth, that of disclosure, has important consequences. Hermeneutics cannot be only a question of method, striving for objectively secured knowledge, but must open up a

dialogical process through which possibilities for existence are acknowledged. Thus a dialogue unfolds between present and past, between text and interpreter, each with its own horizon. The goal of interpretation is the fusion of these horizons; the medium through which this takes place is language. Language is not an objectification of thought but that which speaks to us. In this sense our very existence is linguistic. The implication is that the interpreter always finds himself or herself in the stream of tradition, for here past and present are constantly fused. Tradition and the related concept of "effective history" thus represent important aspects of Gadamer's hermeneutics.

Habermas and Apel's critique of Gadamer starts at this point. For them Gadamer's uncritical acceptance of tradition as authoritative and his ontological understanding of language obscure the fact that language may be used as medium of domination. They develop a "critical hermeneutics" based on the experience of manipulation and propaganda and fed by a suspicion regarding the truth claims of tradition. The aim is to reveal the suppressed interests underlying the apparent normal interaction with the past. Hermeneutics thereby becomes a social science in the form of a critique of ideology.

In the dispute between philosophical and critical hermeneutics, the mediating role of Ricoeur is of special significance. In drawing together hermeneutics, phenomenology, and structuralism, he displays his ability to mediate between what at first sight seem to be mutually exclusive approaches. But through his theory of the conflict of interpretations, Ricoeur demonstrates that hermeneutical philosophy, more directed toward understanding the past and its significance for the present, and critical hermeneutics, more directed toward the future and changing the present, are both one-sided when maintained as absolute positions. In directing his attention to biblical hermeneutics, Ricoeur develops a hermeneutic which grafts an existential interpretation on a structural analysis. He demonstrates how an analysis of the narrative by means of the metaphorical process can open up the world in front of the text.

In close association with the ideas of Gadamer and Ricoeur, Tracy designs his interpretation theory for Christian theology by reemphasizing the underlying hermeneutical nature of Christian theological articulation. At the same time he demonstrates the need for a special hermeneutics for the interpretation of biblical material.

Apart from understanding as a universal problem and hermeneutics as a general theory, a particular hermeneutics may become necessary, depending on the nature of the material to be interpreted and the purpose for which it is done. The revival of interest in Roman law during the 12th century led to the development of a special hermeneutics of jurisprudence, continued in its contemporary form as the interpretation of statutes. Likewise the need for a special hermeneutics for the interpretation of biblical texts was soon recognized which led to various attempts to establish a sacred or biblical hermeneutics in contrast to a profane or secular hermeneutics. But the difference does not lie in different methods and techniques required for biblical texts, but rather in the specific nature of these texts and the interpretative community in which they are read. General and particular hermeneutics have always influenced each other and continue to do so. Major shifts in general hermeneutics are always reflected in specialist applications. For its part, biblical hermeneutics has also been responsible for important developments in general hermeneutics.

B. Development of Biblical Hermeneutics

Insofar as biblical texts form part of a dynamic communication process, their essential hermeneutical nature is undeniable. Interpretation is essential to discerning the will of God. Numerous examples from the origin, collection, and preservation of these documents attest to this need. Individuals (e.g., Moses and the prophets) and even a whole class of people (scribes in postexilic Israel) act as interpreters of God's will. The temptation story is a classic example of a hermeneutical debate. According to Luke, Jesus' first public appearance begins with an interpretation of Isaiah 61 (Luke 4:21)—a style which characterizes the rest of his ministry (cf. the antitheses in the Sermon on the Mount, the parables, the discourses). Paul's mission to the gentiles is in essence a reinterpretation of the gospel in a Hellenistic context. Apocalyptic literature reveals the same hermeneutical tendencies. In a broader sense, the NT can be understood as an interpretation of the OT.

Even after the formation of the canon, the need for interpretation continued. The early Church drew on its Jewish heritage, using the techniques of proof texts, typology, and allegory. While a grammatical-historical approach was favored in Antioch, allegory thrived in the environment of Alexandria, where Origen continued the hermeneutical tradition of Philo. The ensuing plurality of meaning eventually required some kind of norm or authority to distinguish between acceptable and unacceptable interpretations. For Tertullian, this authority was vested in the church and more specifically in the doctrine of the rule of faith *(regula fidei)*. In the process, exegesis was subordinated to dogma and lost its critical function. Consequently, no hermeneutical innovation of significance took place during the Middle Ages.

The Reformation represented a fundamental change in hermeneutical thinking. Luther's insistence that the Bible should first of all be understood as the living word (Lat *viva vox*) of God, in which Christ himself is present, reintroduced the existential dimension of the text. The Bible is not a historical document in the first place, but a text for preaching. Philological and historical research should serve this end. The Bible's central theme is Christ, and from this perspective the rest of Scripture is to be interpreted. Hermeneutics is more than rules or techniques; it concerns the problem of understanding as a whole. Luther's position had two important consequences: multiplicity of meaning is replaced by the central scopus of the text, and the priority of the Word over against any other authority is confirmed.

If tradition and ecclesiastical authority no longer serve as controlling forces in the interpretation process, heavy responsibility is placed on exegesis itself. The Reformation, therefore, also marks the beginning of intense hermeneutical and exegetical activity which has shaped subsequent hermeneutical developments. The post-Reformation era is characterized by at least four consequences which are related to the historical, existential,

structural, and pragmatic aspects of the interpretation process.

The emphasis on the independence and priority of exegesis in relation to dogma and tradition had two different results. It led to an attempt to strengthen scriptural authority by the doctrine of verbal inspiration, but, it also resulted in the discovery of the historically determined nature of the Bible. The second development was influenced decisively by the Enlightenment spirit of emancipation and the emerging rationalism of the post-Reformation era. A critical attitude toward all forms of (external) authority was made possible by the discovery of the historical and therefore relative nature of these institutions. The implication was that the Bible should also be read as a historical document. Thus began the long tradition of historical criticism, which appeared subsequently in various forms: text criticism, form criticism, historical background studies, redaction criticism. The basis for all these methods is the genetic principle: the idea that insight into the origins and development of a phenomenon contains the key to its understanding.

In the course of the 19th century, the relativizing effect of historical criticism was countered by the idealistic view of a universal spirit and unchanging ethical values underlying the fluctuations of history. This made it possible to pursue rigorous historical criticism and also to preserve the universal ethical message contained in the biblical texts. On the hermeneutical level, the result was the dichotomy between "scientific" and "practical" exegesis which characterized liberal theology at the turn of the century. This position was challenged only when Schweitzer again emphasized the unmistakable eschatological nature of biblical texts.

The existential dimension of biblical hermeneutics became prominent through the development of dialectical theology, first by Barth and then more extensively by Bultmann and his pupils. The devastating effect of World War I (1914–18) was a severe blow to the spirit of liberal optimism in Europe. A search for existential meaning followed, which in the churches resulted in a crisis for preaching. Barth's theology is an attempt to meet this challenge. With his concept of a "theological exegesis" his goal was to bridge the division between scientific and practical exegesis and to regain the supposed unity of biblical interpretation. From the perspective of the incarnation, the Bible is to be understood as the unity of God's and man's word. Historical exegesis is therefore unavoidable, but should serve the better understanding of the real subject matter of the text, Jesus Christ. Completely objective exegesis is impossible, and real understanding requires the interpreter's personal input.

At this point, Bultmann is in agreement with Barth—exegesis without presuppositions is an illusion. Bultmann therefore takes up Dilthey's suggestion of a special hermeneutics for the human sciences in order to include the subjective element in hermeneutical reflection. Thus the biblical text is the result of an existential encounter between God and man, and the subsequent interpretation of the text is aimed at making a similar encounter possible in the present. Bultmann's whole hermeneutical program is motivated by the need to communicate the *kerygma,* the existential message of the NT, to a modern audience. In doing so he develops a remarkable dialectic between the historical and existential dimensions of the text. The existential encounter inherent in the *kerygma* cannot be objectified in any full sense of the word. The written text represents only an incomplete rendering. This opens the possibility for Bultmann to apply the full range of historical-critical operations on the text without endangering its essential *kerygma.* The latter rests on the fact *(Dass)* of Jesus' life, not on its historical details *(Was).*

Fuchs and Ebeling further refined Bultmann's hermeneutical program, especially with regard to the existential analysis of the text. Trivial questions will render only trivial information. In terms of Heidegger's existentialia, the real questions to be put to the text are those in which the very existence of the reader is put on line. Only in this way can the self-understanding *(Selbstverständnis)* of the reader be challenged. Thus the hermeneutical circle is set in motion, which eventually leads to a new self-understanding.

Advances in linguistic and literary theory during the seventies focused attention on the structural dimension of biblical hermeneutics. A seminal influence in this context was the work of the early 20th-century Swiss linguist Ferdinand de Saussure, but Russian formalism, the school of Prague, French structuralism, and various other streams contributed to this development as well. In fact, the formative influences are so diverse that it would be misleading to talk of structuralism as a unified movement. Semiotics, the science of signs, did achieve a greater degree of coherence by distinguishing three dimensions of the communication process in terms of the relationship between signs: (1) syntactics (relation between sign and sign), (2) semantics (relation between sign and reference), (3) and pragmatics (relation between sign, reference, and action).

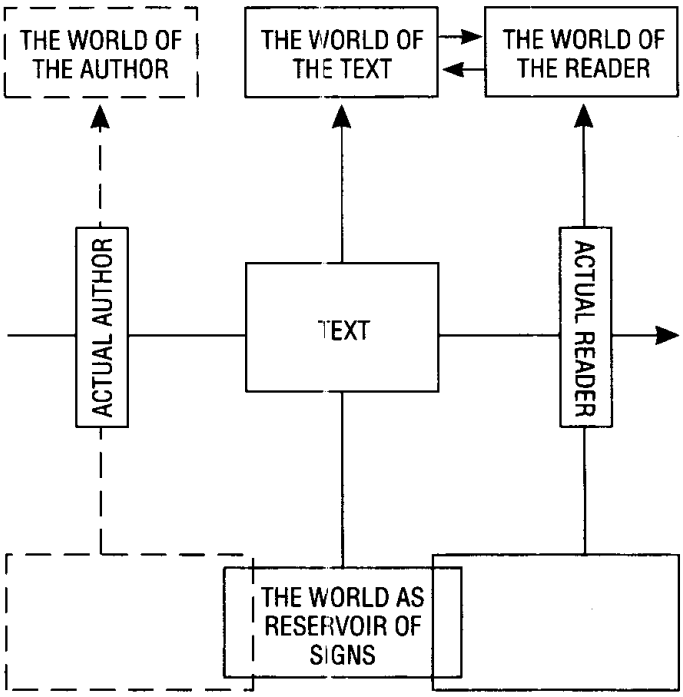
For the interpretation of biblical texts, several basic concepts of the structural approach are of special significance. First and foremost is the insistence on the autonomy of texts as analytical objects. In reaction to historicism, which views texts as the product of historical forces and explains them in terms of their origins, they should be understood as autonomous structures in their own right. A text constitutes a self-contained unit, and its different parts should be explained in terms of their relation to each other and not in terms of some external cause or authority. Second, the emphasis is on synchronic rather than diachronic relations. It is not the history of the text which holds the key to its meaning but the relations of the textual elements as they stand. Furthermore the author's intention cannot be used as some external criterion for evaluating the interpretation; it is discernible only in the text. The need is therefore for a "text-immanent" exegesis which takes the text seriously as a network of relations. Third, the structure of the text and techniques for its analysis become an important consideration. Different types can be distinguished: linguistic, literary, narrative, discursive, rhetorical, or thematic structures, each requiring its own form of analysis. The structural approach is therefore a conscious effort to eliminate subject, history, and intentionality as factors in the interpretation of texts.

Finally, in recent hermeneutical reflection, the pragmatic aspect of texts has gained in importance. Various factors contributed to this development. Speech act theory focused attention on the effect of verbal communication.

Similarly, the revival of rhetorical criticism is directly linked to an interest in the persuasive potential of biblical material. Up to this point the role and situation of the receiver hardly formed part of hermeneutical reflection. But the advance of reader theories in literature and the appearance of contextual theologies (black, liberation, feminist), made it imperative to include the context of reception in any effective hermeneutical design. Deconstruction and post-modern theories pose a challenge to the structural and new critical concept of the autonomy of the text and attempt to move beyond what is seen as the foundationalism of reader studies and the modernist position.

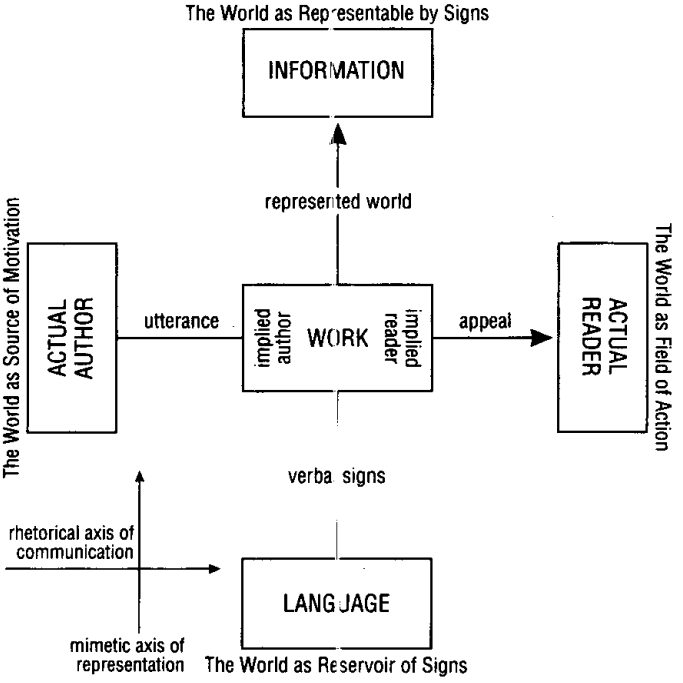
C. Elements of an Effective Hermeneutic for Biblical Texts

If hermeneutics is taken in its wider sense, that is, not merely as the formal rules controlling the practice of exegesis, but as something concerned with the total process of understanding, biblical hermeneutics can only be developed as part of an encompassing theory of communication. Because interpretation in this case is mainly directed to written texts, such an overall theory must of necessity include an adequate text theory.



In its most basic form, communication can be described as the relationship between sender, message, and receiver (SENDER → MESSAGE → RECEIVER). This basic model can be expanded in various directions to provide for the different functions of language and for the full spectrum factors determining the communication process (Gülich and Raible 1977; Plett 1975).

Although communication takes place via different channels (visual, auditive, intuitive), in the case of biblical texts the medium is the written word. As such, the text represents the solidification of a preceding communication event. It is the deposit of a prior encounter between sender (e.g., Moses or Jesus) and receiver (e.g., Israel or the disciples). In the process of becoming a written text, the message may pass through various stages (oral tradition, pre-literary forms), but the text represents also the first stage in the process of reinterpretation. The latter has as its aim a new communication event, this time between text and contemporary receiver. The challenge of interpretation is the fusion of the horizons (Gadamer) of sender and receiver. In the case of biblical texts, the original sender is no longer present and interpretation becomes the interaction between text (and its horizon) and receiver. See Fig. HER.01.



The text therefore forms the meeting point of two axes (Hernadi 1976): the rhetorical axis of communication, which reflects the diachronic movement from sender to receiver via implied author and implied reader, and the mimetic axis of representation, which reflects the synchronic selection from the available reservoir of signs and codes to form a "world"—that of the sender, text, or receiver. See Fig. HER.02.

In terms of this greatly simplified outline, it is possible to locate the main elements of the hermeneutical process. The multiplicity of methods currently available for biblical exegesis is confusing and can tempt the interpreter to focus on method(s) rather than on the dynamics of the process of understanding. When the full scope of the problem (including its "ontological" dimensions) is taken as the point of departure, it becomes possible to classify methods in terms of the specific aspect they address and to select the most suitable method in each case.

The historical aspect of the problem has mainly to do with the relationship between sender and message. From

HER.01. Textual interpretation—relationship of the worlds of the author, text, and reader.

HER.02. Textual interpretation—intersection of communication and representation.

this important area of research a number of specialized techniques evolved. Background studies *(Zeitgeschichte)* focus on the historical environment from which the text emerged. FORM CRITICISM assumes an oral tradition behind the written text and is interested in its transition from the pre-literary form to the literary form. SOURCE CRITICISM studies the relationship between individual texts in a wider literary context and their dependence on sources. REDACTION CRITICISM proceeds from the assumption that the individual authors of biblical books had a strong influence on their eventual form and analyzes the composition of these texts from the perspective of the final redactor. TEXTUAL CRITICISM is a specialized and technical discipline aimed at restoring the presumed original form of the text as accurately as possible. Questions of authorship, the history of individual books, and the formation of the canon all have to do with the historical aspect of the relationship between sender and message. See CANONICAL CRITICISM, REDACTION CRITICISM, RHETORIC AND RHETORICAL CRITICISM, and STRUCTURALISM.

The structural component is concerned with the message itself, understood as an autonomous and self-contained entity, without taking the relation with sender and receiver into consideration. Also, structural features are constitutive at both the micro- and macro-level. Several types of synchronic analysis have been developed for biblical material, usually adapted from linguistic and literary theory. At the linguistic level, discourse analysis is used to reveal detail of the surface structure of the text; syntactic and semantic markers play an important part in this respect. On the literary level, stylistic features offer a clue to the communicative intention of the text. These may include metaphors, rhetorical devices, and point of view, but also narrative and theological structures.

The pragmatic dimension deals with the relationship between message and receiver. Speech act theory focuses on the desired effect of an utterance. Closely related is the growing recognition of the rhetorical nature of biblical texts and their persuasive power. Interest in the reader led to the development of reader response studies—both as a theoretical endeavor and as a form of empirical research. Awareness of the context of the receiver is an important key in the analysis of contextual theologies (black, liberation, feminist). Recognition of the creative input of the reader has relativized the objective status of the text, especially in post-modern thought. It is believed that all statements about the text depend on a prior reading of the text; consequently, the relationship between experience and thought is again a focal point in hermeneutical reflection.

D. The Hermeneutical Process

In practice, the text mediates between two events of understanding: the one which produced the text and the one flowing from interaction with the text. When dealing with biblical material, a variety of considerations are important.

First, the present reader is not the first reader or even one intended to read the text. In most cases, the reader is dealing with an "enriched text." Jesus' command to Levi, "Follow me!" (Luke 5:26), is not merely repeated by the evangelist, but enriched by Levi's response, Jesus' comments, and a description of the context. This enriched text (and not merely the original command) becomes the text for interpretation. In the extended history of the biblical tradition, more than one enrichment is possible, as the Abraham story in its many versions illustrates.

Second, clarity concerning the purpose and the context in which reading takes place is important. While the text can be read to gather linguistic data or to study literary features, the *kerygmatic* or proclaiming nature of the text presupposes a new event of understanding as the ultimate goal of reading. Although a variety of audiences are possible, it is the interpretive community of believers which constitutes the context of such a reading.

Third, although what we understand as a text is dependent on a prior reading of the text, thus making it impossible to speak of the objective status of the text in absolute terms, the text does function as a separate entity within the interpretation process. The horizon of the text forms the counterpoint of the horizon of the reader and the tension between the two opens the possibility of a new understanding.

Fourth, because the original authors of biblical texts are no longer participants in the process, the interpretive interaction takes place between text and (present) reader, thus making the text the natural point of departure for the subsequent hermeneutical process.

The text is thus both the end of the process of text production and the beginning of the process of interpretation. In its written form, it is the static record of a preceding event of understanding, and its text-immanent features are important clues for its interpretation. An analysis of the surface structure makes it possible to discern the syntactic arrangement and cohesion and the way in which the smaller units combine to form the macrostructure of the text. Syntactic analysis also provides the basis for discovering the literary features of the text and its narrative or argumentative structure. In this way, the distinctive "world" of the text comes into view, with its own "sociology," its own point of view, representative of a specific set of beliefs. This world is not an imitation, but an interpretation of reality—with important implications for the mediating function of the text.

However, the text is a self-contained entity only up to a certain point. It inevitably points beyond itself, to its past and to its future. The syntagmatic relationships between signs in the text have semantic implications, that is, implications for the relationship between these signs and to what they refer. Reference may be text-immanent, linking internal elements with each other, or text-external, pointing to realities outside the text. As a whole, this referential capacity highlights the historical dimension of the text.

Biblical texts are historical in a double sense, though. They are historical documents in their own right, with their own history of composition, tradition, and preservation. But they also refer to specific historical events, for example, in the history of Israel, the life of Jesus, or the ministry of Paul. For an adequate understanding of the text, analysis of its structure has to be complemented by the historical study of the world behind the text. For this task, the full range of historical methods is at the disposal of the interpreter. Not all methods are relevant for all texts

or parts thereof, and the nature of a specific segment will determine the appropriate method(s).

Finally, the text refers to the world in front of itself. The contribution from the structural and historical dimensions converge at this point to activate the pragmatic potential of the text. Understanding the original speech event is the prerequisite for its appropriation in the contemporary situation. Rhetorical analysis and speech act theory are important tools to reveal the persuasive strategies used by the author. The concept of the implied reader sharpens the eye for directions given on all levels for the realization of the text. But not only is the reader as textual construct at stake, the interpreter has to take the real receptor and his or her existential situation into account. It is in this context that the world of the text plays a mediating role. What the text offers is an alternative way to look at reality, a "proposed world," a world which "we may inhabit' (Ricoeur). Thus the self-understanding of the reader is challenged. Between the horizon of the text and that of the reader a creative tension develops which calls for the affirmation of the status quo or for the openness and courage to accept a new self-understanding.

BERNARD C. LATEGAN

HERMENEUTICS, EARLY RABBINIC.

The early rabbis inherited a long tradition of scriptural interpretation beginning in the Bible itself (Kugel and Greer 1986: 11–106). Following biblical precedent, they continued to interpret Scripture for the needs of their communities, particularly following the destruction of the Jerusalem temple and its levitical cult in 70 C.E. Interpretation included oral traditions passed down from generation to generation about the meaning of a verse or the particular way in which to carry out a biblical command. At the same time there was an active tradition of scriptural exegesis based on hermeneutic norms, many of which could be inferred from the Bible.

Rabbinic traditions as early as the 3d century present both types of scriptural exegesis as being known to Hillel the Elder before the destruction of Jerusalem. In a disagreement with the elders of Batayra he uses both exegetic norms and relies on the tradition of his teachers (*t. Sanh.* 7, end; intro. to *Sipra; t. Pesaḥ.* 4; *y. Pesaḥ.* 33a; *ʾAbot R. Nat.* A. 37). The versions of this tale attribute to Hillel from three to seven hermeneutic devices.

Other rabbinic texts from the 3d century and later attribute more extensive hermeneutic norms to the two Jabnean (viz. late 1st to early 2d century) masters Rabbi Akiba and Rabbi Ishmael. Akiba's methods seem to be more far reaching, and although not organized in a given list, include the principle of exclusion and inclusion (e.g. *m. Šebu.* 3.5; *Midr. Gen. Rab.* 1.14, 53.15) learned from his teacher Naḥum of Gimzo. Akiba is also presumed to make inferences from juxtapositions of scriptural verses (*Sipre* 131) and doublets in the Bible (*m. Soṭa* 5.1).

Rabbi Ishmael's hermeneutic norms (Heb *mîddôt* = Aram *mĕkîlatā* = Gk *kanones*, "measures") have been collected in a list of thirteen devices (intro. to *Sipra, Mek. Rabbi Šimʿon ben Yoḥai* to Exod 21:1; for a full exposition

see *EncJud* 8:366–72). Examples of some of the devices on Rabbi Ishmael's list include inference from minor to major, the construction of analogous sets based on one or two verses, and the resolution of scriptural contradictions by the introduction of a third verse to tilt the balance.

The differences between these sages' methods may be explained in part by a generally different hermeneutic outlook toward the Bible. Akiba apparently perceived Scripture as a code which hermeneutic rules could crack. Thus Scripture could be atomized into constituent words or even individual letters, and doublets could be profitably exploited for interpretation since the divine authority of the text could tolerate such unusual exegeses. Rabbi Ishmael disagreed, tersely stating his principle that the Torah speaks in human discourse (*Sipre* 112).

Rabbi Ishmael's list of hermeneutic norms also discloses that he, his colleagues, and his predecessors were comfortable using some of the hermeneutic devices known to the Greco-Roman rhetorical schools (Lieberman 1950; Daube 1949). Whether these norms were directly borrowed from the Hellenistic schools or only the organizing principles of the rhetors were used to canonize already existent rabbinic devices is still open to question. It is not surprising, however, that in rabbinic circles which perceived and presented themselves as Hellenistic "schools" such norms would have found a home.

All of the hermeneutic rules discussed thus far pertain to inferring halakic (behavioral) rules from Scripture. The rabbis also engaged in aggadic (nonbehavioral) exegesis aimed at the exposition of the narrative text as well as for didactic, ethical, and moral purposes. This hermeneutic involved a much broader range of midrashic techniques which were freely employed given the non-binding nature of aggada. A medieval collation of techniques, attributed to the 2d-century sage Rabbi Eliezer, son of Rabbi Yose the Galilean, lists from thirty-two to thirty-six such norms, depending on the manuscript (see the edition of H. Enelow [1933]). These rules include patently Hellenistic devices such as *notarikon* (which assumes a word is really shorthand for other words). Elaborate codes may be employed for the sake of aggadic exegesis (e.g., *ʾatbaš*, which presumes substitution of letters of the alphabet for one another while interpreting), and in rabbinic circles puns were a favorite means of deriving a homiletical message from Scripture.

As time went on and the rabbinic communities grew ever farther from the cultic religion outlined in the Bible, in some places hermeneutical technique became more and more radical. Where early rabbis knew that their interpretations were on a continuum with the apparent meaning of Scripture, some later rabbis seemed startled to learn that Scripture cannot lose its plain *(pĕšat)* sense (*b. Šabb.* 63a). It seems that hermeneutic allegorization *(dĕraš)* had pushed the interpretation of text so far that any original sense of Scripture was obliterated. This parallels certain tensions regarding scriptural interpretation found in the Church (Visotzky 1988). In the rabbinic community, a reaction to this extreme was an uneasy marriage of two kinds of hermeneutics. Contextual and consentual meaning *(pĕšat)* now coexisted with readings of Scripture that solely served the halakic and aggadic needs of the community *(dĕraš)*. This dual hermeneutic of Scripture kept faith with a long tradition of a given understanding of a biblical text while affording an elasticity to interpretation which allowed that text to speak afresh to every generation of rabbinic Jews.

HERMES (DEITY). The Hellenic deity identified by the Romans with Mercury, he was born on Mt. Cyllene in Arcadia, the son of Zeus and the Titan nymph Maia. Such was the lineage myth conferred on the anthropomorphic Hermes.

His actual origins were far more humble, for he began his divine career as the power of spirit residing in the roadside cairn, the stone heap, or *herma,* which served throughout Greece as a marker of boundaries, entrances, and graves. He then arose from the rocks that held him fast and came to surmount them in the form of a herm, a stone pillar endowed with an erect phallus and a bearded head. The Athenians especially worshipped him in this form and were filled with consternation when his herms, which stood at the entrances to both temples and houses, were ominously mutilated in 415 B.C., virtually on the eve of the departure of the great armada that would be annihilated in its attempt to conquer Sicilian Syracuse.

Long before this, however, popular imagination, magnificently assisted by art and literature, particularly the Homeric poems, had released Hermes from the stone heap and transformed him into one of the Olympians, though he lacked the grandeur of the others and was commonly their servant. By the time his new configuration was complete, he had become the inventor of the lyre (see the Homeric *Hymn to Hermes*), Zeus' envoy (see, e.g., *Od.* 1.32–95, 5.28–148, *Prometheus Bound* 941–1093), the deity responsible for conducting the souls of the dead to Hades (see, e.g., *Od.* 24.1–204), and the patron of travelers, herdsmen, merchants, and servants. He was also a clever trickster with an amoral strain to his character, and he granted his patronage to thieves and perjurers (see, e.g., *Od.* 19.392–98); in fact, perhaps his most famous mythological exploit, recounted in the Homeric hymn in his honor, was his theft of his half-brother Apollo's cattle on the very day of his birth.

There is a single reference to Hermes in the NT at Acts 14:8–18, where the inhabitants of Lystra respond to Paul's healing of the cripple by identifying him with Hermes and Barnabas with Zeus. Two factors account for these particular identifications: the story that Zeus and Hermes once appeared in the region of Lystra "in the likeness of men" (Acts 14:11), to bestow blessings on the hospitable Philemon and his wife Baucis (see Ov. *Met.* 8.611–724); and the

fact that by this time Hermes had become the patron of eloquence, for the Lystrians noted that Paul "was the chief speaker" (Acts 14:12).

HUBERT M. MARTIN, JR.

HERMES (PERSON) [Gk *Hermēs*]. A Roman Christian who received greetings from Paul in Rom 16:14. He was probably a gentile Christian (Lampe *StadtrChr,* 58), because Paul usually mentioned specifically if persons in the list of Romans 16 were Jewish-Christian "kins(wo)men" (Rom 16:7, 11, 21). While the latter term is absent in his other letters, Paul, in Romans, after chaps. 9–11 (cf. 9:3), was interested in emphasizing Christians' ties to Israel. It therefore can be assumed that he applied and omitted the label "kins(wo)man" purposefully in Romans 16. (The only exception is Aquila at the beginning of the list; so many other characteristics were reported about him that his Jewish background was passed over. See also MARY (PERSON) #7 and RUFUS.) A member of a Roman house-church, Hermes was quoted by name, as were four other members, while other participants were mentioned only generally as "brethren who are with them." The five persons therefore may have played leading roles in the house-church. Hermes' Greek name indicates that he probably was a slave or freedman. As the inscriptions in the city of Rome show, Greek names were mostly carried by (freed) slaves; "Hermes" was even preferred for slaves (see Lampe *StadtrChr* 142, 144–45, 152–53).

PETER LAMPE

HERMES TRISMEGISTOS. The name of a Greco-Egyptian deity influential from Late Antiquity through the Middle Ages. The syncretistic nature of the god is apparent from the name: Hermes, Greek god of eloquence and science, was identified with his Egyptian counterpart Thot, who contributed the epithet "thrice-greatest" (Gk *trismegistos*).

A. Hermetic Literature

Hermes Trismegistos is best known because of his association with the so-called Hermetic literature, in particular the Corpus Hermeticum (abbreviated *CH*). The Corpus Hermeticum is a collection of 17 philosophical/theological tractates written in Greek probably between the 2d and 5th centuries C.E., and most are ascribed to Hermes Trismegistos. The Latin (Pseudo-Apuleius) *Asclepius* (an apocalypse attributed to the god Asclepius), the Hermetic fragments assembled by Ioannes Stobaeus (5th century), and Hermetic texts recently discovered at Nag Hammadi are usually studied alongside the Corpus Hermeticum under the categories of philosophical or religious Hermetism. In addition, numerous references to and excerpts from Hermetic works, many of which are no longer extant, are found in the Church Fathers. All these texts are of interest to biblical studies because they provide a window onto the religious and philosophical milieu of Late Antiquity, and thus partly reflect the religious world in which the NT and other early Christian literature arose.

The earliest known manuscript of the Corpus Hermeticum (tractates 1–14) probably goes back to the 11th century and was brought from Macedonia to Cosimo de Medici in Florence, who asked Marcilio Ficino to prepare a Latin translation (1463). The reasons for the tractates' being collected together, as well as questions about their provenance, are still largely unresolved. The best critical edition of the entire corpus, along with the Latin *Asclepius* and the Stobaeus fragments, is by A. D. Nock and A.-J. Festugière (1945–1954). The older edition by Walter Scott (1924–1936) contains highly speculative textual reconstructions, but it is still useful because of its notes and an introduction to the history of textual transmission. Jean-Pierre Mahé (1978) has published a critical edition of the Coptic Hermetic texts found at Nag Hammadi.

B. Date and Provenance of the Corpus Hermeticum

Isaac Casaubon (1559–1614) was the first scholar to recognize that the Corpus Hermeticum did not pre-date Plato, as Ficino and other 15th century scholars had believed, but rather dated from the first centuries of the common era (Scott 1924–36, 1: 31–34). This understanding reversed Ficino's view that the doctrines of Plato and even of Moses had derived from these teachings of Hermes Trismegistos. Subsequently the corpus came to be understood as a mixture of later Platonic, Stoic, Neo-Pythagorean, and some Jewish ideas. Scholars have almost unanimously accepted a 2d- to 5th-century dating as the time when most of the tractates in their present forms took shape, while the Hermetic traditions they contain are assumed to have older roots in Greco-Egyptian syncretism. This dating is given credence by references in the early Church Fathers Athenagoras (ca. 180), Tertullian (ca. 200), and Cyprian (ca. 250) to Hermes Trismegistos as an ancient teacher of wisdom. While it is unclear whether these writers know specific documents attributed to Hermes, the early 4th-century writer Lactantius quotes from such writings; some of his references may be to our "Corpus Hermeticum," while others are to presumably lost works.

The religious and philosophical ideas contained in the tractates can be described as an amalgam of the Greek philosophical schools which is given an Egyptian dress, or alternatively as Hellenized Egyptian religion in a Greek philosophical garb. Thus, the works reflect the adaptation of Greek philosophy to late Egyptian religious thought, and they therefore reflect the influence of Egyptian gods and cults. One difficult question is whether the tractates are the products of a functioning cultic community or school. *CH* I *(Poimandres)* hints at the life of a worshipping community in chapter 29, while Arnobius' *Adv. Nat.* 2.13 (late 3d century) speaks of "those who follow Mercury" (Hermes; see Grese 1979: 40–43). While each tractate has a distinctive message, the similarity in terminology and thought among the tractates probably does indicate a

number of authors with a common religious and philosophical outlook.

C. Points of Contact with Early Christian Literature

The affinities of the Corpus Hermeticum with Pauline and Johannine literature, as well as with Christian and non-Christian gnostic sources, are striking. Speculative cosmologies, various types of dualism, the devaluation of the empirical world, the idea of the body as evil, individual salvation, the *Urmensch* myth, sacraments, and revelation dialogues, to name only the most obvious, all constitute points of contact. See GNOSTICISM. Verbal parallels abound, as God is identified as "light and life" (*CH* 1.12 and 13.18–19; John 1:4, 9), and the theme of *CH* 13 is "rebirth" (*paliggenesia,* John 3:3, Titus 3:5, and 1 Pet 1:23). Although there is no direct mention of Christianity in the Corpus Hermeticum, there may be points at which the Hermetic authors are taking deliberately anti-Christian positions (Büchli 1986): death does not enter the world on account of sin (*CH* 1.20; Rom 5:12), and "it is impossible for the incorporeal (God) to become manifest in a body" (*CH* 4.9).

The relationships between Hermetic and early Christian thought have been studied by C. F. G. Heinrici (1918), Richard Reitzenstein (1904), C. H. Dodd (1935; 1953) and William Grese (1979), among others. The general consensus is that there are few, if any, literary dependencies either way, but that some early Christian (especially Johannine) texts and the Hermetic texts are representative of a common religious milieu. Parallels are also found between the Hermetica and the 2d-century Christian work the *Shepherd of Hermas.*

While each treatise is characterized by its own particular concerns, the main point of the Hermetic texts generally is to provide a way for human salvation from the empirical world. The empirical world is viewed as the result of developments due to tragic errors on the part of divine beings in the primordial past (especially *Poimandres* and *Kore Kosmou,* Stobaeus Fragment 23). Acquiring knowledge about this past and the resultant human predicament is the essential step toward salvation (Betz 1966). Unlike some forms of Gnosticism, the Hermetica do not attribute the empirical world to an evil creator god in opposition to the Highest God. In some of the tractates, the created world is even pronounced good; only human involvement with matter, the result of tragic error without evil intent, created the situation which requires salvation (*CH* 1.12–15; *CH* 13; *Kore Kosmou*). According to *Poimandres,* the individual must recognize the divine element within himself or herself; such recognition leads to ultimate divinization. *CH* 4 calls for a dipping (baptism) into the "basin of mind" (Gk: *nous*) sent down from heaven, and *CH* 13 takes the reader through a complete regeneration and rebirth of the individual which are necessary for true understanding and salvation to take place. The disclosure of knowledge about the nature of the universe and salvation occurs in the form of a dialogue in most of the tractates. Usually Hermes is the hierophant (*CH* 2, 4, 5, 6, 8, 9, 12, 13, 14, and *Asclepius*), and Hermes' son Tat (Eg. Thot) or Asclepius serves as the receiver of the knowledge. In *CH* 1, the instruction proceeds directly from the highest God to an unnamed recipient. In *CH* 9, God himself imparts knowledge to Hermes, and in *CH* 16 and 17, Tat and Asclepius take over the role of instructor. *CH* 7 and 18 have no role assignments. While influences of Greek philosophical speculation can readily be seen in the Hermetica, some scholars have also argued for Jewish influences, particularly B. Pearson (1981) and, earlier, C. H. Dodd (1935), who argued that the cosmogony of *Poimandres* utilized the Genesis account. For an understanding of the religious world of Late Antiquity, including Gnosticism and early Christianity, especially Johannine Christianity, the Hermetica are an invaluable resource. See further *EncRel* 6: 287–93; *ANRW* 2/17/4: 2240–81.

J. A. TRUMBOWER

HERMOGENES (PERSON) [Gk *Hermogenēs*] Hermogenes, along with Phygelus, is singled out for mention in 2 Tim 1:15 as being among "all (those) in Asia" who had turned away from Paul, presumably because of or during his imprisonment. A contrast is drawn between these Asians and another, Onesiphorus of Ephesus, who upon arrival in Rome had found Paul and "was not ashamed of (his) chains" (1:16). The contrast implies that Hermogenes and Phygelus indeed were ashamed of Paul's incarceration, but what their turning away meant (total apostasy? desertion of Paul?) or what it led to is hard to assess. Dibelius and Conzelmann (*The Pastoral Epistles,* Hermeneia, 106) judge that the phrase "all . . . turned away from me," because it is compartively mild terminology, should not be

taken to imply apostasy. But Fee (*1 and 2 Timothy, Titus* GNC, 186) counters that the same wording argues for a rejection of the gospel since "it means that they have abandoned their loyalty to Paul . . . [and] for him that would mean they have also abandoned his gospel, since that is about the only way one could desert the apostle."

Also difficult to interpret are the "all . . . in Asia." It is hardly likely that the phrase is meant to imply that every Asian Christian had defected. Perhaps it means a number of Asians had come to Rome and all but Onesiphorus had deserted Paul. Or perhaps the reference is to a great wave of defections in Asia even among Paul's friends, including Hermogenes and Phygelus. It has also been suggested that the desertion had to do with the refusal of certain Asians to go to Rome to help Paul as Onesiphorus had done. In any case, Hermogenes and Phygelus are portrayed by the author of 2 Timothy as having deeply disappointed the Apostle, and their case functions as a warning to Timothy to be ashamed neither of the Lord nor of his prisoner Paul (1:8).

The issue may be raised as to whether characters in the Pastoral Epistles such as Hermogenes and Phygelus are merely fictitious creations of the deutero-Pauline authorship who function to combat various heresies. While that possibility ought not too readily be dismissed, the very intentions of the Pastoral writer(s), presumed to be Paul, argue that those referred to could well be historical persons known from the Pauline tradition. Also, the appearance of some of the same characters in apocryphal literature about Paul, insofar as that literature may be independent of the Pastorals, likewise suggests at least some historical basis for such persons.

Hermogenes, for example, is also mentioned in the apocryphal *Acts of Paul* (3.1, 4, 12–16). He and Demas travel with Paul from Antioch to Iconium. According to these Acts, they "were full of hypocrisy and flattered Paul as if they loved him" (3.1). The same text identifies Hermogenes as a coppersmith, depicting Hermogenes and Demas as turning against the apocryphal Paul's teaching on celibacy and the future resurrection. Both teach that resurrection "has already taken place in the children whom we have, and . . . we are risen again in that we have come to know the true God" (*Acts Paul* 3.14).

If the *Acts of Paul* is primarily an elaboration on 2 Timothy, as has often been supposed (MacDonald 1983: 62–64), then the apocryphal Hermogenes and Demas could be judged a conflation of such texts as 2 Tim 1:15; 2:17–18, 4:10. But if, as is more likely (MacDonald 1983: 65–66), the apocryphal writer drew independently from the same oral traditions as did the Pastorals, then the *Acts of Paul* may supply a piece of information lost to 2 Timothy, namely that the Hermogenes (and Phygelus) of 2 Tim 1:15, as well as Demas in 2 Tim 4:10, broke with Paul in a dispute concerning the resurrection.

FLORENCE MORGAN GILLMAN

HERMON, MOUNT (PLACE) [Heb *har hermôn*]. A mountain mentioned in the Bible as marking the N border of the territory conquered by Moses and Joshua E of the Jordan river (Josh 11:17; 12:1, 4–5), and the N border of the half tribe of Manasseh (1 Chr 5:23). Mt. Hermon is located above the valley of Lebanon (Josh 11:17) and above the land of Mispeh or the valley of Mispeh, where Joshua chased the kings of the Canaanites in the battle of the waters of Merom (Josh 11:1–8). Prior to the Israelite conquest, it was mentioned as the place where the Hivite resided (Judg 3:3, Hurites according to the LXX), under the reign of Og king of Bashan (Josh 12:4, 5), Sihon king of the Amorite (Josh 13:10, 11), and the Gebalites (Josh 13:5).

The toponym Hermon derives from *hrm*, which in many Semitic languages means a ban, taboo or consecrated (*al-Haram* means in Arabic a sacred enclosure). ANE beliefs associated high peaks and mountains with the dwelling places of gods. Hittite and biblical records support the use of Hermon as a dwelling place of gods. Muršiliš II (1344–1320 B.C.E.) called to witness his peace treaty with the Amorite Duppi-Tessub, the gods of *Sariyana*, a synonym for Hermon (KBO. V, #9, *ANET*, 205). The Bible mentions the mountain, along with other places, where the name of God is rejoiced (Ps 89:12). Ritual centers were located at the foot of Hermon: Baal-gad (Baal of the Oracle ?) in the valley of Lebanon under Mt. Hermon (Josh 11:17), and Baal-hermon (1 Chr 5:23).

The Hermon is praised for its dew, which flows over the mountains of Zion (Ps 133:3). It was known for its lions and leopards (Cant 4:8), as well as for its cypresses (Ezek 27:5). It is mentioned in reference to the might of God (Ps 29:6), to other high mountains (Ps 89:13), and to the Jordan river (Ps 42:7).

The term "Hermon" is not found in ANE texts. It is juxtaposed in the Bible with other toponyms known also from epigraphical records. "Which Hermon the Sidonians call Sirion and the Amorite call Senir" (Deut 3:9). Scholars debate whether all three toponyms refer to the entire Anti-Lebanon range or only to its S spur, known today as Hermon or Jabal ash-Shaykh. The name "S[iri]on" is recorded in the Egyptian Execration texts dating from the 18th century B.C.E. (Helck 1962: 57). However, no MB settlements have been found thus far on this range. Hermon is contrasted to Lebanon in an Ugaritic text: "[Le]banon and its trees, Sirion and its precious cedars" (UH, 51, VI, 18–21; *ANET*, 134), as well as in the Hittite text mentioned above, and a few times in the Bible (Ezek 26:5; Ps 29:6). Mt. Senir, on the other hand, is mentioned once in the Assyrian records. In the campaign of Shalmaneser III to Damascus in 841 B.C.E., Hazael fortified "Mount Senir (Sa-ni-ru), a mountain facing Lebanon," (*LAR*, 672; *ANET*, 280). This obviously refers to the N section of the Anti-Lebanon range, known today as Jabal ash-Sharqi. This identification was also known to Medieval Arab geographers. Ibn Hokal (10th century) maintains that Snir is the source of the river Barada (biblical Pharpar [?] 2 Kgs 5:12), which springs from the mid Anti-Lebanon. The book of *Enoch* contributes to this identification. It tells of an assembly of angels on the top of Mt. Hermon. "They call it Hermon because they vowed and took an oath" to marry human wives (1 *En.* 6:6). Enoch tells of reading and sleeping on the river Dan, "which is southwest of Hermon." He then awakened and went to the angels who gathered

"between Lebanon and Senir" (1 *En.* 13:9). It seems, however, that the Bible differs from other sources over the boundaries of Hermon. While the Bible sometimes includes the Anti-Lebanon range within its understanding of Hermon, other sources call the N range Senir, while they leave unnamed the S spur. It is also possible that the names Senir, Sirion, and Hermon are general names pertaining to the entire Anti-Lebanon range, while the name Hermon also relates specifically to the S section. Another name that is associated with the Hermon, or one of its peaks, is śî'ōn (Deut 4:48).

Josephus does not use the term Hermon, but rather Mount Lebanon (*Ant* 5.3.1). Sirion and Senir, on the other hand, are well documented in the Talmudic literature as places where sacred wine was produced (*b. [Talm.] Sukk.* 12; *Soṭa* 48). One phrase states that "Senir and Sirion are among the mountains of the land of Israel" (*Ḥul.* 60).

Eusebius relates the toponym Hermon only to the S range and testifies that: "until today the mount in front of Panias and Lebanon is known as Hermon and it is respected by nations as a sanctuary" (*Onomast.* 20.12). Hieronymus comments that "the Hermon is close to Paneas, which formerly was inhabited by the Hivites and the Amorites, from which summer snow was carried to Tyre for indulgence" (Hieron. *De Locis*).

Today the Hermon is identified only with the S spur of the Anti-Lebanon range. It is known by the names Jabal ash-Shaykh, (Arabic, "the mountain of the chieftain") and Jabal al-Thalj (Arabic, "the snow mountain"). In Aramaic translations of the Bible, Hermon is identified as *Tur Talga* ("Mountain of snow"; *Tg. Onq.*, Deut 3:9 and Cant 4:8), because the mountain is covered with snow most of the year.

Mt. Hermon is a large convex block that rises above its surroundings as a result of the Syro-African rift. It extends over 50 km along a NE–SW axis, and is 25 km at its widest point. The Hermon range is mainly Jurassic limestone which leads into Karstic landscape. Its highest peak reaches 2814 m and slopes steeply toward the E. The W slope descends in a series of several terraces, where precipitation (dew, rain, and snow) is more abundant. The Barada brook divides it from the N Anti-Lebanon range. In the E it borders the Damascus tableland, in the S the basalt tableland of the Golan, and in the W the valley of the Senir (Ar Hasbani) and its continuation Wadi al-Taym.

The flora of the Hermon on the W slope is similar to that of the Lebanon mountains. The terrain up to 1440 m is dominated by vines, beyond which are oak trees and bushes. Between 1150 and 1650 m are fruit trees, including plums, cherries, pears, and almonds. For this reason the area is also called "the almond slope," (ʿAqabat el-Loz). There are, in addition, a few types of pines. Above this altitude, bushes and low plants dominate the landscape. The S and E slopes are different. Up to the altitude of 1200 m the vegetation is similar to that of the Galilee and is dominated by Mediterranean forest. From 1200 m to ca. 1900 m the forest becomes thinner. The upper part is covered with low bushes and is mostly bare. Most of the year the peak of the mountain is covered with snow. Until recently it was customary to bring snow to the foothill villages to cool foods and drinks. This custom, which was recorded by Hieronymus, was perhaps followed in biblical times.

The view from the top of the mountain is magnificent and covers a large part of N Israel and Syria. In the S, the view covers the Gilead mountains, the Jordan valley, the Huleh, and the Sea of Galilee. The scene in the W covers the Galilee, the Carmel range, the Mediterranean coast, Tyre, and the mountains of Lebanon. In between are the Litani depression (identified with *Nsn*, in an Egyptian source, according to Aharoni 1958: 295; Papyrus Anastasius I, *ANET*, 477; and identified with Leontis according to Avi-Yonah 1966: map 49) and its river. The view extends from Klaʿat ash-Shaqif through the Biqaʿ valley ("the Valley of Lebanon," Josh 11:17). In the N, the Anti-Lebanon peaks are visible. To the NE, lies Damascus, and to the SE, the Golan and the Bashan.

The summit of the Hermon has three peaks, in the N, E, and SW. On the highest of these peaks, the SW, there are the remains of a temple known as Qasr ʿAntar or Qasr ash-Shabib. The temple contains an enclosure, a large basin carved in rock, and a building that measures 10 by 11 m. A Greek inscription was found that, on behalf of the "Greatest and Holiest God," addresses all those "who had not taken the oath to stay away." Scholars interpret this as an order preventing the uninitiated from reaching the sacred temple. Other scholars refer to the belief of keeping the temple pure from the angels who swore to take human wives. The temple dates from the 1st to the 4th centuries C.E. Surveys yielded a few Iron Age sherds on the summit indicating probable early use. The temple is perhaps mentioned by Hieronymus (*Onomast.* 21.13–14), and by a Jewish traveler in 1624, Rabbi Gershon Berabbi Ĕliezer.

More than twenty temples have been surveyed on Mt. Hermon and its environs. This is an unprecedented number in comparison with other regions of the Phoenician coast. They appear to be the ancient cult sites of the Mt. Hermon population and represent the Canaanite/Phoenician concept of open-air cult centers dedicated, evidently, to the celestial gods. During the 2d century B.C.E., chapels carved out of rock were incorporated within the enclosures. In the 1st century C.E., temples built in Classical style were added to the complex. The pottery collected from these temples shows an affiliation to that attributed to the Iturean repertoire. The Itureans were the inhabitants of the mountain from the 2d century B.C.E. until the 7th century C.E.

Since Mt. Hermon is juxtaposed with Mt. Tabor (Ps 89:13), biblical exegesis from the medieval period sought to place Hermon next to Tabor. Consequently, the mountain S of Tabor, the hill of Moreh, was called "Hermon Minor" (Burchardus de Monte Sion (1283) in Laurent 147, Baldi 1982: 342).

RAMI ARAV

HEROD ANTIPAS (PERSON) [Gk *Antipas*]. The son of Herod the Great who, in 4 B.C., inherited from his father the territory of Galilee and Perea, which he governed as Tetrarch until A.D. 39. Antipas is named simply "Herod"—not "Antipas" or "Herod Antipas"—in Josephus, in the NT, and on his own coins (Hoehner 1972: 105–106). The NT gospels mention him in two important contexts. First, because his marriage to Herodias (see below) was harshly criticized by John the Baptist (who preached in the Perea area), Antipas had John arrested and beheaded (Matt 14:1–12 = Mark 6:14–28 = Luke 9:7–9; cf. also *Ant* 18.5.2 §§117–119). Second, because he was ruler of Jesus' home province of Galilee, Antipas was given an opportunity to question and ridicule Jesus during his trial before Pontius Pilate (Luke 23:6–12).

Although the Bible says nothing more about Herod Antipas than this (cf. *HJP*^{2} 1: 345–51), the Jewish historian Josephus provides us with some detailed information. Antipas and Archaelaus, Herod's two sons by Malthace, a Samaritan, were raised in Rome (*Ant* 17.20). Although initially he had been favored as the principal beneficiary under Herod's will, Antipas received only prosperous Galilee and Perea under Herod's final will ratified by Augustus in 4 B.C. (see ARCHELAUS). His title, "tetrarch," is attested in inscriptions dedicated in his honor on Cos and Delos, which were erected respectively by a certain Philo and by the Athenian people (*HJP*^{2} 1: 341 n.1).

In Galilee he rebuilt Sepphoris and surrounded it with strong walls; he re-named it Autocratoris, evidently in honor of the emperor, who in Greek might be called *autocrator*. In Perea he fortified Betharamphtha and renamed it Livias (and subsequently Julius) in honor of Livia, wife of the emperor Augustus (*Ant* 18.27). He also built a new city in Galilee which he named after Augustus' successor, Tiberius, using forced migration to populate it. While Josephus stresses the impiety entailed in the creation of Tiberias, which was founded on the site of tombs (*Ant* 19.36–38; with Schürer *HJP*^{2} 1: 342–343), Antipas could also show considerable respect for Jewish traditions, as when he sympathized with complaints over votive shields which offended many Jews (Philo *Leg. ad Gaium* 38), when he would attend holy feasts at Jerusalem (cf. Luke 23:7), and when he would mint aniconic coins.

Antipas had first been married to the daughter of Aretas, king of neighboring Nabatea. When Antipas divorced her and married HERODIAS, trouble ensued. First, the marriage to Herodias apparently was considered unlawful by some traditionalists, including John the Baptist (Matt 14:4). Herodias was Antipas' niece (daughter of Aristobulus and sister of Agrippa I); in order to marry Antipas, she had first to divorce another uncle (Antipas' half brother), by whom she had had a daughter, Salome. (On the problematic identity of this first husband, see HEROD PHILIP.) Second, Antipas' divorce enraged his former father-in-law, the king of Nabatea; but since a disputed boundary was also at issue, we cannot be entirely sure whether the divorce was a cause or a symptom of the quarrel between the two rulers (*Ant* 18.109–13). Aretas attacked, and in the subsequent battle Antipas' forces were soundly defeated. Antipas appealed to Tiberius for assistance, and the emperor instructed Vitellius, Roman governor of Syria, to capture Aretas dead or alive (*Ant* 18.113–15; see ARETAS). The defeat was all the more serious for Antipas since some of the Jews considered it to be divine retribution for his execution of John the Baptist (*Ant* 18.116–20).

Vitellius' expedition against Aretas had scarcely begun when Tiberius died on March 16, A.D. 37. Vitellius, probably no great friend of Antipas, halted the campaign and awaited instructions from the new emperor, Gaius; consequently Aretas escaped punishment (*Ant* 18.120–26). Although the chronology is uncertain (Schürer *HJP*^{2} 1: 351), it was about this time that Antipas hosted a feast for Vitellius and Artabanus, king of Parthia, who wished to make peace with the Romans. Antipas wrote to the emperor (whether Tiberius or Gaius) to report this good news, preempting Vitellius' own official report and earning his considerable displeasure (*Ant* 18.101–105).

Josephus implies that a vengeful Vitellius subsequently played a role in Antipas' downfall (*Ant* 18.105); however, Agrippa I's old quarrel with Antipas probably played a more central role in Antipas' decline (*Ant* 18.149–50; see AGRIPPA). Gaius' appointment of Antipas' nephew Agrippa as "king" encouraged Antipas to seek the same title for himself. Allegedly spurred on by his nagging wife Herodias (Agrippa's sister), Antipas sailed to Italy to present this request. But at the same time envoys from Agrippa arrived to denounce Antipas to the emperor, accusing him of treasonous dealings with the discredited Sejanus and now with Artabanus, king of Parthia. Gaius believed these accusations (Antipas could not deny that he had amassed a great quantity of weapons, even though he may well have done so for use against Nabatea, not Rome), and consequently he deposed Antipas and annexed his tetrachy into Agrippa's kingdom. Antipas was exiled to the W (probably to Lyons, although N Spain is also possible). Although Gaius offered to pardon Herodias because she was Agrippa's sister, she chose instead to follow her husband into exile (*Ant* 18.240–55 with Braund 1983: 241–42). It is not known whether Antipas and Herodias had any children.

DAVID C. BRAUND

HEROD PHILIP. A name some scholars have adopted for one of the sons of Herod the Great, who would have been Herodias' first husband and, therefore, father of her daughter Salome. It is important to note that there is no single source attesting to a person by this name, and that the name is a scholarly construction resulting from the combined evidence of two unrelated sources.

The first source is the NT pericope recounting the death of John the Baptist. In Mark 6:17 (= Matt 14:3; cf. Luke

3:19), Herodias' first husband (and presumably the father of Salome) was named "Philip," the brother of Herodias' second husband, Herod (= HEROD ANTIPAS). This "Philip" therefore would have been a son of Herod the Great. The second source is Josephus' account of the quarrel between Herod Antipas and Aretas, king of Petra (*Ant* 18.5.1 §109). In it, Josephus recounts that Herodias' first husband was named "Herod," and that he was the half-brother of Herod Antipas; therefore he was a son of Herod the Great by Mariamme (see also *Ant* 18.6.2 §148). Josephus explicitly identifies him as the father of Salome (*Ant* 18.5.4 §136). By assuming that these two sources refer to the same son of Herod the Great (albeit under different names), some scholars have combined the two and posited the existence of a "Herod Philip."

While some insist that the Gospels and Josephus each accurately preserve a separate element of an original double-name (*ISBE* 2: 695), others feel that the Gospels (particularly Mark) have used the name erroneously. The name "Philip" is omitted in the best mss of Luke 3:19, as it is in codex D and the Latin versions of Matt 14:3. This omission has caused some to argue that Mark confused Herodias' first husband with Philip the Tetrarch, the son of Herod the Great by Cleopatra. See PHILIP (PERSON) #5. The confusion may have resulted from the fact that this Philip was the *husband* (not the father) of Salome, and therefore the *son-in-law* (not the husband) of Herodias (*Ant* 18.5.4 §157). On balance, however, the existence of a "Herod Philip" (and the compatibility of Mark and Josephus) resolves more problems than it creates (Mann *Mark* AB, 296).

GARY A. HERION

HEROD THE GREAT (PERSON) [Gk *Hērōdēs*]. The king who, by arrangement with Rome, ruled Jewish Palestine from 37 B.C.E. to 4 B.C.E. According to the NT (Matt 2:1–19; cf. Luke 1:5), Jesus was born during the reign of this king.

A. Introduction

Herod was born in the late 70s B.C.E. into an aristocratic Idumean family that had converted to Judaism a half century earlier, in the reign of John Hyrcanus I. His father, Antipater, was adviser to Hyrcanus II and later held office in his own right when he was appointed *epitropos* (overseer) of Judea in 47 B.C.E. The rise to power of both Antipater and Herod was predicated first and foremost on their unswerving loyalty to Rome. Both father and son were convinced that, following the conquest of Judea by Pompey in 63 B.C.E., nothing could be achieved without the consent and aid of Rome. This principle was inviolable, and it guided their actions under all circumstances and at any price. At the age of 25 Herod was appointed governor of Galilee by his father and gained a reputation as a vigorous ruler by his aggressive campaign against brigands in the area.

By the late 40s, however, Herod's political fortunes took a turn for the worse. The murder of his father in 42 B.C.E. put him on the defensive with regard to Jerusalem's aristocracy. Taking revenge on what it considered a tyrannical usurper, this nobility attempted to have Herod removed through Roman intervention, only to be thwarted by the steadfast loyalty of the Romans to Antipater's memory and Herod's proven abilities. Nevertheless Herod was finally forced to flee Judea in 40 B.C.E. when the Hasmonean Mattathias Antigonus joined with the Parthian invaders to oust both Herod and the Romans. Herod then made his way to Rome, where he was formally crowned King of Judea. He returned to Judea in 39 B.C.E., and in the summer of 37, after a stay of some two years during which Herod and the Romans were pitted against Antigonus and the Parthians, Herod was finally able to claim his kingdom. He proceeded to rule for the next 33 years.

Herod's reign can be divided into three periods. The first was one of consolidation, lasting from 37 to 27 B.C.E. The second, from 27 to 13 B.C.E., was a period of peace and prosperity, marked by Herod's close relationship with Rome and her leaders on the one hand and an ambitious building program on the other. The third period, from 13 to 4 B.C.E., was marked by domestic strife and misunderstandings with Rome, and was capped by Herod's physical and emotional deterioration.

B. The Period of Consolidation

Herod's conquest of Jerusalem in 37 did not bring his problems to an end. Inheriting a divided city, he moved swiftly and decisively to thwart all opposition. Forty-five leaders of the pro-Antigonus faction in the city were executed (*Ant* 15 §5) and others were forced into hiding (*Ant* 15 §264). The wealthy were despoiled, and the revenue gained was used to pay Herod's debts to his Roman patrons and his army. Having established ties with one branch of the Hasmonean family through his marriage to Mariamme (Mariamne), grand-daughter of Aristobulus (*JW* 1 §344; *Ant* 14 §467), Herod attempted to cement this relationship further by returning Hyrcanus II from exile in Babylonia and according him an esteemed position (*Ant* 15 §18–21). Josephus claims, however, that Herod's prime motivation for having Hyrcanus nearby was more out of fear than honor; proximity would allow Herod to control Hyrcanus' whereabouts and, if necessary, eliminate him.

In the years following his ascension, Herod was almost obsessively concerned about the security of his rule. Thus he appointed an old friend, Hananel, a Babylonian, to assume the high priesthood (*Ant* 15 §22–40, 56). Alexandra, daughter of Hyrcanus II and mother of Mariamme, was incensed at the slight to her son, Aristobulus III, who was next in line to assume the duties of high priest. She appealed to Cleopatra, who in turn solicited the aid of Antony; he succeeded in persuading Herod to appoint Aristobulus. Herod agreed reluctantly, with good reason. Little time elapsed before he realized the extent of Aristobulus' popularity and the potential danger he posed (*Ant*

15 §52). Herod ordered the young man drowned in a swimming pool at his Jericho palace (*Ant* 15 §54–56).

Herod's moves to forestall any Jewish uprising are noted by Josephus on a number of occasions. It was for this reason that Antigonus was beheaded in Antioch (*Ant* 15 §8–9) and that the king kept the young Aristobulus homebound despite Antony's request, at one point, for the lad to join him (*Ant* 15 §28–30). Even as late as the year 30, before leaving for a fateful rendezvous with Octavius, Herod executed Hyrcanus II and placed Alexandra in a fortress under guard. He feared that in his absence either of them might foment a rebellion or assert his right to leadership (*Ant* 15 §174–78, 183–86). Similarly, Herod justified the execution of his wife Mariamme two years later, claiming that a popular disturbance might have broken out had she lived (*Ant* 15 §231).

The focus of anti-Herodian sentiment at this time lay close to home. Alexandra, both fearing and detesting the Idumean king, strongly opposed the appointment of Hananel as high priest and became totally distraught upon her son's murder. Herod's suspicion of her intensified, moving him to place her under house arrest. On Cleopatra's advice, Alexandra attempted to flee Jerusalem in a coffin but was apprehended in the act (*Ant* 15 §46–48). Herod was forced to overlook this incident for fear of Cleopatra's possible retaliation (*Ant* 15 §42–49). Alexandra informed Cleopatra of Herod's guilt in the drowning of Aristobulus, leading Antony to summon him to Laodicea. The king, however, succeeded in exonerating himself of all charges (*Ant* 15 §62–57, 74–79).

Cleopatra's association with such anti-Herodian machinations was not fortuitous. She indeed wished to incorporate Judea, S Syria, and Arabia into her kingdom. Despite the fact that Antony resisted her ultimate demands, much as he had refused to respond to her initiatives with regard to Alexandra, Cleopatra was not entirely unsuccessful. She succeeded in gaining the whole coastal region of Phoenicia and Judea ("the cities between the Eleutherus River and Egypt with the exception of Tyre and Sidon"—*Ant* 15 §95). The lucrative palm and balsam groves of the Jericho Plain were also transferred to her, although here she agreed to lease the territory to Herod for 200 talents a year (*Ant* 15 §132).

Despite these intrigues, Herod kept both his kingdom and relations with Rome on an even keel. In 31, three crises of major proportions beset the king—a war, an earthquake, and the defeat of his Roman patron. Charged by Antony and Cleopatra to collect the revenues owed by the Nabatean king, Herod was forced to resort to arms when the former refused to honor his debts. Although Herod was victorious in his first battle near Dion, E of the Jordan, he suffered a serious defeat at Canatha in the Hauran and was forced to disband his army due to heavy losses of men and equipment (*Ant* 15 §108–20). To make matters worse, a disastrous earthquake struck Judea about the same time, claiming, according to Josephus, some 30,000 lives and a considerable loss of cattle (*Ant* 15 §121–22). However, the most decisive event of the year 31 was Antony's defeat at Actium (*Ant* 15 §161–62). Octavius now stood as sole ruler of the Roman Empire. At first glance Herod's previous loyalties and ties to Antony were not the most auspicious credentials for winning the support of the new ruler.

Yet Herod emerged from these crises stronger than ever. Avoiding open warfare for a time, he finally engaged the Nabateans in battle near Amman (Philadelphia) in 31 and twice inflicted heavy casualties on them (*JW* 1 §380–85; *Ant* 15 §147–60). Spurred by this victory, Herod next addressed himself to the post-Actium political situation. It was to his benefit that the Nabatean war had engaged his attention at the time, leaving him no opportunity to dispatch troops in support of Antony. Herod was thereby spared the embarrassment of having actually backed the losing side. On learning of the outcome at Actium he immediately declared his loyalty to Octavius and demonstrated it by helping prevent gladiators in the service of Antony from joining him in Egypt for a last stand (*JW* 1 §386–92; *Ant* 15 §194–96). Herod in the spring of 30 B.C.E. proceeded to Rhodes, where Octavius had made public his decision to support, wherever possible, existing client kings. He realized that the loyalty shown Antony—who had been the legitimate Roman ruler in the East—was natural and commendable. The main concern of the new emperor (in 27 B.C.E. to be officially so named and given the title "Augustus") was to guarantee efficient, effective, and loyal rulers. As Herod met these qualifications it is not surprising that he was immediately ratified as King of Judea and awarded other honors as well. Soon after, when Augustus was passing through Judea on his way to Egypt for the final battle against Antony, Herod met him at Ptolemais and provided his army with elaborate provisions and gifts, including abundant wine and water for their march across the desert. In a demonstration of munificence designed to win gratitude and support, Herod also gave Octavius 800 talents of silver (*JW* 1 §394–95; *Ant* 15 §187–201).

Octavius received Herod in Egypt after his final victory and awarded him the 400 Gauls who previously had served as Cleopatra's bodyguards. It was then that he restored to Herod the territory confiscated by Cleopatra (Jericho) in addition to the coastal cities of Gaza, Anthedon, Joppa, Strato's Tower, Samaria, and the Transjordanian cities of Gadara and Hippos (*Ant* 15 §217). When Octavius passed through Judea upon his return to Rome, he was once again lavishly received by Herod, who even accompanied him as far as Antioch.

This recognition, in addition to the newly acquired territory, fortified Herod's determination to put to rest the remaining vestiges of domestic opposition. Having already eliminated Hyrcanus II just prior to his journey to Rhodes, Herod then executed Alexandra: the king had fallen ill, and Alexandra, finding this to be a propitious opportunity for insurrection, moved to capture the Jerusalem fortress. Apprised of the situation, and having recovered from his illness, Herod immediately ordered her execution (*Ant* 15 §247–51). A year or so later Herod's sister Salome sought to divorce Costobar who, together with others, was plotting a revolt. She also told Herod that Costobar had provided refuge for his enemy, the Baba family, during the conquest of Jerusalem a decade earlier. Already aware of Costobar's seditious proclivities, Herod now moved quickly to execute him and his companions (*Ant* 15 §253–66).

All this was but a prelude to the most tragic—and, in the

long run, the most significant—execution of all. Despite the extraordinary love he felt for his wife, Mariamme, Herod's relationship with her had seriously deteriorated. Precisely owing to his passionate attachment, and dreading the thought that his beloved might be wedded to another, Herod on two separate occasions had ordered her death should he fail to return from a fateful encounter. Mariamme, however, misjudged his intentions and was incensed at such plans. Salome's machinations against her only added fuel to the fire, as did Mariamme's own intemperate remarks and actions vis-à-vis the king. Imbued with a sense of familial superiority because of her Hasmonean lineage, she often treated her husband and sister-in-law with contempt and arrogance. In 29, under the incessant prodding of Salome, Herod finally ordered her execution (*Ant* 15 §222–39).

The murder of Mariamme thrust Herod into a distraught state. He would call out to her, lament her absence, and absentmindedly tell the servants to summon her. Herod sought distraction through banquets, parties, and hunting expeditions, but to no avail. The king became seriously ill with an inflammation and constant pain in the back of the head, and a temporary loss of reason. No medicine seemed to have any effect, and at one point there was fear for his life (*Ant* 15 §240–46).

The specter of Mariamme returned to haunt Herod during the last decade of his life. His sons by her, Alexander and Aristobulus, could not forgive their father for this deed, and the tensions and intrigues in Herod's court became unbearable and ultimately proved disastrous. On a deeper level, Mariamme's fate and the circumstances surrounding it reflected Herod's inability to exercise control over the many and disparate members of his family. Each strove to further his own interests and ambitions and sought ways—with more or less success—to manipulate the king according to his desires. The irony of events was such that Herod's political fortunes were on the rise while his personal life was the scene of much anguish and pain.

C. The Herodian Kingdom at Its Peak (27–13 B.C.E.)

1. The Political Dimension. By 27 B.C.E., and for the next 14 years, Herod's prosperity and accomplishments were practically unsullied. The territory under his rule continued to expand, there were no wars, and domestic unrest was almost nonexistent. Whatever tensions arose were limited and short-lived and do not seem to have affected the kingdom as a whole.

Herod's ties with Rome remained the backbone of his policy. His successful meetings with Augustus provided a firm basis on which these ties were to develop; as a result, Herod's kingdom was further augmented in 23 with the inclusion of the territories of Trachonitis, Batanea, and the Hauran to the NE. These lands had formerly been under the control of Zenodorus who, aware of the local population's predilection for brigandage, encouraged it to plunder its neighbors, particularly the inhabitants of Damascus, thus enabling him to increase his revenues. When complaints from Damascus reached Octavius (who since 27 was titled Augustus), he ordered Varro, the governor of Syria, to strip Zenodorus of his territories and eliminate the bandits. Augustus subsequently conferred these lands upon Herod in order to prevent similar disruptions in the future. Operating with his customary zeal, Herod abruptly aborted all unlawful acts and restored order to the area (*Ant* 15 §343–48).

Zenodorus, however, refused to accept this demotion and continually attempted to undermine Herod's position. He brought charges against the king and on several occasions encouraged the residents of Gadara to do likewise. On each occasion the Romans rejected these charges out of hand. Three years later, upon Zenodorus' death, Augustus awarded Herod his remaining territory, which included the Golan and Ḥulah areas, including the towns of Ulatha and Panaeas (*Ant* 15 §349–60). Thus, by the year 20 Herod had regained practically all the territory which had once comprised the Hasmonean kingdom, and in some areas much more.

As a sign of his newly acquired status, Herod was recognized as a "friend and ally" (*philos kai symmachos; Ant* 17 §246) as well as "friend of the Romans" (*philorōmaios*—Dittenberger, *OGIS*, no. 414) and "friend of Caesar" (*philokaisar*—Meshorer, *IEJ* 20 [1970]: 97–100). Moreover, Augustus issued a directive to his procurators (i.e., financial officials) in Syria to obtain Herod's authorization for their activities which, if indeed carried out, would have given him extensive power throughout Syria (*Ant* 15 §360). In addition, in as early as 23, Caesar granted Herod the privilege of choosing his successor, requiring only the confirmation of the emperor.

Herod lost no opportunity to express loyalty and gratitude to his Roman patrons. Augustus was undoubtedly impressed with the lavish reception accorded him by Herod before and after his Egyptian campaign against Antony. The Jewish king was again in attendance when Augustus visited Syria in 20 B.C.E., not only to further solidify his friendship with the emperor, but to answer charges brought against him by the people of Gadara. Herod also obtained an appointment for his brother Pheroras as tetrarch of Perea (*Ant* 15 §354–62). On three occasions in subsequent years Herod traveled to Rome in order to visit the emperor.

Herod also forged close personal relations with the second-in-command in Rome, Augustus' son-in-law, Marcus Vipsanius Agrippa. He visited Agrippa at Lesbos (an island off the coast of Asia Minor) during the years 23–21 (*Ant* 15 §350) and on another occasion, in 15 B.C.E., invited Agrippa to visit Judea, where the latter was warmly welcomed by the king and populace at large. Agrippa visited Herod's newly founded cities Sebaste and Caesarea, as well as the Judean desert fortresses of Alexandreion, Herodium, and Hyrcania. His stay in Jerusalem bore special significance, for it was here that he received the acclamation of the people. Agrippa expressed his appreciation by offering a sacrifice at the temple and by feasting the populace (*Ant* 16 §12–14). The following spring Herod joined Agrippa in Asia Minor on an expedition to Crimea. Upon the conclusion of the expedition, Herod accompanied Agrippa throughout much of Asia Minor, distributing gifts and helping those who presented petitions to Agrippa (*Ant* 16 §16–26). Herod also took this opportunity to plead the cases of a number of Jewish communities in Asia Minor.

Within his own realm Herod wielded absolute authority. One method of assuring this support was through an oath

of loyalty; on one occasion, dated to about 20 B.C.E. (*Ant* 15 §368–70), he demanded an oath of fidelity to his own rule, on another—during the last years of his reign—to Caesar as well (*Ant* 17 §42). The anniversary of Herod's accession was declared an official holiday (*Ant* 15 §423), and there is some evidence that his non-Jewish subjects erected statues of him in his honor; later on the same was done for the daughters of Agrippa I at Caesarea (*Ant* 19 §357). Herod's royalty is regularly proclaimed on his coins, as is evidenced by the legends "of Herod the King" or simply "Herod the King."

Herod exercised complete control over his realm by dominating all key institutions. No matter was beyond his scrutiny. The highest tribunal (Sanhedrin), whatever its composition and authority in the previous era, was now merely a rubber stamp for the king's wishes. In effect, this judicial body was similar to the privy councils of other Hellenistic kings. Summoned whenever it suited the king, this group consisted primarily, if not exclusively, of Herod, his friends, and his relatives, and it was convened, for example, to condemn Pheroras' wife (*JW* 1 §571) and later Antipater (*Ant* 17 §93). It was before such a council that Herod announced the appointment of Aristobulus III as high priest (*Ant* 15 §41) and reviled Hyrcanus II's alleged treason several years later (*Ant* 15 §173). Following the execution of his sons, Alexander and Aristobulus, Herod convened this body to hear plans for the marriages of his grandchildren. In a speech purportedly delivered on that occasion, Herod personally addressed several members of that body, his brother Pheroras, and his son Antipater (*JW* 1 §556–58).

The high priesthood was another institution manipulated by Herod for his own purposes. Herod realized from the outset that control of this office was crucial for a successful reign, and it is for this reason that he immediately installed his long-time friend Hananel of Babylonia as high priest (*Ant* 15 §22, 40). The rise and fall of Aristobulus III, as already noted, clearly exemplify the threat perceived by Herod if that office were to fall to the hands of a potentially inimicable person. He appointed a series of high priests, several of whom apparently came from Egypt—Jesus, son of Phiabi, and Simon, son of Boethus (*Ant* 15 §320–22). The appointment of relatives to high positions was likewise a Hellenistic practice fully embraced by Herod. Simon was appointed high priest in 23 after Herod fell in love with his daughter, also named Mariamme, and he remained in office almost until Herod's death; Simon's son Joazar succeeded to the high priesthood in the year 4, following a brief ministry of one Matthias, son of Theophilus, a native of Jerusalem (*Ant* 17 §78, 164–67).

The army, too, was tightly controlled by Herod. It was comprised of Jews and non-Jews alike, and although precise information on the composition of his troops is unavailable, it would seem that the pagan element was crucial—if not in numbers, then at least in the importance of their position. The elite troops, those closest to the king and charged with personally protecting him, appear to have been of non-Jewish origin. Between 40 and 37 this foreign element was apparently dominant in the makeup of Herod's troops (*Ant* 14 §394; *JW* 1 §290, 301). Following the battle at Actium, Augustus had presented Herod with 400 Gauls who had served as Cleopatra's bodyguards (*Ant* 15 §217). The cortege at Herod's funeral was headed by his bodyguards, then the Thracians, Germans, and Gauls, and they were followed by the rest of the army (*JW* 1 §672; *Ant* 17 §198). Prominent among Herod's soldiers were those recruited from the cities of Sebaste and Caesarea, who numbered some 3,000 in all.

The expenses involved in maintaining an army and a court as lavish as those of Herod, as well as the need to finance his ambitious building program, required an enormous outlay of money. Herod's sources of income were many and varied. First and foremost he depended on the revenue from taxes, which were certainly levied on agricultural produce and included taxes on public purchases and sales (*Ant* 17 §205). Tax revenue figures mentioned at the deposition of Herod's will approached the not inconsequential sum of 1,000 talents (*Ant* 17 §317–21). Herod himself brought significant personal wealth to the throne, and this was augmented by his despoliation of political enemies. Moreover, his appropriation of Hasmonean property, which included large tracts of land throughout the country, added vast new sources of income. Thus Herod came into possession of fertile lands near Jericho, the coastal plain, and the Jezreel Valley. Furthermore, the vast tracts of land to the NE (Trachonitis, Batanea, the Hauran, and the Golan) were awarded to him by Augustus in 23 and 20 B.C.E. The customs duties derived from his control of lucrative trade routes, Nabatean trade from the Arabian peninsula, and maritime trade through his ports, especially Caesarea, and the revenue accrued from his Cyprus copper mines (*Ant* 16 §128) all provided significant sources of income. On occasion Herod resorted to less savory means of acquiring money. For example, he once opened the tomb of David and stole some 3,000 talents (*Ant* 16 §179–82).

These sources of revenue undoubtedly operated with relative efficiency during years of peace and tranquility, from the time of the battle of Actium to Herod's death. Broken by only a few skirmishes with the Nabateans, this era allowed the Judean agricultural economy to flourish. The blessings of the *pax Romana* were felt in the country's commerce as well; trade prospered throughout the Mediterranean world and extended as far as Parthia, Arabia, India, and beyond.

Moreover, the peaceful conditions throughout the Roman world strengthened the ties between Judea and the Diaspora. Pilgrimages to the Holy City and donations by Jews everywhere to the temple were of enormous benefit to the Jerusalem economy. Rome protected the rights of Diaspora Jews to send contributions, no matter how substantial, and upon reaching their destination these funds were earmarked for the repair and development of Jerusalem, its walls, and its aqueducts, as well as for ritual purposes.

There were, on occasion, famines and plagues in Judea, and the need to reduce taxes temporarily (*Ant* 15 §365), but such crises appear to have been the exception. The complaints of the citizenry following Herod's death with regard to the enormous tax burdens undoubtedly bear much truth, but we must be careful not to emphasize their significance unduly. Rarely have people, no matter how prosperous, *not* complained about tax measures. However

heavily assessed, the population does not seem to have suffered any serious consequences. Despite the devastating wars under Alexander Jannaeus (103–76), the civil war between Aristobulus II and Hyrcanus II (67–63), and the cases of rapacity and exploitation during the first years of Roman rule (under Pompey, Crassus, Cassius, and Antony), the Herodian period—for all its royal expenditures and financial pressures—was a distinct improvement over its predecessors. When all is said and done, Herod's reign appears to have brought significant economic prosperity.

2. Herod's Domestic Policy. Despite Herod's apparently successful political fortunes throughout much of his reign, the king never felt secure in his position. His sense of insecurity (and here we must be careful not to exaggerate, for most Hellenistic-Roman rulers shared these same apprehensions) stemmed from a number of factors. Since he came from a family which until the not-too-distant past had been entirely outside the Jewish fold, it is understandable that some Jews might have looked askance at Herod's lineage; they might have been upset that an "outsider" assumed the title of king that was historically associated with the Davidic lineage. For others, his ascension was objectionable as it came at the expense of the Hasmonean Dynasty. Moreover, Herod's rule was repugnant to some, owing to his dependence upon and identification with a foreign power, and many were undoubtedly dismayed, if not enraged, by the high-handed methods and cruel tactics employed as Herod rose to power. Undoubtedly much of the resentment toward Antipater in the previous generation was now transferred to Herod. Finally, some Jews were clearly offended by the markedly increased tempo at which Hellenistic customs and practices were being introduced and absorbed into Judea. Although this process had been going on since the time of Alexander the Great (336–323), the extent and intensity of this process in Herodian Judea dramatically increased.

Herod's relations with his non-Jewish population were also problematic. Although of Idumean stock, Herod was considered by the pagans a Jew in all respects. It is difficult to imagine that the pagan population would take kindly to Jewish rule, since tensions between Jewish and non-Jewish segments of the population had become quite exacerbated during the Hasmonean era. When Pompey liberated the pagan cities from Jewish rule, their inhabitants undoubtedly breathed a sigh of relief; now, however, with their reincorporation into Herod's realm, many of the old antagonisms surfaced once again.

In light of this situation, Herod adopted a wide range of measures to assert his control over the native populations. Meetings of citizens were prohibited, as was any kind of mass assembly. Spies were ubiquitous both in the city and in rural areas. Herod is said to have disguised himself and to have mingled with the people in order to assess their attitude toward his rule. Anyone showing objection to his regulations or violating any law was severely punished; this included the death penalty, which was often carried out at Hyrcania (*Ant* 15 §365–68). Attempted assassins of the king were put to death, but only after being tortured. At times whole families were punished for crimes committed by one of its members (*Ant* 15 §289–90). According to Josephus, the entire network of fortresses, starting with the Antonia in Jerusalem through Sebaste and Caesarea and culminating with Gaba and Heshbon, was intended to provide a bulwark against any possible Jewish uprising. Together these fortress-cities were meant to monitor seditious activity and, if necessary, to suppress any insurrection originating in the main centers of Jewish population, Judea, the Galilee, and Perea.

Herod, however, was far too shrewd a politician to settle for such preventative measures. He actively sought to mollify negative attitudes and win the allegiance and support—if not the love and affection—of his people. On one occasion (ca. 24 B.C.E.) when a particularly severe drought and plague struck the country, Herod moved quickly to relieve the crisis. He converted his personal ornaments into silver and gold coinage and sent the money to Egypt in return for a large shipment of grain. He also helped the aged and infirm by providing bakers to prepare their food. Clothes were distributed to the needy, and when the time came for the harvest, Herod sent tens of thousands of people to the fields at his own expense to help. He likewise distributed grain to the people of Syria, although Josephus makes it clear that the king distributed eight times more grain within his own kingdom. The generosity and timeliness of these benefactions apparently made a profound impression on the populace and did much not only to neutralize existing antagonisms, but also to build up a reservoir of goodwill (*Ant* 15 §299–316).

Around the year 20/19 the crops again failed, and this time Herod remitted one third of the taxes due (*Ant* 15 §365). On his return from visiting Agrippa in 14 B.C.E., Herod jubilantly reported to the people of Jerusalem his triumphs and their good fortune. He then remitted one fourth of their taxes for the previous year (*Ant* 16 §64).

Another way of winning the respect and loyalty of the people was through the popular assemblies called by the king from time to time. These meetings were advantageous to the king in that they enabled him to establish direct communication with his subjects and to win their approval for acts already accomplished or about to be undertaken. We know that such assemblies were convoked at Caesarea, Jerusalem, and Jericho, where Herod announced grandiose plans (such as the building of the temple—*Ant* 15 §380–87), reported on his trips abroad (in 12—*Ant* 16 §132–35), or used the occasion to gain popular support for intended executions, as at the convocation at Caesarea regarding the imminent deaths of his sons, Alexander and Aristobulus (*Ant* 16 §393).

The above measures were aimed at winning the support of the inhabitants of his kingdom generally. Certain undertakings, however, were intended for specific groups. The large populations residing in Sebaste and Caesarea were indebted to the king for the generosity and benefactions bestowed upon their cities. The character and institutions of these urban centers went a long way toward reducing fears that a Jewish king was, by definition, inimicable to pagans and paganism. That Herod succeeded in gaining the loyalty of these local populations is reflected decades later in Caesarea. In a polemic against the Jews there (ca. 60 C.E.) the pagans praised Herod as the founder of their city (*JW* 2 §266).

Moreover, Herod sought to win the loyalties of the pagans in his realm by incorporating them into his administration. As noted, many non-Jews held high positions in

his court and army. Finally, Herod strengthened his ties with this sector of the population by closely identifying himself with Roman rule. The close contacts maintained with Augustus and Agrippa, along with the building of temples and other Hellenistic institutions, were designed not only as a general expression of support for Rome, but also as a message to his pagan subjects that Jewish rule could be supportive of local pagan interests and was not necessarily at odds with their way of life.

Herod's relationship to his Jewish subjects was far more complex. In part, it was related to their conception of Jewish political leadership, the roots of its legitimacy and authority, and its relationship to a number of well-established institutions (the council of elders and the high priesthood). For much of the Second Temple period political and religious leadership was epitomized in the figure of the high priest. He was the political spokesman and the central religious figure of his people. This symbiosis reached its peak under the later Hasmoneans when the high priest was also king. On Hasmonean coinage the Hebrew name and the title "high priest" in ancient Hebrew script appeared, as did the ruler's Greek name and the title *basileus*, "king" in Greek.

Herod, however, sought to end the dual nature of Hasmonean leadership. For him, political power was the "be-all and end-all," while religious leadership (of the priestly or non-priestly variety) was of no interest. Whether this was because his unsuitable origins would preclude any chance of holding such a position or whether he simply was not interested in this religious aspect is a moot point. Herod was indeed keen to separate the functions of religion from those of the state, and he left no doubt as to the superior status he accorded the latter.

3. Herod's Building Program. a. With Rome in Mind. As was customary among client kings at the time, Herod named buildings and even whole cities in honor of his patrons. The two wings of his Jerusalem palace he called Caesareum and Agrippeum, and around the theater built by him in Jerusalem he placed inscriptions in honor of the emperor (*Ant* 15 §272). In Caesarea Paneion, near the source of the Jordan, Herod erected a temple of white marble in honor of Augustus (*JW* 1 §404). The coastal town of Anthedon was renamed Agrippeum, and Agrippa's name was inscribed on one of the gates of the Jerusalem temple. Moreover, Agrippa was often the namesake of Herod's progeny. Josephus speaks of a complex of buildings erected in the vicinity of Jericho in honor of his two Roman patrons, noting, in addition and perhaps with some exaggeration, that there were few landmarks in all his realm which did not bear tributes to Caesar (*JW* 1 §407).

However, the pièce de résistance of Herod's building projects in honor of the emperor was the construction of two cities he named Sebaste and Caesarea. The former, Herod's first major project, begun in 27 and completed in 25, was built in Samaria, on the site of the ancient Israelite capital. The newly founded city of Sebaste was intended to afford the king a strong measure of security. It was fortified by a wall some two miles in circumference and settled by a contingent of veteran soldiers, local inhabitants, and people brought from the surrounding areas—all told, some 6000 colonists were settled there (*JW* 1 §403; *Ant* 15 §296–98). Situated in the center of the country, about a day's journey from Jerusalem, Sebaste afforded an ideal location for an urban center whose *raison d'être* included security considerations. The carefully selected population was to provide a contingent whose loyalty to the king was unquestionable.

An even more ambitious project initiated by Herod was the building of Caesarea, located on the site of Strato's Tower, the Phoenician colony which had long since fallen into a destitute state. Herod invested enormous sums to construct a magnificent city and an impressive port. The city itself boasted a theater, an amphitheater, a stadium or hippodrome, palaces (including one for Herod and his family), an effective sewage system, and other buildings characteristic of Greco-Roman cities (a forum, a basilica, baths, etc.).

Herod's various tributes to the emperor in numerous cities throughout the empire were not merely expressions of adulation from a client king to his patron. In a deeper sense they expressed Herod's commitment to and identification with the *pax Romana*, the vision of the new world order which Rome was then offering the entire *oikumene*. The list of pagan cities that benefited from his generosity is impressive (*JW* 1 §422–28; *Ant* 15 §326–30; 16 §18–19, 24–26, 146–49). He built baths, fountains, and colonnades in Ascalon, gymnasia in Ptolemais (Acco), Tripoli, and Damascus, and theaters in Damascus and Sidon. In Tyre and Berytus Herod built halls, porticoes, temples, and marketplaces, in Byblos a wall, in Laodicea an aqueduct, and in Antioch he constructed colonnades and laid stone or marble pavement for its main street which, according to Josephus, stretched for some 4 km.

Somewhat further afield, Herod rebuilt, on a grander scale than before, the Pythian temple at Rhodes, which had burned down, and on several occasions he contributed to the shipbuilding industry of the city. Herod is reputed to have built most of the public buildings in Nicopolis, a city founded by Augustus following the battle of Actium, and when visiting Chios he restored the collapsed local basilica. Athens and Sparta could boast of his gifts as well. Josephus claims that in Asia Minor, as in Judea, no district was bereft of some sort of Herodian benefaction. See also HEROD'S BUILDING PROGRAM.

b. The Private Needs and Pleasure of Herod. Herod expressed his royal prerogatives liberally through the extensive building activities undertaken for his own pleasure. Foremost among his palaces were those erected in Jerusalem. The Antonia, situated at the NW corner of the Temple Mount, and a much larger and more sumptuous palace in the Upper City served as Herod's palaces in the city during the first 15 years of his rule.

Josephus informs us that royal palaces existed throughout the country (*Ant* 17 §274). He specifically mentions those in Ascalon (*Ant* 17 §321), Ammatha in Perea (*Ant* 17 §277), Jericho (*Ant* 17 §274), Herodium (*Ant* 17 §323–25), Masada (*JW* 7 §286–94), and perhaps Sepphoris (*Ant* 17 §271). Acts 23:35 notes a palace of Herod in Caesarea.

c. Herodian Jerusalem: The Temple and the City. Herod's ambitious building plans were also aimed at winning Jewish support, especially his rebuilding of the temple on a scale and magnitude heretofore unknown. Herod's convocation of a Jerusalem assembly for the purpose of an-

nouncing these plans is an indication of the importance he attached to this undertaking (*Ant* 15 §380–425). This is described as his noblest achievement, one which would guarantee his immortality. Herod's plans were ambitious indeed: he intended to double the size of the Temple Mount by extending the artificial podium to the S, W, and N. Only the E portico, associated in popular memory with Solomon, remained more or less untouched. The Temple Mount was to resemble closely other *temenoi* (sacred areas) in the early empire, which were all constructed on a foundation and augmented by an artificial podium surrounded on three sides by porticoes and on the fourth by a large basilica. The temple in these *temenoi* was a free-standing building erected in the center.

The sacred area of the Temple Mount contained a series of courts which only Jews—and only those Jews who were ritually pure—were allowed to enter. The first—called the "women's court"—seems to have been open to all; the second was primarily intended for men, although women bringing sacrifices (for instance, following birth) might also enter; the innermost court was designated exclusively for priests. Here were to be found the main altar, the site for slaughtering sacrifices, and other installations required by the priests for carrying out their daily functions.

The temple building itself was divided into three rooms. The first was an empty porch that was wider than the other two rooms; it had no entrance door. Beyond the porch was the *hêkal*, which contained the *mĕnôrôt* (candelabra), a priestly altar, and a table for the sacred bread. Beyond this was the Holy of Holies, to be entered only by the high priest, and then only on Yom Kippur. Originally, in the days of the First Temple, the Holy Ark and the tablets of the Covenant were kept here, but these were lost following the destruction of the First Temple in 586 B.C.E. Throughout the Second Temple period the Holy of Holies remained empty.

Indeed, the rabbinic saying "whoever has not beheld Herod's building (i.e., the temple) has not seen anything beautiful in his life" (*b. B. Bat.* 4a) attests to the magnitude and magnificence of his enterprise at the Temple Mount. Given the sanctity and centrality of the site to all Jews, it is easy to understand why this was Herod's principal gift to his people; "for he believed that the accomplishment of this task would be the most notable of all the things achieved by him, as indeed it was . . ." (*Ant* 15 §380). Popular imagination even saw a divine blessing in this undertaking. It was said that throughout the period of construction rain fell only at night so as not to interrupt the work (*Ant* 15 §425; *b. Taʿan.* 23a).

Herod's building projects extended beyond the Temple Mount and were noticeable throughout all of Jerusalem. It seems likely that the second of the city's three walls was built in Herod's reign, although its date remains problematic. This wall ran from the vicinity of the three towers near Herod's palace to the Antonia fortress, adjacent to the Temple Mount, and probably included the Damascus Gate area (*JW* 5 §146). It enclosed much of the Christian and Muslim quarters of today's Old City, about 60 acres (including the enlarged Temple Mount), and probably contained some 10,000 additional inhabitants within the city walls. The city's population was thus augmented by about 25 percent, bringing it to somewhere in the vicinity of 40,000. These numbers, in themselves somewhat speculative, did not include the many homes built outside the walls (later to be enclosed by the third wall), nor the villages which existed in the Jerusalem environs.

Mention has already been made of Herod's splendid palace situated in the Upper City of Jerusalem and the three towers named after his brother (Phasael), wife (Mariamme), and friend (Hippicus). These towers were reputedly unparalleled in terms of their beauty, strength, and magnitude (*JW* 5 §156–75). Every Roman city of note boasted a theater, an amphitheater, and a hippodrome, and Herod had these three major entertainment institutions built in Jerusalem as well. The theater was the scene of dramatic and musical presentations, the hippodrome of chariot and horse races, and the amphitheater of gladiatorial spectacles featuring wild animals. Remains of these buildings in Jerusalem have to date eluded archaeologists. See also TEMPLE, JERUSALEM.

4. Hellenistic Influence on Herod and in Jerusalem. In light of archaeological remains and literary sources, it is evident that Hellenistic influence on Jerusalem was considerable under Herod. The extent and nature of this influence is, however, not entirely clear. Were we to depend only upon Josephus' accounts, the dominant impression would be that circles close to Herod's court were largely Hellenized, while others were unreservedly opposed or even indifferent to this foreign culture. Such a conclusion, however, would be superficial and at best only partially true. Indeed, Herod's court appears to have been very highly Hellenized: his non-Jewish advisers, the almost universal use of Greek names, the Greek education accorded his sons in Rome, and the style of the buildings he constructed are but a few indications of the king's Hellenistic proclivities. Herod's enthusiasm for Hellenistic-Roman culture was second only to his loyalty and faithfulness to the Roman political system.

Yet Herod himself set definite bounds to his adoption of Greek norms. He scrupulously avoided any human or animal representations on the coins he minted, and it seems that he pursued the same strict line in his private life as well: in none of Herod's buildings discovered to date is there any trace of figural representation. Nothing which smacked of idolatrous practices was introduced into Jewish society at the time, and the construction of any temple for the glory of Caesar was carried out for the benefit of the pagan population only. Moreover, Herod was careful regarding intermarriage: whenever a member of his family wished to marry a non-Jewish male, he insisted on circumcision. His sister Salome was unable to dissuade him of this prescription, and he prevented her from marrying the Arab Syllaeus when the latter refused to be circumcised (*Ant* 16 §225). Moreover, Herod's cordial relations with some Pharisees and Essenes and his concern for the Jewish Diaspora communities (whatever his motivations) reflect this fundamental identification and sympathy with Jewish matters.

Just as we must see Herod's Hellenistic proclivities in proper perspective, so too we should be careful not to overemphasize Jewish aversion to Hellenism. Although such aversion is noted on several occasions by Josephus, or, more exactly, by his Jewish sources of information, we do not know how accurate such sources are in this regard.

Just as Josephus' primary source, Nicolaus of Damascus, is clearly tendentious in his praise of Herod, so too we may assume that his other sources concerning the Jewish people were biased in the opposite direction. Judging by what actually happened—and not by the evaluation of events related by these sources—we are witness to the emergence of an interesting pattern. The popular reaction of the Jews to the eagle being fixed above the temple gate was indeed violent, but given the general Jewish prohibition regarding figural representation, the placement of an eagle in such a spot was probably as insensitive and as irrational a step as could be imagined (*Ant* 17 §146–63). Herod's decision in this regard was so completely out of step with everything we know of his cautious religious policy that we must ascribe this action to the king's last years, a time when he was far from being in rational control of affairs.

Of equal interest is the response of the people to the major entertainment arenas built by Herod in Jerusalem. After emphasizing the impious non-Jewish nature of this activity, Josephus (or his source) notes that the only reaction involved the dispatch of a delegation which demanded to know if there were figural representations decorating the theater premises. Interestingly enough, no objections were registered concerning the erection of the theater itself, and no grievances were aired against the building of the hippodrome and the amphitheater. In fact, when Herod showed the delegation that there were only trophies of war, and not images, in the theater, everyone laughed at the misunderstanding (*Ant* 15 §267–79). Following the report of these events, Josephus remarks that a few people (ten in all), alarmed and overwrought by the events taking place and by the degree of acculturation in their midst, attempted to assassinate the king (*Ant* 15 §280–91).

The foregoing does not necessarily imply that the people at large liked Herod. As mentioned, we have ample evidence of spies, outlawed meetings, and the building of fortresses to indicate the antipathy of many toward the king or, at the very least, of Herod's fears of such hatred. However, it would be a mistake to attribute this animosity simply to an aversion to Hellenistic practice per se. There were other reasons to dislike Herod on political, economic, and social grounds without assuming that religious-cultural issues constituted the main point of contention. It is not without significance that the delegation to Rome following Herod's death requested annexation to Syria because of the reign of terror and economic hardship imposed upon them (*Ant* 17 §299–314). There were no complaints of religious and cultural crisis, nor was there any demand for the removal of offensive Hellenistic buildings and institutions. The absence of such statements is certainly not because the Romans would have been averse to such requests; in fact, Roman officials, both in Judea and the Diaspora, were invariably sensitive and responsive to Jewish claims of a religious nature. We can only conclude that such issues either did not exist or were not all that critical, at least for the Jews of this delegation.

D. The Last Years (13–4 B.C.E.)

The latter years of Herodian rule were ignominious. The intrigues and manipulations initiated by various family members were widespread, and Herod displayed little ability to control this depraved behavior. Such circumstances were not new, just more intensive and extensive than before. As will be recalled, even during Herod's early years the struggles between the Hasmonean (Alexandra and Mariamme) and Idumean (Salome and Cypros) branches of his house were severe and often deadly. However, with the deaths of Mariamme and Alexandra a respite ensued. Mariamme's sons, Alexander and Aristobulus, were too young (about seven years old at the time) to instigate any serious trouble. Yet with their return from Rome ca. 17 B.C.E. the intrigues resumed. At first Herod made it very clear that these young men would enjoy a special status. He himself went to Rome to escort them back to Judea, and he arranged for Alexander to marry Glaphyra, daughter of King Archelaus of Cappadocia, and for Aristobulus to marry Berenice, daughter of his sister Salome (*Ant* 16 §6–11). The handsome appearance and royal carriage of these two young men won them much popularity with the public at large as well as with the army.

However, the brothers carried a heavy burden of antagonism vis-à-vis their father. They left no doubt that they did not forgive those responsible for their mother's death and that in due time they would seek revenge. Moreover, their royal bearing was often interpreted as contempt for others, such behavior serving only to enhance opposition by Salome, Pheroras, and Antipater, Herod's eldest son by Doris. The poison spread by Salome had its effect, and Herod's ambivalence regarding the Hasmonean family again resurfaced. Already by 14–13 he had recalled Antipater, once repudiated, and sent him to Rome to foster ties with imperial circles (*Ant* 16 §66–86). The situation became exacerbated by the brothers' antipathy toward their father and his suspicions of their patricidal plans. By the year 12 he decided to accuse them formally before the emperor in Rome. A reconciliation, however, was effected, but on his return to Jerusalem, Herod informed a popular assembly that he was bequeathing the throne to Antipater, with Alexander and Aristobulus next in line (*Ant* 16 §130–35).

Matters degenerated in the following years, and the brothers' fate was sealed by the discovery of a number of alleged plots to murder the king. Herod believed the evidence presented by Antipater, Salome, and Pheroras, and following a trial in Berytus with the participation of Roman officials, Alexander and Aristobulus were executed in 7 B.C.E.

Removal of the brothers, however, did not put an end to the family's intrigues. The situation at court had become much more complicated even earlier because of friction between the king on the one hand and both Salome and Pheroras on the other. In both cases the issue was marriage: Salome deeply resented the king's decision to prevent her intended marriage to the Arab Syllaeus, when the latter refused to become circumcised, and Pheroras insisted upon marrying a slave girl with whom he was in love, thereby rejecting Herod's request that he marry the king's daughter (*Ant* 16 §188–219).

Herod's domestic problems at this time were further exacerbated by external political crises. Unruly inhabitants of Trachonitis gained refuge with Syllaeus, who then refused to hand them over to Herod. Thereupon the king marched on the Nabateans, having gained the approval of Saturninus, the Roman governor of Syria, and Syllaeus

went to Rome to accuse Herod of unlawful initiation of a war. With Augustus unaware of the circumstances (at least as far as Josephus would have us believe), he reproached Herod and refused to receive his delegation. Only a second embassy, led by Nicolaus of Damascus, managed to have a hearing and duly rectified the situation (*Ant* 16 §271–99).

Following the brothers' demise, Antipater's position as successor appeared unassailable. He strove hard to strengthen his support at Rome and among Roman officials in Syria and drew especially close to Pheroras at home. Salome viewed this relationship with alarm and proceeded to arouse Herod's suspicions against their brother. When Pheroras died, poison that was allegedly intended for the king himself was found, and after an investigation Antipater was implicated, recalled from Rome, put in chains, tried, and condemned (*Ant* 17 §52–145).

By this time Herod had fallen seriously ill. He was moved to make a new will naming Antipas, son of the Samaritan Malthace, his successor (*Ant* 17 §146). News of the king's incurable disease incited two sages, Judah, son of Sariphaeus, and Matthias, son of Margalothus, to provoke their disciples into destroying the eagle erected by the king over a temple gate. The deed was accomplished, but the perpetrators were apprehended and sentenced to death (*Ant* 17 §149–67). Realizing his end was imminent, Herod ordered that upon his death the men whom he had locked up in the Jericho hippodrome should be executed, thus ensuring general mourning at the time of his death (*Ant* 17 §173–75). He ordered Antipater killed and once again altered his will by naming Archelaus, the older son of Malthace, successor to the throne, Antipas tetrarch of the Galilee and Perea, and Philip, son of Cleopatra, tetrarch of Gaulanitis, Trachonitis, Batanaea, and Panaeas (*Ant* 17 §188–90). Finally, in 4 B.C.E., five days after the execution of Antipater, Herod himself succumbed. A solemn prearranged funeral procession, featuring his troops and private bodyguard, accompanied his body from Jericho to Herodium, where he was interred (*Ant* 17 §199).

E. Conclusion

To evaluate Herod's life and reign is well nigh impossible. Most primary sources either vilify or extol him. He is described both as a consummate politician and as clumsy and ineffective, as adroit in his use of power and as blindly cruel. Love and hate, strength and weakness, grandiose plans, and petty concerns were all a part of his personality and behavior. There can be no doubt that contemporary attitudes toward Herod were as complex and varied as they are today. Some despised and others respected him; most were probably ambivalent. But above the personal likes and dislikes, Herod offered the Jews an unwavering political policy which advocated cooperation and integration within the *pax Romana*. When conditions led to the collapse of that policy some seventy years after his death, the consequencces proved to be catastrophic and tragic for the Jewish people.

Other general surveys of Herod the Great may be found in *WHJP* ("The Herodian Era"; "Society and Religion in the Second Temple Period"); *HJP*^{2} 1: 287–329; PW 7/2: 1–158; and *CAH* 10: 316–36.

HEROD'S BUILDING PROGRAM.

Herod the Great's building projects in W Palestine constitute the most prominent in the country, for any single specific period or personality. One of the significant characteristics of his projects is their variety—he initiated the construction of towns, fortifications, fortresses, palaces (and palatial fortresses), temples, gymnasia, theaters, stadia, hippodromes, monuments, harbors, irrigation projects, and other buildings. The building activity virtually never stopped during the years of his reign (37–4 B.C.).

The main sources for our knowledge of these building projects are Josephus' books (mainly *Wars* and *Antiquity*) and archaeological excavations. These sources complement one another to provide an impressive picture.

Herod excelled in choosing the sites for his buildings (e.g., Masada's N palace, the third winter palace at Jericho, and the harbor city of Caesarea). Another characteristic of his projects was the multi-functional design (of which the HERODIUM is the best example). Herod's logical and practical approach, as well as economic factors, influenced this multi-functional strategy. For a map showing locations and distributions of these sites, see Fig. HER.03.

A. Building Projects in Jerusalem

Naturally, most of Herod's important projects were built in his capital, Jerusalem. On the other hand, because of the destruction that occurred during the Roman sack in A.D. 70 and the intensive building activities of later periods, most of these buildings have nearly totally disappeared.

1. Antonia Fortress. Herod's first building in the capital was named to honor Mark Antony. Except for minor remains, our knowledge depends mostly on Josephus. Antonia combined a palace and a fortress (controlling the Temple Mount which was just to its S). It was a high square or rectangular building surrounded by steep walls and a moat, and was crowned with four towers, one at each corner, three of the same height, but the SE corner tower was much higher.

2. The Central Palace. Situated at the W edge of the upper city, this palace is almost totally missing. Josephus describes it as being encircled with ramparts and towers. While nothing else is known except from Josephus' descriptions, it was probably the biggest and most elaborate of Herod's palaces; it had two huge, elaborate reception halls to entertain hundreds of guests and was named to honor Augustus and Marcus Agrippa. It also included

many bedrooms and peristyled courtyards (some of which were rounded) with gardens and fountains.

The three multistoried towers—Phasael, Hippicus, and Mariamne—were all integrated near one another into the city wall N of the central palace (now the site of "The Citadel"). From Josephus' careful descriptions, it is known that these towers ranged from 35–45 m high. All had solid foundations with palatial facilities on top. Only one solid foundation (22 × 18 × 20 m, probably Phasael's) has survived from these unique towers.

3. Theater and Amphitheater. Although these are mentioned by Josephus, they have not yet been located.

4. Fortifications. Data unearthed in excavations indicate city walls and towers either built or reinforced in Herod's day.

5. The Temple Mount. Herod's most prestigious building project was the rebuilding of the Jewish temple in Jerusalem and the enlargement of the sacred temenos around it. Josephus and the Mishna are our main sources concerning the temple itself. The new temple followed the ancient plan but no doubt was more elaborate and perhaps even higher. A major effort was given to the enlargement of the Temple Mount toward the NW, and mainly to the S. Archaeological investigations complement Josephus description of the various gates, the doubled stoas which surrounded the temenos on three of its sides, and especially the royal basilica (Herod's most monumental building), which adorned the Temple Mount on its S. The royal basilica, no doubt, was built to compensate for Herod's inability, since he was not a priest, to enter the temple itself. The excavations have exposed not only major parts of the W and S walls, but also many details of the adjacent roads, the monumental stairway at the SW corner (Robinson's arch), the Hulda gates on the S, and the adjacent monumental stairways and plaza.

B. Samaria/Sebaste

Samaria, the ancient capital of the Israelite kingdom, was rebuilt by Herod to settle veteran soldiers. The prominent building was the Augusteum, the temple built on the acropolis to honor Augustus. Foundations have survived not only of the temple (34 × 24 m), but also of the large forecourt (ca. 82 × 70 m with its surrounding stoas); both are described by Josephus. Herod also built a circling wall (ca. 3.5 km long) with towers (also described by Josephus), and a large rectangular stadium (about 200 × 60 m) which was surrounded by stoas. See SAMARIA.

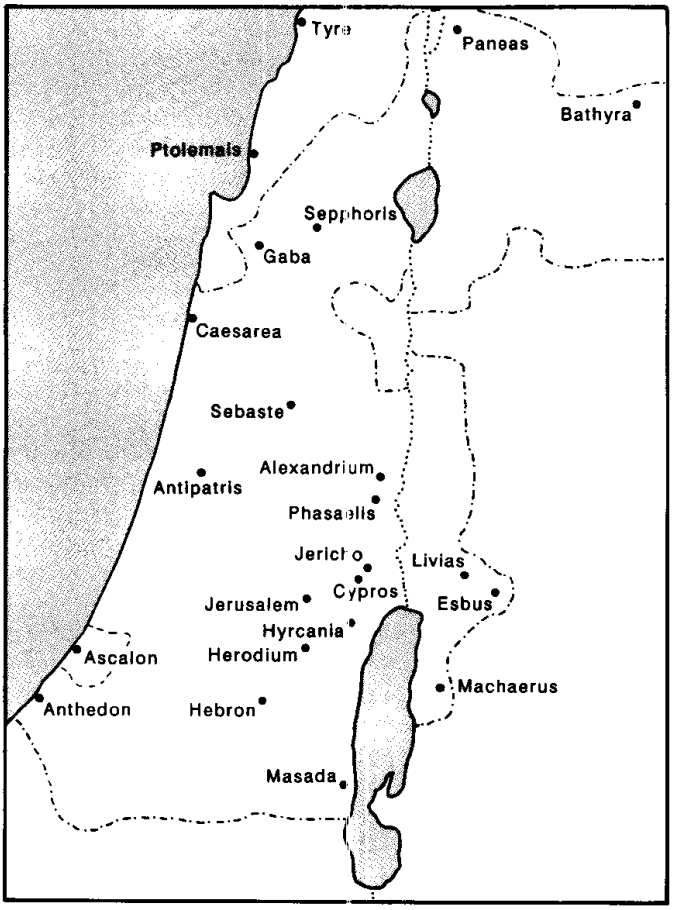
C. Caesarea Maritima

Caesarea was one of Herod's most important projects and the biggest planned town built by him (replacing the ancient Phoenician "Migdal Straton"). Josephus' detailed description (already partially attested by archaeology) focuses on the harbor as Herod's main effort and achievement.

Most of the harbor was built in the open sea. It was surrounded by massive breakwaters built with huge concrete blocks cast *in situ* in special wooden forms. Six monuments decorated the entrance into the harbor. Walls, towers, and promenades circled the harbor. Only the podium has survived from the temple which Herod built opposite the harbor; this temple was also in honor of Augustus.

The city was well planned, with streets intersecting at right angles, and with impressive underground drainage systems. Both a theater (which is still preserved) and a hippodrome were built to accommodate the games which were held every five years in honor of Augustus.

Herod's palace should probably be identified with the ruins exposed on the promontory W of the theater.



The earliest of the three aqueducts which exist at the site was probably part of Herod's activity. See CAESAREA.

D. The Desert Fortresses

In all the desert sites, Herod followed the Hasmoneans, who had been the first to build palatial fortresses. All these projects were described by Josephus (with special attention to Masada and Machaerus).

1. Masada. Masada was situated on top of a prominent rocky plateau W of the Dead Sea. It seems that Herod continued to use the buildings, first built by the Hasmoneans (including the nucleus of the Western Palace, the three small palaces, and a few other buildings), but he added many more buildings besides constructing an impressive water system.

The most outstanding building was the Northern Palace, built on three natural rocky terraces. The upper terrace

HER.03. Map of Herod's building projects.

was the dormitory wing; the main structure on the central level was a rounded building, probably a *tholos*-shaped hall; the lower terrace consisted of a square hall surrounded by colonnades and a small bathhouse in the Roman style at its basement. Another much larger bath installation was built close to the Northern Palace. Around the latter was exposed the large storeroom complex built by Herod. The whole mountain was fortified with a casemate wall and towers (intensively used during the first Jewish revolt against the Romans).

Twelve huge cisterns were also built on the NW cliff to store water from the occasional flash floods. At the same time, additional cisterns were built on top of the hill. See MASADA.

2. Machaerus. Built to the E of the Dead Sea, Herod's palatial fortress replaced the Hasmonean one. It consisted of walls and towers, dwelling and storage rooms, and a bathhouse in the Roman style. It also included a lower town just outside the summit. See MACHAERUS.

3. Hyrcania. This desert fortress which is W of the Dead Sea is virtually unexcavated.

4. Cypros. This was a desert fortress W of Jericho built on top of a ruined Hasmonean one. It included many palatial rooms and two bathhouses in the Roman style. Herod built a water channel from the Qelt springs especially to feed this site.

5. Alexandrium. The site is located on a high hill W of the Jordan, between Jericho and Beth-shan. Only one peristyled courtyard has been excavated of Herod's royal fortress. This fortress was also built on top of a Hasmonean one.

E. The Plain of Jericho

Because of the proximity of Jericho to Jerusalem, and because of the abundance of water and land, as well as the mild climate, Jericho was a favored location for Herod. At "Tulul Abu el-Alayiq," near Wadi Qelt, he followed the Hasmoneans and built in succession three palaces which ultimately were merged to function as one. On another part of the plain, Herod built a unique multipurpose structure, the "Hippodrome."

The first palace was a rectangular building (85 × 45 m) built S of Wadi Qelt. It was initially misinterpreted as a gymnasium by its excavator, but more recent investigations have clarified its function.

The second palace was built later, N of the wadi, on top of the Hasmonean palace which had probably been destroyed in the 31 B.C. earthquake. It had a large entertainment wing (including a swimming pool and a bathhouse in the Roman style), another swimming pool surrounded by gardens, and what appears to have been an elevated wing on top of an artificial mound.

The most outstanding palace was the third one, covering 3 hectares on both sides of the wadi. Its construction implemented Roman techniques, such as *opus reticulatum* stonework. It comprised a large entertainment wing N of the wadi (with a huge triclinium hall 29 × 19 m), and S of the wadi a large exotic formal garden, a huge pool (90 × 70 m), and a round hall (16 m in diameter) built on top of an artificial mound. It seems that the two halls were also named after Augustus and Marcus Agrippa. See JERICHO.

The hippodrome was built about a mile N of the palaces and was a unique combination of a 350 × 85 m racing course, a 70 × 70 m building (perhaps a gymnasium) built on top of an artificial mound, and a theater built on the mound's S slope, facing the course. In the context of the political events near the death of Herod, Josephus refers probably to these structures which were unique in the whole Classical world (*Ant* 17 §161, 194; *JW* 1 §659).

F. Herodium

The Herodium was one of the most important sites built by Herod, and the only one to carry his name. Situated about 10 miles S of Jerusalem, in Herod's most crucial battlefield, Herodium was a unique combination of a huge summer palace complex, a district capital, a fortress, a monument, and the royal tomb estate. The 25-hectare site, well planned with one grid system, combined a unique elevated building situated on top of a mountain, and a lavish lower campus.

The mountain fortress had a palace at its center surrounded by walls which were laid out in a circle. Along the walls were four towers, three of which were apsidal, while the fourth was completely round and much higher. This outstanding building was half buried and surrounded by an artificial, cone-shaped mountain.

The lower campus, at the bottom of the mountain, included a huge pool (70 × 46 m) surrounded by gardens, colonnades, and various buildings. These buildings laid in a "rug pattern" included palatial edifices, a large bathhouse in the Roman style, and service facilities. Not far from the pool are remains of a 130 × 60 m building which was probably the campus' main palatial wing.

Although Herod's tomb has yet to be located, it probably existed in the lower campus. Hints of such are a 250 m long "course" (the funeral track?), a monumental building at its end, and a group of beautifully curved stones, characteristic of contemporaneous funerary monuments at Jerusalem. Stones which are reused in a nearby Byzantine church probably came from the facade of the missing tomb monument itself. See HERODIUM.

G. Other Building Projects

More building projects are mentioned by Josephus: a harbor at Antedon (S of Gaza); a royal estate at Phasael (N of Jericho) named after Herod's brother; a palace at Beth Haramtha E of the Dead Sea and other fortifications further E at Heshbon; a royal residency, perhaps a governor's palace, at Sepphoris; and two veterans' settlements, one near Mt. Carmel (Geva Haparashim) and the other one E to the Golan (Biethura).

Archaeological evidence exists for a pagan temple at Banias (Panion), situated at one of the sources of the Jordan river. On the other hand, the only complete monument dated to Herod's days (and attributed by all scholars to this king) is the temenos built above the Patriarchs Tombs at Hebron, which was never mentioned by Josephus.

H. Building Projects Outside Herod's Kingdom

Josephus speaks of widespread building activity outside Herod's kingdom, not only in nearby places like Ashkelon, Ptolemais (Acco), Tyre, Sidon, Beirut, and Damascus, but

also at more remote sites such as Antioch, Rhodes, Chios, and even Nikopolis, in W Greece. Of all of these projects, including theaters, gymnasia, markets, etc., only one (what appears to be a colannaded street in Antioch) has archaeological attestation. However, these projects manifest Herod's ambition, ability, and political orientation which tried to maintain good relations with various parts of the Roman Empire.

No doubt Herod had a deep understanding for building and architecture. The wide range of original ideas, the buildings' outstanding locations, and the unique combination of functions (such as at Herodium and Jericho's hippodrome) are clear evidence of Herod's personal role in the initiative as well as the implementation of these vast building activities.

EHUD NETZER

HERODIAN ARMY. We are relatively well informed about the army of Herod the Great, especially through the *Jewish History* and *Jewish Antiquities* of the historian Josephus, who was writing in the late 1st century A.D. However, our knowledge of the development of the army, its composition, and its tasks remains fragmentary.

First an appreciation of how Herod came to the throne is necessary. He owed his position, as a client-king of the Roman Empire, to his father, Antipater, who, although not a member of the Hasmonean house, the Jewish royal family, had gained real power and positions of influence for his sons through services to great Romans like Julius Caesar. After his father's death in 43 B.C., Herod was driven from Judea by the Parthians in a world stricken by civil war. He went to Rome and through influence had himself appointed king of the Jews. But he had to fight to make his title a reality against his Hasmonean rival, Antigonus. When he arrived in Judea in 39 B.C., his forces already included foreigners as well as his own countrymen, and it was not until 37 B.C. that, with the help of the Roman forces of M. Antonius, Jerusalem was taken and Herod made himself king in fact. From this date Herod enjoyed the support of a legion based at Jerusalem until its withdrawal in 30 B.C.

The military tradition that Herod inherited derived from the world of the successor states of Alexander the Great: Herod's Hasmonean predecessors had used mercenaries—we hear of Greeks, Pisidians and Cilicians—in his armed forces, as well as Jews he could rely on, trained and commanded on the Seleucid model. But Herod had collaborated with Roman officers in the 30s and even commanded Roman troops, and it is likely that he was influenced by these experiences in building up his own army. His professional forces were supplemented when necessary by a popular levy from his own kingdom.

Herod's use of the forces at his disposal in this period is illustrated by the hostilities in which he was embroiled by Cleopatra in 32 B.C. at the time of the outbreak of civil war between Octavian and Antonius. The war was against Malichus, ruler of the Nabatean kingdom. Herod was defeated at Canatha, modern Qanawat in the Jebel Hauran, but successfully crushed an Arab invasion of Judea in 31 B.C. at Philadelphia.

We see here Herod acting within the Hasmonean tradition. Josephus describes Herod's forces simply as "the Jews," who are opposed to "the Arabs." Herod has taken advantage of his prerogative as king to raise an army from his subjects which he is leading against a hostile neighboring kingdom.

After the defeat of Herod's patron, M. Antonius, in 31 B.C., Herod was confirmed in his position as king by Octavian, who took over Antonius' role and increased Herod's territory. A new phase in Herod's reign began as king under the strict supervision of Octavian, who in 27 B.C. took the cognomen Augustus.

His main military duties in this capacity were to keep the peace with his neighbors and refrain from aggression himself. Augustus sternly disapproved of major military action by client-kings unless they had received his permission. He was angered by punitive action taken by Herod against the Nabatean king later in his reign, in 10–9 B.C., even though Herod was severely provoked by incursions into his territory.

Herod, however, was compelled to base his rule on force. This was directed mainly against his own subjects. The kingdom included troublesome areas like Auranitis, the modern Jebel Hauran, and Trachonitis-el Lejah, whose inhabitants resented being forced to live peaceably from agriculture. Herod also had little support either from the Greek cities who disliked being ruled by a Jew or from the Jews, who hated Herod as an Idumean and as an instrument of their oppressors, the Romans. His lack of popularity is emphasized by the plot to assassinate him in the theater, which came to light in 25 B.C.

The army was thus Herod's main means of maintaining his power. After the departure of the Roman legion from Jerusalem, Herod had to rely on a professional army loyal to himself. His troops included his own countrymen, Idumeans, recruits from his own settlements like Sebaste, or from the wild tribes from the NE of his kingdom. A unit of Trachonites took part in the disturbances after Herod's death in 4 B.C. But the best elements of his standing army came from the fighting men of the west. Herod's funeral procession was led by élite corps of Gauls, Thracians and Germans. Early in his reign, Herod's guard had been reinforced by 400 Gauls, formerly Cleopatra's, who were presented to Herod by Octavian.

Among the officers serving in the army were Roman citizens, possibly from Italy. We meet, for example, a Volumnius as military tribune, and Rufus and Gratus in charge of the royal cavalry and infantry, respectively. As large numbers of soldiers who had fought in the civil wars were demobilized, Herod should easily have been able to find suitably qualified recruits to command and train his forces.

How large was Herod's standing army? Precision is impossible. We hear in 4 B.C. of 3,000 Sebastenes going over to the Romans while the bulk of the royal troops joined the rebels. This gives a minimum of 6,000 men. It is tempting to compare with this the garrison of the Roman province under the emperor Vespasian. A legion and the auxilia in the discharge diploma of A.D. 86 suggest a minimum garrison of 9,000 men. Conditions were by then different, but the figures are perhaps helpful in providing a rough idea of the scale of the garrison.

What were the dispositions of the army? Much of it was

based in fortresses throughout the kingdom. Because of the distrust and hostility felt toward him by his subjects, Herod had to hold them down harshly and ruthlessly. Strongpoints, as Josephus notes, were built throughout the country so that Herod could find out about, and quickly nip in the bud, any trouble that was brewing. A strong garrison was based at Jerusalem, where Herod rebuilt the citadel dominating the temple early in his reign—its name, Antonia, dates it to before Antonius' demise in 31 B.C.. He also constructed a second citadel in the upper citadel, completed by 29 B.C. Then Josephus, in his survey of Herod's means of controlling his kingdom, mentions major fortresses at Caesarea, Gaba in Galilee, Heshbon-Esbonitis in Perea, and Sebaste-Samaria. Areas of strategic importance were similarly strongly held. We know of a cluster of forts dominating the region E of Jerusalem: Cyprus overlooking Jericho, Herodium 7 miles S, Hyrcania 8 miles SE of Jerusalem, and Alexandrium in the Jordan valley 15 miles N of Jericho. They would all no doubt have contained garrisons and were supplemented by sites like Masada, kept in readiness in case of an emergency.

But Herod did not rely only on his standing army. He followed the practice of Hellenistic kings in building up a reserve army by granting plots of land on condition of military service in time of need. Such a settlement of reservists was established at Heshbon-Esbonitis, E of the Dead Sea. Another body was settled in the fortress at Gabae, N of Mount Carmel. The duty of these colonists was to hold Galilee in check, as they attempted to do later at the time of the rebellion that broke out in A.D. 66. But the most important military settlement was at Samaria, where Herod granted plots of land to six thousand men. He refounded the city and renamed it Sebaste in 27 B.C.: it was a day's march from Jerusalem and was useful for controlling both those in the city and those in the country.

In the unruly NE provinces of his kingdom Herod planted two colonies to police the area after a serious revolt by the inhabitants. The first colony was composed of three thousand Idumeans, fellow countrymen of Herod. The colony was destroyed during a second revolt in 10–9 B.C. The second colony was more unusual. Zamaris, a wealthy Babylonian Jew, migrated from Parthian to Roman territory ca. 10–6 B.C. Herod offered him a permanent home in his kingdom, in Batanea, a region centering on the modern town of Deraa, on very favorable terms. In return for policing the area Zamaris and his followers were granted land free of taxation. Zamaris accepted the offer, built the village of Bathyra, and fortified the area. He was clearly a man of some substance. He came from Babylon with 500 cavalry, all of them horse archers, and a group of 100 relatives. The Babylonian Jews, living in an alien country, out of touch with the Jews of Palestine and dependent on the Herodian house for their favored position, flourished under Herod and remained loyal to the dynasty.

One particular section of Herod's frontier line has been examined with the aid of archaeological evidence. This is in the south, in Idumea. Herodian pottery has been found at seven sites between the mouth of the Zohar valley in the E and Ber Shema (Bersama) in the W. Fortified settlements with Herodian occupation have also been noted, for example, at Arad. On the basis of this evidence, Professor Gichon has argued for a defensive line based on the E–W running valleys of the Besor, Beer-sheba, and Malhata-Zohar. Forts, watchtowers, and fortified settlements gave, it is maintained, depth to this line. However, the interpretation of this evidence is open to some doubt. Josephus does not record any serious incursions into this area during Herod's reign. Indeed, the interests of Herod and the Nabatean king at Petra were similar: both wished to ensure that caravans to and from Arabia journeyed unmolested. The archaeological evidence is thus compatible with small-scale occupation, possibly temporary, involved in the protection of traffic and travelers passing through the region. The fortified settlements in Idumea can then be seen as serving to protect the local inhabitants from the occasional raiding expeditions from the Negeb which were to be expected in the desert borderlands. A substantial presence of Herod's troops in this region thus remains questionable.

The importance to Herod of his armed forces throughout his reign is clear. After receipt of an empty title from the Roman senate at Antonius' urging in 40 B.C., Herod had to make himself king by armed force. His rule was at first buttressed by Antonius' legion, but after 30 B.C., under Augustus' stricter suzerainty, he had to depend on his own resources: most important was his standing army. A large garrison was based at Jerusalem, and other troops garrisoned fortresses strategically placed throughout the kingdom. His grip was strengthened by means of colonies of veterans, loyal subjects, and outsiders like Zamaris. So Herod both protected and held down his difficult and rebellious subjects.

HERODIAN DYNASTY. The Herodian "dynasty" properly begins with ANTIPATER, the grandfather of Herod the Great, who won acclaim as Alexander Jannaeus' governor in Idumea around the turn of the 2d century B.C. (*Ant* 14.10). His son, also named Antipater, was an energetic supporter of Hyrcanus II; he was especially skilled at winning and exploiting friendly connections with powerful Romans, from Pompey onward (e.g. *Ant* 14.37). He also helped the Romans in their dealings with the Nabateans; his wife was a Nabatean (*Ant* 14.80–84). The ability to work with Rome was the basis of the success of the Herodian dynasty; Antipater II set this pattern, and it was by and large followed by his descendants. Yet that particular political strategy was fraught with danger, especially when the interests and values of the essentially Greco-Roman culture of the Roman Empire conflicted with Jewish tradition.

In 48 B.C., when Rome was still caught up in the civil war between Caesar and Pompey which had erupted the year before, Antipater II astutely realigned his loyalties. Caesar was in mortal danger in Alexandria. Antipater, who had hitherto supported the Pompeian cause, judged

that that cause was lost now that Pompey was dead; he therefore sought and won the favor of the likely victor by raising troops and bringing them to Caesar's aid (*Ant* 14.127–39). As a reward, Caesar gave Antipater and his family Roman citizenship in 47 B.C.: his full name was now presumably Gaius Julius Antipater. The administration of Judea was put in his hands; Phasael and Herod, his sons, administered Jerusalem and Galilee respectively. The abilities of Herod, who was to become HEROD THE GREAT, were soon obvious (*Ant* 14.140ff.).

In 43 B.C., shortly after the assassination of Caesar, Antipater was poisoned while collecting money for Cassius (*Ant* 14.280ff.). In 40 B.C., with Hyrcanus II captured and Jerusalem in Parthian hands, Herod made his way to Rome, where he was appointed king of Judea by the Roman Senate, thanks to the combined efforts of Antony and Octavian. But it was not until 37 B.C. that Roman forces made it possible for Herod to enter Jerusalem. Herod's position could only have been uneasy: he had no dynastic claim to rule, and there was some resistance among the Jews toward the establishment of any king at all.

As the Roman world divided in civil warfare once more, with Octavian in the W and Antony in the E, Herod had little choice but to support Antony's cause; his links with Antony were stronger. After Octavian's victory, Herod deftly won his pardon in 30 B.C. Under Octavian (later known as Caesar AUGUSTUS) Herod proceeded to build up his kingdom. His reconstruction projects are especially noted for their elaborate foundations. He also developed a reputation throughout the empire for his generous beneficence. Despite the occasional rift, Herod's relations with the imperial family were notably warm, yet Herod's dealings with non-Jewish communities and his flirtation with Greco-Roman culture won him some displeasure at home. His position became ever more uncomfortable in the latter years of his reign, thanks largely to the opposition of Jewish traditionalists, who abhorred this Idumean king with gentile ways.

Herod's difficulties found expression within his family: he was led to execute a wife, Mariamme I, in 29 B.C., and later, three sons—Alexander and Aristobulus in 7 B.C., and Antipater in 4 B.C. His several and significant changes to his will further indicate the unsettled nature of his last years. He died, some 70 years old, in 4 B.C. Consequent social disorder also points to the extent of problems in Herod's reign.

Augustus was free to enact Herod's will as he saw fit: he divided Herod's property, partly to ensure the future of each of Herod's dependents. The bulk of the kingdom was divided between Herod's three sons—ARCHELAUS, HEROD ANTIPAS, and Philip the Tetrarch (see PHILIP [PERSON] #5). Archelaus, given the title of ethnarch, had the core of Herod's kingdom (Judea), but he could not maintain order and only made himself unpopular in the attempt. He was removed by Augustus in A.D. 6 at the request of his subjects and replaced by a Roman governor. Antipas and Philip each received smaller territories to the N and the title tetrarch, but were more successful in retaining control. Antipas was deposed in A.D. 39 by the emperor Gaius (alias Caligula), largely through the machinations of his nephew and brother-in-law Agrippa, who received his tetrarchy (later AGRIPPA I). Philip died in A.D. 33/4, and ultimately his tetrarchy also passed to Agrippa.

In A.D. 41 Agrippa helped Claudius to power at Rome. A grateful Claudius gave him the province of Judea; thus the original domain of Herod's kingdom was restored for Agrippa. Agrippa had made astute use of the connections he had formed with the imperial family during his youth in Rome. Earlier, Herod had sent his sons to Rome for just this purpose, but they seem to have derived less advantage from their sojourn than did Agrippa. Agrippa used his contacts to protect Jewish interests from the worst excesses of Roman power; he also gained the territory of Chalcis for his brother Herod (of Chalcis).

Upon the death of Agrippa I in A.D. 44, Claudius appointed a Roman governor to his kingdom, since his son (Agrippa II) was considered too young for such a responsibility. The young Agrippa lived at the court of Claudius in Rome until about A.D. 50, when Chalcis became available through the death of his uncle Herod (of Chalcis). In A.D. 53 he received an extended version of Philip's old tetrarchy while exercising certain religious prerogatives in Jerusalem.

Agrippa II owed everything to Rome and seems to have thought that the best future for the Jews lay in acquiescence in Roman rule, which was to be coaxed and tempered rather than thwarted. Together with his sister, BERNICE, Agrippa opposed the Jewish revolt of A.D. 66, first with words and then with arms. Agrippa's royal forces fought beside the Romans to suppress the revolutionaries, who, it must be said, were also fighting among themselves. Such cooperation was the essence of Herodian rule; the book of Acts clearly shows the essentially amicable and everyday dealings of Roman governors with Antipas and Agrippa II. The latter's other sister, DRUSILLA, even married the Roman governor FELIX.

After the revolt had been crushed, Agrippa and Bernice were duly rewarded by the Romans with honors and territory. It was thought that Bernice might even marry into the new imperial family of Rome, the Flavians (A.D. 69–96), but she did not. By the end of the 1st century A.D. Agrippa died. Drusilla's son by Felix had been killed in the volcanic eruption of Mt. Vesuvius in A.D. 79. The rest of the family faded from history, though occasional glimpses survive of possible descendants of the Herodian dynasty (Sullivan *ANRW* 2/8: 344–45 with Braund 1983: 242). (See also *HJP*^{2} 1: 243–454.)

DAVID C. BRAUND

HERODIAS (PERSON) [Gk *Herodias*]. The daughter of Aristobulus (son of Herod the Great) and Bernice (daughter of Herod the Great's sister, Salome). She was probably born between 9 and 7 B.C., shortly before Aristobulus died in 7 B.C. According to Josephus (*Ant* 17 §14) she was

HER.04. Genealogy chart of the Herodian family. See also Fig. HAS.01.

betrothed about 6 B.C. to Herod the Great's son Herod, whose personal name seems to have been Philip. Apparently Herodias bore to her first husband a daughter, whom Josephus says was named Salome (*Ant* 18 §136). While Herod Antipas was visiting the residence of his half-brother Herod Philip, Herodias became interested in Antipas and agreed to divorce Philip for Antipas (*Ant* 18 §110).

Herodias was the niece of Herod Antipas and was nearing her fortieth birthday at the time of her second marriage. This second marriage would have been judged incestuous by the OT laws (Lev 18:13) and definitely forbidden (Lev 20:21; 18:16). It is probable, considering Jesus' close relationship to John the Baptist and the fact that John apparently lost his life for condemning the relationship of Antipas and Herodias, that Jesus made indirect reference to this relationship in his discussion of marriage (Mark 10:12, but especially Matt 19:1–9 [Witherington 1985: 571–76]).

The Synoptic Gospels give attention to the relationship of Antipas to Herodias because of its effect on the Baptist's career and life (Mark 6:17–29; Matt 14:3–12; Luke 3:19–20). Luke explicitly says that John was imprisoned because he criticized the incestuous and unlawful marriage between Herodias and Antipas. Thus, this comment provides a plausible explanation why we find Herodias biding her time, "nursing a grudge against the Baptist and wanting to kill him" (Mark 6:19), and finally forcing Antipas to execute John. It must be remembered that Josephus' version of this affair was written some 60 years later by one who focused on the political rather than the personal aspects of the story. Thus it is not surprising to hear Josephus say that John was executed because Herod perceived him to be a political threat (*Ant* 18 §116–19).

Some believe that the story in Mark 6 (and any parallel) is legendary in character, that it would be unlikely for a Jewish princess like Salome to dance a lascivious dance. Yet elsewhere in Josephus (*JW* 2.2.5) we hear of this same sort of revelry and drinking within the Herodian household, which was thoroughly Hellenized (Windisch 1917: 73–81). Furthermore, the machinations of Herodias in this story are true to form, the Herodian household being infamous for plots to bring about an opponent's downfall. The most probable reading of the text in Mark 6:22 is not "his daughter" but "her daughter," a reading supported by many and varied sorts of manuscripts (Taylor 1966: 314–15). Thus it is unlikely that Mark was ill informed about the actual state of relationships among Herodias, Salome, and Antipas.

The picture of Herodias derived from the Gospels is in fundamental agreement with Josephus. In both works she is seen as a scheming, clever woman who would stop at nothing to achieve her ends (Mark 6:19–29, *Ant* 18 §111, 136). There is also no counterhistorical evidence to suggest

that either Mark or Josephus was pursuing some antifeminist agenda in his respective portrayals of Herodias. Indeed, there is some evidence to suggest that Mark was sympathetic to the plight of women in his era (Witherington 1988: 158–66). Notice too the story in *Ant* 18 §240–55, where Herodias is jealous of her brother Agrippa I receiving the title of king and insists on Antipas going to Rome and asking for a similar title, an act which leads to the downfall of Antipas and Herodias, both banished by the Emperor Gaius either to Spain or the Lyons in Gaul (*Ant* 18 §252–53; *JW* 2 §183; there are divergent traditions about their final location).

BEN WITHERINGTON, III

HERODION (PERSON) [Gk *Hērōdiōn*]. A Roman Jewish-Christian who received greetings from Paul in Rom 16:11. His name, unique in the Roman Empire at that time, was likely the Greek equivalent of the Lat "Herodian(us)." In the 1st century C.E. this latter name identified former Herodian slaves who had been sold to a second master (in most cases slaves with this type of name were sold to the public or to the household of the emperor), and they usually were freed later (Lampe *StadtrChr,* 67, 68, 148, 153, 296; cf. *CIL* 6: 9005). It is therefore possible that Herodion was an imperial freedman and had Roman citizenship (cf. Phil 4:22; Christians in the emperor's household). As a former Jewish slave of Herod, Herodion probably had immigrated to Rome. Other former Herodian slaves had gone the same way from the east to the capital: the inscription in *CIL* 6: 9005 (1st century C.E.) mentions a former slave of Herod the Great, Coetus Herodianus, who had become an imperial freedman in Rome. The inscription in *CIJ,* no. 173 even proves the existence of a Roman "Synagogue of the Herodians" ([*syna*]*gōgē* [*Hē*]*rodiōn*), which apparently had been founded by several former Jewish Herodian slaves.

It may not be coincidence that just one verse earlier (Rom 16:10), Paul greeted the servants of Aristobulus. Aristobulus was probably a member of the Herodian family; Herodion may therefore have had connections to Aristobulus' household.

The Greek form *Hērōdiōn* was first used by an Alexandrian veterinarian (*Hippiatrica* 82); as far as we know, the name was not used again until the 4th century C.E.

PETER LAMPE

HERODIUM (M.R. 173119). A palace-fortress built by Herod the Great on the site known in Arabic as Jebel el-Fureidis. It is situated 13 km S of Jerusalem, 6 km SE of Bethlehem (N of the biblical Tekoa), on the edge of the Judean desert. No settlement earlier than the days of Herod the Great (37–4 B.C.) is known at the site, which comprises a steep conical artificial mountain into which is integrated a building; to its N are additional substantial ruins (including a huge pool). The final identification of the site as Herodium, following Josephus and Pliny (*JW* 1.13.8 §625; 1.21.10 §419; 1.33.9 §673; *Ant* 14.13.9 §360; 15.9.4 §323–25; 17.8.3 §199; Pliny *HN* 5.14.70) is attributed to E. Robinson, who visited the site in 1838. Herodium was surveyed later by F. de Saulcy, in 1850 and 1863, who excavated a small trench in the center of the large pool in an effort to locate Herod's tomb; by M. V. Guerin in 1868; by C. R. Condor and H. H. Kitchener on behalf of the Palestine Exploration Fund in 1873, 1881, and 1883; and by C. Schick in 1879. The first excavations at the site were carried on by V. Corbo in four seasons (1962–1967). Corbo exposed a major part of the interior structure which is surrounded by the artificial mountain. Corbo's work was followed by minor additional work by G. Foerster (1969). E. Netzer was the first to excavate Lower Herodium—the ruins below and to the N of the mountain (1972, 1973–78, and 1980–87).

According to Josephus a crucial battle occurred in 40 B.C. at the site where Herod later built the Herodium. The battle was between Herod, son of Antipater (of Edomite origin), who had just escaped from Jerusalem, and Matthias Antigonus (a Hasmonean prince). The event was a result of an agreement between Antigonus and the Parthians (following their occupation of Syria in the same year) to displace John Hyrcanus II and the Romans, who had dominated Judea since 63 B.C.

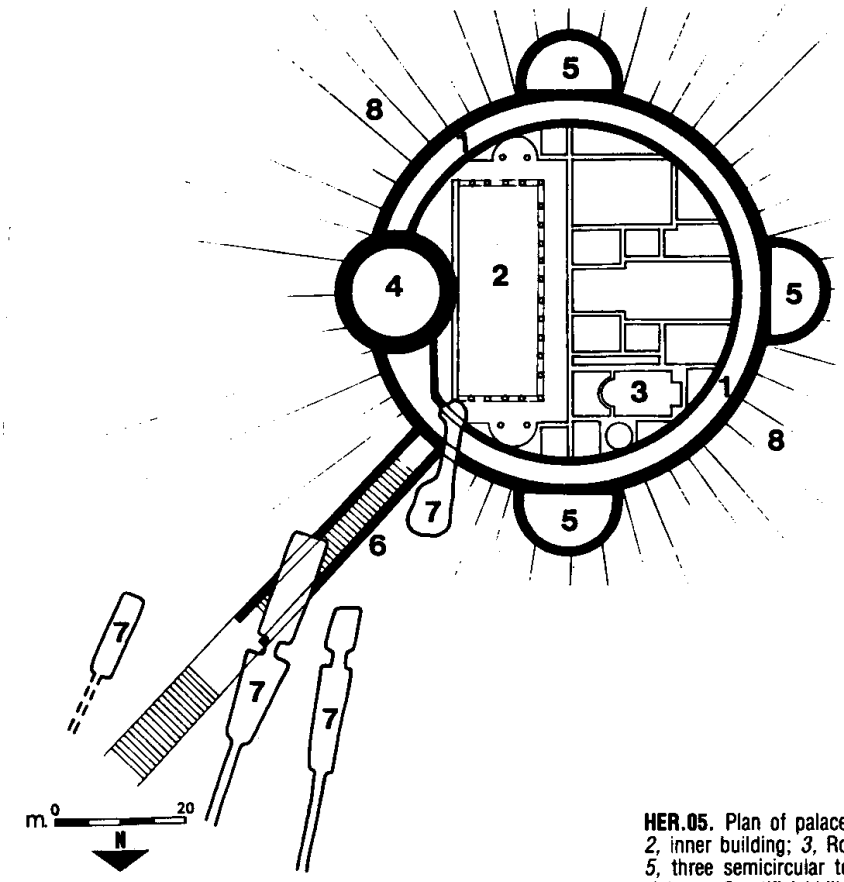
According to Josephus, during the same flight from Jerusalem, Herod tried to commit suicide after his mother fell under the wheels of her cart. Herod, however, won the battle and managed ultimately to reach Rome, where he was nominated to be the king of Judea.

The two successive events were no doubt traumatic for Herod, and it seems that much before Herodium was actually built (around 23 B.C.), Herod had determined it to be his burial place instead of his capital.

As inferred from Josephus and the archaeological material finds, Herodium served various functions: it was a large, countryside summer palace (his winter palace was at Jericho); it served as a monument to Herod's name, since it is the only site to perpetuate his name (although a second Herodium is mentioned in *JW* 1.21.10 §419, it cannot be confirmed either from textual or archaeological evidence); it was a monument to the battle which occurred here; it became Herod's burial estate (although his tomb has not yet been found); it was the capital of the toparchy (which Herod probably moved from Beth-zur); and it served as a fortress. The fortress, as inferred from the remains, was only in the mountain and was probably only to secure Herod and his family during their assumed long visits to this substantial palace. Some scholars understand Herodium to be part of the wider range of palatial fortresses. Since there was no water source in the vicinity, Herod built

a 6-km water channel from a spring S of Bethlehem; it is documented by Josephus and confirmed by archaeological surveys.

A. The Mountain Palace-Fortress



The Mountain Palace-Fortress is bounded by two concentric walls forming a "cylinder" 63 m in diameter. See Fig. HER.05. The space between the two walls, filled today by debris, was originally divided into galleries, each about 5 m high, which were probably used as corridors and for storage. Inside the cylinder, well protected by the surrounding towers and artificial steep slopes, was a luxurious villa. The round space was divided into two equal parts. The W half consisted of dwelling quarters and the E half contained a large peristyle courtyard surrounded by colonnades on three sides. The columns were in the Corinthian style, similar to those found at Masada, Jericho's winter palaces, and Cypros. Semicircular excedras adorned the courtyard on both its narrow sides. The entrance to this inner building was located at the NE corner of the courtyard.

The W half consisted of a large triclinium (10.5 × 15 m; this was used as a synagogue during the first Jewish revolt against the Romans); dormitories on either side of a cross-shaped central corridor; and a bathhouse in the Roman style. The bathhouse included one or two *apoditeria* rooms, a small *frigidarium*, a large *caldarium*, and a small rounded *tepidarium* with a fully preserved cupola, one of the oldest found in the Holy Land. Many of the inner building's rooms had walls covered with frescoes, which depicted only geometrical patterns. The triclinium was originally paved with *opus sectile* tiles, and the bathhouse's rooms were paved with mosaics.

Of the four towers which surrounded the cylinder, the one to the E was round (18.3 m in diameter) and the other three, to the N, W, and S, were semicircular (16.5 m in diameter). The semicircular towers were divided into floors, each having four rooms, which probably served as dwellings for soldiers and servants. Of the E round tower only a massive stone-built structure (about 20 m high) is preserved. Apart from a water cistern and two small cellar-like rooms on its top, it appears to have been completely solid. This tower resembles the so-called "David's tower" in Jerusalem, the only remnant of Herod's three famous towers (named Phasael, Hippicus, and Mariamme) mentioned by Josephus.

The mountain complex was approached by a steep, 6.5 m wide stairway (about 120 m long), in a straight line to the NE of the mountain. Adjacent to the stairway, at the foot of the hill, three large water cisterns were revealed with a total capacity of about 2500 m^3.

Once the rounded structure was completed (according to Netzer's reconstruction, the cylinder reached the height of 30 m above the original hill), huge quantities of soil and

HER.05. Plan of palace-fortress at Herodium. *1*, cylinder; *2*, inner building; *3*, Roman bathhouse; *4*, E round tower; *5*, three semicircular towers; *6*, main staircase; *7*, water cisterns; *8*, artificial hill. *(Courtesy of E. Netzer)*

gravel were dumped around it. Thus the cone-shaped hill was created. The fill covered about ⅔ of the building (15–20 m above the original height of the hill) but also continued down the slopes for another 20 m.

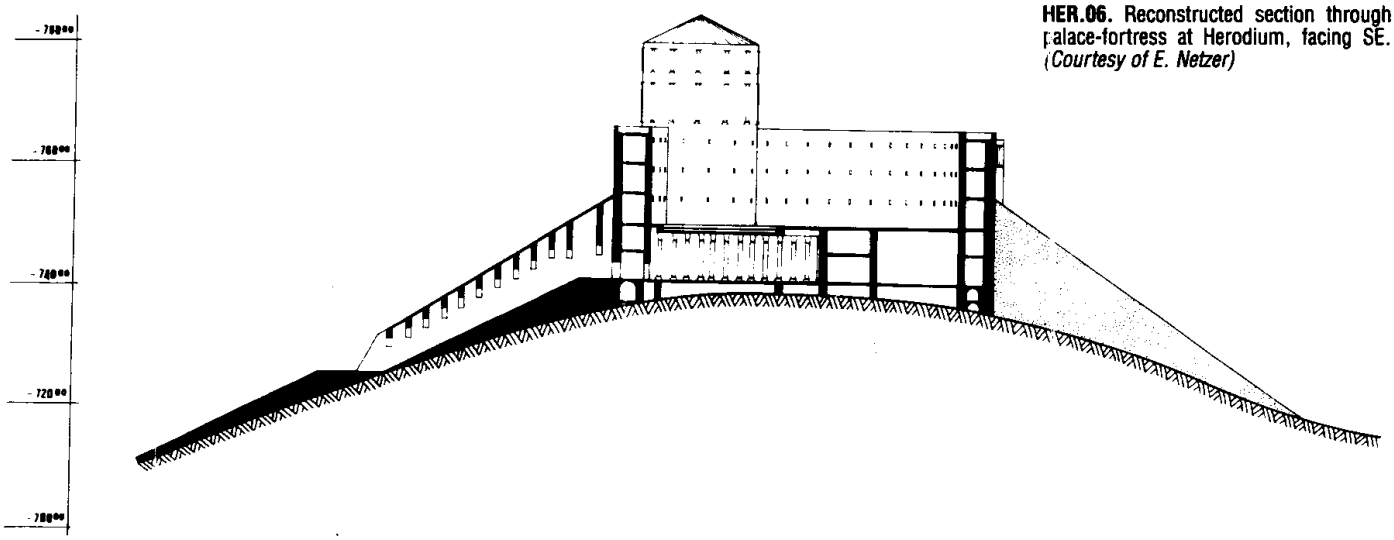
The Mountain Palace-Fortress combined at the same time three major functions: it was an exotic villa, an outstanding monument to be seen from afar, and a fortress. According to the excavator's reconstruction, the cylinder consisted of a two-level barrel-vaulted foundation, above which were five stories. See Fig. HER.06. It protruded close to 10 m above the steep artificial slopes, thus serving as the fortress's wall. The semicircular towers were either slightly higher or perhaps lower than the cylinder, but the round E tower had probably about five stories above the solid base (an estimated height of about 15 m above the cylinder). It was used, it seems, not only as an observation post, but also to house palatial rooms, from which to enjoy the superb landscape and breezes, which otherwise were hidden by the cylinder inside the inner building.

Scholars have seen the prototype for this unique building in Augustus' mausoleum in Rome. Others postulate the Antonia Fortress (probably Herod's first building project, which was a large palace built in Jerusalem surrounded by four towers).

B. Lower Herodium

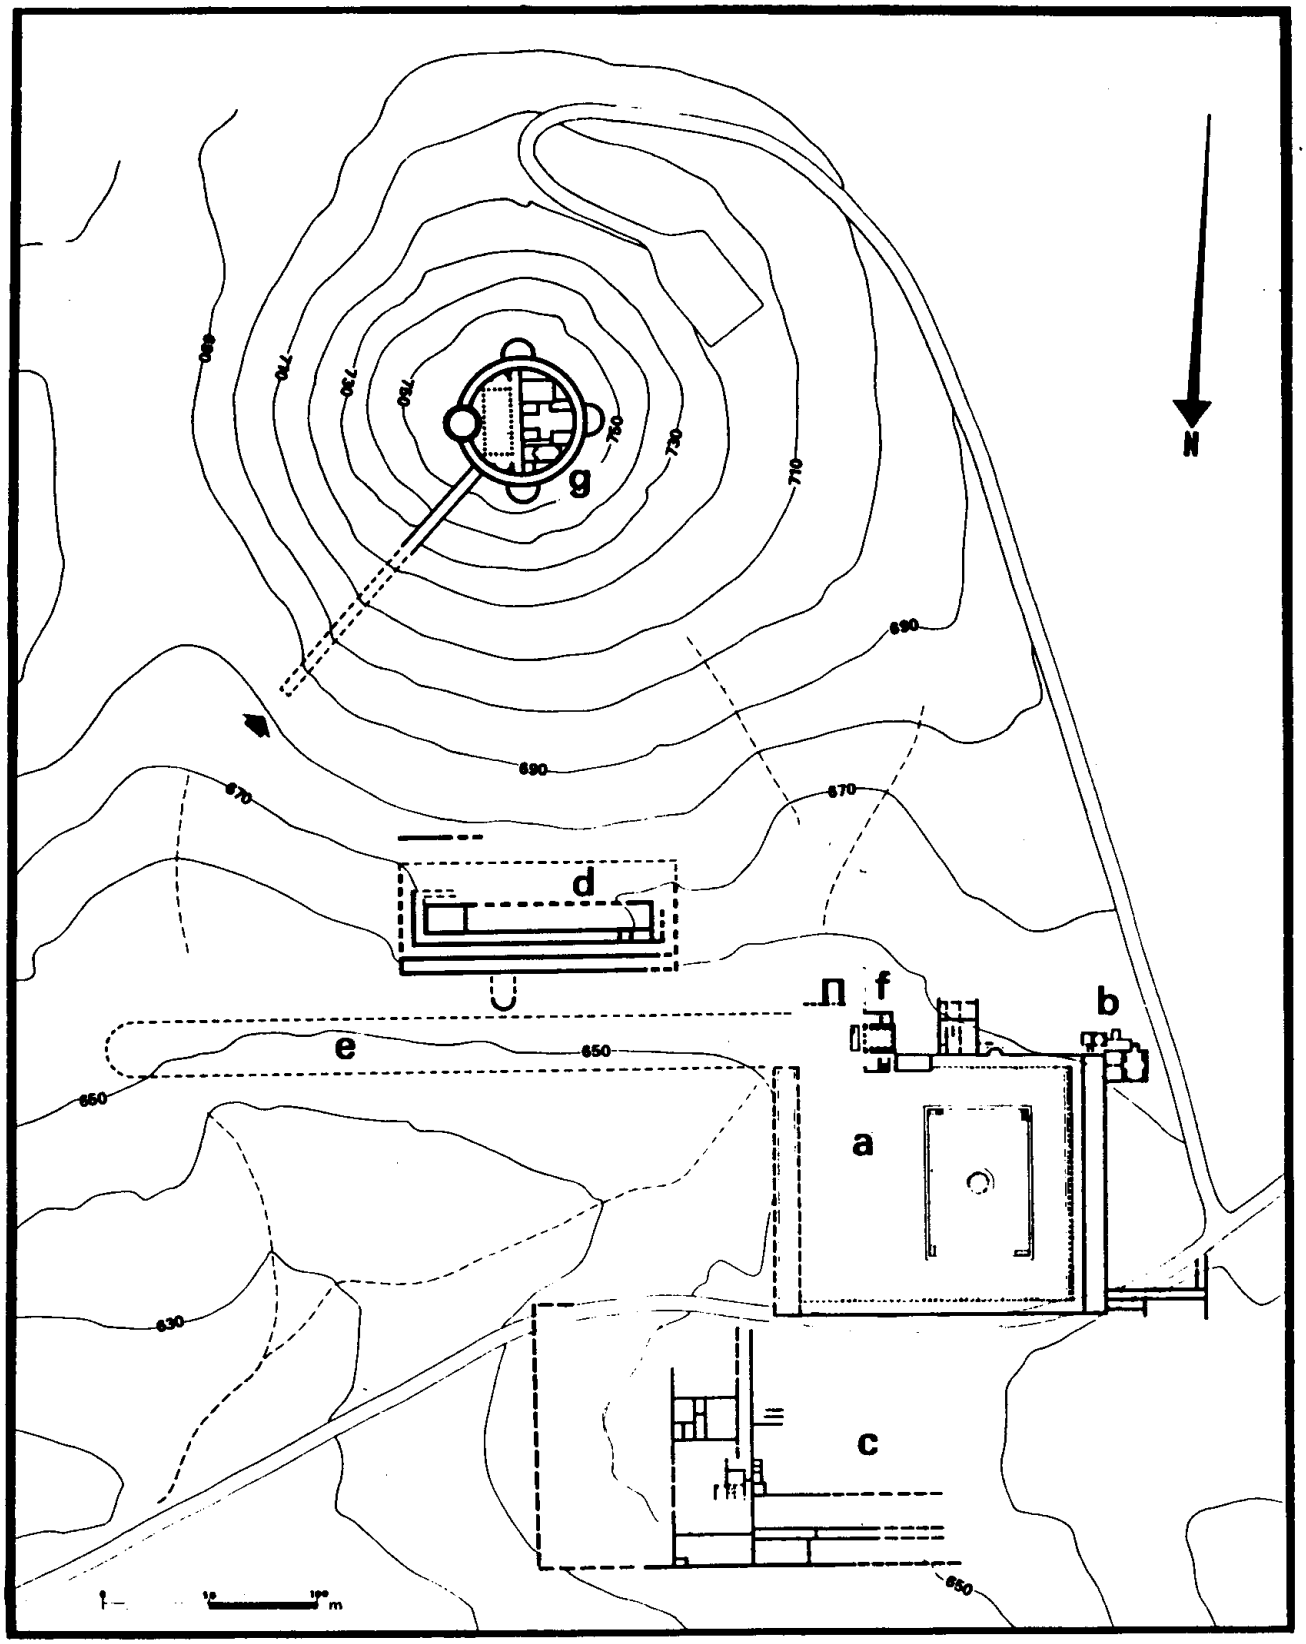
About 100 m below the Mountain Palace-Fortress, Lower Herodium was built as a complex of buildings and gardens spread over an area of about 15 hectares. See Fig. HER.07. This complex was well planned and had one homogeneous grid system. Large-scale earthworks preceded the construction of the campus, built along both sides of a small valley. It consisted of two major sections: (1) the "large palace" directly below the mountain; and (2) the "pool complex" at the center of the lower site. The pool site had rows of buildings to its S, W, and mainly to its N (all built in a kind of a "rug pattern" design). Another outstanding feature was a long artificial terrace, the "course," measuring 350 × 25 m, which lay N and parallel to the large lower palace.

The "large palace" (its function is postulated) was the largest and most prominent building at Lower Herodium. It was 130 m long and about 55 m wide, and was built on a relatively steep slope. This rectangular building shares the same E–W axis with the Mountain Palace-Fortress. Only the substructure has survived, including remains of two long halls (each about 130 × 5 m) probably used as storage spaces.



The "pool complex" combined a huge rectangular pool (70 × 46 m and 3 m deep) within a garden 125 m long and 105 m wide. In the pool's center are the foundations of a round structure, probably a *tholos*-shaped pavilion. The garden, which encircled the pool, extended 18 m on the N, W, and S, but 60 m on the E. The garden probably was bounded on three sides by colonnades 5–6 m wide which were elevated 1.2–1.5 m above the garden level with access via about 5 steps. Two long halls, at least 9 m wide and 110 m long, lay E and W of the garden. The hall to the W lay behind the W colonnade and the E hall (of which only its substructure has survived) was built next to the wide section of the garden. The purpose of these halls, however, remains unknown. Most of the structures to the S, W, and N of the pool complex remain unexposed. Among the few that are exposed are the central bathhouse, a storage and service wing, and the remains of two luxurious villas.

The "central bathhouse" to the SW of the garden was built in the Roman manner; it was relatively well preserved and included some decorated mosaic floors and frescoed walls. Its *caldarium* measured about 16 × 9 m, twice the size of the ones exposed in the Mountain Palace-Fortress or at Masada. It also included a round heated *laconicum*.



The "service and storage wing," to the NW of the garden, had a long barrel-vaulted hall which collapsed in the middle of the 1st century A.D. An adjacent hall may have been a stable.

The two luxurious villas, situated one beside the other in the area N of the garden, included in each a small Roman style bathhouse. These villas probably served the officers in charge of the local toparchy since Herod had moved the capital to Herodium.

An intriguing group of structures have been exposed in the Lower Herodium S of the pool complex, at the W end

HER.06. Reconstructed section through palace-fortress at Herodium, facing SE. *(Courtesy of E. Netzer)*

HER.07. Site plan of Greater Herodium, *a*, pool complex; *b*, central bathhouse; *c*, northern area; *d*, large palace; *e*, course; *f*, monumental building; *g*, palace-fortress (see Fig. HER.05 for detail). *(Courtesy of E. Netzer)*

of the long "course." The main building is the monumental building (14 × 15 m) which faces the "course." Inside is an elaborate hall (8 × 10 m) surrounded by niches separated by half columns based on pedestals. The hall, which originally had a barrel-vaulted ceiling, had probably five entrances and probably was surmounted with a monumental roof. A long but narrow (reflecting?) pool was found in front of the building.

Evidence of a second monument, which was probably nearby, was found in a group of well-carved and decorated ashlar blocks. These were reused in a Byzantine church, which was exposed just S of the monumental building. Some of these stones belonged to a Doric frieze (in the Roman style) and others carried floral patterns, both often used in Jewish tomb monuments in Judea. The monument that yielded these stones could be the yet-unlocated tomb monument of Herod. Perhaps the long course was built for Herod's funeral procession (as described by Josephus), whereas the monumental building may have been a related triclinium (similar to ones integrated into burial complexes at Petra).

A ceremonial ritual bath with a double entrance was also exposed near the monumental building and could relate to this group of structures. However, only the discovery of Herod's tomb in this vicinity will prove such a hypothesis.

Following the death of Archelaus, Herod's son who ruled over Judea after him, Herodium was controlled for 60 years by the Roman procurators except for a short interval (42–45 A.D.) when Agrippa I was in power.

In 66 A.D., the site was occupied by the Jewish rebels, but probably surrendered a short time after the destruction of Jerusalem (*JW* 7.163). The rebels settled in the Mountain Palace-Fortress and turned its large triclinium into a synagogue similar to the one exposed at Masada.

During the Second Jewish Revolt against the Romans, the site was occupied again by Jewish warriors (the site is mentioned in Bar Kokhba's letters found in the Judean desert caves). These warriors built an intricate and sophisticated system of tunnels into the hill under the palace-fortress.

The site was abandoned until the 5th and 6th centuries, when a Byzantine community settled inside and beside the ruins. Three churches were exposed here during the excavations at Lower Herodium in addition to a chapel exposed by Corbo on the mountain. The site was finally abandoned at the beginning of the Early Arabic Period.

EHUD NETZER

HERODOTUS (PERSON) [Gk *Hērodotos*]. Herodotus (b. 484 B.C.) of Halicarnassus was "The father of History," the first important prose writer of Classical Greece. He wrote his famous *History of the Persian Wars* at Athens ca. 445 B.C. He then took part in the colonization of Thurii in southern Italy, where he died and was buried.

Herodotus traveled broadly in the Persian Empire after the Peace of Callias in 449 B.C. He is not only our chief source for Median and Persian history, but also gives us invaluable information about ancient Mesopotamia, Egypt, and Scythia (Yamauchi 1982).

Herodotus was above all a raconteur of entertaining stories. The fact that he himself did not believe an account did not deter him from relating an interesting tale. At times he gives several contradictory stories.

Herodotus' veracity was contested in antiquity by Ctesias and by Plutarch. It was challenged early in the 20th century by scholars who questioned whether Herodotus even visited Egypt or Babylonia (Yamauchi 1966: 10).

Few scholars now doubt that Herodotus visited Egypt (but cf. Armayor in *JARCE* 15: 59–73 for a more cautious assessment), though he does not mention the Sphinx nor the hypostyle hall at Karnak. He does transmit the name of the first pharaoh Menes and the builders of the pyramids at Giza: Cheops (Khufu), Chephren (Khofre), and Mycerinus (Menkaure). He knows very little about the early periods of Egyptian history, but he is our most important source for the 26th Dynasty (6th century B.C.).

With the exception of errors as to the size of the city and the height of the wall, Herodotus' descriptions of the city of Babylon have been remarkably vindicated by the excavations of that city by R. Koldewey from 1899–1917 (Ravn 1942). Herodotus, however, gives us very little information about Babylonian or Assyrian history (Baumgartner 1959). His story about Semiramis may reflect the Assyrian Sammuramat (Thompson 1937) and that about Nitocris may reflect the Assyrian Naqi'a (Lewy 1951).

Herodotus claims that Deioces first unified the Medes. This name corresponds with the Assyrian Daiukku. Herodotus preserves accurately a number of Median and Persian names (Schmitt 1967; 1976). Herodotus' account of the rise of Cyrus can be confirmed by cuneiform texts. See ASTYAGES (PERSON).

His narrative of Cambyses' invasion of Egypt was based on anti-Persian Egyptian sources. His claim that Cambyses stabbed the Apis bull is directly contradicted by a sarcophagus which was dedicated to the Apis by Cambyses.

Herodotus gives us a full account of the accession of Darius and the overthrow of the usurper, Pseudo-Smerdis (3.66–88). He describes Darius' satrapies (3.88–96), his invasion of European Scythia (4.1–142), the Ionian Revolt from 499 to 494 (5.23–6.27), the punitive expedition shipwrecked at Mount Athos in 492 (6.42–44), and the famous battle of Marathon in 490 (6.112–17).

There are some passages in Herodotus which classicists have rejected as entirely fabricated, such as the celebrated "Constitutional Debate" (3.80–88), during which three conspirators discussed the respective merits of three forms of government: (1) Otanes argued for democracy, (2) Megabyzus for oligarchy, and (3) Darius for monarchy. Though these ideas and the mode of presentation are thoroughly Greek (Bringmann 1976), some Iranologists have argued that there may be elements in the passage which go back to Persian traditions (Gschnitzer 1977: 31; Dandamaev 1976: 145, 163; Schmitt 1977: 243–44).

When it comes to the account of the overthrow of the usurper Gaumata/Bardiya/Pseudo-Smerdis by Darius and his six colleagues, Herodotus reveals an impressive corre-

spondence with the information which we can derive from Darius' Behistun Inscription (Wiesehöfer 1978: 96–97). He transmitted with remarkable accuracy all but one of the six names of Darius' colleagues. And even in that one case he gave us a genuine Persian name which may be explained as a later substitution (Schmitt 1977: 243–44). Among those who could have been able to supply Herodotus with such accurate information, passed down in their families, could have been the descendants of the six coconspirators (Wells 1907). Other descendants of these ruling families could have been contacted by Herodotus in western Asia Minor (Drews 1973: 82–83).

Though the correspondence of Herodotus with Darius' Behistun Inscription is undeniable, there are scholars who suspect that Darius was lying and that Herodotus was simply gullible in accepting the king's propaganda. This view was held by Olmstead (1948: 108–9) and has been followed by Dandamaev (1976: 116–21) and Balcer (1987). But despite difficulties in reconciling the Old Persian and the classical sources, the official version remains more credible than revisionist theories (see How and Wells 1912: vol. 1, 393; Altheim and Stiehl 1960: 75–105; Hinz 1979; Frye 1984: 99).

Herodotus grossly exaggerates the size of Xerxes' forces. But archaeological evidences, topographical surveys (Pritchett 1962a; 1963; 1969), and linguistic studies have for the most part vindicated the honesty and credibility of much in Herodotus' account of Xerxes' invasion of Greece in 480, such as his accounts of the battles of Thermopylae (7.205–26), of Salamis (8.78–97), and of Plataea (9.28–75).

The newly discovered Themistocles' Decree contradicts Herodotus on the nature of the evacuation of Athens before Xerxes' advance. In this case scholars are divided as to whether Herodotus or the inscription is more trustworthy. Pritchett (1962b: 43) argues: "Herodotus has in fact been proven to be correct in so many cases where he had earlier been doubted, that when a late document is found which flatly contradicts him, this document has to be considered *a priori* suspect."

Unfortunately for a history of Xerxes, Herodotus provides little information on the king after the battles of 479 B.C. See AHASUERUS (PERSON).

HERON. See ZOOLOGY (FAUNA).

HESHBON (PLACE) [Heb *hešbôn*]. A town on the central plateau E of the Jordan River, mentioned 38 times in the Bible. For geographical and linguistic reasons it is identified with Tell Hesban (M.R. 226134), a mound which rises 895 m above sea level, guarding the NW edge of the rolling Madaba (Moabite) plain where a southern tributary to the Wadi Hesban begins to cut down sharply toward the Jordan River about 25 km to the W. It is about 55 km E of Jerusalem, 20 km SW of Amman, 6 km NE of Mount Nebo, and 185 m higher than ʿAin Hesban, the perennial spring with which it is associated.

Between 1968 and 1976 Andrews University sponsored five seasons of excavation; in 1978 Baptist Bible College (Pennsylvania) continued the excavation of a Byzantine church. These six seasons of archaeological excavation at Tell Hesban did not uncover any remains antedating about 1200 B.C. This poses a problem for the location of Sihon's Amorite capital referred to in Num 21:21–25 (cf. Deut 2:16–37, reiterated in Judg 11:12–28). Evidence of Amorite occupation may not have been found either because it is elsewhere on the site (unlikely) or because its (seminomadic) impermanent nature left no trace to be discovered (most likely). The most extreme options are to consider the biblical account unhistorical or at least anachronistic (now favored by such OT scholars as Miller and Van Seters) or to seek the Amorite capital at another location; e.g., Jalul (a view favored by Horn). Most scholars would identify Tell Hesban with Greco-Roman Esbus, based on coin and milestone evidence coupled with such geographical specifications as required by Ptolemy and Eusebius. If Cross' reading of an Ammonite ostracon found at the site in 1978 is accepted, it as well would support such an identification for Iron Age Heshbon. During this period it was alternately Reubenite, Gadite, Levite, Moabite, and finally Ammonite (Num 32:1–7; Josh 13:15–28; 21:34–40; 1 Chr 6:81; Isaiah 15, 16; Jeremiah 48, 49). Altogether, the Andrews University expedition has reconstructed 19 superimposed strata from the excavated remains, covering a period from about 1200 B.C. to A.D. 1500.

A. Iron Age Remains

The Iron Age remains (ca. 1200–500 B.C.) are very fragmentary due to periodic removals of earlier strata on top of the hill by later builders; nevertheless evidence for at least four strata remains. Stratum 19 (12th–11th century) represents probably a small unfortified village dependent on an agrarian-pastoral economy. In its earlier phase its most notable installation was a long (15 m exposed) 3.6 m-deep trench crudely carved out of bedrock on the tell's S shelf. There is no real clue as to its purpose though suggestions have included a moat for defense, storage, or cultic activity, subterranean habitation, or a water channel if not a narrow reservoir itself. In its later phase this installation was filled with soil and into it were built both the cobbled floor of a room and a 2.5 m-wide "filler" wall. An egg-shaped cistern may also be associated with this phase; this produced so many loom weights that we infer the presence of a cottage industry. Stratum 18 (10th century) left no *in situ* remains but its typologically later pottery was found in deep dump layers outside the contemporary settlement on the W slope; it may have been a continuation of the stratum 19 village. Stratum 17 (9th–8th centuries) is also represented by sloping debris layers dumped to the W. During this phase was the initial construction, on the tell's S shelf, of a nearly 2-million-liter-capacity reservoir, 15 m to a side (its thrice-plastered E wall supplemented a bedrock cut with a header-stretcher retaining wall), and 6 m deep. Could this be the pool referred to in Cant 7:4? Though several channels carved out of adjoining bedrock funneled rainwater to the reservoir, its capacity appears to exceed the normal amount of winter rain that would fall on the catchment area; perhaps it was intended that extra water be transported up to the reservoir from below the mound. If so, perhaps this stratum is what is left of Mesha's attempt to fortify his N border with Israel. (The Mesha Stone from the 9th century does not mention Heshbon but since Medeba, Nebo, and Jahaz all came back into Moabite hands at that time, presumably Heshbon did as well. At least by the close of the 8th century and into the 7th, Heshbon appears to be under firm Moabite control, because it figures in both extant recensions of a prophetic oracle against Moab [Isa 15:4; 16:8, 9; and Jer 48:2, 34, 35], where its fields, fruit, and harvest are mentioned. By this time it may have been a steep *tell*, for fugitives stop in its shadow [Jer 48:45].) Stratum 16 (7th–6th century) was the best preserved Iron Age stratum; its remains indicate a general prosperity and that the settlement continued to grow, probably clustered around a fort. A few scattered domestic units came to light on the W slope and the reservoir continued in use—perhaps a part of a way station or supply depot on the King's Highway. It was probably controlled by the Ammonites, to judge from the pottery and several ostraca found in the reservoir fill. (These ostraca have already been important in enlarging a knowledge of the Ammonite dialect and script.) Stratum 16 may have come to a violent end, considering the great quantity of ash in the debris scraped from the abandoned town into the reservoir by the (Maccabean?) rebuilders in the 2d century B.C.

B. Hellenistic and Roman Remains

According to the post–Hebrew Bible literary sources (mostly Josephus), the site should have been occupied in the following periods: *Hellenistic* (2d–mid 1st century)—perhaps moving from Ptolemaic/Tobiad control to Maccabean; *Early Roman* (late 1st century B.C.–early 2d century A.D.)—Herodian fortress populated with veterans, later sacked by Jews at the beginning of the Jewish War (A.D. 66); *Late Roman* (2d century)—Ptolemy giving site's exact location; (3d century)—locally mined coins during reign of Elagabalus; (4th century)—Eusebius' *Onomasticon's* site location; and all through this period—milestone finds counted from Esbus along the road down to Livias. This literary evidence was confirmed by excavation. After about a 300-year abandonment of the site, Tell Hesban was reoccupied in the Late Hellenistic period. The remains from the Hellenistic and Roman periods (ca. 200 B.C.–A.D. 365) comprise at least five strata. Stratum 15 (ca. 200–63 B.C.) consisted primarily of a rectangular military fort at the site's summit probably surrounded by the dwellings of dependents, often in association with bell-shaped subterranean store silos. In stratum 14 (ca. 63 B.C.–A.D. 130) Esbus came under the control of Herod the Great, probably as a border fort against the Nabateans. There is abundant evidence for extensive underground dwellings on the mound and characteristic Herodian period family tombs in the cemetery where two such tombs were found sealed by rolling stones. The town of stratum 14 was destroyed by an earthquake so stratum 13 (A.D. 130–ca. 193) contained much new building. A new inn with an enclosed courtyard S of the fort testifies to the increased traffic past the road junction (*Via Nova* and Esbus-Livias) at which Roman Esbus was located. In stratum 12 (ca. A.D. 193–284) the inn was partially rebuilt and well used. On the acropolis, earlier masonry was incorporated into what has

been interpreted as a small temple—perhaps the one depicted on the Elagabalus coin minted for Esbus, a very fine example of which was found at the site in 1973. Access to the temple from the S was by a ramp. Stratum 11 (ca. A.D. 284–365) continued to demonstrate a modest level of prosperity. A porch was added to the temple and a double colonnade built eastward from it. The inn to the S of the acropolis platform was demolished and a wide monumental stairway replaced the earlier earth ramp. The stratum came to an abrupt end with the severe earthquake of A.D. 365.

C. Byzantine and Early Arab Remains

Apart from the earthquake the transition from the Roman to the Byzantine periods was a gradual one. The Roman cemetery continued to be used. At least six strata encompass the Byzantine and Early Arab remains at Tell Hesban (A.D. 365–ca. 1000). In stratum 10 (A.D. 365–408) the growing Christian community was apparently significant enough to prevent the rebuilding of the temple that had been destroyed by the earthquake but not quite strong enough to immediately construct a church. In the 4th century, Esbus appeared for the first time as an episcopal seat when Gennadius, its bishop, is mentioned twice in the Acts of the Council of Nicea. Stratum 9 (A.D. 408–551) saw the construction of a slightly asymmetrical basilica-type church on the acropolis (plaster apparently coming from a large subterranean lime kiln to the S). The stratum may have been brought to a close by the earthquake of 551. Again, we know from literary sources that Esbus sent its bishop to the councils of Ephesus (A.D. 431) and Chalcedon (A.D. 457). In addition to reconstruction activity, possibly necessitated by the 551 earthquake, stratum 8 (A.D. 551–614) also witnessed the construction of another basilica-type church with well-preserved mosaic floors to the N of the acropolis. The reconstructed acropolis church had a much less ornate mosaic floor than its predecessor. After the close of stratum 8, probably brought on by the invasion of the Sassanid Persians, stratum 7 remains (A.D. 614–661) are very scant. Occupation seems to have centered S of the acropolis church within the acropolis circumvallation wall. Some correspondence of Pope Martin I (A.D. 649) shows that Esbus was still an important bishopric, however, in the middle of the 7th century. The coming of Islam in the Umayyad period coincided with a slight increase in activity in stratum 6 (A.D. 661–750). A large oven was constructed in the mosaic floor of one of the anterooms of the Late Byzantine acropolis church which by then was probably already in ruins since there is no evidence for an Umayyad destruction. With the move of the center of Islamic rule to the E in the Abbasid period, there was a sharp decline in population in stratum 5 (A.D. 750–ca. 1000). No architectural remains from the period were uncovered so the tell may have been occupied by a seminomadic population before subsequent apparent abandonment. Indeed, after the 7th century, the name Esbus disappears from literary sources, reappearing only centuries later in its Arabic form *Ḥesbân*. Its mention in the Abbasid period by ʿAbu-Djaʿfar Muhammad at-Tabari' (839–923) in reference to Israelite history does not make it clear whether a Jabal Ḥesban (the *tell*?) existed in his time or not.

D. Ayyubid/Mamluk Remains

Although a village of no particular significance during the earlier periods of Islamic rule, after a gap in sedentary occupation, Hesban flourished again immediately after the Crusades. The first clear literary reference to Hesban as an inhabited place comes in 1184 in connection with a campaign of Saladin recorded by Beha ed-Din. In the Arabic geographical literature originating from before the time of the Mamluks (ca. 1260–1456), Hesban is not mentioned. By the 14th century, however, it even replaced ʿAmman as the capital of the Belqa' district of central Transjordan and is mentioned by Ibn Fadl Allah al-Umari (1301–1348), Dimishqi (died 1327), Abu el-Feda (died 1331), and several others. Its excavated remains comprise at least three strata (ca. 1200–1456) which were relatively well preserved compared to earlier remains. Stratum 4 (ca. 1200–1260) represents an Ayyubid village's occupational surfaces and terracing around two cisterns on the mound's summit. Stratum 3 (ca. 1260–1400) is characterized by a large number of soil and architectural loci which reflect extensive new Early Mamluk construction activity using the existing Roman-Byzantine ruins as a base: at the tell's summit was an elaborate U-shaped building complex (including a bathhouse) reached by a stairway from the S. A number of vaulted rooms opened onto a central courtyard created by clearing the debris of the collapsed Byzantine church. Because the postal route from Karak to Damascus passed through the town, these remains may be interpreted as an inn complex to care for travelers and their animals. The mound was surrounded by numerous domestic dwellings and cisterns which covered most of the slopes above terraces used for agriculture. Stratum 2 (ca. 1400–1456) began with a general collapse of the town in the Late Mamluk period (due probably to plague or warfare) and is characterized by gradual abandonment leading, apparently, to the tell's desertion until the late 19th century when stratum 1 marks the gradual return to limited occupation in the Ottoman and modern periods. Several Western travelers and explorers visited Hesban, particularly during the 19th and 20th centuries, from Seetzen in 1806 to Glueck in the early 1930s, many of them recording for posterity what they saw.

LAWRENCE T. GERATY

HESHMON (PLACE) [Heb *ḥešmôn*]. Judging from its position in the list of Negeb settlements assigned to the tribe of Judah (Josh 15:21–29), the town of Heshmon (Josh 15:27) was situated somewhere between Hazargaddah and Beth-pelet in the vicinity of Beer-sheba, though its precise location has not been identified. The name Heshmon is lacking in the LXX's rendering of the list, an omission which some scholars (Boling *Joshua* AB, 379) attribute to haplography, while others (Aharoni *EncMiqr* 3: 316) suggest that the name was a later addition. Heshmon is also missing from the list of Simeonite settlements (Josh 19:2–9), which closely parallels the list of Josh 15:21–29 in many respects (Cross and Wright 1956: 214). The term "Hasmonean," a designation for the Maccabees used by the Mishna, Talmud, and occasionally Josephus, is frequently derived from "Heshmon," but the sources themselves do not confirm such a conjeccture, and other derivations are possible. See HASHMONAH (PLACE).

HESHVAN [Heb *ḥešwān*]. The eighth month of the modern Hebrew calendar, roughly corresponding to October and November, and equivalent to the ancient month of MARCHESHVAN. See CALENDARS.

HESI, TELL EL- (M.R. 124106). A site in the S Shephelah whose biblical identification is a matter of dispute. It was, however, essentially the first Palestinian site to be excavated (by William Flinders Petrie in 1890) using a scientific method.

A. Location and Topography
B. Identification
C. History of Excavations
D. History of Occupation

A. Location and Topography

Tell el-Hesi is located in the SE coastal plain, 23 km from the Mediterranean coast and 26 km NE of Gaza and occupies a cluster of barchan sand dunes on the W bank of the Wadi Hesi (Nahal Shiqma). The site is comprised of a 25-acre, roughly rectangular lower city, with a small acropolis at its NE corner. The base of the acropolis is about 4 acres, while it narrows to only 0.69 acres at its summit. The acropolis, about 150 m above sea level, was originally a sand dune 17 m high. Occupational remains have added 21 m to its height. Three sand dunes form the S border of the lower city and on the E, W, and N perimeter, the site is bordered by deep wadis.

Hesi's location at the SE limit of the "Philistine Plain" was too far inland to influence the coastal highway, although Hesi was able to control some of the internal road systems, in particular a branch of the *Via Maris* which turned E a short distance N of the site. Its position also allowed Hesi to exert control over the S approaches to the Shephelah. In addition, the site is located at a natural border. Immediately to the S, the semi-arid Negeb region begins. This places Hesi in a location of fluctuating rainfall which makes agricultural production unpredictable.

B. Identification

The ancient name of the site is unknown. Conder (1878: 20) was the first to identify Hesi with Lachish. This identification was reinforced by Bliss' discovery, in his 1891 excavations, of an Amarna tablet which mentioned Lachish (1894: 184). It was not until 1924 that Albright rejected the identification of Hesi with Lachish. He pointed out the small size of the site and the fact that its location did not fit Eusebius' placement of Lachish in the Shephelah, seven Roman miles S of Eleutheropolis (Beth Jibrin). Albright concluded (1924: 8) that Hesi was "almost certainly Eglon," a Canaanite city-state conquered by the Israelites (Josh 10:34; 15:39). Excavations at Tell ed-Duweir in the 1930s revealed written materials which confirmed that site's identity as Lachish. The identification of Hesi with Eglon was maintained by Wright (1971). More recently, however, some scholars have argued that Tell Aitun may be identified with Eglon (Rainey *IDBSup,* 252). The biblical accounts locate Eglon in the Shephelah. Hesi's location several km W of these foothills probably disqualifies Hesi as a contender. Hesi's ancient identity remains uncertain.

C. History of Excavations

Hesi holds a unique place in the history of Near Eastern archaeology. It was at Hesi, in 1890, that the site's first excavator, Sir Flinders Petrie, developed the foundations of modern archaeological method in applying the principles of stratigraphic excavation and ceramic chronology. For the first time, pottery was used as a chronological indicator based on its stratigraphic location. His publication of the Hesi excavation (1891) was the first to present architecture and ceramics in a sequential manner, to cor-

relate pottery and artifacts with stratigraphy, and to illustrate pottery in section drawings.

Petrie excavated at Hesi for six weeks, and in this short time was able to formulate an occupational history of the site. He identified three major occupational periods: Amorite (ca. 1700 B.C.E.), Phoenician (1350–850 B.C.E.) and Jewish (ending 450 B.C.E.). His Amorite period can now be identified with the EB Age, his Phoenician with the LB and Iron ages, and his Jewish primarily with the Persian and Hellenistic periods.

Excavations continued in 1891 and 1892 with a new director, Frederick Jones Bliss. His strategy was to excavate a large portion of the site stratigraphically to virgin soil. At the conclusion of his work, Bliss had removed almost one third of the acropolis, and "Bliss' Cut" has remained a distinguishing feature of the site ever since.

Bliss identified eleven layers of architectural features and grouped them into eight strata or "cities." City I belonged to Petrie's Amorite occupation, Cities II, III, and IV to the Phoenician, and Cities V through VIII to the Jewish. Bliss' publication of these "cities" in 1894 was the first attempt to present large-scale architectural remains in a stratigraphic context.

Following an 80-year hiatus, excavations resumed at Hesi in 1970, when the Joint Archaeological Expedition began its work. The expedition carried out eight field seasons (1970, 1971, 1973, 1975, 1977, 1979, 1981, 1983). Its goals were: (1) to investigate in more detail, and with more refined methods, the structures found by Petrie and Bliss; (2) to integrate scientific disciplines for the purpose of achieving a broader data base and interpretive results; and (3) to provide a carefully structured educational experience for participating volunteers. During its eight seasons of excavation, the expedition investigated the acropolis (Field I), its S slope (Field III) and the lower city (Fields II, IV, V, VI, VII, VIII, and IX).

D. History of Occupation

Excavation has confirmed that the site was occupied almost continuously from the Chalcolithic through the Hellenistic periods. Unstratified Roman pottery was also found. Following a gap of several centuries, the site was again in use during the 16th to 18th and 20th centuries C.E. See the following table.

A. STRATIGRAPHIC CHART FOR FIELD I (ACROPOLIS) AND FIELD III

Stratum	*Date*	*Cultural Period*	*Characteristics*
I	After C.E. 1900	Modern	Military trenching
II	ca. C.E. 1600–1900	Turkish	Muslim cemetery
III	Yet to be determined	Late Arabic	Fragmentary walls and surfaces
IV	4th–3d centuries B.C.E.	Hellenistic	Three phases, Bliss City VIII
V	6th–4th centuries B.C.E.	Persian	Four phases, Bliss City VII
VI	6th century B.C.E.	Iron II	Poor construction of houses
VII	9th–6th centuries B.C.E.	Iron II	Four phases, Bliss City VI
VIII	11th (?) century B.C.E.	Iron I	Probably same phase as Petrie's Pilaster Building
pre-VIII	34th–15th centuries B.C.E.	Iron I, Late Bronze, EB III, Chalco	Twelve phases of occupation, unexcavated

B. STRATIGRAPHIC CHART FOR FIELD VI

Phase	*Date*	*Cultural Period*	*Characteristics*
1	After C.E. 1900	Modern	Military trenching
2	ca. C.E. 1600–1800	Turkish	Muslim cemetery
3	Yet to be determined	Late Arabic	Fragmentary pits and surfaces
4	28th or 27th to 24th centuries B.C.E.	EB III (and EB II?)	Five phases, Bliss City I

1. Chalcolithic Period. Evidence indicates that use of the site began during the Chalcolithic Period. Although a good quantity of pottery has been found on the acropolis and in the lower city, stratified remains are confined to two pits at the base of the S slope of the acropolis (Toombs 1974: 31). Probably more Chalcolithic remains exist at the unexcavated base of occupation on the acropolis.

2. Early Bronze Age. The EB was the only period when occupation at Hesi covered the entire 25 acres of the site. On the acropolis, remains of seven EB phases were identified and were associated with pottery from EB I and II; EB III pottery was characteristic of the lower city.

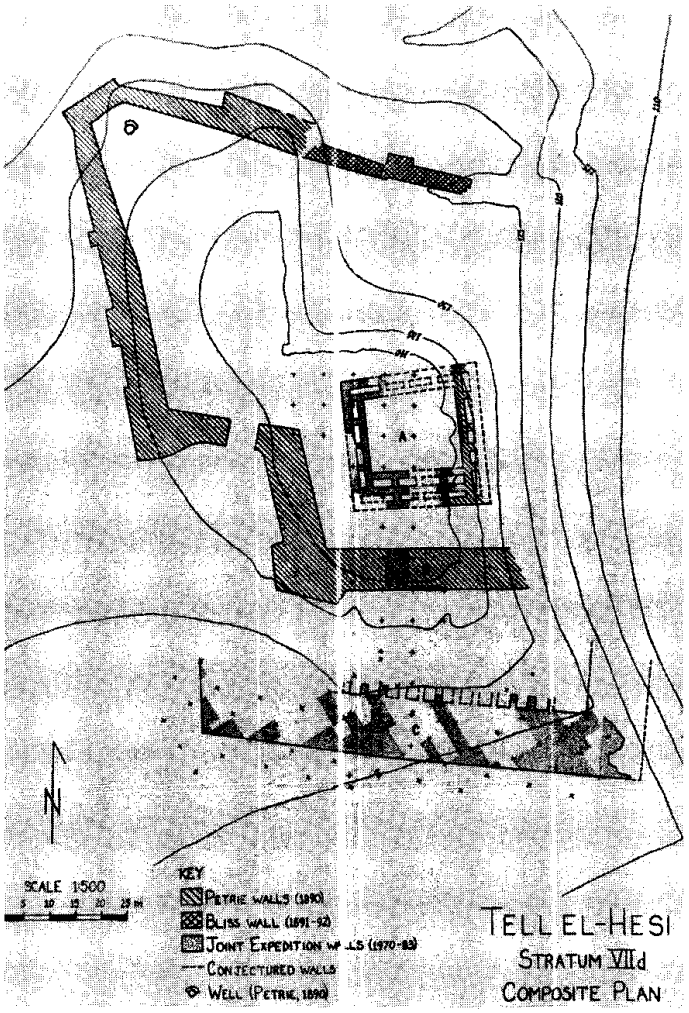
Probes by all three excavators in the lower city indicated a shallow depth of domestic occupation. On the S ridge of dunes, the Joint Expedition uncovered the EB city wall in Fields V, VI, and IX and traced it for 82 m along the S and 95 m along the E sides. The wall was about 5 m wide, with towers placed at intervals. One tower found by Bliss in City I (1894: 26) and one found by the Joint Expedition were almost identical in shape and each contained two long chambers connected by a narrow passageway. Along the outer face of the city wall was a deep deposit of water-and-wind-sorted ash with a heavy organic content. At the SE corner of the site, where the city wall turns to the N, a glacislike deposit of crushed limestone was laid against the outer face of the wall and extended to the N for 60 m. Its unusually wide (9 m), horizontal exposure suggests that it served primarily for erosion control. Inside the city wall, remains of domestic and industrial activity were found. Five phases were identified, and all belonged to EB III (Toombs 1983: 35–44; Doermann and Fargo 1985: 13–22).

The EB city wall was constructed of mold-made mud bricks of varying colors and composition. Many of the bricks were made of a humus-filled clay no longer available in the region. Also present in the remains was *Gryaulus piscinarum*, a snail which lives in sluggish streams and swamps. The presence of pistachio in the ash deposits adds to the evidence that the climate at Hesi was noticeably more moist in the EB than it is today.

It is likely that the earliest settlement at Hesi began in late Chalcolithic or EB I and centered on the acropolis. In late EB II–EB III, the population increased and the site expanded to 25 acres. At some point during EB III, Hesi

appears to have been abandoned. There is no evidence of destruction. The contents of the ash layers suggest an economy based on the raising of cattle, sheep, and goats, and the production of emmer wheat. There is strong evidence for progressive desiccation which extended northward from Egypt during the EB. This climatic change, coupled with the exhaustion of natural resources to accommodate an increasing population, proved too much of a strain for the environment. As with most other sites in the area, Hesi was abandoned for the rest of the millennium.

3. Middle Bronze Age. Following the abandonment during EB III, there is a gap in occupation at Hesi. None of the excavators has found any structural remains of the MB, although occasional MB sherds have been identified. The nearby site of Tell en-Nagila, 5.5 km SSE of Hesi, experienced a period of prosperity during MB II–III, but occupation at Hesi was not resumed.



4. Late Bronze Age. Bliss' Cities II, III, and IV contained LB material. Cities II and IV had large public buildings. Of particular note was an Amarna tablet found in City III (1894: 184). The Joint Expedition did not reach the LB levels on the acropolis. During exposure of later strata, three phases of structures containing Late Bronze pottery were encountered. In the lower city, significant quantities of LB sherds were found in Field V, but any associated structures had suffered erosion.

5. Iron Age I. The Joint Expedition reached the Iron Age I level (Stratum VIII) only in one probe. Fragments of a wall and floor were covered with destruction debris. The associated pottery was dated to the 11th century (Doermann and Fargo 1985: 8–9). Petrie's "Pilaster Building" is probably to be dated to this stratum (Petrie 1891: 23). This stratum also corresponds to City V of Bliss.

6. Iron Age II. A major engineering project was undertaken in the 9th century (Stratum VIId). Portions of a structure had been identified by Petrie as the "Manasseh Wall" and a "long range of chambers." Bliss also had excavated a small portion of this construction in City VI. Stratum VIId was constructed to raise the S half of the acropolis by 6–7 m, to provide a platform on which occupational structures could be built and to defend the site by means of two large mud-brick walls, one at the crest and the other at the base of the acropolis. This construction surrounded the acropolis on all sides, although erosion has removed much of the E portion. See Fig. HES.01.

The foundation for the entire system was a mud-brick wall, 12 m wide, at the base of the slope. A series of four terraces consolidated the slope. Above the terraces stood the Upper Wall (Petrie's Manasseh Wall; 3 m wide). A chamber and fill system was constructed on the summit. This structure consisted of chambers composed of parallel walls connected by cross walls (see structure A on Fig. HES.01). This system was what Petrie identified as a long range of chambers. The space between the chambers and the area enclosed by the rows of chambers was filled with earth to form a solid platform of walls and fill (Toombs 1983: 25–33; Doermann and Fargo 1985: 1–6).

The structures of the Iron II occupation were built directly on the platform created by the chamber and fill system. The first phase in the 9th century consisted of a large courtyard building. Above this were several smaller

HES.01. Composite site plan of Tell el-Hesi—Stratum VIId, Iron II. *A*, chamber and fill system; *B*, upper wall; *C*, lower wall. *(Drawing by N. Clark and J. Blakely, courtesy of V. M. Fargo)*

structures which belonged to the 8th–6th centuries. A heavy layer of ash and destruction debris covered the 6th-century occupation. Above this was a poorly built mud-brick house (Stratum VI), which probably represents a relatively brief resettlement by a poor population during the time of the Exile. Its transitory nature may explain why this stratum was not identified by Bliss (O'Connell, Rose, and Toombs 1978: 78–80).

The massive constructions of Stratum VIId and VIIc were most likely preparations for Hesi's use as a military outpost. A group of small Iron Age sites extends along the E edge of the coastal plain: Bornat, Areini, Sheqef, Hesi, Quneitirah, and Muleihah. These probably served as the outer perimeter of defense for Lachish and SW Judah. After a number of Egyptian raids, Rehoboam established a new network of outposts to protect the S and W borders of Judah (2 Chr 11:5–12). At this time, the important fortress at Lachish was constructed. This fortress is almost identical in plan to that at Hesi. Rehoboam's defensive system continued in use through the 8th century until it was destroyed during the Assyrian conquest of Judah. In the 7th and 6th centuries, the Hesi occupation was no

longer military, but residential and industrial. The Iron II occupation came to an end with a destruction in the 6th century, very probably associated with the Babylonian conquest (Fargo 1987).

7. Persian Period. Hesi regained its position as a military/governmental outpost during the Persian period. Once again, a massive building project produced a large platform on which a sizable mud-brick building was placed. The large building served as a small citadel and had casemate walls surrounding a courtyard (Rose and Toombs 1976: 43–46).

In contrast with earlier periods, there was a sizable quantity of imported pottery, in particular Greek wares. There was no evidence of residential dwellings on the acropolis, although there were signs of domestic activities. Characteristic of the Persian occupation were large, deep pits 1 to 2 m wide and equally deep. These pits, probably originally used for grain storage and later for garbage, contained vast quantities of broken pottery, seeds, bones, and a variety of implements and weapons which imply a range of activities (O'Connell and Rose 1980: 77; Toombs 1983: 33–35).

The large quantity of amphorae and transport vessels suggests storage or transport of materials, probably grain grown in the fields around the site. The lack of permanent housing structures may indicate a mobile population. Beginning around 500 B.C.E. and for about a century (a date based on the Attic ceramics), Hesi probably became a semi-permanent depot and storehouse for the Persian military. It may also have been converted temporarily into a staging area and supply dump for Persian military raids into Egypt around 460–455 B.C.E. and 404–401 B.C.E. On the S slope of the acropolis was a small cemetery of the Persian period which contained burials of men, women, and children. This may imply a more permanent population to oversee the grain business. At the end of the 5th century, Persian troops began to focus their attention on areas farther to the N and no longer needed a depot at Hesi. This allowed Egypt to regain control of S Palestine, and in 401 B.C.E. the Persian occupation at Hesi ended (Blakely and Horton 1986; Bennett and Blakely fc.).

8. Hellenistic Period. The Hellenistic occupation at Hesi had three phases, all of which were of a domestic nature. Bliss' plan for City VIII was a composite of all three phases. Unusual in this period was the use of stone for walls, as foundations for brick walls, and in a stone-lined drain and basin. In the latest phase there was little architecture, but instead a large number of pits, full of pottery, artifacts, and faunal and botanical material. Remains of this period were fragmentary, because burials from the Muslim cemetery (Stratum II) had badly disturbed the Hellenistic stratum (Rose and Toombs 1976: 46–47; Rose, Toombs, and O'Connell 1978: 126–28).

9. Late Arabic Period. Following the end of the Hellenistic occupation, the summit of the site was roughly leveled, and it may have been used sporadically for agriculture. On the acropolis, there was virtually no evidence for the Roman, Byzantine, or early Arabic periods. A few remains such as pits, hearths, surfaces, and fragmentary walls (Stratum III) apparently belong to the Turkish period and probably were associated with agriculture and stock raising (Rose, Toombs, and O'Connell 1978: 128–29).

10. Muslim Cemetery. Bliss had noted the presence of burials immediately below the surface. He identified them as Arab and suggested that they were 200 to 300 years old. This date has been confirmed, and the burials of Stratum II have been dated to about C.E. 1600–1800. The cemetery is located on the acropolis and along the dunes on the S rim of the site. The S dunes were probably used because of the presence of a shrine of a minor Muslim saint. The Joint Expedition excavated over 800 burials. The burials were simple earth graves, and the bottoms of the shafts were sometimes lined with stone slabs. Stone slabs also were used as capstones. The body was placed so that the eyes were directed toward Mecca. There were few grave goods, but some jewelry (Toombs 1985).

11. Military Trenching. The most recent use of the site occurred after C.E. 1900. At various times in this century, military confrontations have taken place in the Hesi area. Because of the excellent view of the surrounding area, troops have been stationed at Hesi and have dug trenches and machine gun emplacements (Toombs 1985).

VALERIE M. FARGO

ḤET. The eighth letter of the Hebrew alphabet.

HETH (PERSON) [Heb *ḥēt*]. A son of Canaan, grandson of Ham and great-grandson of Noah (Gen 10:15; 1 Chr 1:13). His descendants settled in the area of Hebron, in the hill country south of Jerusalem. Early in the 2d millennium, at the time of the death of his wife Sarah, Abraham negotiated the purchase of a cave site for her burial from descendants ("sons") of Heth (Genesis 23). The transaction shows some of the legal procedures of the period. Tradition holds that Abraham himself is also buried there (25:10), as is his grandson Jacob (50:13). Rebekah, Jacob's mother, does not consider these descendants of Heth suitable for marriage to her son (27:46) because they are not ethnically related to Abraham's immediate family, though her son Esau does marry two of their women (26:34).

These people continued to occupy the land through the Conquest under Joshua and the settlement of Israel (Deut 7:1; Josh 3:10; Judg 3:5). This is evident when Solomon also takes a Hittite wife (1 Kgs 11:1) and David commits adultery with Bathsheba, the wife of Uriah who is called a Hittite (2 Sam 11; 12:9–10). All of the names given, apart possibly from Uriah, are Semitic.

These people are apparently distinct from the larger group of Hittites or *bĕnē ḥēt*, "sons of Heth." These were an Indo-European people who established an empire in Asia Minor in the middle half of the 2d millennium B.C. They continued in international politics as city-states until the 8th century B.C.

HETHLON (PLACE) [Heb *ḥetlôn*]. A place mentioned in one of Ezekiel's visions as located on the N boundary of restored Israel (Ezek 47:15; 48:1). Its location was apparently somewhere between the Mediterranean coast and the "entrance of Hamath" at the N end of Lebanon, or it may be identical to the "entrance of Hamath" (Num 34:8; Ezek 47:15 [LXX]; 48:1). Some have identified Hethlon as Heitela, NE of Tripoli on the Lebanon coast; others with ʿAdlûn, along the Lebanon coast halfway between the mouth of the Litani River and Sarepta. Its precise location is not known.

RAY L. ROTH

HEXAPLA OF ORIGEN, THE. One of the great achievements of textual criticism, Origen's six-columned presentation of various Gk versions of the OT was begun in Alexandria either in 230 or in 238, and was finished in Caesarea in about 245. Origen's aim was to establish a relationship between the Septuagint (LXX) and Hebrew texts of the OT. His motivation was not purely text-critical, although his writings show that he obviously enjoyed textual study, and he could hardly have got to the end of such an undertaking without an aptitude for it. But he had also a reason of a somewhat different character—he wished to establish for the Church a sound basis in its dialogue with Judaism. As will become clear, the Hexapla showed those passages which were accepted either only by Jews or only by Christians. Origen's approach is set out in his reply to a letter from Julius Africanus (ca. 240). He writes, "I make it my endeavour not to be ignorant of their [LXX's] various readings, lest in my controversies with the Jews I should quote to them what is not found in their copies, and that I may make some use of what is found there, even although it should not be in our Scriptures."

To achieve his aim, Origen brought together all available materials relating to the Hebrew and to the Greek versions. He set out the Hebrew and the various Greek versions in parallel columns. These contained, from left to right:

1. The Hebrew text, in Hebrew characters
2. A transliteration of this into Greek characters
3. The version of Aquila
4. The version of Symmachus
5. The LXX
6. The version of Theodotion (at least in some books, though not in the Psalms or Minor Prophets)

In addition, three other versions were used. These are known as *Quinta*, *Sexta*, and *Septima*. None of them was complete (*Quinta* contained at least 4 Kingdoms [2 Kings], Job, Psalms, and the Minor Prophets; *Sexta* at least Job, Psalms, the Song of Songs, and Habakkuk). It seems that the terms "Heptapla" and "Octapla" were used to describe portions of the work that contained seven or eight columns, where one or more of the three additional versions was available. There is dispute about the meaning of another term, "Tetrapla." In the past, it has been generally believed that after completing the Hexapla, Origen later compiled a Tetrapla, consisting of columns 3–6 of the larger work. This has been challenged by Orlinsky, who argued that the Hexapla was preceded by an attempt at revision, before Origen came to possess *Quinta*, *Sexta*, and *Septima*. According to this theory, the Hexapla itself was begun in about 238. The matter is rendered complex by the imprecise and contradictory statements of ancient witnesses, and by the fact that the term "Hexapla" does not seem to have been used by Origen himself.

A fragment of the Hexapla has been found as the lower script of a palimpsest in Milan. It has columns 2–6, the sixth being *Quinta*. Each line has just a couple of words—partly to facilitate comparison between the columns, partly because even the largest parchment leaf can contain only narrow columns when there are so many of them. This palimpsest is quite extensive, containing 35 folios and about 150 verses.

A much smaller fragment, of Psalm 22, was found in the Cairo Genizah. This contains all six columns.

The comparison of the Hebrew and the LXX revealed both additions and omissions in the latter. Origen indicated these by means of the symbols developed by Alexandrian classical scholarship (the Aristarchian symbols). Words in the LXX but not in the Hebrew were embraced by an obelus (÷ or ÷) and metobelus (⁄. or ⁄.). Where the LXX lacked material found in the Hebrew, Origen added

it from another version (usually Theodotion), between asterisk (※) and metobelus. However, such signs are totally absent from the Milan fragments. This has led Kahle to challenge the traditional view that they were used in the Hexapla. In his opinion, Origen used the Hexapla as the basis for a critical edition of the LXX, in which these signs were used. Against this, it has been suggested that by the time the Milan copy was written in the 10th century, the symbols had dropped out of the text.

Kahle also draws attention to the fact that in all columns of the Milan palimpsest, the Divine Name is written with the letters of the Hebrew tetragrammaton. This leads him to conclude that all the manuscripts used by Origen, including those of the LXX, were of Jewish origin.

The effect of the Hexapla on the text of the LXX was not altogether good. Origen believed that the original text of the LXX was the one closest to the Hebrew text of his own day, which he supposed to be itself original (this Hebrew text was very similar to the Masoretic text). Actually, there are many readings where the LXX preserved an older and purer form of the Hebrew text (evidence from Qumran has established some of these). Origen's work tended to hold in low esteem such variants from the current Hebrew text. The study of the Hexapla in its original form would have made the situation clear to a competent scholar. However, copies that were made generally only contained the fifth column. The critical signs cannot have made much sense on their own, and as a consequence were gradually obliterated. The result was a form of the LXX which contained supplementary passages from other versions where it had omitted material found in the Hebrew. Study of the Hexapla, and the recovery of the Aristarchian symbols, is a vital stage in our recovery of the Old Greek, pre-Origenic, text of the LXX.

The Hexapla itself, an enormous compilation of 6,500 or more pages, in a good 15 volumes, stayed in Caesarea. It was never copied in its entirety. Certain eminent scholars took the trouble to consult it—one thinks especially of Pamphilus, Eusebius of Caesarea, and Jerome. The volumes are presumed to have been destroyed with the rest of the library in the Arab invasions of the early 7th century. Our knowledge of it is therefore fragmentary. Manuscripts which preserve the critical symbols are of great importance. The most valuable of these are the manuscripts G (Codex Sarravianus), M (Coislianus), both containing the Pentateuch and some historical books, and 86 and 88 (the Chigi manuscript) of the prophets. There are also highly significant versional materials—the Syro-Hexapla and the Armenian.

Editions of the Hexaplaric remains have been made by Montfaucon (1713), Bahrdt (1769–70), and Frederick Field (1875).

In conclusion, the reader must be warned that the attempt made by this article to achieve clarity may be misleading: there is almost no question which may be asked about the Hexapla that could receive a simple answer. For text see *PG* 11: 41–48.

HEZEKIAH (PERSON) [Heb *ḥizqîyāhû; ḥizqîyāh; yĕḥizqîyāhû; yĕḥizqîyāh*]. The name of three persons in the Hebrew Bible. The root of the name is *ḥzq,* "to be strong, to strengthen."

1. King of Judah. See HEZEKIAH KING OF JUDAH.

2. The great-great-grandfather of the prophet Zephaniah (Zeph 1:1). Zephaniah prophesied during the brief reign of Amon ca. 640 B.C.E. Assuming 20–25 years per generation, this Hezekiah would have been alive during the latter years of the 8th century B.C.E. Indeed, some have suggested that this ancestor of the prophet was none other than the famous king Hezekiah, and that Zephaniah was therefore of the royal family. See ZEPHANIAH, BOOK OF.

3. The older Heb name of the head of a family that returned from Babylonian exile (Ezra 2:16 = Neh 7:21 = 1 Esdr 5:15). This person affixed the family name to the covenant document of Nehemiah (Neh 10:18—Eng 10:17). See also ATER (PERSON).

GARY A. HERION

HEZEKIAH KING OF JUDAH. Hezekiah was king of Judah ca. 715–687 B.C.E., the son and successor of Ahaz. He came to the throne at the age of 25 and ruled 29 years (2 Kgs 18:2; 2 Chr 29:1). His mother's name was Abi (perhaps a hypocoristic of "Abijah," 2 Chr 29:1), daughter of Zechariah. His name is attested as *Ḥzqyhw* in a seal impression of a royal servant, *Yhwzrḥ* (Hestrin and Dayagi 1974: 27–29) and as *Ḥa-za-qi-a-ú* in the account of the third campaign of Sennacherib in 701 B.C.E. (*ANET,* 287–88).

Sources are inconsistent on the date of Hezekiah's accession. In 2 Kgs 18:9–10 the conquest of Samaria (722/1) is recorded as the sixth year of Hezekiah's reign, making his accession 727/6; however, in 2 Kgs 18:13 the mention of Sennacherib's conquest of 701 in Hezekiah's fourteenth year supports an enthronement in 716/5. Much of German scholarship has accepted the earlier date; most others

assume the later (*IJH,* 678–83; cf. Hayes and Hooker 1988; Jenkins 1976) which has received independent support (Tadmor 1958: 22–40, 77–100; Hallo 1960: 55). The terminal date of Hezekiah's reign (687/6) is established by a combination of 2 Kgs 19:9, which chronicles a challenge to Sennacherib by Tirhakah of Egypt (ascent: ca. 690/89), and the 29 years of the sources.

Hezekiah's acts fall into two major, interlocking categories: his religious reform and his efforts to gain political independence from Assyria. Historiographically, his reign is noteworthy for the convergence of a variety of biblical sources and diverse extrabiblical evidence often bearing on the same events. Significant data concerning Hezekiah appear in the Deuteronomistic History, the Chronicler, Isaiah, Assyrian annals and reliefs, Israelite epigraphy, and, increasingly, stratigraphy.

A. Hezekiah's Reform

The Chronicler's depiction of Hezekiah's reform (2 Chr 29:1–31:31) departs strikingly in length and detail from the Deuteronomistic History's brief version (2 Kgs 18:4, 16, 22). In both, Hezekiah is depicted as a king who "did right in the eyes of YHWH" and who inaugurated a religious reform which included the removal of the *bāmôt* ("high places" of decentralized worship and sacrifice), the shattering of the sacred pillars *(maṣṣēbôt),* the cutting down of the Asherah, and the refurbishing of the Jerusalem temple (to which 2 Kgs 18:16 gives only passing, backhanded acknowledgement). Chronicles depicts other major details of the reform (Passover celebration and invitation to remnants in the North, establishment of covenant), which are omitted by 2 Kings. On the other hand, the Deuteronomistic History alone (2 Kgs 18:4) credits Hezekiah with destroying the Nehushtan associated with Moses.

1. The Deuteronomistic History. The concept of the Deuteronomistic History (DH) first proposed by Noth *(NDH)* was refined by Cross (*CMHE,* 274–89) who suggested two Deuteronomistic editors: a Josianic one, Dtr_1; and an exilic one, Dtr_2. Subsequently, Smend (1978) and Veijola (1977; cf. 1975) posited new Deuteronomistic redactors, basing their conclusions on internal inconsistencies in the text. Weippert (1983), Peckham (1985a; 1985b), and Provan (1988) place the earliest Deuteronomistic redactor in the period of Hezekiah; Peckham discards a Josianic version entirely. Weippert (1985) adds a Josianic updating of the Hezekian version, thereby revising rather than rejecting Cross' original conclusions. In this Weippert is joined by Provan (1988), who independently confirms McKenzie's Josianic redactor (1985: 171–80). Halpern (1988: esp. 114–16, 134) supports a Hezekian document and seeks to harmonize Weippert and Cross (Halpern and Vanderhooft fc.). A Josianic revision and updating may explain the surprisingly short shrift given by 2 Kings to the reform of Hezekiah: the Josianic redactor may have feared the undermining influence of comparing his patron, Josiah, with Hezekiah's well-meaning but ultimately failed reform (Rosenbaum 1979).

2. The Chronicler's Depiction: Conflation or History? For more than a century the tendency of critical scholarship (e.g., *WPHI,* 222) was to dismiss the historicity of the Chronicler's sources (see Japhet 1985 for a summary of the literature). Support for the earlier position repudiating the historicity of preexilic accounts in Chronicles continued to be found in the writings of von Rad (1930) and Noth (*NHI,* 292–93, 296, though Noth [*NHI* 319–20] accepts the Chronicler's sources for his own period) and has recently received support from some scholars who dismiss the work on historiographical grounds (e.g., Welten 1973; Klein 1983; and Williamson, *1–2 Chronicles* NCBC, 15–23) and others who see the Chronicler's motivation as theological (Ackroyd 1967: 509; Gonçalves 1986: 95, 522).

While scholarly opinion is virtually unanimous that the Chronicler used the DH as a source, a wide range of scholars have begun to hold with Albright (1921) that the Chronicler possessed independent, accurate sources which he preserved without substantial amendment. Albright (1950: 62) went further, adding that archaeological evidence had begun to confirm the Chronicler's historical reliability. Authentic data could be found in tendentious as well as neutral stories since the Chronicler did not invent but selected the sources which suited his purposes. Recent surveys based on independent case studies (Halpern 1981: 35–54; Friedman 1980) have added significant evidence to these conclusions.

Because of the striking disproportion between the portrayal of Hezekiah's reform found in Chronicles (three chapters [2 Chr 29:1–33:31] totaling seventy-four verses) and Kings (three verses), the subject provides intriguing data to test the historicity of Chronicles. It is one of the few episodes where Chronicles supplies substantial information which differs in quantity and content from Kings. The disproportion cannot be dismissed by appeals to differences of viewpoint or emphasis, since although only one chapter of Chronicles (2 Chr 32:1–33) is devoted to Hezekiah's foreign policy (i.e., his rebellion and Sennacherib's response) versus three chapters in the DH (2 Kgs 18:7–20:20), virtually every element claimed by 2 Kings also appears in Chronicles' briefer version.

Sennacherib's invasion was indisputably a catastrophe for Judah and thereby undermined an acknowledged theme of the Chronicler's work (defense of the legitimate claims of the Davidic line; Freedman 1961: 438–41). Therefore, the Chronicler's detailed account of the Assyrian onslaught would be gratuitous if his history were pure invention anyway. Its inclusion would seem to lend support to the Chronicler's historicity regarding Hezekiah.

The Chronicler's history receives further support in its lack of bias in describing Hezekiah's reform itself. Though the priestly Chronicler was certainly committed to the centralization of the priesthood in Jerusalem, he acknowledges a rural priesthood in the time of Hezekiah (e.g., 2 Chr 31:15–19). Alt (*KlSchr* 2: 255–58) held that such a

decentralized priesthood is also the accepted view of Deuteronomy and did not end until the centralization of the priesthood by Josiah, whose reform exceeded the Deuteronomic legislation. Thus, in this area, Hezekiah was more faithful to Deuteronomic legislation than Josiah. The fact that the Chronicler presents this point despite its potential for thwarting his own theological commitments to centralization in Jerusalem adds support to the assessment that his presentation is relatively impartial.

3. The Nehushtan's Omission. In light of the Chronicler's detailed accounts, the omission of any reference to the destruction of the bronze serpent (Nehushtan) attributed to Moses (Num 21:6–9) is odd. The act appears exclusively in DH (2 Kgs 18:4), which otherwise provides a minimal view of the reform. For this reason, even those scholars who have doubted the reform itself have tended to accept the eradication of the Nehushtan (e.g., Rowley 1961: 425). Similar images have been found at Megiddo, Gezer, Hazor, and Shechem (Joines 1968: 245–56). The reason for Chronicles' omission of the Nehushtan's obliteration may lie in the Mushite (i.e., descendants of Moses)–Aaronide competition identified by Cross (*CMHE,* 195–215) and ultimately won by the Aaronides. The Nehushtan's exclusive association with Moses may have been sufficient cause for the Aaronide Chronicler to delete the material.

B. The Impact of Assyrian Events

A precise date of Hezekiah's reform has not been established. It is generally assumed that the reform immediately preceded his rebellion since the reform entailed politically provocative actions such as appeals to the remnants of the exiled northern kingdom and centralization of the cult in Jerusalem (*BHI,* 282). Judah sagaciously avoided the wrath of Sargon II in 714 probably by refusing to participate in the Philistine revolt (Tadmor 1958: 80–84) and eluded his interest again in 710 at the height of the Assyrian king's military successes.

Though the reform fits most logically into the period after Sargon's death in battle in 705, its less provocative elements such as the rededication of the priesthood may have been inaugurated earlier in Hezekiah's reign while Sargon ruled Assyria (cf. 2 Chr 29:3). Even the centralization of the cult with its attendant destruction of local shrines may not have drawn Assyrian ire. This position gains additional credence in light of Cogan's demonstration (1974: 72–77; cf. Spieckermann 1982, for contrast) that religious syncretism was not an element of Assyrian domination. The altar which Ahaz accepted under Tiglath-pileser III (2 Kgs 16:10–18) was not Assyrian. Therefore, religious reform may have been possible for Hezekiah without making a major political statement as has been previously believed (e.g., *BHI,* 282).

While the reform's date is debatable, Hezekiah's rebellion undeniably arose in response to the shift in Assyrian power occasioned by Sargon's death and Sennacherib's assumption. The resulting opportunity for independence ignited revolts throughout the empire. Insurrection flared from Babylon, where Marduk-apal-iddina (Merodach-Baladan, 2 Kgs 20:12–19), a perpetual thorn in the Assyrian side since Sargon's early days, led a temporarily successful uprising, to Egypt, where the invigorating 25th Dynasty offered tempting if unreliable support to potential rebels.

C. Archaeology of Hezekiah's Reign

1. Revisions in Stratigraphy. Until the 1970s, those scholars who sought to dismiss Hezekiah's reform as fiction (e.g., Rowley 1961: 425) found complementary evidence in the Deuteronomistic sparseness regarding the events and the conclusions of the excavators of the most pertinent Judean sites. Albright's conclusions at Tell Beit Mirsim (1932; 1943: 39–45) attributed Stratum A2 to a 300-year period ending with the beginning of the Babylonian deportations. This schema was followed by Starckey (1937) at Lachish where he equated Stratum III to Tell Beit Mirsim A2 and dated it from Sennacherib's campaign in 701 to the first Babylonian invasion in 597. He placed Stratum II in the slim period between the first and second Babylonian campaigns (598/7–586 B.C.E.). These conclusions tended to dominate Judean stratigraphy in Iron IIC while leaving Sennacherib's successful invasion of 701 unidentified.

O. Tufnell (1953: 55–58), however, who published the major account of Iron Age Lachish, assigned the destruction of Stratum III to 701, thereby evoking a cacophony of criticism (on the scholarly debate, see Rosenbaum 1979: 30–31). She based her conclusions on ceramic analysis, the destruction of Stratum III, and the Assyrian bas-reliefs of Sennacherib's siege of Lachish (*ANEP,* 129–32, 293–94; cf. *ANET,* 288). Subsequent excavations by D. Ussishkin (e.g., 1980; 1982) have vindicated Tufnell. See also LACHISH (PLACE). Further, Y. Aharoni's major revision of Judean stratigraphy (Aharoni and Aharoni 1976), equating the end of Tell Beit Mirsim A2 and Beth Shemesh IIC with Sennacherib's 701 destruction, has now gained wide acceptance. These conclusions have a definite bearing on Hezekiah: artifacts and strata previously associated with Josiah must now be assigned to Hezekiah.

2. The *lmlk* Stamps. Significantly, the *lmlk* store jars must now be placed in Hezekiah's reign. Their distribution in the N along Judah's border with Assyrian Samaria and in the W of the country demonstrate careful preparations to counter Sennacherib's likely route of invasion (Na'aman 1979; 1986). (Na'aman 1988 forcefully counters a critique of his conclusions by Garfinkel 1988.) Further, they demonstrate a notable degree of royal control of towns and cities which would facilitate Hezekiah's destruction of rural sacrificial sites and his centralization of worship in Jerusalem. See also STAMPS, ROYAL JAR HANDLE.

3. Jerusalem and Related Fortifications. The capital city itself yields significant evidence of Hezekiah's preparation. The Siloam tunnel (2 Kgs 20:20; 2 Chr 32:30) with its famous inscription (*ANET,* 321) is the most obvious example, and later studies have documented the tunnel's sophistication. See also SILOAM INSCRIPTION; DAVID, CITY OF (PLACE). Hezekiah also probably began the Broad Wall (Avigad 1983: 49–59). Perhaps most impressive are the increasing data substantiating the expansion of Jerusalem's population under Hezekiah. Broshi (1978) has estimated that a census under Hezekiah would have revealed some 25,000 inhabitants, five times the population under Solomon. Excavations originally undertaken by N. Avigad in 1970 point to an enlargement of the city under Hezekiah,

perhaps due to the influx of refugees from the N kingdom in agreement with 2 Chr 30:25. Such an influx may add support to the Chronicler's claim that Hezekiah invited the North to participate in his reestablished Passover ritual.

Excavations suggest that Hezekiah augmented fortifications in preparation for Sennacherib's assault and may have established administrative centers and command posts, which Halpern (fc) calls a " 'hedgehog' defense—a pattern of self-contained, fortified nodes." As part of the process, Hezekiah may have implemented a key element of his reform, destroying local altars (as excavations at Beer-sheba suggest). (Previous, similar conclusions regarding the altar at Arad must now be suspended, since scholarly debate on the subject continues.)

4. Sennacherib's Invasion. Despite the considerable preparations made by Hezekiah, the effect of Sennacherib's offensive was catastrophic. After stabilizing his eastern holdings in two initial campaigns, the Assyrian king embarked on a westward campaign which sought to suppress rebels and establish his unchallenged hegemony. The events are well documented in both the Assyrian annals (e.g., *ANET,* 287–88) and in the biblical sources (2 Kgs 18:13–19:37; 2 Chr 32:1–22; Isaiah 36–39). In addition, an echo of Sennacherib's failure to conquer Jerusalem may survive in Herodotus (2: 14–141), whom Josephus (*Ant* 10) followed.

Sennacherib utilized classic Assyrian military techniques to reduce Judah. Though the figure of 200,150 captives and the razing of 46 walled cities has been contested (see *BHI,* 286 n. 49), later scholarship has increasingly accepted the possible authenticity of the numbers (see Halpern fc. for a summary of the supporting data). Certain facts are uncontested: Sennacherib successfully captured the fortified towns of Judah (2 Kgs 18:13; 2 Chr 32:1), exacted spectacular tribute (2 Kgs 18:14–16), and failed to capture Jerusalem though he walled up Hezekiah "like a caged bird."

The seeming paradox that Hezekiah paid tribute but was never captured raised the possibility that the sources (biblical and Assyrian) refer to two separate invasions with different outcomes (*BHI,* 298–309; Horn 1966). This theory gains fundamental support from a reference to Tirhakah of Egypt, whose anticipated aid is mocked by Sennacherib's Rabshakeh (2 Kgs 19:9). Since Tirhakah did not reach the Egyptian throne until ca. 690 and since he would have been a child in 701, Bright (*BHI,* esp. 299–303) found the two-invasion theory especially persuasive. Subsequent work by Kitchen (1973a: 154–72; 1973b) showed that in 701 Tirhakah was old enough to command, thereby disabling the theory's main defense. Heavy tribute and survival in a well-fortified and well-supplied mountainous capital are not mutually exclusive; they may have been mandatory elements in Hezekiah's quest for Judah's perpetuation.

Recent studies suggest a greater acknowledgement of Hezekiah. His reform (previously doubted as a fictional reading back from Josiah) and his capacity as an administrator and strategist (denied because of erroneous stratigraphy which placed the *lmlk* stamps and considerable building in a later era) have gained acceptance as archaeological data have emerged to lend support. The literary activity of his reign already known through Micah and First Isaiah has been amplified by suggestions of a Hezekian redactor of the DH. Independent verification has also bolstered arguments for the historicity of the Chronicler and his use of sources independent of the DH. The bulk of this evidence suggests that rather than being a mere foreshadowing of Josiah's deeds, Hezekiah's accomplishments may have surpassed those of his great-grandson.

JONATHAN ROSENBAUM

HEZION (PERSON) [Heb *ḥezyôn*]. Grandfather of Ben-Hadad I, king of Syria (1 Kgs 15:18). Scholars have sometimes identified Hezion with Rezon, who became king of Damascus during the reign of Solomon (1 Kgs 11:23–24), but there is no convincing evidence for this nor does it solve any pressing chronological or historical problem. Formerly, Hezion's name (Aram *ḥazyān*) was sometimes included in the Bir-Hadad Stela, but more recent studies have proposed other readings. If Hezion was himself king of Syria, something implied but not explicitly stated by the biblical text, he probably reigned in the late 10th century B.C.E.

RICHARD D. NELSON

HEZIR (PERSON) [Heb *ḥēzîr*]. The name of two men in the OT. It may mean "swine" (*IPN* 230).

1. A priest who received the seventeenth position in the priestly order of the temple during David's reign (1 Chr 24:15). An evaluation of the historical reliability of his existence in the time of David depends largely upon the literary context of 1 Chr 24:1–19. Though generally agreed that the priestly list originated after the Exile, its exact date remains debated. See HAKKOZ (PERSON). The consensus agrees, at any rate, that Hezir represents a name from the postexilic period, rather than an individual who was contemporaneous with David.

2. A member of the Judean aristocracy who signed a document that forbid intermarriage between Judeans and other ethnic groups, insured the observation of Sabbath, and provided for the maintenance of the temple and its staff (Neh 10:21—Eng 10:20). While some commentators have thought the signees reflect authentic historical persons from the time of Nehemiah (Rudolph *Ezra Nehemiah* HAT, 173–75), the names of Neh 10:2–27—Eng 10:1–26 seem to represent "an artificial literary compilation, based on other material in Ezra and Neh" (Williamson *Ezra Nehemiah* WBC, 329).

The ultimate source of the name Hezir remains a mystery, as both occurrences appear in artificially constructed lists. It may represent a common familial name from Judah in the late Persian period.

JOHN W. WRIGHT

HEZRO (PERSON) [Heb *heṣrô*]. One of the members of "the Thirty," the distinguished group of warriors who fought for David (2 Sam 23:35, Heb *heṣrô; heṣray*, LXX *asarai;* 1 Chr 11:37, Heb *heṣrô*). He is known as the Carmelite, a noun describing his origin, the town of Carmel, seven miles southeast of Hebron in southern Judah. This town produced not only a rich landowner like Nabal, who hated David, but also a poor person like Hezro, who was devoted to him (Elliger 1966: 114–15). It is tempting to think of Hezro as a runaway slave of Nabal who joined David in the wilderness of Judah (1 Sam 25:10–11, cf. 1 Sam 22:2). His name appears toward the end of the list of "the Thirty" in 2 Samuel, an indication that he may have had a lesser rank among the group (McCarter *II Samuel* AB, 501).

STEPHEN G. DEMPSTER

HEZRON (PERSON) [Heb *heṣrôn*]. **1.** The third son of Reuben (Gen 46:9; Exod 6:14; 1 Chr 5:3). In the enumeration of the family of Jacob who migrated to Egypt (Gen 46:8–27), Jacob's sons are listed by family, according to their mothers. The family of Reuben was listed first because he was Jacob's and Leah's firstborn. Hezron also was the eponymous head of the family of the Hezronites (Num 26:6). According to Noth (*NHI*, 64), the Hezronite clan of Reuben became the Judean Hezronite clan when the Reubenites, who lived in the vicinity of Judah, were assimilated into the tribe of Judah. In 1 Chr 4:1 the genealogy of

Judah may provide some evidence for this assimilation. Hezron appears as the brother of Carmi and both are the sons of Judah, while in Gen 46:9 both are brothers but the sons of Reuben.

2. The son of Perez and the grandson of Judah by his daughter-in-law Tamar (Gen 38:29; 46:12). Hezron is included in the list of the family of Jacob who migrated to Egypt. Hezron and his brother Hamul are counted among the sons of Leah in order to complete the list of seventy people who descended with Jacob to Egypt. Hezron was the eponymous father of the Hezronites, a southern Judean clan (Num 26:6; Josh 15:3).

Hezron was an important clan in Judah. From the descendants of Hezron came the Calebites (1 Chr 2:18–24) and the Jerahmeelites (1 Chr 2:25–33), two great clans in Judah. The family of David came from Hezron through his son Ram (1 Chr 2:10–15; Ruth 4:18–19). Hezron also appears in the genealogy of Christ (Matt 1:3; Luke 3:33).

The genealogy of Hezron found in 1 Chronicles 2 presents serious problems in interpretation (Braun *Chronicles* WBC, 25–35). 1 Chr 2:9 says that Hezron had three sons, Jerahmeel, Ram, and Chelubai. 1 Chr 2:18 states that Caleb was the son of Hezron. Caleb probably was the Chelubai mentioned in 2:9. However, Caleb in another passage is said to be the son of Jephunneh the Kenizzite. According to 1 Chr 2:24 (RSV), the wife of Hezron was Ephrathah. However, the translation in the RSV depends on an emendation of the MT. The KJV translates 1 Chr 2:24 as follows: "And after that Hezron was dead in Caleb-ephratah, then Abiah, Hezron's wife bare him Ashur, the father of Tekoa." If Abiah was Hezron's wife, then the expression "and the wife of Hezron" should be read as a gloss to 1 Chr 2:21 as Williamson (1979: 355) has proposed.

CLAUDE F. MARIOTTINI

HEZRON (PLACE) [*heṣrôn*]. Station named in the description of the extreme S border of the tribal allotment of Judah (Josh 15:3). This place, whose name seems to mean "enclosure," is located between Kadesh-barnea and Addar. Alt (1953) has persuasively argued that the border list of Joshua 15 is derived from an ancient legal document delineating the territorial claims of the tribes during the period of the judges. The parallel nature of the S border descriptions in Numbers 34 and Joshua 15 suggests that both depend on a single, presumably premonarchical, tradition. It is possible that "Hazar-addar" in Num 34:4 represents a mistaken combination of "Hezron" and "Addar" from Josh 15:3. Ancient Hezron may perhaps be located at or near Ain Qedeis (Aharoni *LBHG*, 65; M.R. 100999), one of three small wells in the vicinity of the oasis of Ain el-Qudeirat (Kadesh-barnea?). This S border station is not to be confused with Kirioth-Hezron.

WADE R. KOTTER

HIDDAI (PERSON) [Heb *hidday*]. Var. HURAI. At 2 Sam 23:30 Hiddai "of the brooks of Gaash" is listed as one of David's thirty mighty men. In the parallel at 1 Chr 11:32 he is called Hurai. Thenius (*Die Bücher Samuels* KEHAT, 253), Wellhausen (1871: 215), and Smith (*Samuel* ICC, 387f.) preferred this alternate reading as the more original and indeed it is found in Origen's text (Field 1875: 586) as well as in several Greek mss. The OG, however, has *haddai* (attested in mss b o c_2 e_2) and the original reading of cod. B is *hadaoi*, which was later modified to *hadroi*. The strength of the OG reading, along with the possibility of the confusion of the letters *dalet* and *reš*, suggests that "Hiddai" was the original form.

Hiddai's home, the brooks, or the valleys, of Gaash, would be at the base of Mount Gaash, which is found in the hill country of Ephraim (Josh 24:30; Judg 2:9). Thus in this verse two Ephraimites, Benaiah of Pirathon and Hiddai, are mentioned together (Budde, *Samuel* KHC, 325).

STEPHEN PISANO

HIDDEKEL (PLACE) [Heb *hiddeqel*]. The Hebrew name for one of the four branches of the river which flowed out of the Garden of Eden (Gen 2:14). The etymology of the name can be traced as follows: Sum *Idiglat, Idigna,* Akk *Idiqlat,* Arab and Aram *Diglath,* Pers *Tigra,* Gk *Tigris*. The only other OT occurrence is in Dan 10:4 where some see possible universal connotations, in contrast to limitations tied with the Abrahamic covenant connected with the Euphrates river.

ZDRAVKO STEFANOVIC

HIEL (PERSON) [Heb *ḥî'ēl*]. A citizen of Bethel who rebuilt Jericho when Ahab reigned as king of Israel (1 Kgs 16:34). It is stated that he laid the foundation of Jericho with Abiram, his eldest son, and the city gates with Segub, his youngest son. The meaning of this statement is not clear. Some suggest that it indicates Hiel used his sons as foundation sacrifices; others take it to mean that Hiel's sons died of natural causes at the time that the city was being rebuilt. Though archaeologists have discovered bodies of infants buried in homes, it is not certain whether these infants were sacrificed to lay the foundation of the home or if they simply died of natural causes and were subsequently buried in the home. Whether Hiel's sons died a natural death or were sacrificed, the incident is taken as the fulfillment of the curse against the rebuilding of Jericho in Josh 6:26.

PAULINE A. VIVIANO

HIERAPOLIS (PLACE) [Gk *Hierapolis*]. A city in the Lycus valley of SW Phrygia, probably originated as a settlement attached to the sanctuary of the Anatolian mother goddess, worshiped locally under the name Leto.

A. The Hellenistic City
B. Jewish Settlement
C. The Church of Hierapolis

A. The Hellenistic City

It has commonly been supposed that Hierapolis received its city status from Eumenes II of Pergamum (197–159 B.C.); to his reign belongs the earliest known inscription on the site, recording a decree in honor of his mother Apollonis (*OGIS* 308). But the character of tribal names in a theater inscription points to its being a Seleucid foundation (Kolb 1974: 255–70), dating perhaps from the reign of Antiochus I (281–261 B.C.).

Hierapolis stood on a road which left the main Iconium-Ephesus highway at Laodicea and led NW to Philadelphia, Sardis, and the Hermus valley—the road along which Xerxes marched after leaving Colossae in 481 B.C. (Hdt. 7.31). It looks across to Laodicea from a terrace 300 feet high on the north bank of the Lycus (modern Çürük-su); in the plain beneath the terrace the Lycus flows into the Maeander. Behind the site a hot mineral spring wells up (one of several lime-charged springs in the neighborhood), filling the "sacred pool" and overflowing so as to cover the rocks beneath with white deposits of lime, which give the appearance of a frozen cascade. It is to these formations probably that the Turkish name Pamukkale ("Cotton Castle") is due. The medicinal properties of the hot water attracted visitors in antiquity, as they do today. On coins of Hierapolis, Asklepios and Hygieia feature either separately or together.

Hierapolis honored Apollo as its divine founder *(Apollo Archēgetēs);* the temple of Apollo which is still to be seen is a structure of the 3d century A.D., but an early temple may once have stood on the site, where his oracle was available for consultation. To the S of this temple was a cave, called the Plutonium, which was believed to be an entrance to the underworld. The *galli,* the eunuch-priests of the Magna Mater, were said to be the only living beings not to be asphyxiated by the carbon dioxide generated in the cave. The cave was filled in at the beginning of the 4th century A.D., but has been rediscovered by Italian excavators. W. C. Brice (1978: 226–27) describes his visit in 1950 to a similar cave at Hierapolis which also emitted carbon dioxide.

Hierapolis long maintained its importance as a cult center: Caracalla (A.D. 211–218) conferred on it the title *neōkoros,* "temple warden" (compare the Ephesian pride in the same title, attested in Acts 19:35). But shortly after its foundation it became a commercial center also: in particular, it was noted for the quality of its textile products. Perhaps the local water imparted a special richness or stability to the purple dye which was manufactured there from the juice of the madder root (Strabo 13.4.14). There is epigraphic evidence of a guild of purple dyers; a guild of carpet weavers and "the most august gild of wool washers" are similarly attested (*IGRR* 4.816, 818, 821, 822), all suggesting Hierapolis was a center for textile production.

Hierapolis belonged to the judicial circuit of cities called the Cibyratic *conventus,* from Cibyra, a city between 50 and 60 miles to the S (although from the 1st century B.C. on the central headquarters of the circuit were at Laodicea).

In the history of human thought the city's chief claim to fame lies in its being the birthplace of the Stoic philosopher Epictetus (A.D. ca. 50–117).

The ruined buildings on the site are all Roman; the earthquake which flattened Laodicea in A.D. 60 may also have devastated Hierapolis. The city was constructed on the grid system. One can see sections of the city walls and the main colonnaded street running NW and SE, with a monumental gateway at either end and with other streets crossing it at right angles. Down the center of each street was a channel for the disposal of sewage. Other channels carried water from the springs to various points in the city.

From 1957 onward excavation and restoration work has been carried on by Italian archaeologists, particularly on the temple of Apollo, the agora (notable for the fine locked stone of its arches), the nymphaeum, the Roman baths with gymnasium attached, and especially the theater, overlooking the city and the Lycus valley, with seating accommodation for up to 15,000 persons. The necropolis contains some 1,200 tombs, 300 of which have epitaphs.

B. Jewish Settlement

Like other cities of SW Phrygia, Hierapolis had a Jewish community, called a *katoikia,* "colony" (*CIJ* 2.775), from its earliest days as a city. Some members of this community have left epigraphic records, like the 2d-century A.D. "Marcus Aurelius Alexander, also called Asaph, of the people of the Jews" (*CIJ* 2.776), and Jewish members of some of the craft guilds (*CIJ* 2.777).

C. The Church of Hierapolis

There was a Christian group in Hierapolis about A.D. 60 (Col 4:13). It probably came into existence during the missionary campaign of Paul and his associates in proconsular Asia in A.D. 52–55 (Acts 19:10). With the other churches of the Lycus valley, the church of Hierapolis was evidently founded by Paul's colleague Epaphras (Col 1:7; 4:12).

Some time before A.D. 70 the Palestinian Christian leader Philip and his daughters settled in Hierapolis: their tombs were pointed out there toward the end of the 2d century (Eus. *Hist. Eccl.* 3.31.2–5; 3.39.9; 5.24.2). Eusebius or his sources show some confusion between Philip of Bethsaida, the apostle, and Philip of Caesarea, the evangelist (Acts 21:8–9); it is not impossible that they were the same person (Hengel 1983: 14). A local inscription (Ramsay 1897: 552) indicates the existence of a church dedicated to "the holy and glorious apostle and divine, Philip." Above the city to the NE, just outside the walls, stands the early-5th-century *martyrion* (monument) of Philip, an octagonal chamber set within a square comprising a series of rectangular chambers.

Papias, bishop of Hierapolis ca. A.D. 125, compiler of five volumes of *Exegeses of the Dominical Oracles* (no longer extant), is an important figure in the history of postapostolic tradition. Irenaeus says Papias was a hearer of "John the disciple of the Lord" (*Haer.* 5.33.4); Eusebius questions this (*Hist. Eccl.* 3.39.2).

In A.D. 172 a later bishop of Hierapolis, Claudius Apollinaris, addressed a defense of the Christian faith to Marcus Aurelius. This work, with several others ascribed to him, is lost (Eus. *Hist. Eccl.* 4.26.1; 4.27.1; 5.5.4; 5.16.1; 5.19.1–2).

The church of Hierapolis was represented at the councils of Nicaea (A.D. 325), Ephesus (431) and Chalcedon (451). Under Justinian, before the Second Council of Constantinople (553), Hierapolis became a metropolitan see, with jurisdiction over churches in the NW of the province Phrygia Pacatiana.

HIEROGLYPHICS. See LANGUAGES (EGYPTIAN LANGUAGE AND WRITING).

HIERONYMUS (PERSON) [Gk *Hierōnymos*]. One of five military governors of the Jews in the time of Antiochus V Eupator, 164–162 B.C.E. (2 Macc 12:2). The five governors have Greek names, which seems to imply that the Jews fought with local Macedonian officials, whereas 1 Maccabees 5 shows that they fought with neighboring peoples. There is no further specific information about Hieronymus himself, but the governors mentioned in the text are designated by the Greek term *strategos*. This term might refer to a commander of any rank from general to commander of a small tactical unit. Here they are set over "local" places, which likely indicates that they are commanders of lesser rank. They would not let the Jews live quietly and in peace, but whether their harassment resulted from orders from the central government or from their own initiative is not known.

HIGH PLACE (Heb *bāmâ*). A type of cultic installation in ancient Israel. The precise architecture and purpose of high places has been a subject of considerable disagreement.

A. History of Interpretation

The traditional interpretation of Heb *bāmâ* begins with the Vg's *excelsus,* whence Eng "high place" (conventional since the 1535 Coverdale Bible; cf. Wycliffe's *high things* and Luther's *Höhe*). The LXX, although generally using *hupsēlon,* approached the word very differently (see Daniel 1966: 33–53). The modern era of biblical scholarship inherited this understanding of *bāmâ* as signifying physical elevation, as well as an etymological explanation for it. The word has no known verbal root in Hebrew, but on the basis of the irreducible *qâmes* the hypothetical root **bûm* (cf. *qûm: qāmâ*), meaning "to be high," had been advanced (e.g., Pagninus 1578: 30; GKC 187). Nineteenth-century lexicographers took the newly discovered Akk topographical pl. *bamātu* as cognate to *bāmâ* and defined it accordingly (e.g., Norris 1868: 104; Delitzsch 1896: 177); this datum, in turn, entered Hebrew lexica (e.g., BDB, 119) and biblical encyclopedias (e.g., *JEnc,* 387) as confirmation that *bāmâ* must be a topographical term denoting high ground. This meaning was applied to Ug *bmt* when that word became known in the 1930s (Virolleaud 1932: 136), but almost immediately gave way to Albright's suggestion that *bmt* is an anatomical term comparable to Akk *bamtu,* "back, trunk (of animal or man)" (1934: 120 n. 86). This anatomical sense has rightly been claimed for *bāmâ* in several biblical and extrabiblical passages (Deut 33:29; Isa 14:14; Job 9:8; 1QM 12:10 and 19:3; Sir 9:2 [Heb]) and is cited in current Hebrew lexica as one of the standard meanings of the word (*HALAT,* 130–31; *CHAL,* 42).

The prevailing consensus holds, therefore, that *bāmâ* can refer both to a part of the body ("back," although the exact reference is disputed) and to a part of the landscape (a "high place"). Its Akk cognate evidently shares this semantic duality, but thus far only the anatomical sense is certain in Ugaritic. To reconcile these meanings, a common proto-Semitic ancestor capable of generating both has been posited by Albright: **bahmatu,* the medial *h* having quiesced to produce *ā* in the first syllable in the attested forms. This should have become *ō* in Hebrew (cf. **qahlu* > **qāl* > *qōl*), and suffixed forms of *bāmâ* with an initial *o*-vowel are found in the Qumran literature (1QIsa^a 14:14; 53:9; 58:14); thus, Albright reasons, the familiar *a* spelling "may be due to dialectal phenomena, *ah* being preserved in some places until after the principle that an accented *ā* became *ō* had ceased to operate" (1957: 245, 256). The *h* is preserved in such derivatives as Heb *bĕhēmâ* ("animal, beast") and Ug *bhmt* ("cattle") in which the anatomical idea has expanded from a bodily part to the entire creature, and obscure Ar *buhmatun* ("mass of rock"), which develops the topographical idea. The basic semantic nexus, however, is high-ness or, in de Vaux's words, "something which stands out in relief from its background" (*AncIsr,* 284).

1. Etymological Inferences. Over four-fifths of the some 100 occurrences of *bāmâ* in the MT refer to places where cultic acts were performed, i.e., to cultic installations of some sort. Speculation about the nature of these installations has proceeded from the aforementioned etymological considerations: whatever a bamah might be, it must somehow exhibit high-ness because that is the root meaning of the word. As Hirsch observed in 1904, "the only point in doubt is whether the bamah originally received its name from the circumstance that it was located on a towering elevation or from the possible fact that independently of its location, it was itself a raised construction" (*JEnc*, 387). These alternatives underlie virtually all subsequent efforts to describe or further identify these installations with any specificity. These efforts have produced two basic images: (1) a primitive open-air hilltop precinct, with altars, maṣṣeboth (cultic stones), and asherim (wooden cultic objects; cf. Day 1986), scattered throughout the Palestinian countryside; and (2) some sort of constructed elevation, such as a raised platform or mound. (Albright's view that bamoth were funerary installations [1957: 242–58], a variation of the platform hypothesis, is entirely without foundation: see Barrick 1975.)

Despite its pervasiveness, this etymological approach to the question is methodologically problematic. Etymologizing reveals the past history of a word and its past meaning(s), which may provide clues as to its possible (or even probable) sense in a given text, but "it cannot impose a sense authoritatively upon known usage" (Barr 1961: 158). Known usage of the word *bāmâ* suggests that it refers to built constructions of urban provenance and without a noticeable locational preference for high ground (see below). The few texts that do seem to place them in mountainous locales do not warrant the common presumption that there is a pronounced "biblical tradition that the bamoth were built on hills" (Albright 1957: 249), nor do they justify positing an evolutionary development of the bamah phenomenon itself to explain why some bamoth—virtually all of them, to judge from the biblical record—were in fact not built on hills (e.g., BDB, 119). If, on the other hand, a bamah was an artificial elevation upon which cultic acts were performed, a view much favored in recent scholarship (e.g., *AncIsr*, 284–88; Conrad 1968: 85–100; Haran 1978: 18–25), this should be reflected in the verbs and prepositions used in the texts to locate the worshipper relative to the bamah. But this is not the case. For example, the preposition routinely used in biblical reports of bamah usage is not *ʿal* as one should expect, but *b-*, suggesting *prima facie* that a bamah was something *within* which cultic acts took place. When this most embarrassing incongruity is acknowledged, appeal usually is made to the principle of prepositional "ambiguity" whereby *ʿal* and *b-* could be semantically equivalent (so, e.g., Vaughan 1974: 31). While this is a possibility to be considered (see below), the appeal amounts to circular reasoning since *b-* need be "ambiguous" in these passages only if bamoth were mounds or altars. In both cases, etymologically inspired presuppositions have been imposed onto textual evidence which otherwise would lead the interpreter in a very different direction.

2. Archaeological Influences. Vaughan's study (1974) departs from the traditional understanding of the word. From the Akk and Ug materials he deduces that the semantic origin of *bāmâ* is *anatomical* ("rib-cage, chest, back, flank, etc.") and that "there is no idea of *height* inherent in this concept at all" (10; cf. already Vincent 1948: 276). This anatomical sense is applied figuratively in the expression *bomŏtê-ʾāreṣ* (Deut 32:13; Isa 48:14; Amos 4:3; Mic 1:3), lit. "flanks of the land," the topographical nuance being supplied by *ʾeres*. Vaughan sees this phrase as a "stock poetic formula" originating in an ancient theophanic myth and referring to the mountainous terrain astride which Yahweh manifests himself in symbolic possession of the land. The mythological site of the theophany, according to Vaughan, was realized architecturally as a mound or platform which took its name from its mythic prototype (1974: 9, 11–12, 25). That the specialized technical use of the word to designate a cultic installation should have derived from a mythological image is an intriguing possibility, but Vaughan's claim that bamoth were cultic platforms does not hinge on that hypothesis. For him, the consistent semantic factor is the hill-like *shape* of the objects to which the word refers: mythological mountains or cultic platforms representing them; actual mountains (2 Sam 1:19, 25; but the word may carry an anatomical sense here: see e.g., McCarter, *2 Samuel* AB, 74–75); and grave-mounds (Isa 53:9 and Job 27:15 [both emended]) having no connection whatever with either the myth or its cultic symbolism. Implicit in Vaughan's argument is a semantic assumption not unlike the traditional etymological one.

Vaughan's conclusions are heavily influenced by recent archaeological discoveries in the Levant. A number of platformlike structures have come to light over the years and are in need of interpretation (Vaughan 1974: 37–54). A reliance upon archaeological materials is characteristic of 20th-century speculation about the bamah phenomenon. Too often, however, the relevance of these artifacts is presupposed rather than demonstrated, and the burden of proof for a particular understanding of the bamah phenomenon is shifted (as in Vaughan's case) from the texts to the artifacts (cf. Fowler 1982: 210–11). This too is methodologically questionable. A cultic installation called a "bamah" is known to have existed at all only from references to it in the Hebrew Bible (and in the inscription of the Moabite king Mesha). Archaeology has revealed the context into which those references must be placed if we are to move beyond the heavily theologized and imperfectly controlled literary traditions of the Bible to the actual life of people in biblical times (*WLSGF*, 572–87). But for something known from archaeology to be identified as a "bamah" there must be a demonstrable correspondence between the artifact and the literary descriptions. And, as one reviewer of Vaughan's monograph cautiously observes, "given our present very incomplete knowledge of what a bamah really was and looked like, we need to find an edifice actually labelled 'bamah' before we can be sure" (Ap-Thomas 1975: 107).

3. Generalizing Tendencies. Whitney's study (1979) moves in a very different direction. He maintains that "fundamentally *bāmâ* meant 'shrine' and was used of the whole cult complex, which may or may not have contained a platform" (134). Most commentators would agree that the word is such a generic designation in at least some of

its occurrences. That the bamoth of the Bible were common Canaanitish cult places is a view omnipresent in the secondary literature. Typically, a categorical distinction is drawn between bamoth—understood as open-air rustic sanctuaries—and more architecturally sophisticated urban temples (e.g., Noth 1966: 177–78; Ringgren 1966: 156–58). The fact that archaeologically known cult places in Syria-Palestine do not conform to such a sharp dichotomy has not lessened the popularity of this view (cf. Schunck 1971: 132–40, and Welten 1972: 19–37; Wright 1971: 17–32). But for Whitney *bāmâ* does not carry any specific architectural or functional connotations; bamoth were "different things in different places at different times" (147). The earliest references may be to cult places located on high ground, but by the late monarchy (whence most of the references come) the word had become an all-purpose label for "local shrines" in general (138). This view also has a wide following and, in fact, underlies the normative reconstruction of Israel's religious history: worship was conducted at "local shrines" throughout the land until the erection of Solomon's temple (cf. 1 Kgs 3:4); thereafter those sanctuaries remained the loci of popular religiosity until their final illegitimation in the reign of Josiah (e.g., *WPHI,* chap. 1). This reconstruction, anticipated already in the Talmud (*Zeb.* 14:4–8), assumes that the orders in Deuteronomy 12 to destroy the cult places "upon the high mountains and upon the hills and under every green tree" (v 2) and to worship only at "the place which Yahweh will choose" (v 5) coincide with Josiah's actions as recorded in 2 Kings 23, specifically the centralization of worship in the temple at Jerusalem and the concomitant elimination of all other sanctuaries in the country. The only non-temple sanctuaries mentioned in 2 Kings 23 are called "bamoth" and, as Whitney points out, more than one type of installation seems to be so identified: small gate shrines, royal chapels dedicated to foreign gods, large public sanctuaries, and rustic local sanctuaries (137–38). Since Josiah's reform was "Deuteronomic," these "bamoth" must be equated with the cult "places" *(hammĕqōmôt)* proscribed in Deuteronomy 12. In at least "Deuteronomistic" vocabulary, therefore, *bāmôt* is synonymous with *mĕqōmôt* as a generalization with distinctly pejorative overtones (see, e.g., *AncIsr,* 288).

This generalizing approach to the question also is methodologically problematic, for it makes the meaning of *bāmâ* in a given passage contingent upon other exegetical judgments which may be neither correct nor germane. For example, the supposed open-air rusticity of a bamah installation stems from a romanticized conception of "primitive" religious practice, buttressed by dubious ethnographical analogies and biblical passages which "though not expressly mentioning any bamah, certainly have the same type of religion in mind" (*AncIsr,* 285). Relevance is assumed, but not demonstrated. Similarly, Israel's religious history *may* have unfolded in the way supposed, or later biblical writers *may* have presented this as an idealization, but it is by no means a certainty and should not be accepted uncritically as the basis for solving all other exegetical puzzles. Reconstructing history of Israelite religion and literature by linking the cult "places" of Deuteronomy 12 with the "bamoth" of 1–2 Kings and then using that reconstruction as the basis for interpreting the "Deuteronomistic" meaning of the word is a circular argument which excludes other exegetical options at the outset; the possibility that a specific architectural or functional type of installation may be referred to even in "Deuteronomistic" passages is not seriously considered (cf. Fowler 1982: 212).

B. The Biblical Picture

The OT evidence, meager and fragmentary as it is, does yield a consistent if sketchy picture of those installations called "bamoth" by the ancient writers.

1. Language Usage. Bamoth appear to have been man-made installations. They are "built"/*bnh* (1 Kgs 11:7; 14:23; 2 Kgs 17:9; 21:3; 23:13; Jer 7:31; 19:5; 32:35; 2 Chr 33:3, 19; MI 3–4[?]) or "made"/*ʿśh* (Ezek 16:16; 2 Chr 21:11; 28:25; MI 3), "torn down"/*nṯṣ* (2 Kgs 23:8, 15; 2 Chr 31:1) or "burned"/*śrp* (2 Kgs 23:15). These verbal actions do not suggest ephemeral sacred precincts or crudely augmented natural phenomena. While this does not prove that all bamoth were man-made structures, there is no evidence that any bamah was not.

The verb *ʿlh* (in Qal) is used of bamoth in four biblical passages (1 Sam 9:13, 14, 19; Isa 15:2). This verb can express movement up to a position upon something, and also movement up to something. When upward movement resulting in superimposition is the intended sense, the destination is always subordinated to the verb by means of the preposition *ʿal:* e.g., "You shall not go up upon my altar by steps" (Ex 20:26, and 20 other examples). When *ʿlh* is used of bamoth, however, the subordination is thrice by means of the "accusative" and once by the "terminative" *h.* In none of the 35 other *ʿlh* + accusative constructions does the one "going up" demonstrably conclude his journey upon his destination. In a great many cases superimposition is obviously impossible: e.g., "the king went up (to) the House-of-Yahweh" (2 Kgs 23:2, and 10 other passages with *bayit*). When the nature of the destination will admit superimposition, the passage makes as good or better sense without this nuance. The situation with the 14 other *ʿlh* + terminative constructions is identical. Language usage suggests, therefore, that one does not climb up a bamah (as one would a hill or a stepped altar or platform), but rather climbs up to (and descends from: 1 Sam 9:25; 10:5) a bamah.

When the OT writers speak of bamah worship, they regularly use the verbs *zbḥ* and *qtr,* plus the preposition *b* (20 occurrences). In each of the 15 other occurrences of these two verbs plus *b-* in the OT, the nature of the prepositional object or the context of the passage or (in most cases) both leave no doubt that the "ritual slaughtering" and "burning of food offerings" (so Edelman 1985) is being done within something. When this activity is conducted upon something, the preposition *ʿal* is always used. There is no evidence of "ambiguity" or semantic overlapping between *b-* and *ʿal* with these two verbs. To interpret *babbāmôt* in these passages as anything other than "in the bamoth" would be completely contrary to attested Hebrew usage.

The preposition *b-* is used of bamoth in three other passages as well: Samuel is expected to preside at a sacrifice to be held *babbāmâ* (1 Sam 9:12), and the Chronicler reports that during David's reign the tabernacle and altar of burnt offerings were *babbāmâ* at Gibeon (1 Chr 16:39–

40; 21:29). There is no reason why *b-* should not mean "in" in all three. This is consistent with the use of *bā'*, primarily "to enter," in reference to bamoth in 1 Sam 10:13 (although the text is uncertain) and Ezek 20:29, the latter a lame pun purporting to explain the meaning of the term *bāmâ* (cf. Greenberg, *Ezekiel 1–20* AB, 370–71).

On the basis of the biblical writers' use of the term, therefore, it would appear that a bamah is something within which cultic acts were performed—not a piece of cultic furniture (like a platform or altar), but an installation within which cultic furniture could be housed and used. Only Isa 16:12 suggests otherwise: *wĕhāyâ kî-nir'â kî-nil'â mô'āb ʿal-habbāmâ, ûbā' 'el-miqdāšô lĕhitpallēl welō' yûkāl.* Assuming that a bamah was a platform or hill, *ʿal-habbāmâ* obviously would mean "upon the bamah." But since this passage is the sole textual basis for that assumption and contradicts the unanimous testimony of the passages just reviewed, its meaning may not be so obvious. The parallelism with *'el-miqdāšô* (cf. Amos 7:9) and the well-documented incidence of semantic overlapping (or scribal confusion) between *'el* and *ʿal* in biblical Hebrew (e.g., Ps 90:16, also with *r'h* in *Nipʿal*) suggest that *ʿal* here might actually mean "in" (cf. Isa 28:22) or simply "at."

2. Location. The most complete description of a bamah in the OT is given in 1 Sam 9:1–10:16. This one is associated with an unnamed "city" *(ʿîr)* in "the land of Zuph." The present arrangement of the text gives the impression that the installation lay somewhere outside the city wall. Vv 14 and 18a conflict on this point, and commentators have long sought to harmonize the two through an arbitrary emendation of v 14 (recently, e.g., McCarter, *1 Samuel* AB, 169). Recognition that the story as a whole is composed of two distinct strata of material (Schmidt 1970: 53–102; Miller 1974: 157–61; Birch 1976: 29–42; McCarter *1 Samuel* AB, 185–87) provides a more defensible solution. In v 14 Saul and his servant are "entering into the midst of the city" *(bā'îm bĕtôk hāʿîr)* and there meet Samuel as he was "coming out" of some unspecified location (presumably his residence) within the city en route "up (to) the bamah"—all exactly as predicted by the girls at the well in v 13. A second version of this encounter is given in vv 12 and 18a: here Samuel is walking on the road up to the city some distance ahead of Saul; the girls point him out, and Saul overtakes him "in the midst of the gate" *(bĕtôk haššāʿar)* as both men are entering the city. In both accounts the subsequent activity at the bamah would have taken place inside the city wall. The fact that this bamah actually lay somewhere within the city was obscured when the two versions of the story were combined, and Samuel's "coming out" (v 14) juxtaposed with the meeting "in the gate" (v 18)—yet it was recognized by the LXX and 4QSam[a] which harmonize the two by reading "city" in place of "gate" in v 18a (just the reverse of the usual solution today).

This is by no means an exceptional case. The preponderance of texts which specify the location of bamoth also give them an urban setting. They are said to have been "in" *(b-)* "the cities of Judah" (2 Kgs 23:8; cf. v 5 and 2 Chr 14:4), the city of Gibeon (1 Chr 16:39; 21:29; 2 Chr 1:3, 13), and all the cities of northern Israel (2 Kgs 17:9). Mesha of Moab made a bamah "in Qarhoh," probably the royal quarter or citadel of his capital city (MI. 3). "Bamoth houses" *(bāttê-bāmôt)* were found "in the cities of Samaria" (1 Kgs 13:32; 2 Kgs 17:29; 23:19); "bamoth priests" *(kōhānê-bāmôt)* were stationed "in (the city of) Bethel" (1 Kgs 12:32) and apparently also in "the cities of Judah" (2 Kgs 23:8–9). The bamoth built by Solomon "in the mountain east of Jerusalem" to serve the religious needs of some of his foreign wives (1 Kgs 11:7–8 and 2 Kgs 23:11; cf. 1 Kgs 16:32) and the bamah installation(s) in the Ben Hinnom Valley (Jer 7:31; 19:5; 32:35 [the number is text-critically uncertain]; cf. 2 Kgs 23:10 which, oddly, does not use the term) were certainly part of the cultic life of the capital city, their extramural location probably due to political considerations, and perhaps (especially for the second) the special character of the cultus conducted there (cf. Heider 1985). Ezek 6:3 speaks of the ubiquity of the bamoth, not their specific location (v 6 nonetheless does indicate an urban setting), and so too 2 Chr 21:11.

It is commonly supposed that bamoth are the object of the frequent polemic against worship conducted in the countryside "upon every high hill and under every green tree" (especially Deut 12:2; cf. Holladay 1961). But 2 Kgs 16:4 (= 2 Chr 28:4) argues against the identification: Ahaz is said to have "slaughtered animals and burned food offerings in the bamoth *and* upon the hills and under every green tree." Similarly, 2 Kgs 17:9–11 apparently distinguishes urban bamoth from hilltop installations featuring (only?) maṣṣeboth and asherim (cf. 1 Kgs 14:23 which seems defective; one does not "build"/*bnh* maṣṣeboth and asherim). The firmest evidential basis for the identification is Ezek 20:28–29 where, however, many commentators regard the pun in v 29 as a secondary or tertiary gloss (e.g., Zimmerli, *Ezekiel 1* Hermeneia, 412).

3. Appearance. The biblical record says little about what a bamah may have looked like or how it was furnished. Since sacrificial activities were conducted there, bamoth would have contained altars of one sort or another (cf. 1 Chr 16:35–40; 21:29). Some undoubtedly also possessed maṣṣeboth and/or asherim. Each bamah undoubtedly was furnished with the special paraphernalia of the cultus conducted there, the details of which are no longer extant.

In terms of architecture, 1 Sam 9:1–10:16 provides a clue. The "sacrifice" to be held "in the bamah" (v 12) is not mentioned further in the story. We are told, however, that "Samuel took Saul and his servant and brought them to the *liškâ*" (v 22a) where a meal was consumed. According to the traditional view, a *liškâ* was a supplementary structure (a shelter or dining hall; cf. LXX, Targ, Vg) not intrinsically part of the bamah phenomenon. Elsewhere, however, the term is used exclusively in reference to architectural components of the temple complex in Jerusalem, "chambers" used to house temple personnel, cultic equipment, and offerings. The Gk version of 1 Sam 1:18b (which may be textually superior to the MT) reports that the "temple" *(hêkāl)* at Shiloh also had a *liškâ*, to which Hannah retired to eat. This associational consistency and functional variety indicate that *liškâ* (possibly a Mediterranean loanword) may be the technical term for the more utilitarian architectural elements of the category of sanctuary we call "temples"—as illustrated by the Israelite temple complex at Arad, with its cult building, courtyard, and adjoining "chambers" (see Aharoni 1968; Herzog et al. 1984).

The occurrence of the term *liškâ* in 1 Sam 9:1–10:16 suggests that at least this bamah was a sanctuary of some architectural sophistication, not too different in its essentials from the sanctuary complex at Arad or, for that matter, the sanctuary complex in the royal quarter of Jerusalem—which one climbed up to and descended from, within which cultic acts were performed, which possessed *liškōt* (as well as altars, and even an asherah [2 Kgs 23:6]), which was "built" and "burned" (and, although the term is not used, was certainly capable of being "torn down")—which, in fact, meets all the criteria which the ancient writers have given us to identify a bamah.

HILEN (PLACE) [Heb *ḥîlēn*]. Var. HOLON. A levitical town in Judah (only slightly to the east of Debir) assigned to the sons of Aaron (1 Chr 6:58). The same place appears as "Holon" in a second list of such towns (Josh 15:51). The difference in spelling could be due either to mechanical error or, as Williamson (*Chronicles* NCBC, 75) suggests, to the likelihood that the Chronicler had access to another (and better preserved?) recension of the list than that preserved in Joshua. This town, along with a number of other towns in the list, probably came under Israelite control during the time of David. The prophet Jeremiah includes a Moabite town by the name of Holon in his oracle against that nation (Jer 48:21).

HILKIAH (PERSON) [Heb *ḥilqîyāhû*]. **1.** A Levite, the son of Amzi, and father of Amaziah (1 Chr 6:30—Eng 6:45). He was a descendant of Levi through Merari. His name occurs in the middle of a list justifying Ethan's rightful place as a levitical singer in the time of David. Oddly enough, his name is one among many others (see 1 Chr 6:29–33—Eng 6:44–47) not paralleled in the list of Merari's descendants given earlier in 1 Chronicles 6 (see 1 Chr 6:4—Eng 6:19; 6:14–15—Eng 6:29–30). In view of the fact that one of the unparalleled names, Hashabiah (1 Chr 6:30—Eng 6:15), occurs in connection with Ezra's activities (Ezra 8:19, 24; see also **7.** below) the second Merari list in 1 Chronicles 6 need not be the literary creation of the Chronicler, but rather a reflection of the levitical guild structure of his own day, whose very legitimacy he was seeking to underscore (Williamson *1 and 2 Chronicles* NCBC, 74).

2. A levitical gatekeeper, the second son of Hosah of the sons of Merari (1 Chr 26:11). His name appears in a chapter which attributes to the efforts of King David the elaborate levitical organization at work in a much later age. On the historicity of David's relationship to the Levites, see Hauer 1982: 41–44. It seems David had appointed Hilkiah's father, Hosah, as one of the gatekeepers in the days of the tent of the ark of the covenant in Jerusalem (1 Chr 16:38; 17:1). But in anticipation of the construction of the Solomonic temple, the Chronicler reports how the lot for the keeping of the gate of Shallecheth fell to Hosah and his sons (1 Chr 26:16). This gate was located apparently on the western side of the temple complex (yet cf. LXX B).

3. The father of Eliakim (2 Kgs 18:18 = Isa 36:3; 2 Kgs 18:26; 18:37 = Isa 36:22). He was the major-domo during the reign of King Hezekiah. In the oracle of Isa 22:20 it is said that Eliakim ben Hilkiah would succeed the arrogant Shebna as the king's major-domo. Understandably, in 701

B.C., he was one of the officials sent out from Hezekiah to parley with the Assyrian Rabshakeh during the invasion and siege of Jerusalem by King Sennacherib.

4. A levitical priest, the father of the prophet Jeremiah (Jer 1:1). Possibly he was a descendant of Abiathar, the last chief priest of the house of Eli, as he resided in the priestly town of Anathoth in the land of Benjamin, whither Abiathar centuries before had been exiled by Solomon (1 Kgs 2:26–27). This possible Shiloh connection may also be noted in Jeremiah's "temple sermon" (Jer 7:12, 14; 26:9).

5. A levitical high priest, the son of Shallum, and father of Azariah (III?), and grandfather of Seraiah (1 Chr 5:39–40—Eng 6:13–14; 9:11; Ezra 7:1–2). He was active during the reign of King Josiah (2 Kgs 22:4 = 2 Chr 34:9). It was he who found "the Book of the Law" in the temple which helped play a role in Josiah's far-reaching reform movement (2 Kgs 22:8, 10, 12, 14; 23:4, 24; 2 Chr 34:14, 15, 18, 20, 22) and this king's celebration of the Passover (2 Chr 35:8; 1 Esdr 1:8). See JOSIAH (PERSON). Interestingly, in both Neh 11:11 and 1 Chr 9:11 he is called the son of Meshullam (= Shallum?). While 1 Chr 9:11 entitles this Hilkiah the father of Azariah, Neh 11:11 dubs him the father (not the grandfather) of Seraiah. He is also regarded as the progenitor of Ezra the priest (Ezra 7:1; 1 Esdr 8:1; 2 Esdr 1:1). In the apocryphal book of Baruch this same high priest (LXX *chelkios*) is evidenced. Here Hilkiah is described as the son of Shallum, but he is also named as the father of an otherwise unknown priest named Jehoiakim who supposedly was the recipient of a gift of money collected among the exiles and sent to Jerusalem (Bar 1:7).

6. The father of Gemariah, the envoy of King Zedekiah to King Nebuchadnezzar (Jer 29:3). While on his mission he carried a letter from the prophet Jeremiah to the Jews in Babylon who had been exiled by Nebuchadnezzar in 597 B.C.

7. One of the priests who returned from exile with Zerubbabel and Jeshua in 536 B.C. (Neh 12:7). He is one of twenty-two leaders cited in Neh 12:1–7. As four major phratries are known to have accompanied Zerubbabel and Jeshua (Ezra 2:36–39 = Neh 7:39–42 = 1 Esdr 5:24–25) the mention of these twenty-two leaders here must refer to leaders of subgroupings within the same four larger phratries (Clines *Ezra* NCBC, 223). This Hilkiah became the progenitor of Hashabiah, the head of one of the important priestly families in the time of Joiakim (Neh 12:21), the high priest who succeeded Jeshua (Neh 12:10) and who became the father of Eliashib, the contemporary of Nehemiah (Neh 3:1).

8. A contemporary of Ezra (Neh 8:4). He may be the same person as **7.** above. He is named as one of a number of individuals who stood at the right hand of Ezra the priest as he read "the law of God" to the people. The closest that the parallel verse in 1 Esdr 9:43 comes to repeating his name is in its reference to the name Hezekiah [LXX *ezekias*].

9. The father of Susanna, Joakim's virtuous wife who was falsely accused of adultery and vindicated by the apocryphal Daniel (Sus v 2).

10. A progenitor of Baruch, the son of Neraiah (Bar 1:1). Baruch was the secretary of the prophet Jeremiah (Bar 1:1; Jer 36:4). The name occurs in the very first verse of Baruch, the apocryphal book purported to have been written by Baruch while in Babylonian captivity. The book of Jeremiah seems to support at least the latter part of the full ancestry given in Bar 1:1, when it calls Baruch "the son of Neriah the son of Mahseiah" (Jer 32:12). What is more, the historical Baruch seems to have had a brother by the name of Seraiah who is likewise described as "the son of Neriah, son of Mahseiah" (Jer 51:59). See BARUCH (PERSON) #1.

11. The son of Eliab and father of Elijah and grandfather of Ahitub. He is named as an ancestor of the apocryphal Judith, the pious widow who delivered her people from Holofernes (Jdt 8:1).

HILKIAH THE HASID. Abba Ḥilkiah is an obscure Jew. He was "a great Hasid" (*hyh Ḥsyd gdwl; b. Taʿan.* 23a), but that description does not necessarily place him among the Hasidim. He lived in the second half of the 1st century B.C.E., since he was the grandson of Ḥoni Ha-Meaggel. Through the power of prayer he was able, like his famous grandfather, to control the fall of rain. While Ḥoni was asked by crowds to cause the rain to fall, Abba Ḥilkiah once received scholars sent by the rabbis who wanted him to influence God to send rain. He was exceedingly poor and had to seek work as a laborer and to borrow a cloak. It is reported that he performed numerous mysterious acts and had penetrating insight. Although a renowned miracle worker, he is never reported to have performed healing miracles.

JAMES H. CHARLESWORTH

HILLEL (PERSON) [Heb *hillēl*]. The father of the Israelite judge Abdon (Judg 12:13, 15).

HILLEL THE ELDER. Pharisaic leader of the late 1st century B.C.E., eponym and perhaps founder of the school of Pharisaic rabbinic leaders that ultimately shaped the Jewish tradition.

Precisely on account of the importance that came to be attached to Hillel's name, the task of extracting biographical information from the legends that surround him is extremely difficult. Hillel came to be remembered as the ideal sage (see Urbach 1971: 128), and stories recounting his acts and teachings are sometimes demonstrably didactic rather than historical in origin (Neusner 1971: 286). Even if the facts of the matter therefore cannot always be ascertained, however, the image of Hillel that was created by his successors can be described with some clarity.

Hillel is said to have immigrated as a young adult from Babylonia to Jerusalem (his Davidic ancestry was almost

certainly a later invention; see Levi 1895); some traditions describe him as having arrived already possessing great learning (*y. Pesaḥ.* 6:1, 33a; *t. Neg.* 1:16; *Sipra Tazria* 9:16), others place him in the chain of Pharisaic (i.e., Jerusalem) tradition as the disciple of Shemaiah and Abtalyon (e.g., *m. ʾAbot* 1:12; *Ḥag.* 2:2) without reference to any previous teachers. He quickly rose to prominence, and according to tradition after solving a problem concerning the Passover offering that no one else could settle he became the leader (*nāśîʾ*) of the entire movement (*y. Pesaḥ.* 6:1, 33a; *b. Pesaḥ.* 66ab; *t. Pesaḥ.* 4:13). Later generations identified him with other great founders or refounders of the tradition (Moses: *Sipre Ve-Zot Ha-Berakhah* 357; Ezra: *b. Sukk.* 20a; *Soṭa* 48b); of his successors, only Yoḥanan b. Zakkai and Akiba were considered his equals.

The enactment most commonly associated with Hillel's name is the *pĕrôzbûl* (from the Gk *prosboulē*), a procedure whereby creditors could avoid the cancellation of debt every seven years; this innovation is said to have been ordained because lenders would refuse to make loans as the sabbatical year grew closer (*Šeb.* 10.2–4; *Sipre Reeh* 113; see Neusner 1971: 217–23).

Hillel's reported teachings, especially the series of sayings included in the Mishnaic tractate *ʾAbot* ("Ethics of the Fathers") embody a number of fundamental rabbinic conceptions, such as "Do not separate yourself from the community" (2:4), "If I am not for myself who will be for me, but if I am for myself alone what am I?" (1:14), or "Be among the disciples of Aaron, who loved peace and pursued it" (1:12). Similarly, his behavior in numerous situations is portrayed as that of the ideal sage or scholar of Torah: when he could not afford the fee to a public lecture, he hid on the roof of the building and listened through a skylight even though he wound up covered by snow (*b. Yoma* 35b), and when badgered by a would-be convert who would accept Judaism only under impossible conditions he replied, "Do not do to another what you would not wish done to yourself; that is the whole Torah. The rest is commentary; go and study" (*b. Šabb.* 31a).

The earliest known list of rules (*middôt*) for proper exegesis of the Torah is attributed to Hillel, though it is nowhere suggested that Hillel actually invented the procedures in question or formulated their enumeration. These procedures appear in the story about the Passover offering already mentioned, and are also listed in his name at *t. Sanh.* 7:11.

HIN [Heb *hîn*]. See WEIGHTS AND MEASURES.

HINNOM VALLEY (PLACE) [Heb *gê hinnôm*]. A narrow gorge curving along the W and S sides of Jerusalem. The valley begins near the modern Jaffa Gate as a shallow valley, turns S at the gate for approximately a half mile, and winds to the E, deepening to become a gorge as it reaches the Kidron Valley. Besides the designation "Valley of Hinnom" (Josh 15:8; Neh 11:30), the valley is also referred to as "valley of the son of Hinnom" (*gê ben-hinnôm;* Josh 15:8 [var.]; 18:16; 2 Chr 28:3; 33:6; Jer 7:31–32; 19:2, 6; 32:35; Q in 2 Kgs 23:10), "valley of the sons of Hinnom" (*gê bĕnê-hinnôm;* K in 2 Kgs 23:10), and "the valley" (*haggayʾ;* 2 Chr 26:9; Neh 2:13, 15; 3:13; Jer 2:23; cf. 31:40). These forms of "son" or "sons of" suggest that Hinnom is a personal name.

A. Hinnom in the Biblical Record

The Valley of Hinnom was accessed from Jerusalem through the Potsherd Gate (Jer 19:2) and the Valley Gate (Neh 2:13, 15; 3:13). The valley marked the E to W boundary between the tribal holdings of Judah and Benjamin (Josh 15:8; 18:16).

During the Monarchy, the valley was the site of idolatry. It was there that kings Ahaz and Manasseh burned incense and sacrificed their own sons as burnt offerings to Molech (2 Chr 28:3; 33:6). As a reform measure to prevent the Israelites from such practices, Josiah defiled the Topheth, the junction of the Hinnom, Kidron, and Tyropoeon valleys below Siloam near Jerusalem (2 Kgs 23:10).

By the time of Jeremiah the Valley of Hinnom was infamous for Baal worship, so much so that Jeremiah could simply refer to it as "the valley" (Jer 2:23). Jeremiah prophesied that because of judgment for the sacrifice of children in Hinnom, there would be so many dead on the Day of the Lord that the valley would be renamed the Valley of Slaughter (Jer 7:31–32; 19:5–6). The valley was the N limit of the postexilic settlements of the tribe of Judah (Neh 11:30).

In light of passages which speak of the judgment upon Israel's enemies in a valley near Jerusalem (Isa 30:29–33; 66:24; Joel 3:2, 12, 14) and the worship of underworld deities (Molech) in the Valley of Hinnom, the valley became a fiery place of judgment known by the transliteration "Gehenna." Gehenna was both a place of eschatological judgment in the environs of Jerusalem and an otherworldly place of judgment for the wicked. See GEHENNA (PLACE).

B. The Location of Hinnom

The location of the valley has been identified with any of the three valleys outside Jerusalem: the Kidron Valley E of Jerusalem, the Wâdī er-Rabâbi to the W of Jerusalem, and the Tyropoeon Valley which lies in between these two valleys. The identification which emerged at the turn of the century and still enjoys scholarly consensus is the Wâdī er-Rabâbi.

The Kidron Valley was the identification popular with early Christian, Moslem, and Jewish writers. The Kidron probably became a candidate when the location of the Valley of Hinnom was uncertain, but yet associated with fiery judgment. In light of Isa 66:24 which describes a scene of fiery judgment of Israel's enemies visible from the Temple Mount, the Kidron Valley probably was associ-

ated with Hinnom because it lies the closest to the Mount. This identification is questionable because the Kidron is never called a *gay'* (valley without a winter brook, a gorge), as is Hinnom, but a *naḥal* (a valley with a winter brook, a wadi). Also, the Valley Gate which opened into the Valley of Hinnom did not lie on the E of Jerusalem before the Kidron, but on the W over either the Tyropoeon or Wâdī er-Rabâbi near the present Jaffa Gate.

The Tyropoeon Valley is usually no longer associated with the Valley of Hinnom. During the Monarchy, in the period of Ahaz and Manasseh, the Tyropoeon lay within the walls of Jerusalem and child sacrifice would have been practiced outside the walls of the city. The Wâdī er-Rabâbi is the best identification, fitting the data of Joshua that the Valley of Hinnom ran E and W and lay outside the city walls. According to Joshua, the valley began in En-rogel. If the modern Bîr Ayyûb is correctly identified as En-rogel, then the Wâdī er-Rabâbi which begins there is the Valley of Hinnom.

DUANE F. WATSON

HIRAH (PERSON) [Heb *ḥîrâ*]. The Adullamite mentioned in Genesis 38, the Tamar and Judah interlude of the Joseph story, with whom Judah was staying (Gen 38:1) when he married the Canaanite woman, the daughter of Shua. In vv 12 and 20–23, he is described as Judah's friend who accompanied him to Timnah for sheep shearing, and who was sent by Judah with a kid to pay the prostitute (the disguised Tamar) for her sexual favors and to redeem the pledges (his staff and seal) which Judah had left with her. In these verses, the LXX and Vg call him Judah's shepherd *(poimēn, pastor, opilio)* rather than his friend, which probably resulted from a reading of *rō'ehû*, "his shepherd," for *rē'ēhû*, "his friend." Some scholars have seen Hirah as an elder of a particular tribal group in the Shephelah or as representing a tribal designation.

GARY H. OLLER

HIRAM (PERSON) [Heb *ḥîrām*]. Var. HURAM, HURAMABI. The name of two persons in the Hebrew Bible, both associated in some way with Tyre.

1. A king of Tyre (ca. 969–936 B.C.E.) who was involved in commercial relations with David and Solomon (2 Sam 5:11; 1 Kgs 5:15—Eng 5:1). There is some confusion over the spelling of Hiram's name. It is usually found in the form *ḥîrām* (2 Sam 5:11 and 1 Kgs 5, 9 and 10), except in 1 Kgs 5:24—Eng 5:10 and 5:32—Eng 5:18 where it is spelled *ḥîrôm*. The Chronicler (2 Chr 1:18–2:15—Eng 2:1–16) invariably uses a variant form, *ḥûrām*. Josephus *(Antiquities; Contra Apionem)* uses the form "Hirom" *(Eiromos)*. The biblical name Hiram is a shortened version of the Phoenician "Ahiram" *('ahiram)*, which is found as the name of a king of Byblos on an inscribed sarcophagus at Byblos (ANET, 661).

Our information about Hiram and Tyre during this period is dependent upon the biblical traditions and the Jewish historian Josephus. Katzenstein (1973: 75–115) provides a discussion of some of the problems of interpreting and correlating these sources. According to Josephus (*AgAp* 1.106–11), Tyre kept very detailed chronicles of its internal affairs and foreign relations. Josephus draws upon the biblical account and two other historians, Dius and Menander of Ephesus, using the no longer extant history of Dius (*AgAp* 1.112–15; *Ant* 8.147–49), "an accurate historian of Phoenicia," in outlining the main achievements of Hiram's reign. Dius reportedly credits Hiram with the construction of embankments to level the eastern part of the city, the enlargement of the city, the creation of a causeway to the temple of Zeus (Baal) and the logging of timber from Lebanon for the construction of temples. Dius also reports that Hiram and Solomon used to set riddles for each other as part of a wager: Hiram, it seems, lost a large part of his wealth gambling with Solomon until Abdemun ("Abdemon" in *Ant* 8.149) solved them and recuperated even more money from Solomon, who was unable to solve the riddles he posed. Josephus claims (*AgAp* 1.111) that much of this correspondence was still preserved in the Tyrian archives during his own time. His other source, Menander of Ephesus, adds further information about Hiram (*AgAp* 1.116–121; *Ant* 8.144–460). He reports that Hiram succeeded his father Abibaal *(Abibalos)*, lived for fifty-three years and reigned for thirty-four years. Apart from the general building program mentioned by Dius, Menander recounts that Hiram also demolished a number of temples, built shrines to Heracles (Melkart) and Ashtarte, and conducted a successful campaign against Utica for its refusal to pay tribute. The reliability of Josephus' information is difficult to assess without further independent evidence, particularly in light of the apologetic nature of his writings.

The strategic position of Tyre, modern-day Ṣûr ca. 40 km south of Sidon, on the Mediterranean littoral was enhanced by its location on a small island offshore which protected it against siege and contributed to its rise as one of the most important maritime powers in the eastern Mediterranean. The Phoenician colony of Carthage in North Africa was founded in the 9th century B.C.E. along with other trading colonies in Spain. The biblical account of Hiram's relations with David and Solomon, not unnaturally, concentrates on their major commercial activities. Hiram is said to have supplied workmen and raw materials for the palace of David (2 Sam 5:11) shortly after the capture of Jerusalem. Soggin (1984: 56) believes that since Hiram was a contemporary of Solomon any overlap ought to come at the end of David's reign, not the beginning. He is not able to offer a convincing explanation for this reference except to say that the sources were probably confused over the chronology. Garbini (1986: 22–25) also questions the veracity of 2 Sam 5:11 since the biblical chronology would mean that Hiram reigned for a minimum of fifty-four years, which conflicts with Josephus' information on his life and reign. This problem has been noted by McCarter (*2 Samuel* AB, 145–46), who thinks that

it is chronologically misplaced and is to be attributed to the Deuteronomist.

The two biblical accounts (1 Kgs 5:15–32—Eng 5:1–18 and 2 Chr 1:18–2:15—Eng 2:1–16) differ considerably with regard to Solomon's relationship with Hiram. 1 Kgs 5:15 (Eng 5:1) reports that Hiram made the initial contact after Solomon's accession to the throne. He then agreed to Solomon's request for timber and labor for his massive building projects in return for an annual shipment of wheat and oil. The Chronicler (2 Chr 2:1—Eng 2:3), however, credits Solomon with initiating the transaction for raw materials and skilled labor necessary for the building of the temple. The wheat, barley, wine, and oil was to be given to the workers rather than sent to Tyre to feed its population. This account appears to have been edited in line with the Chronicler's idealization of Solomon. It is generally concluded that Solomon's temple was designed by Phoenician craftsmen in accord with Syro-Palestinian models (Bright *BHI,* 218), presumably adapted to fit the Israelite milieu.

Kings and Chronicles also report important commercial activities during the reigns of Hiram and Solomon (Peckham 1976). Hiram is said to have supplied Solomon with ships and sailors for the commercial fleet at Ezion-geber on the Red Sea (1 Kgs 9:26–28; 10:11, 22; 2 Chr 8:17–18; 9:10, 21). The exact details of this commercial relationship and the precise extent of the trade network are not easy to determine. It is not clear whether Solomon or Hiram owned the fleet (1 Kgs 9:26–28; cf. 10:11–12) or whether they combined their ships as part of the commercial operations (1 Kgs 10:22). It seems that this fleet operated along the African and Arabian coasts of the Red Sea, dealing in high-cost and low-bulk luxury items such as gold, silver, ivory, and exotic animals. The location of Ophir and Tarshish are uncertain. Ophir is variably placed in India, Somaliland, and Arabia, while Tarshish is thought to have been in Spain or Cilicia (Dillard *2 Chronicles* WBC, 66, 73). Ophir is mentioned on ostraca from Tell Qasile dating from the 9th or 8th centuries. The Chronicler's reference to Solomon and Hiram's fleet visiting Tarshish (2 Chr 9:21) is usually viewed as a misunderstanding of the term "ships of Tarshish" (1 Kgs 10:22). It is hardly feasible that a fleet would circumnavigate Africa in order to trade in the Mediterranean. This phrase is taken to refer to a particular type or class of ships (Gray *Kings* OTL, 267). The two locations have also been understood to refer to a mythical or symbolic geography indicating that the fleet traded far and wide (Soggin 1984: 78). Israel and Phoenicia sat astride the major overland trade routes between Africa, Asia, and Europe and with the development of maritime activities along the African and Arabian coasts must have been able to fully exploit their strategic position. Hiram's trade relations appear to have been cemented by marriage since Solomon is reported to have married a Sidonian princess (1 Kgs 11:1). Clement of Alexandria (*Strom.* 1.114) quotes Menander of Pergamum that Hiram's daughter was married to Solomon when Menelaus visited Phoenicia after the capture of Troy.

The report that Solomon ceded twenty cities "in the land of Galilee" to Hiram (1 Kgs 9:10–14) is often interpreted as inferring that his trading operations ran into serious trouble and he was forced by debt or by the need to raise capital to give Hiram these cities (Bright *BHI,* 222; Miller and Hayes *HAIJ,* 216). Donner (1982) has argued that Hiram exploited commercial advantages to the detriment of Solomon's kingdom. Gray (*Kings* OTL, 240) argues that the term *ʿîr,* "city," refers rather to "villages." Their exact location is uncertain. The phrase "the land of Cabul" (cf. Josh 19:27) would suggest the vicinity of Acco. Gray (*Kings* OTL, 241) rejects the popular etymology and understands the term as a passive participle from the Arabic cognate *kabala,* meaning "mortgaged." Josephus (*Ant* 8.141–42) refers to the "land of Chabalon" *(chabalon)* and states that this is the Phoenician for "not pleasing." The Chronicler's version of this episode (2 Chr 8:1–2) presents a different picture in which Solomon rebuilt the cities given to him by Hiram and settled Israelites in them. Once again this would appear to be a reflection of the theological idealization of Solomon in the work of the Chronicler. Willi (1972: 75–78), however, believes that the Chronicler based his report on a text of Kings that was corrupt. Miller and Hayes (*HAIJ,* 216) conclude that Hiram controlled the Mediterranean coast and a large area of the Jezreel Valley by the end of Solomon's reign.

2. A skilled craftsman and metalworker responsible for the decoration of Solomon's temple, including the erection of Jachin and Boaz (1 Kgs 7:13–47). He is called Hiram *(hîrām)* in 1 Kgs 7:13, 45, Hirom in 1 Kgs 7:40 *(hîrôm;* LXX *cheiram),* Huram *(hûrām)* in 2 Chr 4:11, and Huramabi *(hûrām³ābî)* in 2 Chr 2:13; 4:16. The addition of the element *³abî* may be part of the name or it has been explained as a title, "my master (craftsman)" (Dillard *2 Chronicles* WBC, 20).

The details of his parents are also confused. In 1 Kgs 7:14 he is said to be the son of a Tyrian father and a woman of Naphtali. However, in 2 Chr 2:12 his mother is remembered as a Danite. Dillard (*2 Chronicles* WBC, 4–5) believes that the Chronicler changed Huramabi's descent to that of a Danite in order to draw a parallel with Oholiab and the construction of the tabernacle. The Chronicler draws a parallel between the construction of the temple and the making of the tabernacle by comparing Solomon with Bezalel and Huramabi with Oholiab. The addition of the element *³ab* to the end of his name has also been explained as making the parallel with Oholiab more explicit. The timing of the introduction of Huram in the Chronicler's account draws out the parallel further since in 1 Kgs 7:13–47 he is introduced only after the completion of the temple and palace (1 Kgs 6:38–7:1) and is responsible only for the bronze work (1 Kgs 7:13–47). In the Chronicler's account Huram arrives at the very beginning of the building of the temple and is responsible for extensive craftwork corresponding to the timing and range of work carried out by Oholiab on the tabernacle.

HISTORIOGRAPHY. Because a main component of biblical writings is narrative about past persons and events, "historiography" (the recounting of the past) is a major element in biblical literature. This entry consists of three articles that attempt to put biblical historiography in context. The first explores history writing in the great cultures of Mesopotamia; the second focuses specifically upon Israelite historiography especially as this is attested in the Old Testament; and the third surveys historiography in the Greco-Roman world.

MESOPOTAMIAN HISTORIOGRAPHY

Ancient Mesopotamian civilization was made up of three major peoples, the Sumerians, the Babylonians, and the Assyrians, and the cultural continuity from the Sumerians to the Assyrians and Babylonians is a vital factor in the genius of Mesopotamian civilization and certainly in the attitude of these people toward the passage of time and past events, which is reflected in what are called "historiographical texts." The Babylonians and Assyrians were the cultural heirs of the Sumerians and despite the fact that they spoke a language which was entirely different from the Sumerians their ideas and customs were very much conditioned by the earlier civilization. Since Mesopotamian civilization endured for over 3000 years inevitably some changes did take place and new developments appeared after Sumerian times; nevertheless the innovations in Assyrian and Babylonian times were surprisingly few and limited at least in their view of world events. It is also a fact that although Assyrian and Babylonian civilizations were contemporaneous and had a common heritage, there were some differences in the way they wrote about their past and about the passage of time in general. Babylonian historians were much closer in their views to Sumerian historians than were Assyrians. Assyrian royal scribes were much more concerned with the image of the king and his activity as a warrior whereas Sumerian and Babylonian scribes were more interested in the religious and peaceful activities of their rulers. This fundamental difference comes out very strongly in their writing about the past.

The historiographical texts, with which we are concerned here, form part of what has been called the "stream of tradition," that is, texts which were preserved in Ancient Mesopotamian libraries. There is some evidence of an oral tradition in Sumer, Babylonia, and Assyria in historical times which has survived in later literature about such figures as Semiramis and Ahiqar, and this is an indication that contemporaneous with the official records of past events there were popular tales being passed down in the vernacular. Toward the end of Mesopotamian civilization, just after the conquest of Alexander the Great, a Babylonian priest, Berossos, wrote a history of Babylonia in Greek in order to educate the Greeks about what a real civilization was like, for the Babylonians regarded the Greeks as barbarians with no history or culture.

Let us first describe briefly the various types of historiographical texts and then conclude with a discussion of Mesopotamian ideas of the past. There were three major types of historiographical texts: royal inscriptions, chronographic texts, and historical-literary texts. Royal inscriptions in Sumer, Babylonia, and Assyria were originally written as pious reports by the ruler to a god that he had performed some deed to honor his commitment as representative of the god on earth. This usually involved a building enterprise such as the excavation of an irrigation canal or the construction of a temple. Thus in origin, royal inscriptions were building inscriptions. From this original purpose royal inscriptions developed into elaborate records of royal achievements written not only as reports to the god but for future peoples to read and admire. In Sumer and Babylonia the chief content of these inscriptions, in addition to the description of the building projects, concerned religious matters. Military events, even in the heyday of the NB Empire, were rarely mentioned. This is in contrast to Assyrian royal inscriptions where the major part of the narrative concerned the military campaigns of the Assyrian kings. In fact in Assyria, a special type of royal inscription, annals, developed; that is, year-by-year accounts of the royal campaigns in chronological sequence.

The term "chronographic texts" covers a wide variety of compositions, most of which could be characterized as either king lists or chronicles. Among the many documents belonging to this general category were the Sumerian King List, the Assyrian King List, various lists of Babylonian kings, and the Babylonian Chronicle series. The feature all of these texts have in common is an attempt to narrate or list information in chronological sequence.

The category "historical-literary texts" is very amorphous and includes a number of compositions which are really unique. Among these were the historical epics, the prophecies (see also APOCALYPSES AND APOCALYPTICISM [AKKADIAN]), and pseudo-autobiographies. The feature which all of these individual texts have in common is that they present a description of historical events in a highly developed literary style.

Now let us turn to Mesopotamian ideas of the past and the passage of time in general as these ideas appear in the compositions described above as well as in some other sources. The most prominent feature is that Sumerians, Babylonians, and Assyrians were intensely interested in their past and conscious that their civilization had a long history. This comes out very strongly at the end of their civilization when Berossus set about the task of educating the Greeks on what an ancient civilization was all about. This fundamental interest in their history was intuitive and in many ways as essential to them as eating or drinking. This is apparent in the Babylonian Chronicle series, which is a series of cuneiform tablets upon which the history of Babylonia in the late period is succinctly de-

scribed year by year. Inevitably events had to be selected according to what the scribes regarded as "important" and all events revolved around the king of Babylonia. Nevertheless within these restrictions the presentation of events was quite objective and so, for example, the Babylonian chroniclers recorded impassively Babylonian defeats on the battlefield. In other words they simply wanted to record each year the most important events in Babylonian history for the sake of recording them.

Ancient Mesopotamians were not above using history for other purposes, however. Causes could be furthered and ideas disseminated by means of compositions about former times. There are many chronographic texts which were written in order to justify institutions and promote theories. Thus an Assyrian document called the Synchronistic History, a brief description of Assyro-Babylonian relations over several centuries, was written to prove that whenever Babylonia attacked Assyria, Babylonia was in the wrong and lost; this text was written in a period when Assyria in fact was losing on the battlefield to Babylonia and was an attempt to stir up Assyrian morale. In the same vein the Cuthean *Legend of Naram-Sin* was written in the late period to revive interest at the royal court in divination by extispicy, the examination of animal entrails, in contrast to the increasing popularity of divination by astrology.

The ancient Mesopotamian view of the passage of time and of the past in particular is, after several decades of modern scholarship, reasonably clear. To the Sumerian, Assyrian, and Babylonian past, present, and future were all part of one continuous stream of events in heaven and earth. There was a beginning in the distant past but there was no middle or end; gods and men continued *ad infinitum*.

ISRAELITE HISTORIOGRAPHY

Since the mid–19th century, under the influence of the historicism of Herder and Hegel and in reaction to the empiricism of French and English scholarship, the genre of historiography has been increasingly used to describe biblical narrative. Although throughout the history of its use in biblical scholarship, and in modern usage generally, the term "historiography" often loosely refers to any of the many genres of prose narrative including tale and story, imaginary or real, the ancient and particularly the classical Greek genre of historiography used the term in a much narrower, more restrictive sense. This more distinctive meaning has been maintained also in its present usage, namely, as a specific literary genre relating to critical descriptions and evaluations of past reality and events, in contrast to more fictional varieties of prose.

A. Nonbiblical Historiographic Traditions

1. Hittite Historiography. An essential aspect of early Hittite historiographical texts is that the truth of statements about historical or mythical time is explicitly maintained or challenged (Cancik 1970: 7–8). The concepts of truth, facticity, and historicity comprise a central pivotal concept in the writing of the annals of Hattusili I and especially of Mursili II (Cancik 1976: 101–84). Similarly, the Babylonian Chronicle (747–539 B.C.), in contrast (for example) to the religiously tendentious Assyrian annals, also seems to hold historicity as a central structural value (Van Seters 1983: 79–80). It is certainly from such annals and chronicles that ancient Near Eastern historiography develops, separate and independent of the epical and literarily fictive narrative traditions.

2. Greek Historiography. Within Greek literary traditions, a similar concern for historicity developed among the *logographoi* ("prose writers") who considered their task one of *historía* ("research") seeking to offer a true and correct version of both the traditional past and of mythology. The first to systematically evaluate and criticize traditional Greek folk narrative with logic and rationality was Hecataeus of Miletus, who had a wide personal experience of travel and a considerable knowledge of both geography and ethnography. While much of the work of his successors, including Herodotus, was ethnographic, archival, and antiquarian in nature, the critical task which Hecataeus established with *historía* became the dominant factor in the "scientific" history of Thucydides' account of the Peloponnesian War.

Early Greek historiographers, like their ANE counterparts, developed the genre of *historía* in terms of rational critical research and as an evaluative science, in contrast to the more imaginative literary and poetic traditions of epic and mythology. The criterion for this discipline of historiography was historicity: the truth of the events recounted.

In sharp contrast to this extensive historiographical tra-

dition of Greece from the early 5th century B.C. on, and to some extent, even to that of the Hittites of a much earlier age, biblical tradition does not present us with any critical historiographical production prior to the Hellenistic work of Jason of Cyrene, which has been summarized in 2 Maccabees (2 Macc 2:23). Certainly it is most likely that from the time of the Assyrian Empire, the minor political courts of Syria-Palestine, and those of Samaria and Judah among them, maintained the kinds of lists, inscriptions, and annals, and even perhaps court chronicles, which we find in Assyrian and Mesopotamian records. However, such early historical forms we know only by way of later reference (e.g., of Tyre: Josephus *Ant* 7.144–46; 9.283–85; *AgAp* 1.155–57; of Byblos: Philo of Byblos [Attridge and Oden 1986]; of Israel: 1 Kgs 14:19, etc.; of Judah: 1 Kgs 14:29, etc.) and such references may either have been invented, or like perhaps the Books of Jashar (Josh 10:13), of the Wars of Yahweh (Num 21:14), of the Acts of Solomon (1 Kgs 11:41), of the Toledoth of Mankind (Gen 5:1), and of the Law of Moses (Josh 8:31) have been non-historiographical sources for the biblical tradition.

Although it is commonplace today to refer to "the historical books," to Deuteronomistic and even Yahwistic "histories," to "patriarchal biographies" and a "court history" of David, an equivalent of the word "history" does not exist in Hebrew, and a developed genre of historiography is particularly difficult to associate with the kind of prose narratives collected in the Hebrew Bible. Historiography proper seems unlikely to have been part of the Palestinian literary culture prior to the Hellenistic period. Both 2 Maccabees and Josephus stand fully within the tradition of Greek historiography, in striking contrast to Hebrew prose narrative.

The role of historiography in biblical literature is an issue of wide disagreement among biblical scholars. This debate has taken quite distinct but closely interrelated directions. The definition of historiography has been broadened to include a wider range of narrative prose. Dominant examples of this tendency are both the common perception of biblical narrative as an account of Israel's past, ordered chronologically, and the adoption of J. Huizinga's more theoretical definition of history writing as "the intellectual form in which a civilization renders account to itself of its past" (*apud* Van Seters 1983: 1). Such broader views of early Israelite historiography allow many modern scholars to understand the documentary sources of the Pentateuch, the final editions of the "Former Prophets," and the compilations of 1–2 Chronicles, Ezra, and Nehemiah as historiographies, and to speak of their authors as historians. In this they define a genre and tradition which stands in direct contrast to the genre and traditions of Mesopotamian, Hittite, and Greek historiography (*contra* Van Seters 1983; Hallo 1980).

Closely related to this broadening of the genre of historiography is the understanding of biblical historiography as an intellectual tradition of morally and religiously critical commentary on Israel's past, reflected in the biblical texts. This intellectual tradition, most notably centering on themes of "promise," "covenant," and various forms of "divine providence," has been seen to inform a wide range of literature. In terms of "salvation history," it is seen to form the core of the Pentateuch; especially, for example, of the so-called "Yahwistic theology." It has also strongly influenced both the content and collection of the prophetic books and has been seen as the motivating force behind the formation of the so-called Deuteronomistic History. Similar theological *Tendenz* is recognizable in almost all of Hebrew narrative: in Ruth, Jonah, Chronicles, Ezra, and Nehemiah. The recognition of an ever-recurrent concern for and judgment about Israel's past is so marked in this scholarship that Israel's faith is commonly understood as preeminently a historical faith. This is a theory or philosophy of history, making of biblical historiography not so much a genre as a frame of mind.

These tendencies to understand historiography as playing a decisive role in the form (genre) and content (themes) of biblical tradition have been strongly influenced by two related developments within critical scholarship: The "biblical theology" movement, which until the 1960s understood "salvation history" not as a literary subgenre within the tradition but as a viable historical view about Israel's past, centered the focus of the Bible's theological content on assumptions about both the historicity and the historiographical intent of the traditions. Similarly, the long-standing efforts of historical-critical scholarship since Wellhausen and Meyer has attempted to reconstruct a criticial modern history of Israel by using biblical narrative as its primary source.

B. The Content of Biblical Historiography

1. Ordered Chronology. Prose narratives, whether historical or fictional, typically proceed through successive actions or events; that is, they speak chronologically. Both fictional and historical narratives speak from the historical context of the narrator in terms of what has happened, whether real or imagined; that is, they speak of a past. What distinguishes them, and what distinguishes historiography from other narrative genre, is neither their content nor mode of speech, and certainly not such tangential issues as their plausibility and verisimilitude, but rather their referent as perceived by their author. The referent of historiography lies within *a world of the past understood as true and real, and as probable in terms of evidence.* The referent of fictional literature, on the other hand, lies within a *conceptional realm, understood as valid and possible, in terms of the author's own making.* The distinction between the two lies within the intentionality of the authors and in their assumptions regarding the reality of the past of which they write. There is little difficulty in distinguishing historical from fictional literature when the author's intention is clear and explicit. However, such is rarely the case with biblical literature. Moreover, when the received tradition presents itself in large complexes of interrelated units of tradition, extending themselves over enormous reaches of time, the interplay of the motives of multiple authors necessarily precludes any simple or indeed any comprehensive designation of genres based on authorial intention.

2. Source Criticism. For most of the last two centuries, the larger tradition complexes, such as the Pentateuch and the Former Prophets, have been understood to contain smaller units of tradition with single narratives and complexes of narratives, as well as extensive narrative frameworks which hold the smaller units together in a more or

less continuous chain of narration from the creation story (Genesis 1) to the story of the deportation into Babylon (at the end of 2 Kings). This understanding has led to extensive research into both the history of traditions and into compositional theory. By the end of the first decade of the 20th century, compositional theory was dominated by the Graf-Kuenan-Wellhausen Documentary Hypothesis of source criticism, which understood the formation of the Pentateuch in terms of four chronologically successive parallel strands of tradition. Not only did the Documentary Hypothesis establish a relative chronology for the pentateuchal source documents, but this same framework has served several generations of scholars as a much-needed basis for Israel's intellectual history. The earliest source of the Yahwist ("J") was seen to reflect the Jerusalem court of the united monarchy. The Elohist ("E") was associated with the period of the divided monarchy and the thought-world of the northern kingdom. Deuteronomy ("D") was linked with the Josianic reforms of 2 Kings and was dated to the late 7th century; and the Priestly Document ("P") was tied to the exilic, and ultimately post-exilic, period, marking the transition to what Protestant scholarship saw as the legalistic and xenophobic world of Ezra's and Nehemiah's Judaism.

Once the Documentary Hypothesis was firmly in place, not only could the Pentateuch be understood within an historical-critical perspective, but most of the rest of early biblical narrative could be cataloged within associated contexts, forming mutually supportive interpretive matrices of considerable explanatory potential for the entire pre-Hellenistic biblical tradition. Among the least popular implications of Wellhausen's history of pentateuchal thought was the necessary collusion between the historical contexts of his documents and their referents in a now seemingly only literary past. The sources were understood as mere refractions of the world of their authors.

3. Form Criticism. It was the work of the historian Eduard Meyer (1896) and the pioneering form-critical work of Herman Gunkel (*Genesis* HKAT[3]) and Hugo Gressmann (1910), concentrating on the orality of the smaller units of tradition within a framework of comparative religion, which finally established for most of the individual Pentateuch narratives a context within ANE and world literature, providing a network of analogies of both content and form. This work became significant in issues of biblical historiography in its implied repudiation of Wellhausen's axiom that the historical context of the traditions must needs be understood as consonant with their literary fixation. Rather, a substantial oral tradition was seen as responsible for much of the content of Wellhausen's written pentateuchal documents, having had a considerable history prior to their final and secondary written context, perhaps long antedating even the united monarchy of J. The implicitly conservative thrust of this research was not apparent in the early Gunkel or in Gressmann, who both frequently expressed what threatened to become a dominant assumption that Israel's earliest stories had originated as oral folktales and as wholly imaginative works of entertainment. Only over time, it was at first thought, through the influence of the ideological and at times theological and historiographical thrust of a growing literary tradition, had these original folktales become historicized in the manner described by the Documentary Hypothesis. Rather, it was the brilliant and prolific Otto Eissfeldt who, in the Gunkel Festschrift itself, transposed Gunkel's arbitrary assumption about the fictive origination of the tradition, and asserted a historical rootedness of the traditions in terms of such then seemingly pervasive genres as *"Stammessage"* and *"Menschheitserzählungen."* Eissfeldt argued that the referents of the tradition were, in their origin, refractions of the sociopolitical associations of earliest Israel. Historical realities lay at the core of the traditions and gave them their earliest *raison d'être* as historical memories. The pentateuchal traditions had their roots in history. Real events lay behind their narration. However, over time, Eissfeldt admitted, the narratives had undergone a folkloric mutation which often hid this essential historical quality from modern perception. With such arguments, the working assumption was established which formed the basis for an ever-uneasy marriage of source and form criticism: that ultimately historical events lay under the hoary accretions of pentateuchal tradition. It is hardly surprising that Martin Noth in the development of his *Überlieferungsgeschichte* and *Traditionsgeschichte* took for granted that originating tradition was consonant with originating event, allowing Tradition History to become the primary tool of his historical research. Noth also held as a corollary that the mutations which occurred during the process of tradition accumulation inherently reflected comparable historical experiences of the tradent. It is from such assumptions that his confidence in describing a premonarchic period of early Israel, and his belief in the historicity of the peaceful settlement of an original Israel as reflected in the book of Judges, grew. Noth rejected the historicity of most of the patriarchal period only because he could not identify any convincingly coherent tradent which might be identified as the tradition's implicit referent at any time prior to Israel's emergence in Palestine, other than a very undefined association with migratory movements of early West Semitic groups which he referred to as "proto-Aramaeans."

C. The Form of Biblical Historiography

1. Historiographical Genres. The adoption of Huizinga's definition by biblical scholars (Hallo 1980; Van Seters 1983: 1) understands historiography in essentially fictive categories, placing the early forms of ANE historiography, such as lists, inscriptions, annals, and the like, into the category of mere record-keeping, and preserving the category of historiography for *history interpreted.* Such a definition also ignores the origins of Greek and Hittite historiography specifically as a critical discipline, and blurs the distinctions of a wide variety of literary and narrative genres from etiology to propaganda. The adoption of this understanding of historiography for the biblical traditions is dependent on a perception of the larger blocks of prose narrative as substantially unitary and historiographically motivated productions of literary authors, and denies both the fragmentary nature and the potentially oral and folkloric roots of the smaller units collected within the literary contexts of the larger frameworks. Moreover, while moral, ideological, and theological tendentiousness is a common trait of these larger frameworks which collect Israel's traditions, to understand such literary perspectives in terms

of Israel seeking self-understanding not only confuses categories, but also attributes to a peripheral and occasional characteristic of only some historiography the essence of the genre itself. A definition centering on a nation's self-understanding is far more appropriate to ethnography, to genealogies and constitutional narratives, to origin stories, and to much mythology, than it is to historiography.

To define the genre of historiography one must of necessity distinguish in prose narrative traditions a considerable number of discrete formal types: etiologies, traditional tales, fables, parables, legends, myths, *Standesgeschichte, Stammesgeschichte* (tribal histories), genealogical tales, romances, geographical tales, biographies, constitutional tales, origin stories, ethnographies, and historiographies. One must also distinguish simple from compound tales, and these from various forms of chains of narratives. Similarly, occasional historiographical tales (Genesis 14?) must be sharply distinguished from identifiable historiographic intentionality that has informed the collection and transmission process of the tradition (Exodus 1–15), and both of these must be distinguished from those greater literary works of tradition collection which may or may not have assumed that the tradition sources had reflected a real or only a usable past. When dealing with the biblical tradition on the level of the specific units of the tradition, the genre of historiography is rare. Only very few Hebrew narratives involve historiography at a primary level. This genre is rather most notably present in the larger redactions and the final forms of composition. However, even there, a comprehensive historiographically motivated critical perspective only very occasionally surfaces in biblical literature (Gen 11:26–12:5?) and is nowhere dominant.

2. Antiquarianism. Of greater importance is the observation that the redactional techniques of the comprehensive traditions reflect the antiquarian efforts of curiosity and preservation. Such intentionality is specifically inimical to that of historiography. Historians ask the question of historicity and critically distinguish and evaluate their sources. They "understand" history, and therefore at times slip into tendentious ideologies and theologies. The antiquarian on the other hand shows the more ecumenically pluralistic motivations of the librarian: classifying, associating, and arranging a cultural heritage that is greater than the compiler or any single historiographical explanation. So, for example, we notice that in the larger blocks of tradition, narrative development has only the appearance of chronological progression. The progress is rather plot-oriented, as in the Torah story of Exodus 16–23 or most clearly in Abraham's travels from story to story allowing (among other things) Sarah to be an old woman in Genesis 18 and 21 but a young, marriageable beauty in Genesis 20. The recounting of such passages as Genesis 6–9, Exodus 1–12, Exodus 14–15, and especially Exodus 19–21, which collect so many different seemingly disharmonious tale variations is inimical to historiographical narration, for these collections present not accounts (whether critical or uncritical) of what is understood as past events, but rather they narrate variations existing within a tradition, self-consciously rendering *accounts* (not events) past, and in doing so, clearly reflecting the intentionality of our collector and redactor: to preserve what is old. The antiquarian intentionality is both pluralistic and in its own way objective. A similarly non-historiographical motivation is also noticeable in some of the compositional links of the larger redactions. So, for example, the genealogical structure of Genesis encloses this extensive composition through a patterning of such episodes as deathbed scenes, burials, genealogies, introductory and closing formulas, and post-introductory inclusions, as well as by the conjunction of motifs (Exodus 16–17), themes (Genesis 10 and 1:1–9), and parallel narratives (5 genealogies of Esau: Gen 36:1–5, 9–43). Indeed, disjunction is such a common phenomenon in what is only apparently a chronological progression of tradition from Genesis to 2 Kings that one must view this appearance of historical development and change as late and secondary, if not entirely accidental.

This extended tradition is structured very loosely as a succession of heroic biographies: Adam-Cain-Noah-Abraham-Isaac-Jacob-Joseph-Moses-Joshua-Judges-Samuel-Saul-David-Solomon-Kings. This structure, however apparent, clearly stands at a distance from the narratives themselves, and is for the greater part a very secondary ordering of stories which are individually wholly independent of this structure. Genesis–2 Kings is structured as a succession of great periods: Origins-Patriarchs-Exodus-Wilderness-Conquest-Judges-United Monarchy-Divided Monarchy-Destruction. But the existence of such anomalies as conquest stories set in the wilderness and patriarchs such as Judah among the Judges shows this process of structuring to be both secondary and subsequent to the traditions collected. It is extremely difficult to see any historiographical motivation in this collection, or indeed any purpose beyond general classifying or cataloging. The post-compositional and peripheral significance of this progression of texts of necessity excludes this aspect of the tradition from any such self-conscious literary genre as historiography.

D. Historiography As an Intellectual Tradition

1. "Salvation History." An understanding of the intellectual tradition of judgments or critical commentaries on Israelite tradition reflected in the biblical text has been closely associated with scholarly efforts to trace the history of the formation of the Bible and to identify the ideological and theological biases of the larger compositional sources contained within the various biblical books (Whybray 1976). Central to this discussion has been the elucidation of what was understood to be a particularly biblical view of Israel's past, commonly referred to as *Heilsgeschichte* or "salvation history." This concept of "salvation history" was one of the primary issues on the agenda of the Biblical Theology movement. However, considerable confusion was introduced by its use both to designate the biblical view of history (a form of theologically motivated *Tendenz* in Israel's view of its past) and as a concept of revelation (a view of the history of Israel itself as salvific). In this latter, modern theological sense, the concept today has been largely discredited, because, as a view of history and an affirmation about the past it is open in every way to historical-critical research and can neither be equated with revelation nor seen as an object of faith alone (Gnuse 1989: 23, Barr 1962: 66–69). Moreover, by associating revelation with the events of Israel's history, this tendency

of the "biblical theology movement" implicitly rejected the Bible as the foundation of "biblical theology" in understanding the Bible as "revelatory" only to the extent that it recounted the external historical events of the past in which revelation was understood to have occurred (Thompson 1974: 327).

As an understanding of a *biblical* view of history, however, the concept of "salvation history" can be seen to epitomize a significant aspect of ancient Israel's intellectual perception of its tradition. In this perspective, scholarly discussion of "salvation history" has concentrated above all on the identification and description of the theological *Tendenz* of the collectors and redactors of biblical narrative, most notably in the understanding of the Yahwist (of the Pentateuch's Documentary Hypothesis) as a theologian, who developed his narrative about the origins of Israel and of all humanity in a theologically motivated historiographical framework of progression from sin to grace and from promise to fulfillment (von Rad 1948). This interpretation grew out of the understanding of the Yahwist as an historian. Nevertheless, the understanding of the Yahwist as a theologian, and indeed as an independent source of the Pentateuch at all, has undergone serious criticism over the past decade (Rendtorff 1977; Schmid 1976; Blum 1984; Thompson 1987) and continues to be an issue of serious debate today (Van Seters 1987).

Also closely associated with the biblical theology movement's use of the concept of "salvation history" has been an effort to create a special value of Israel's historical understanding as unique in the ANE, in light of the biblical concepts of time, as well as in the understanding of an unparalleled relationship which Israel was seen to have had with its God, who was viewed as guiding Israel's destiny as well as controlling and acting in history. The Israelite concept of time was thought to be dynamic and linear, a fundamentally historiographical perspective in which events occurred, definitely establishing causal chains of unrepeated results through time. In contrast, the ANE understanding of time was described as static and circular, not historiographical but mythical, creating an understanding of the past as ever recurring in the present. Such stereotypes of both ANE and biblical thought have been thoroughly discredited today, and it is now widely recognized that substantial portions of ANE thought understood linear progression of time and established considerable causally oriented historiographies. Moreover, the concept of time as circular is no more characteristic of ANE literature than it is of biblical. Rather, the biblical tradition shares a literary and conceptual mode of typology and analogy. Its writers frequently describe the past and its traditions in terms of *patterns of recurrence*, a technique by which one tradition or event might be seen as a commentary on another, rendering both meaningful. Similarly, the recurrent biblical motif of God guiding Israel, playing an active role in historical events, and controlling world history is a motif in no way unique to Israel, but is a typical description of divine action found throughout ANE historical records, and is a dominant motif from the Assyrian period onward (*AHG*; Cancik 1970; 1976; Saggs 1978; Van Seters 1983).

Finally, it is difficult to maintain an understanding of the motif of "salvation history" in the Pentateuch as an intellectual view of Israel's *past*. Unlike the Deuteronomistic tradition and Chronicles, the Pentateuch is essentially an origin tradition and holds as its primary referent not any Israel of the past so much as an Israel contemporary with its own self-formation as a tradition of origins, defining Israel's essence and significance as an ethnic community of faith. The motifs of promise and fulfillment are not elements from past history so much as they are assertions meaningful in the tradition's contemporary world (Thompson 1974: 329). As such, the genre of the Pentateuch is not historiographical but rather constitutional narrative, a complex subgenre of etiology, which uses stories and traditions from the past in what is essentially an illustrative and paradigmatic mode.

2. The Prophetic Tradition. Central to what might be described as a biblical view of Israel's past is the critical commentary of the prophetic collections and redactions. Illustrating the more-than-a-millennium-old West Semitic tradition of the prophet and seer as a moral and political critic of the government and the populace (Ellermeier 1977), the books of the classical prophets collect many early exilic and preexilic poems and oracles which condemn the governments of Israel, Judah, and neighboring states, as well as their populaces, for a variety of major crimes such as war atrocities, injustices, moral indifference, and cultic hypocrisies. The exilic and postexilic redactions and collections compare these earlier traditions in terms of radical and final judgment—Israel has committed *unforgivable* crimes—condemning the totality of Israel's political and ethnic history as religiously and morally bankrupt. They understand the destruction of the states of Israel and Judah by the Assyrians and Babylonians respectively as a divinely guided punishment. This analysis of the past laid the foundation for a future-oriented religious understanding of divine mercy and forgiveness. This prophetic tradition cast a trajectory toward a new Jerusalem of peace and justice in which Israel would finally carry out the destiny which had been established for it by Yahweh from Israel's earliest beginnings.

Historiographically, the focus of the redactions of the prophetic traditions is not so clearly directed toward the past except insofar as it serves as a justification for the moral and cultic reorientation demanded by the composite tradition in the postexilic world. That the critical judgment involved in this literature relates more to the genres of religious interpretation, ideology, and propaganda (Garbini 1988) than to the sort of criticial judgment normally associated with historiography is indicated in the idealistic and futuristic orientation of the redactions of prophetic collections. Comparable to the pentateuchal narrative's preference for an heroic past to illustrate the meaning of Israel in constitutional etiologies, the exilic and postexilic redactions of Israelite prophecy create a revolutionary future by reference to the failed past as a paradigm of glory shattered.

The intellectual assumption at the core of the West Semitic prophetic traditions (which biblical prophecy continues), is that gods interfere in human affairs and control the political and military events of history, as well as of the cult, of fertility and other aspects of reality. Divinities use their control of events to reward or punish their subjects for good or ill. With the help of this common ANE

perspective (Saggs 1978; *AHG*), the redactors of the books of the prophets were able to salvage a religious understanding and continuing identity out of disaster.

The images of Assyria and Babylonia as conquerers subsequently humiliated, Israel's punishment under the wrath and anger of Yahweh, and the role of Cyrus as messiah and savior of a chastised remnant are not historical reflections analyzing what happened in Israel's past so much as they are explanations of piety, illustrative of future demands. This judgment about the past is not drawn from reflection about past events. Rather, the past, in the form of collected tradition, stands both as warning and basis for hope in the future. It is this hope for the future which selected the past remembered.

3. The Narrative Tradition. Comparably pious explanations of tradition are found occasionally in the Pentateuch. Fulfillment confirms promises cast yet in the future (Gen 22:17–18 and 28:13b–15); the wilderness-murmuring motif operates as a pattern of Israel's recurrent history (Exod 24:2–8); the self-conscious anachronism of the Passover festival bridges past and present (Exod 12:3, 14, 17, 24, 26, 27). Even more frequently in the collections of the traditions of Joshua–2 Kings, the criticism of Israel for immorality, injustice, and loss of cultic integrity becomes a recurrent leitmotiv. In 2 Kings this critical judgment becomes indistinguishable from the redactional framework itself. The motifs of the divine control of Israel's destiny by Yahweh, of Yahweh's anger at Israel's unfaithfulness and the ever-recurrent need for reform, are didactic and moralizing theological reflections on the traditions from the past. They echo motifs from many nonbiblical texts, for example the Mesha stele and the Assyrian texts (*AHG*, 106–7), but ideologically they belong to the same exilic and postexilic circles which were responsible for the redactions of the prophetic works. Instead of prophetic oracles, traditional tales and other early traditions are being used as narrative illustrations of ideology and theology (Rogerson 1974: 182–83).

National self-understanding is claimed by some today to be essential to the genre of historiography, and it is a central concern of prophetic and narrative collections in the Hebrew Bible. But this intellectual tradition in its entirety neither presents nor has an abiding interest in history. It deals, rather, with what one might better describe as ethnographic or ethnocentric etiology, those intellectual efforts which created the *ethnos* of Israel, reflecting a literary motivation which is characteristic of Persian-period literary works throughout the ancient world. Historiography proper does not have the goal of self-understanding so much as that of a critical reconstruction or representation of the past, eschewing etiology along with legend and mythology.

The biblical tradition brings together three distinct tendencies which should not be confused with historiography: (a) an understanding of Israel's deity as providential and as determining historical events; (b) a West Semitic prophetic tradition which judges the morality of historical events and is critical of the action of king and state; and (c) the theological and moralizing *Tendenz* of the exilic and postexilic collectors of traditional narrative who applied the prophetic judgments to the events of the tradition.

E. Collapse of the "Salvation History" and "Bible History" Movements

After the early 1960s, the biblical theology movement, which had linked understanding of the Bible as a theology of events to an understanding of revelation as history, and thus faith to historicity, collapsed. By the mid-seventies the Documentary Hypothesis and the investigations into the history of biblical narrative traditions had come under increasing attack (Mayes 1973; Van Seters 1975; Rendtdorff 1977; Blum 1984; Whybray 1974), undermining confidence in the ability of modern historiography to recreate Israel's historical past from its traditions. The challenge to the historicity of the patriarchs in the mid-seventies (Thompson 1974; Van Seters 1975) was quickly extended to the remainder of the so-called "historical" books of the Bible (*IJH;* Miller and Hayes 1986), leading to recent efforts to develop a history of Israel—and especially of its earliest beginnings—independently of the biblical tradition (Coote and Whitelam 1987; Ahlstrom fc.; Thompson 1987 and fc.).

The historicity of the greater units and of the larger redactions of the tradition is no longer widely accepted. Rather, historicity is an issue to be tested with each of the primary units of the tradition, not with the larger secondary constructs. A contemporary history of Israel no longer takes its starting point (with the tradition) at some point in the past at which Israel began. Rather, a critical history of Israel takes its starting point from the Israel formed by the tradition: the Israel of the exilic and postexilic periods. In this way modern historiography achieves an independence from the tradition itself.

THOMAS L. THOMPSON

GRECO-ROMAN HISTORIOGRAPHY

Oral and written literature—epic, lyric, rudiments of drama, even primitive prose—existed in Greek by 550 B.C.E., but accounts of past events and institutions and their intelligible causes and contingent explanations of subsequent and present circumstances were yet to come. Near Eastern histories either did not extend beyond campaign summaries and accession narratives (Persian, Hittite) or were limited to skeletal lists of royal names and regnal dates, when not blatant propaganda and invented fantasy (Assyrian, Egyptian). Rational, critical knowledge of the notable past based on evidence and testimony had no function or audience in largely illiterate and unfree societies.

A. Greek Origins
B. The Creative Geniuses
C. Hellenistic Historiography
D. Rome from Origins to Early Empire
E. The Later Imperial Period
F. Methodology and Conclusions

A. Greek Origins

Greco-Roman historiography arose from an acute sense of life's brevity in an indifferent world. From the earliest 8th-century Homeric meditations on time and the human condition, the only survival of the individual to be hoped for was human recollection and the memorial of literary celebrity. The modern idea of historiography, as practiced in the European tradition, owes its largest debt to the choice of subjects (war and peace, administration of public affairs, growth of a nation, imperialism), the narrative rhetoric, and the analytical categories of two late 5th-century Hellenes and one Italian: Herodotus, Thucydides, and Livy. The Greeks introduced objectivity and verification of facts into historiography, anticipating the modern concept of critical historical research and interpretation.

A survey of ancient historiography can reconstruct the major habits, concerns, ideas, and themes of this discipline, despite the fact that no ancient critic seems to have composed a formal analysis of it and no rigorous definition of historiography emerged. The historical materials have been divided by Felix Jacoby, the most knowledgeable student of Greek historiography, into five categories: genealogy and mythography, ethnography, chronography, horography or local history, and history proper. Stimuli included familial and local civic pride, the diffusion of literacy, commercial contacts, and military conflicts with foreign peoples both more and less civilized. Certain orientations for these writers followed from a social and economic order in which some free males had the leisure and liberty to reflect on change, human variety, and the challenges faced by a peculiar civilization. Historical discourse ever since has been produced by private individuals in an attempt based on a unique Greek experience to craft meaning and legitimacy in the midst of serial, unvalidated human and natural occurrences.

The Greeks by 700 B.C.E. had learned to write from the Phoenicians and to memorialize in stone from the Egyptians. Anaximander of Miletus (the leading commercial power and colonial mother city in the Aegean) is the first known Greek prose writer (ca. 560). He made a map and wrote up the relevant geography, the basis of later ethnology and history in Ionian lands, the exclusive place of origin of the first historians, the meeting place and battleground of West and East. Fifty years later, Hecataeus of Miletus, a prominent politician under the Persian dispensation, wrote *Genealogies* (family histories often attached to rationalized legends), traveled extensively, and made another map. For this he composed his *Periēgēsis*, a companion ethnology organized by location around the Mediterranean and inland, e.g., the Celts. He referred to distant places and events, although his attempts to explain phenomena seem to have been limited to crude rationalizations. No historical event or events gave focus to Hecataeus' collection of biological curiosities, exotic customs, and sporadic comparative inquiries about past generations. Hecataeus, and later Herodotus, were led to recover the Greek past by their encounters with the oral traditions of the Orient (travels to Egypt, Phoenicia, Scythia, etc.). Hecataeus and Herodotus wrote to disabuse their compatriots

of provincial attitudes. Their polemics against popular delusions and received tradition, their groping toward methodical rigor, and their criticisms of their predecessors' inconsistencies and dogmatic beliefs are healthy signs of *historía* or "investigation" from the beginning.

B. The Creative Geniuses

Herodotus produced the first systematic narrative of a battle, a campaign, a war, an empire's growth, and comparative political systems. His ethnographies of Greek and many barbarian (e.g., Lydian, Egyptian, Persian, Scythian) societies encompass economies, social customs, and geography as well as marvels and annalistic information. Herodotus incorporates many personal stories from Persian and other "native" informants and quotes from translations of Persian documentary sources. His narratives of decisive historical events in the Aegean basin during the previous century re-create the issues by borrowing the mimetic techniques of earlier genres, particularly Homer's epics but also Attic tragedy and oratory.

The first historian is aware of many of historiography's central problems. He shrewdly discusses the bias, conflicts, and prejudices of sources oral and written, the frequent failure of information to satisfy minimal criteria of probability or human experience, the need to select and omit phenomena (such as myth, theology), and the uses and problems of chronology (2.43–44; 3.122).

The latter half of the *Histories* seeks to explain how and why some Greeks after 500 B.C.E. decided to resist the Achaemenid Empire. That is, Herodotus first leapt, as all historians hence must, from oral tradition and record to explanation, to relations of cause and effect, interpretations of individual and communal behavior, and the significance of choices, acts, and events. Overlapping systems of explanation include occasional references to supernatural causes, but these are few, vague, and subordinated to mundane political and strategic considerations and to observed historical patterns. Herodotus' influential invention, an objective account of the human past in its ordinary and extraordinary but always human dimensions, a story based on empirical evidence and sifted testimony, incorporates into the narrative and speeches an analysis of the significance and effect of those events. He produced a clearer identity for his Hellenic audience and his *Histories* created the essential tool for historical consciousness.

Thucydides offers a narrower yet deeper kind of historiography of war and political conflict. He largely eschews events before his lifetime, he generally ignores the past and present of all states and peoples that played no part in the Peloponnesian War (431–404 B.C.E.), and austerely limits his study to that war, its real and alleged long- and short-term causes, its battles and their consequences, the imperial administration of Sparta, Persia, and especially Athens.

He lived to see the imposed peace but his account breaks off in 411. Stripped of genealogy, ethnography, local history, biography and anecdote, his *History* retains many dramatic elements including paired, opposing, highly wrought speeches in legislative, battlefield, diplomatic, and judicial assemblies, descriptions of near-disaster (Lesbian genocide, Syracusan defeat), and rhetorically dry but emotionally intense accounts of sea and land battles and other devastating catastrophes such as the Athenian plague.

Thucydides less successfully ascribes motives to leading individuals and even to armies, political factions, and mobs (3.82; 8.1). The acquisition and abuses of political and military power over other states provide a central theme in both his paradigmatic opening essay on past empires and in the body of his text on Athens' experience. Thucydides absolutely excludes the supernatural from his account except insofar as men are motivated by perceptions of divine interference (e.g., the superstitious response to the eclipse at Syracuse in 413 B.C.E.). He expects future events to resemble past and present occurrences, not because of a cyclical metaphysic but because he has seen that humans tend to respond in similar ways to similar problems. Omission, compression, a false psychological omniscience, and a knotty style mar his excellence but cannot trouble the claim of his being the ancient historian who best approaches the 19th century's concept of historiography.

Thucydides criticizes predecessors (Herodotus, Hellanicus, Ion of Chios) for sloppy chronology, false criteria of prosperity and significance (1.10), too easy acceptance of partial, plausible, and traditional reports, and failure to dig into data to discover the decisive causes in national self-interest and charismatic individuals. On the whole, however, he reinforced the criteria of Herodotus' genre rather than redirecting it. His own rigid chronological scheme is ill-suited to any theme other than a narrow one. He has high standards of evidence and does not supply answers when information does not warrant. He endorses certain traditional moral values (e.g., 2.51, 3.82–83) without any moralizing, while neutrally recording their inefficacy in the stress of international power conflicts.

C. Hellenistic Historiography

An anonymous writer, known as the Oxyrhynchus historian (from the find spot of the 40-page fragment of his *Histories*), possessed Thucydides' dry but accurate manner of battle description without apparently his psychological skills or interest in political analysis. Xenophon also continued Thucydides' narrative in 7 books down to 362 B.C.E., but different capacities and interests produced a very unlike result. The title of his work, *Hellenica,* implies a comprehensive coverage, not a topic limited in time or theme. Painstaking research comes second to explicit historical moralizing (2.3.56, 7.2.1), propaganda for Panhellenism, and an analysis of character that shows traces of his friend Socrates' influence. Xenophon's work begins and ends in the middle of crises, an indication of his weakness in historical conception and literary architectonics. Chronology, motivation, and causation similarly suffer in an innovative writer for whom history was only a sideline. The *Anabasis,* his journalistic account of the pretender Cyrus' campaign against the Persian king (in which Xenophon participated), provides both a more dependable record and more vivid presentation.

After Thucydides, Greek historiography turned to the exotic and the sensational (Duris' *Hellenica,* Ctesias' fantastic *Persica*), to the emotional scene more fictional than factual and intended to arouse fear and pity (Duris again, Phylarchus' *Histories*), and to a moralistic education in elegant rhetoric that Isocrates conceptualized (Ephorus,

Theopompus). These 4th-century historians channeled the main current of ancient historiography for the next half-millennium.

Ephorus of Cyme (405–330 B.C.E.) was first to try to include all Mediterranean history in one work of 30 volumes; his emphasis remained nonetheless Hellenocentric and contemporary. Moral edification by example and platitudes are evident in his fragments. Trivial in his etiologies of war, uncritical of his sources for myth and legend, superficial in political understanding, and derivative at best, he was essentially a synoptic compiler and popularizer. Diodorus the Sicilian composed a 40-volume world history between 60 and 30 B.C.E. He drew from many authors, but Ephorus was his historiographical model as well as a principal authority.

Theopompus of Chios (380–305 B.C.E.) admired Sparta, the Macedonian Philip's strategic policies, and oligarchy, while he railed against Athens, democracy and demagogues, and previous historians. He digressed often and at whim in his 12-volume *Hellenica*, a competitor of Xenophon's. He devoted 58 volumes of *Philippica* to the colossus of the mid–4th century, Philip of Macedon, including Philip's remarkable achievements but also castigating his sexual profligacy, chronic drunkenness, and spending habits. He enjoyed debunking popular views. Moral indignation, inconsistently applied, replaces political analysis. Shocking description, coarse and violent opinions, made his work popular and influential on certain techniques of Hellenistic historiography. Fifth-century confidence in rational analysis, the political process, and human abilities is replaced by emphasis on personality, telling anecdotes, and a fatalistic pessimism.

Histories of individual Greek cities and larger territories were produced in ancient Greece only after Herodotus' general history. They were designed to establish the antiquity and dignity of a Greek community, they presented the rulers and constitutional changes in chronological sequence, and they showed the results of antiquarian research on topography, local myth, monuments, cultic and social customs. The Atthidographers provided a political account in chronical form for Athens, but other subgenres also existed for studying the past of this political, cultural, and intellectual capital. Hellanicus of Lesbos produced at least 12 regional chronicles and ethnological surveys before the earliest and paradigmatic *Atthis*, ca. 400. After 350, nostalgia for former glory produced at least 6 other local chronicles for Athens, several from men holding Athenian priestly office. Antiquarian studies also were valued for the piquancy of their obscure details and implications of former greatness. Craterus of Macedon was unusual in collecting and publishing verbatim primary sources, inscriptions.

Early in the 3d century, two barbarian priests presented improved accounts of their nations' accomplishments to generally uninformed Greeks. Berossus of Babylon transmitted ancient Mesopotamian traditions about the creation and the kings of Babylon; Manetho of Heliopolis then did the same for Egypt. These important compilations of authentic national traditions were later to serve as sources for Jewish and Christian chronographers.

Socrates, the spiritual gadfly, was the first individual in history to have his daily life recorded (ca. 469–399 B.C.E.), but Alexander the Great has forced even historians hostile to hero-worship to acknowledge the power of personality to affect the lives of millions. The revolution wrought in East-West relations, the instant legends, manufactured and natural, the problems of an incomprehensible success and spiritual impact made and make the short-lived Macedonian (356–323 B.C.E.), like Jesus, an insoluble historical enigma.

At least 20 contemporaries wrote accounts of Alexander's life and campaigns. There were hostile pasquinades and encomiastic essays, but after his death 40 years passed before his general and successor as ruler of Egypt, Ptolemy, wrote the first complete narrative. Five full accounts survive today, from the earliest—Diodorus' (300 years later)—to the latest—Arrian's sober military account (450 years later). Alexander's career forced Hellenic historiography to reopen the geographic boundaries of history and raised new questions about historical forces. Also, both sane geographers like Aristobulus and recorders of fantastic beasts and peoples like Onesicritus attached their projects to his deeds. Marvel books and even the genre of the novel resulted from these parahistorical efforts.

Timaeus of Tauromenium in Sicily (355–260 B.C.E.) produced a history in 38 books of the Greek West, Carthage, and Italy (including Rome) down to 264. He tried to synchronize these nations' pasts. Polybius criticizes him severely for the consequences of his inexperience in public affairs, failure to visit battle sites, and naive acceptance of myth and etymological explanations, but he honors him by beginning where his predecessor ended and by often arguing with his method and results. Although Timaeus' work has perished, later Greek historians of Rome owed much to this diligent western Greek pioneer who introduced Rome and the Celts to the historiography of Western Europe. Polybius and Posidonius continued his explorations of primitive and non-European peoples.

Polybius (200–155 B.C.E.) had extensive personal experience of war and politics (39.5). After his efforts for the Achaean league, as an official hostage in Rome and friend of Scipio Aemilianus, he found unusual opportunities to produce a 40-volume history of the Roman unification of previously separate nations. The Roman conquest required only about 140 years (264–146 B.C.E.); Polybius presents this astonishing feat with unusual impartiality, conscientious topographical research, examination of witnesses, accuracy of narrative detail, study of original documents (3.22, 33; 16.15), and with the presentation of the causes of each particular conflict (12.25E).

Like Herodotus and Thucydides, Polybius begins with a long introduction explaining his plan and providing the background necessary for understanding his chosen events in their proper context. His accounts of war are more perceptive than his analyses of political organizations and success (cf. the etiology of Rome's victories: they were due to the armies, moderation in victory, the constitution, and the attitudes of the ruling class [book 6]). He is critical of many historians and schools for their literary sensationalism, their ignorance of geography and warfare (book 34), their inflated rhetoric and credulity toward myths, and their self-glorification (29.12.3), but most of all for their inadequate grasp of etiological factors. His frequent

digressions on theory are polemical and his own practice can differ from his precepts.

Polybius' determined intentions were to train men of public affairs in practical politics (9.1–7; 10.21.2–4) and to enable readers to understand power and its consequences. He felt comfortable with Roman values and political wisdom. *Tyche,* Fortune, appears frequently not so much as a cause but as a convenient non-explanation when no one can have foreseen outcomes. He displays Gibbon's two preconditions for the historian: diligence and accuracy; but his style is dreary.

D. Rome from Origins to Early Empire

Roman historiography suffered from the start from the eminence of its senatorial authors and from the dominance of oratorical education over most of its practitioners. Contemporary political issues were retrojected onto remote ages; the desire to glorify one's family made historiography a branch of rhetorical skill; plausibility outweighed evidence, or the frequent absence of any. As Cicero too plainly states, historians were expected to dress up the exploits of their "heroes" (*Fam.* 5.12).

The historians of the Republic patriotically reconstructed the rise of Rome from insignificance to Mediterranean hegemony by friendship, treaty, war, and conquest. But the historiography of the Roman Empire, initiated by Sallust, elaborates a perceived pattern of moral degeneration, the decline of liberty, the extension of autocracy, a long battle more against internal dissolution than external attack (Ammianus 31.5.14).

Roman senators first kept records as officials (e.g., pontifices), to produce a public record of a year's events that mattered to Rome, such as consuls, triumphs, famines, and omens (Gellius 2.28.6, from Cato). They first wrote history as politicians of notable lineage to glorify their own families, and to gain literary repute in the cultural efflorescence that followed the 2d-century conquest of the Greek world. History-writing came late to Rome, and began in the Greek language with Fabius Pictor's ambitious *Annales* retelling the founding of Rome, summarizing the following centuries, and then giving a more detailed yet anecdotal account of the First Punic War. From the few fragments, one can conclude that he wrote in order to explain Rome to the Hellenistic world, and perhaps to educated Carthaginians and Romans. History was an extension of diplomacy as well as of patriotic didacticism: the Romans owed their initial success and recent expansion to perseverance, good faith, and strict moral values. Antiquarians, of whom Varro (115–27 B.C.E.) was to be the greatest, researched the names, origins, and functions of religious rites, the calendar, public places, and state offices. But even Roman antiquarians often had moral improvement in mind.

The elder Cato wrote his Latin *Origines* covering both Rome's legendary history and the imperial expansion from the First Punic War down to nearly the beginning of the Third (264–149 B.C.E.). He provided a prose parallel to the poet Ennius' earlier historical epic.

Cato's 7 volumes were not only didactic and political but also polemical and apologetic. He defended Roman achievements for Romans, as a plebeian senator he stripped the famous political names from Rome's communal victories, and in the last section he used the account of the past to promote his own considerable achievements as a senatorial and military leader. He included his own speeches and denigrated his political opponents (Livy 34.15.9, 35.25.1; Cic. *De Or.* 1.53). Historiography in the hands of active statesmen naturally showed partisan distortions.

Later writers imaginatively filled in the poorly known epoch between regal Rome and the Punic Wars. Distortion and invention helped to give shape to the void, sometimes to sate antiquarian curiosity about customs and holidays, often, to be sure, to promote a moral and political agenda. Official records were scant, the demand considerable, so the result was more coherent than true. The upheavals of the Gracchan age (145–120 B.C.E.) produced propagandistic accounts by factional leaders, and the next generation produced several senatorial memoirs, for instance, those of Aemilius Scaurus and the dictator Cornelius Sulla. Strictly contemporary accounts and historical monographs (e.g., Sisenna's *Histories* to 78 B.C.E.) become the fashion of the ambitious politician and historian.

Annalists for the distant past are now less prominent persons often at work in their studies remembering what had never happened. Valerius Antias, for example, notorious even in antiquity (Livy 30.19.11, 33.10.8), sought to edify and to entertain connoisseurs of rhetoric—even if this purpose required the invention of speeches and factitious documents. The personal researches of Varro and others were disdained and their results ignored. Cicero, who names most of these writers, judges them chiefly by their style and rhetoric rather than by their mendacity, and this Roman standard, a result of rhetorical education, was all too common.

Cicero's letter to the senatorial historian Lucceius (*Fam.* 5.12 [56 B.C.E.]) requested a history that would celebrate in a dramatic and eulogistic manner his own vicissitudes from his repulse of Catiline to his return from exile. The cajoling purveys a slippery description of Hellenistic-Roman historiography. Later, imperial historians justly feared to offer an honest account of their own times (Livy *Praef.*; Tac. *Hist.* 1.1; Pliny *Ep.* 5.8.12–13).

Julius Caesar (100–44 B.C.E.) wrote not history but elaborate *commentarii, aides-mémoire* of his military campaigns with no political framework or explicit historical introduction or rationale. The year-by-year summaries of the *Gallic* and *Civil Wars* in 10 books constitute a public record, hastily compiled but purposefully slanted, by the commander in the field. As consul, pontifex maximus, orator, and faction leader, Caesar took serious risks in politics, war, and literature, the continuation of politics by other means. The *commentarii* justify his self-aggrandizing and illegal actions. He notoriously speaks of himself in the third person, conveying a tone of passionless objectivity. Suppression, severe compression, and false suggestion elegantly promote a favorable view of the author. The memoirs are covert propaganda; they demonstrate Caesar's skill in war and diplomacy as well as literary subtlety. The aggressive imperialist tone employed to justify war atrocities in the *Gallic Wars* is abandoned for the delicate subject of the *Civil Wars* and Caesar's self-exculpation. In the imperial period, one can compare Augustus' autobio-

graphical yet magisterial *Res Gestae,* cast in bronze and carved in stone around the Mediterranean.

Sallust (85–35 B.C.E.) grew up in Sabine Italy between the Civil Wars. He became a senator but was expelled in 50, joined Caesar, was accused of extortion in Africa, and retired from "public service" to write his historical essays, *Catiline's Conspiracy* and *Jugurtha's War,* and an annalistic History of Rome from 78 to 66 B.C.E. in 5 books, now largely lost.

His theme was the political and moral decline of the senate through venality and incompetence. This prejudice resulted from both his own experience and his sources' bias. His archaistic diction and vengeful rhetoric is highly colored, censorious, pointed, and not unearned. He dislikes popular champions as much as greedy oligarchs. He wrote between Caesar and Augustus when pessimism and cynicism had a warrant as the only realism. Much detail is excised in the service of the dramatic scene, the impressionistic analysis. Tacitus found his corrosive tone congenial, even necessary (*Ann.* 3.30), although Asinius Pollio, who wrote *Histories,* covering 60–42 B.C.E., criticized him and Livy for their stylistic excesses. Sallust crafted the thenceforth canonical presentation of Roman history as a tale of degeneration and breakdown.

Livy (59 B.C.E.–17 C.E.) wrote a history of Rome from the founding of the city to his own day comprising 142 books, of which 34 survive. He conducted almost no independent research and depended on authorities whose accuracy he could judge only by the criterion of their inherent probability. Like other ancient historians, he had not developed the critical method of source criticism and his own acumen was vulnerable to any plausible invention that fit his presuppositions and didactic purpose of spiritual regeneration. Too often he innocently accepts his predecessors' fabrications. As with many of his forerunners, history turns out to be moral biography; his heroes embody the characteristics that built Rome. Economic, social, and political issues are seen as personal contests, institutions are downplayed. The annalistic framework and the focus on dramatic episodes smother inquiries into structural problems and analysis of intellectual change. Livy is weak on geography, military matters, and factional politics.

Livy met Cicero's criteria of elegant style, dramatic construction, dignified yet graphic presentation, variety of tone, edifying themes with implicit judgments of character. His idealistic patriotism made him uncritical of Roman "manifest destiny" and racial superiority. His history offers magnificent examples and warnings and a record of moral decline from a primitive yet robust simplicity. He explains Rome's unique success as compromise among citizen groups, dedication to the common welfare, plain living, and honest dealings with foreign governments. Heroes such as Scipio are made perfect; bad qualities or ignoble acts are distorted or suppressed. Divinity has only a trivial role compared to Roman virtues such as *fides, clementia,* and *pietas;* his organic central metaphor is *crescere,* Roman growth.

Livy had an antiquarian dimension. He explains the origins of customs, names, particular holy sites. His complete narrative and his scale had no predecessor. His success was immediate and long lasting (cf. Pliny *Ep.* 2.3.8; 6.20), indeed, the model for modern national historiography. One of his pupils was the future emperor Claudius, who wrote in Greek on Etruscan and Carthaginian history and in Latin on events following the civil wars (after 27 B.C.E.; Suet. *Claud.* 41–42).

E. The Later Imperial Period

Tacitus (50–120 C.E.) was a Gallic provincial senator, a noted orator, a successful officer of the emperors who lucidly anatomized and deeply disliked the autocratic system that he served. Exigencies of survival under Domitian and after led him to cultivate obliquity (*Hist.* 1.1), an epigrammatic and asymmetrical style, and an elevated and cryptic manner of expression in which the significant meaning is rarely obvious. He minded the experience of the historian Cremutius Cordus, who had been led to suicide in 25 C.E. and whose *Annals* of the Civil Wars had been burnt by the Aediles for their Republican sympathies (*Annals* 4.34). His work stems from the same hostile, pro-Republican, senatorial tradition. Ironic juxtaposition, tendentious emphasis, and malicious insinuation permeate both the *Annals* and the *Histories,* originally 30 books covering 14–96 C.E., the relatively recent Julian and Flavian dynasties of the New Testament epoch.

The psychology of personality attracts the energies of Tacitus, the historian of seemingly all-powerful emperors. His pessimism drives him to reveal the internal political lies and shams of the imperial administration and to indict more often than praise the Roman exploitation of the Mediterranean world (*Hist.* 1.11; *Agr.* 30). His accounts of military strategy and battles are perfunctory, but he does connect the dynastic quarrels, frontier wars, provincial complaints, constitutional changes, and disturbances at Rome. Tacitus tends to present characters in clear categories—the victim, the tyrant, the freedmen opportunists. He provides posterity with examples of morality, acts to avoid and imitate. *Fama* as public reputation, rumor and renown, and *memoria* are his concern (*Ann.* 3.65; 4.35).

Tacitus' demolitionary account of emperors such as Tiberius and Domitian and their propaganda follows from his view that accounts of recent history must witness and memorialize a tale of debasement and ceaseless woe (*Ann.* 4.32; 16.16, 25). Even the record of acts of memorable courage and justifiable prudence further darken the portrait of unlimited power; rare (but significant) are the acknowledgments of the Empire's achievement (*Ann.* 3.55; *Hist.* 1.1; 4.74).

Tacitus' claims to objectivity (e.g., *Ann.* 1.1; *Hist.* 1.1) are puzzling, yet he strove to report names, dates, and events correctly, even if his inveterate psychologism, with its invention of motives and his extreme version of the Roman nostalgic model of degeneration from ancient virtue, colors his partial account of a century of despotism (*Ann.* 4.33). A dramatic focus on Rome and its aristocracy, natural and traditional for a man of his status but still profoundly misleading, could hardly lead to any other result. His own career's circumspection led him to identify virtue with the bureaucrat Agricola's unostentatious and courageous service to the state, and to write an account of his father-in-law's life and death.

In the 4th century B.C.E., a greater political dependence on individuals rather than on collectives emerged, and the

individual became increasingly alienated from communal social and religious values. The spectacle of Alexander had promoted a focus on character and an interest in idiosyncracy digestibly packaged in anecdotes. In Greece biography began as collections of illustrative stories from the lives of influential men (Socrates, Philip); in Rome, it began as accounts of famous ancestors (*laudationes*) and retained that character (see, for example, Plutarch *Cimon* 2.2–5; Tacitus *Agricola*). Chronological arrangement (Plutarch generally; cf. *Alexander* 1) often jostled against topical inventories (Suetonius *Augustus* 9), because ethical concerns outweighed historical. Plutarch's generous "comparisons" of Greeks and Romans (perhaps Varro's innovation) reflect his purpose of describing constructive behavior—deliberate, rational choices—by historical examples. Plutarch rarely chose protagonists to condemn them (*Per.* 1–2; *Tim. Pref.; Demet.* 1), while his contemporary Suetonius, the private secretary of the emperors, elected to emphasize coolly the scandalous facets of his subjects, the Caesars from Julius to Domitian.

Biography was considered a separate genre (Polyb. 10.24; Plut. *Alex.* 1.2), but the northern Italian Cornelius Nepos (100–25 B.C.E.), the Boeotian Plutarch (50–120 C.E.), and the African bureaucrat Suetonius (70–130 C.E.) require mention as reporters of lost historical sources. Furthermore, the generic barrier between history and biography was more permeable than some modern critics have supposed.

In both writers, unique examples of behavior serve to substantiate noble and criminal tendencies. Coherence of character leads Plutarch to suppress or downplay exceptions; Suetonius sacrifices such coherence to the juicy anecdote. Political analysis is largely absent, not safe or even interesting. The problematical *Historia Augusta*—author(s) unknown—constitutes a contradictory and often fraudulent collection of imperial biographies continuing Suetonius from Hadrian to Numerianus (117–284 C.E.). Ancient biography was a kind of moral essay organized to illustrate one man's character, his great and trivial deeds. We get certified heroes and villains. Biography's popularity and influence have often exceeded those of history proper.

Compilers of the imperial age depend more on other compilations than on earlier researchers. In this encyclopaedic and anthologizing epoch, we have, for example, the naive contemporary of Augustus, Dionysius of Halicarnassus (*Roman Antiquities* in 20 books), the compendious and inelegant Appian of Alexandria (*Roman Wars* in 24 books), the rhetorical consul Cassius Dio of Nicaea (*Roman History* in 80 books to 229 C.E.), and the Syrian Herodian (8 books, 180–238 C.E.). Derived from these already secondary sources are epitomators who dutifully record consuls and portents and excerpt crises without fleshing out their material with spiritual causes and context. For examples, consider Florus, and his 4th-century followers Eutropius, Justin, and Aurelius Victor. These authors often present similar summaries of the canonical main events of Roman history rather than intelligently compact the historical vision of Livy or the Gallic "universal" historian Trogus. Their gullibility and erratically sensationalist tendencies, qualities also found in other sometimes parasitic genres such as literary dialogues, biography, and utopian "histories," make them treacherous sources for us, however indispensable.

Lucian of Samosata (115–200 C.E.) wrote a satire on historians of the Parthian War entitled *How to Write History*. The essayist's dogmatic advice is conventional (34–39); the model to imitate is Thucydides; or rather, Thucydides is the stick with which Lucian beats his generation's sloppy research, exotic descriptions, servile imitations, inappropriate emphasis, and adulatory rhetoric (7, 15, 20, 28, 59, 61). In general, Greek nostalgia for the pre-Roman era, Greek ambivalence toward the Roman peace, and flattering treatments of the indecisive Parthian Wars dominate the historiography of the later 2d century.

Flavius Josephus (35–115 C.E.), a Hellenized Pharisee, fought against and for the Roman government of Palestine. Thus both Jews and Romans distrusted him. His *Jewish War* (7 books, 66–73 C.E.) as well as *Against Apion* defends his career and political acts. Josephus had represented Jewish interests in Rome under Nero and, after failing to hold Galilee in the rebellion, he lived in Rome from 70 on. Josephus advocated the Jewish community's accommodation to Hellenistic culture under Roman rule. Resistance to Rome was hopeless and Jews would do better to suppress nationalism (he blamed the Zealots for the ruin of the Jews) and to enjoy their culture and faith under the invincible Roman peace (*JW* 5.367). The Stoic Posidonius (135–50 B.C.E.) from Syrian Apamea had similarly vindicated Roman imperialism in his *Histories* (52 books).

Josephus' *Jewish War* provides our fullest history of any Roman provincial rebellion (with information from both sides). For once, a subject from the periphery, even a prisoner of war (although a Roman citizen and an intimate flatterer of the Flavians in the years to come), wrote the eyewitness account. Josephus describes the horrible fate of the Jerusalem Jews in detail. He is the first extant historian to present Jewish history from a Jewish point of view in Hellenic terms and in decent Greek; he is also the first to refer to Jesus and his sect (see *Jewish Antiquities*, which draw on Hebrew Scripture and Greek sources; 18.63–64; 20.200). His historiography is largely conventional by Greco-Roman standards ("this was the greatest war of all time"), but his circumstances and the subject justify inclusion here.

Eusebius (260–340 C.E.) of Caesarea, a Christian bishop and confessor to the emperor Constantine, produced a panegyrical biography of his patron, and harmonized pagan and biblical chronologies in the *Chronica*. He wrote the *Ecclesiastical History* (10 books, down to 324 C.E.), the first such history and a model for all his churchly successors. Hellenistic principles of biography and historiography (including the example of Josephus) informed the history of the origin, growth, tribulations, and triumph of Christianity. Martyrdoms, persecutions, battles over doctrine and heresy, and miracles required a new kind of history (8.9), a new subgenre, institutional and "fulfillment" history.

Eusebius may be derivative in his political and military narrational methods, but his record of the Church's development is radically different for its profuse documentation, inclusion of verbatim quotation, and absence of invented speeches. Eusebius made the form and substance of classical historiography accessible to Christian writers, although his work has a slovenly style and little conceptual

structure. Like Josephus he uses history to justify faith; unlike his predecessor, he has a sensational success to narrate (10.4.9) rather than a tragic failure to explain. He included Greek and Roman pagan achievements as part of the preparation for the triumph of the Christian Church in the vast lands already, providentially, under Roman control. Conceptually the peoples of the East and their mystery cults have moved from the periphery to the center of Greco-Roman history and historiography.

Ammianus Marcellinus (330–395 C.E.), an Antiochene Greek officer of the military elite (15.5.22; 19.8.6) and a man of wide reading, served under Julian and other commanders in the East and West. Thirty-one books in forceful Latin covered the years 96–378. The extant and more detailed portion, beginning in 353 C.E., records wars with barbarians, internal dynastic struggles, and the rapacious administration of the Empire (16.8.11; 29.1.21; 31.16.9). He hopes the Empire can be salvaged, endorses an indispensable absolutism, and analyzes the internal and external crises of his age.

Ammianus argues for the truth, impartiality, and thoroughness of his account, which he based on personal observation, examination of witnesses, and public records (15.1.1). He disparages historians who criticize selective, ungossipy writers, who strive to include every trivial fort or praetor, or who industriously invent motives (26.1.1). This soldier-historian recognizes the limitations of his accuracy and will not supply false figures (31.5.10).

In an oppressive epoch for writers of any creed he shows unusual humanity, tolerance, and even admiration for both Christianity (22.11.5, 10; 21.16.18) and traditional pagan beliefs (divination: 23.6.25; 30.9.5; cf. the attitudes of Eunapius or Orosius). He digresses into scientific and social topics (14.6.2; 22.15.1). His wide travels and active military career aid his topographical explanations and geographical notices (16.10.14–17; 27.4.2). Ammianus takes fair measure of Julian (25.4) and provides succinct if exaggerated summary epilogues for each emperor, highlighting their characteristic traits of remarkable cunning and violence (e.g., 14.27–8; 30.7.1, 8–9; 31.14.2–7). He proclaims Roman values in an age that justly fears impending chaos, and dislikes the Germans because of the threat they pose to civilization. Nevertheless he forgoes the usual deference to the wisdom of the Roman senate, he criticizes rampant peculation by officials, and he admires valiant and astute enemies. His dependable concern for facts leads him to avoid unjustified generalizations (27.11.1) in an age of dogma, fear, and brutality.

F. Methodology and Conclusions

Local records, the Homeric epics, and a rationalism critical of mythical tradition gave the preconditions for historical research. The Greek genre is eclectic in its sources and scope, secular and humanistic in purpose. A rational method and a literary genre were constructed by Herodotus to solve a particular historical puzzle and to legitimate his demonstrably eccentric society. History of politics, public administration, and war remained central but sociocultural history emerged already with Herodotus. The best historians limited themselves to an extended narrative of the period within living memory; the preeminence of recent history was a consequence of methodology's failure to produce reliable evidence for earlier periods.

To record with honesty and after determined research the recent past, especially its changes with no norm postulated, to comprehend the rational, continuous, and earthly connections among things, to inform not a dynasty but all those (of the dominant class) who cared to understand contingent but decisive forces in human societies: these were the ancient historian's professed intentions. The impulse varied as of course did the style, the diligence, and perceptivity of the explanations. Some authors delight in the trivial deed revelatory of personality, many have a moral purpose. Some have a theory of historical causation (cyclical, pendular, linear), but rarely is it applied systematically. Sudden change and contingency were explanations more often invoked than gradual evolution and inevitability. The best of the ancient historians express surprise over outcomes, a sense that things could have gone forward differently, and their historical reconstructions preserve that three-dimensional quality.

The superior historians identified problems of time, change and cause, bias, evidence, individual and group interests, culture, nation, myth, and power. They downplayed the gods, giving them at most the job of keeping the show running, not proving their power. They sought to render events intelligible in human, not providential terms. To instruct and to entertain readers with true examples were goals (cf. Pliny *Ep.* 5.8). Their narrative histories of events were not as analytical as ours. The causes of war were not profoundly discussed, success was measured by duration rather than by ethical notions, evidence was inadequately evaluated and sometimes fabricated. Metaphors, models, and ideological assumptions were rarely considered: narrative history did not question the rights of power, the aim of dominion, or slavery.

Writers of history competed less frequently to unearth new material than to extend the scope of political discourse or to delight their audience with drama, passion, and elegant prose. The chief theoretic was rhetoric; the motive of inciting the reader's virtue and condemning vicious behavior tempted writers to persuade unscrupulously more often than to strive for accuracy. Neither Greek nor Roman historians bothered to learn foreign languages in order to search native resources. Quotation of sources was rare, testing their authorities' accuracy occurred to few of them, and the disinterested weighing of conflicting material evidence was uncommon.

Greek ethnic bias did not lead historians to see history as proof of their nation's favor or disfavor before a god or as a fulfillment of divine promises. Greek historians were often from, but no longer of, their city's power elite. Herodotus, Thucydides, Xenophon, and Polybius all wrote in exile, a political limbo. This reduces parochial favoritism, but not class prejudices. Many Romans deploy history to explain and justify Rome's growth and supremacy. Some subordinate disinterested curiosity to apologetic, polemical, and didactic ends. The great Roman achievement in historiography is the transformation of Greek antiquarian local history in annalistic form into Roman national history. This relocation of focus became the precursor of most modern historiography.

The story of particular men and contingent events has

always been insufficiently logical for philosophers and scientists, but the ancient historians did create a beachhead for systematic research into past human activities. Ancient classical historians generally find and leave men in the historical process, responsible for their choices and acts. The genre maintained a recognizable, if profitably fluid, profile for 750 years in Greek hands, for 500 years in Roman.

A. The Name "Hittite"

The name is derived from the indigenous *ḫatti*, while the modern designation is based on the Hebrew *ḥēt/ḥittī*. In the Old Assyrian texts, *ḫatti* is used as the geographical term for (central) Anatolia and hence is not a gentilic. At that time (19th to 18th century B.C.), *Ḫattuš* was the name of the later Hittite capital, where there was an Assyrian trading post. (In the Hittite language the name of the town becomes an *a*-stem, giving the well-known Ḫattuša.) During the New Kingdom or Empire (from about 1425 to 1180 B.C.), in addition to the expressions "the land" or "the people of [the town of] Ḫattuša," the name Ḫattuša alone was used as a gentilic. From the end of the 2d millennium, Assyrian texts use the term *ḫattû* (Hittite) usually in a pejorative sense—in a way which corresponds to the term *ḥēt/ḥittī* in the later books of the OT.

Numerous passages in the OT refer to Hittites as forming part of or even as actually constituting the original population of Canaan. References to Hittites in the books of the Pentateuch are likely to reflect Canaanite and Hebrew traditions concerning the political reality of the Hittite state during the stage of the Old Hittite kingdom or the initial phase of the Empire period. References in later books (1 and 2 Samuel, 1 and 2 Kings, 1 Chronicles) usually refer to the symbiosis of the Neo-Hittite and Aramaic states in more northern regions as well as to individuals stemming from the north. From a Hittitological point of view, Palestine does not belong to those countries which at any given time belonged to the Hittite sphere of influence. However, this does not preclude that in isolated cases persons or even groups may have crossed the borderline which separated the Hittite from the Egyptian sphere of influence. See also HITTITES IN THE OT.

B. Geography

The geography of Hittite Asia Minor is still a strongly contested area of Hittitology. In the SE lay Kizzuwatna, which comprised sections of the later Roman provinces of Cilicia and Cappadocia. In the NW, later known as Paphlagonia, lay Palā. In the W and SW of Asia Minor lay Luwiya (from ca. 1400 B.C. onward called Arzawa).

C. Form of Government

It has been postulated that an Indo-European trait can be discerned in the character of Hittite kingship, which originally was less absolutist and despotic than elsewhere in the ANE, and in the position of authority held by the *pangus*, or council of able-bodied (?) men. There was a clear relationship between the Hittite queen and the sun goddess of Arinna, the leading female figure of their pantheon, while in a religious text which, as far as its contents are concerned, stems from Old Hittite times, the Hittite king is designated "the governor" of the storm god, the most important male figure in their pantheon. According to Hittite terminology, the Hittite kings "became gods"

when they died. It would seem that in the 13th century B.C. the Hittite king and queen were, to an extraordinary degree, assimilated with the gods, whom they appear to have represented on earth and with whom they were perhaps identified after death.

The Hittites formed what was essentially a federatively organized state which during the New Kingdom or Empire was second only to Egypt in the ANE. At first the kingdom manifested certain feudal traits, but gradually it developed into a state ruled by officials.

D. Excavations and Discoveries

The existence of the Hittite kingdom during the 2d millennium B.C. and the later continuance of Hittite traditions in the so-called Neo-Hittite states in the region around modern Kayseri, SE Anatolia, and N Syria in the period from 1180 to 700 B.C. have gradually been pieced together as a result of numerous archaeological excavations. In 1834 the earliest surface exploration resulted in the discovery by the Frenchman C. Texier of the extensive ruins of Boghazköy/Boğazkale about 150 km E of Ankara, and the nearby rock sanctuary Yazılıkaya. In 1905 the German Assyriologist H. Winckler first visited the site, and in 1906 regular excavation work began and continued in 1907, 1911, and 1912. After a long hiatus as a consequence of World War I and its aftermath, excavation work was resumed in 1931 by the German prehistorian K. Bittel. The same thing happened in 1952 after World War II, but work finally resumed and is still going on.

From the beginning of the excavations at Boghazköy large numbers of clay tablets were found near the great Temple I in the lower city, at Büyükkale, the citadel, the Palace of the Hittite "Great Kings," and the so-called "House on the Slope." The presence of Akkadian and Sumerian texts among the collections of tablets was very quickly discerned. Soon, too, a tentative reconstruction of the succession of Hittite kings during the period of the New Kingdom (ca. 1425–1180 B.C.) was formulated, and only later did it become clear that the texts are preponderantly of an administrative and religious character. For some periods of Hittite history the texts reveal a surprisingly clear picture of how the upper stratum of the Hittite population lived and worked. Written on clay tablets in an adapted version of the cuneiform writing system used in Mesopotamia, the texts comprise a variety of genres: royal inscriptions, religious documents, diplomatic correspondence, and treaties.

The Hittite hieroglyphic script had been previously rediscovered. This system of writing, typologically affiliated (as a syllabary) with cuneiform script, but with a closer resemblance to pictography in its sign forms, was especially used (beginning in the late 18th and 17th centuries?) for official documents. Numerous seals and seal impressions have been preserved together with longer or shorter texts inscribed on (natural) stone, mostly stemming from the late 14th and 13th centuries B.C. Statements on clay tablets reveal that this type of script was also used for lower administrative purposes within the palace, the temple and the army, and was in these contexts inscribed on wax-covered wooden tablets. The hieroglyphic script and wax as a writing material were presumably used by broader layers of the population, and they continued to be used in the period of the Neo-Hittite states, from about 1180 to 700 B.C. Stone, lead, and probably wood continued in use as writing materials. The first example was discovered in Hama(th) in Syria in 1812 by the Swiss explorer J. L. Burckhardt, was published in 1822, and was rediscovered together with other examples in 1870.

Turkish archaeologists were already closely involved in the earliest excavations at the Hittite capital. A second important site in the central region within the bend in the Halys River, Alaca Höyük (1907, 1935, and 1937–39), was excavated solely by Turkish scholars. German archaeologists sponsored by American institutions excavated Alişar (= Ankuwa?) in 1927–32. Both sites have proved especially important for the earlier periods of Hittite history. However, the main new developments in the field of Hittite archaeology since World War II are without doubt the Turkish excavations in Inandık led by R. Temizer and K. Balkan (1966–68). There they discovered an important Old Hittite temple, an exceptionally important relief vase and a donation deed (published by Balkan in 1973). Since 1973, the Turks have been conducting excavations in Maşat led by T. Özgüç and S. Alp. In Maşat a large palace dating from the beginning of the Empire period was excavated and an important local archive of 125 letters on 94 clay tablets, 16 lists, and 1 oracle text was found. These two excavations filled in sizable lacunae in the archaeological documentation of Ḫattuša, while the letters from Maşat, when finally published, will prove of great historical, linguistic, and paleographical significance. The period in question, the last decades before the accession of Suppiluliumas I (ca. 1350–1325 B.C.), is rather poorly attested in the text collections of the Hittite capital.

During the first stage of the study of the hieroglyphic script and again since 1974 English scholars in particular have been intensely occupied with this Anatolian method of writing. Between 1872 and 1884 and on the basis of the find spots of the hieroglyphic script, W. Wright and A. H. Sayce succeeded in drawing a rough map of the extent of the Hittite New Kingdom or Empire. The find spots are dispersed over a wide area from the Sipylos inscription near Smyrna (= Izmir) on the west coast, via Boghazköy in the heart of Turkey, and on to Carchemish (= Çerablus) on the Turkish-Syrian border near the Euphrates (after Boghazköy the largest tell in the whole country; English excavations in 1878, 1881, 1911–14, and 1920). The unity of the script was correlated with the textual data on the kingdom of the Hittites in inscriptions of the pharaohs of the Egyptian New Kingdom, of the Assyrian king Tiglathpileser I (1115–1077 B.C.) and the OT.

The discovery of the so-called Arzawa letters in the Archive of Amarna (1887) led to the surmise that in view of the two systems of writing, cuneiform and hieroglyphic, in use there, Boghazköy must have been the capital of the Kingdom of Arzawa. Now Arzawa is known to have been located on the SW coast of Turkey. Only after the work of H. Winckler and the other German and Turkish researchers in Boghazköy and after the deciphering (or rather the analysis) of cuneiform Hittite by the Czech scholar B. Hrozný (1915–17; cuneiform had already been deciphered, so that the script could be read) was it conclusively established that the site represented Ḫattuša, the Hittite capital, and that a new branch of the Indo-European

family of languages had been discovered. In 1926 the Swiss scholar E. O. Forrer made available the most important historical text material for both the Old Hittite Kingdom (17th–15th centuries B.C.) and the Empire period (approx. 1425–1180 B.C.). In about 1952 paleographic research began to make headway with the work of the American scholar H. G. Güterbock and the German epigrapher H. Otten. Specific forms of signs much used during the Old Hittite period and the first half of the Empire period were distinguished as such, making it also possible, therefore, to date more precisely the religious texts of earlier periods, especially those written in the Old and Middle Hittite scripts.

E. Hittite History

In a surprisingly quick succession of events, the first three kings of the Old Hittite dynasty of Ḫattuša, Labarnas, Ḫattusilis I, and Mursilis I, succeeded in establishing a realm in Anatolia and later add to it large parts of present-day northern Syria. According to the historical prologue of a legal and administrative edict of the later Hittite king Telepinus, who in this prologue gives a tendentious survey of Old Hittite history up to his time (beginning of the 15th century), Labarnas already held considerable regions in S Turkey. Either Labarnas himself or Ḫattusilis I, his successor (and probably his grandson), must have penetrated far into the NW. Kizzuwatna, reached by way of the famous "Cilician Gate," was probably annexed to the kingdom during the reign of Ḫattusilis I.

It was under this same king that conflict began with Aleppo, the capital of the Yamḫad kingdom in Syria, which at that time was perhaps the most powerful state in W Asia. Yamḫad prevented the Hittites from entering Syria. According to the bilingual (Akkadian and Hittite) annals of Ḫattusilis I (found in 1957), the Hittites attacked the coalition of city-states (which included Emar, Ebla, and Zalpa) from two directions: by the way of Kizzuwatna, specifically that part later known as the Cilician plain (around present-day Adana), and from the N after crossing the Euphrates. It appears from one of the two edicts dating from the end of his reign (but perhaps not of his life), in which Ḫattusilis I probably again appointed a grandson, Mursilis I, as his successor, that Aleppo had not as yet been defeated. The text suggests that this was to be the task of the new, young king when he had attained the age to undertake campaigns independently. This latter detail derives, however, from the second edict, likewise bilingual, dealing with the succession to the throne. During the reign of Ḫattusilis I the Hittites penetrated deep into the Hurrian country in N Mesopotamia. The Hurrians, on their part, invaded Anatolia in the early part of his reign and advanced far into Hittite country.

After capturing Aleppo, Mursilis I undertook the gamble of sending a military expedition to the then weakened Babylon, an event known not only from Hittite sources but also from Akkadian texts. Mursilis I probably joined battle with the Hurrians both before and after the expedition against Babylon, which was carried out with foot soldiers and charioteers and resulted in a temporary occupation of the city. The same period of his reign (about 1600 B.C. according to the "Middle Chronology" or in the second half of the 16th century according to the "Low Chronology") also yielded a number of important texts. These include the Old Hittite version of "The Laws" and several interesting and original historical texts, one of which describes the conflict with Aleppo during his reign and the reign of his predecessor and another text which would seem to be devoted to the conflicts with the Hurrians. It is this latter composition which, in addition to another "contemporary" fragment, alludes to the predatory raid on Babylon. A third text contrasts instances of corruption in official conduct and military action with the description of a meal at court at which sat the "good" dignitaries from the reign of Ḫattusilis I.

This period of prosperity was followed by a long one of decline, attributed by Telepinus to dissent within the royal family concerning the rights of succession and initiated by the murder of Mursilis I by his brother-in-law Hantilis I. About 1425 B.C. a new dynasty arose, perhaps with the transfer of power to a secondary branch of the reigning royal family. The Hurrian names of the new queens (Nikalmati and Asmunikal, but also Taduhepa and Henti) and the originally Hurrian birthnames of a number of its male princes (Manninni, Tulpi-Tešub, and Tasmisarri), two of whom later became kings under traditional Hittite names, strongly suggest connections with Kizzuwatna. Little is known about the period between Telepinus and the New Kingdom or Empire period. Recent archaeological discoveries in the Upper Town of Ḫattuša have confirmed the historical reality of Hantilis II, Zidanza II, and Huzziyas II, whose existence had been doubted by some scholars, and even added a final Old Hittite or Early Empire king, Muwattallis I, whose claims to sovereignty had not yet been recognized by modern scholarship (Houwink ten Cate 1987). At least five and possibly six kings need now be reckoned with; they must have succeeded each other quickly, and certainly did not represent separate generations.

The advancing Gasga nomads of the N must have made their proximity felt, at the latest under Hantilis II, but perhaps already under the reign of Hantilis I. In the course of later centuries they several times threatened or actually attacked Ḫattuša, located dangerously near the north zone. The first incursion was during the reign of Tudḫaliyas II (?), the direct predecessor of Suppiluliumas I (1350–1325 B.C.), when not only the palace of Maşat but also large sections of the capital itself were laid waste. Less than a hundred years later, at the beginning of the 13th century, the threat of the Gasga nomads was likely one of the reasons Muwattallis II removed the royal residence to Tarhuntassa. His successor, Urḫi-Tešub (= Mursilis II) returned the palace to Ḫattuša. Some scholars ascribe the ultimate devastation of Ḫattuša (ca. 1180 B.C.) to the Gasga nomads. A recently found hieroglyphic inscription concerning Suppiluliumas II, the last known Hittite "Great King," may contain information regarding the actual causes for the final disaster.

The beginning of the New Kingdom can be dated to about 1425 B.C. There is uncertainty, however, as to the number and succession of the kings of the first part of this period. A genealogical reconstruction of this first stage reckons with four or five kings belonging to three generations, and provides an historical sequence whereby under Tudḫaliyas I extensive annexations were made: land on

the west coast and later Isuwa, East of the Euphrates, and territory around present-day Elaziğ was added to the realm. This king is the same Tudḫaliyas who, according to the later Aleppo treaty, conquered both Aleppo and Mitanni. It would seem that even Wašukanni, the as yet unidentified capital of Mitanni, was held temporarily by the Hittites. In all reconstructions, the reign of Ḫattusilis II, presumably a son and direct successor of Tudḫaliyas I, witnessed the first signs of a decline which became acute during the reign of Arnuwandas I, now assumed to have been the brother-in-law of Ḫattusilis II (Arnuwandas I was married to Asmunikal, the daughter of Tudḫaliyas I and Nikalmati). This rapid decline, which continued during the beginning of the reign of Tudḫaliyas II, led to a situation in which, when the enemies of the kingdom were pressing on all sides, the Hittite king was driven back to the core of his realm, the region around Ḫattuša within the bend of the Halys River. There is evidence that during a later stage of his reign, Tudḫaliyas II was able to recapture Kizzuwatna. But the success of the second attempt to expand the kingdom beyond the frontier of present-day Turkey was of short duration.

It was the third attempt at expansion, during the reign of Suppiluliumas I, that had longer success and resulted in a firmly demarcated sphere of influence. This hegemony was maintained for almost a century and a half. Suppiluliumas I concentrated initially on the consolidation of the kingdom in Anatolia itself; later, during the second stage of his reign, he put an end to the independent existence of the Hurrian kingdom of Mitanni (perhaps with Babylonian assistance) and captured important towns and regions which lay within the sphere of Egyptian influence. The superiority of Suppiluliumas I lay in the combination of cautious diplomatic maneuvering and strong military action at the opportune moment. Ugarit and Amurru were removed practically forever from the Egyptian realm and added to the Hittite Empire. In domestic and foreign affairs he made frequent use of the well-known strategem of dynastic marriage. He arranged the marriages of one sister and of two daughters with vassal princes; he himself married a Babylonian princess before he began his more internationally orientated career; and the widow of the Egyptian pharaoh Tutanhkamen asked him for a son to be her husband and future pharaoh of Egypt. The latter marital project was not, however, realized. The prince Zannanzas was killed *en route*, and this led to new military and political complications.

The administrative consolidation of the new realm was expressed in the installation of two princes, sons of Suppiluliumas I, as viceroys in Aleppo and Carchemish respectively. In particular the dynasty of Carchemish, strategically located at the point where the Assyrian and Hittite spheres of influence adjoined, thereafter played an important role in the governance of the Syrian provinces of the empire. Four generations of kings of Carchemish were contemporaneous with the four generations of Hittite "Great Kings" who ruled the realm after the death of Suppiluliumas I. It is likely that the fifth king of Carchemish, Kuzi-Tešub (recently attested in two seal impressions found at Lidar Höyük [see Hawkins 1988]), outlived the disastrous end of the Hittite Empire. In the second half of the 13th century the city of Tarḫuntassa played an equally important role in the defense against western invaders. The recently published "Bronze Tablet," an official copy of a treaty between Tudḫaliyas, the son and successor of Ḫattusilis III, and Kuruntas, son of Muwattallis II, and the later treaty that Tudḫaliyas concluded with his brother Ulmi-Tešub prove that during this period the kings of this SW border province functioned on a par with their contemporary, the king of Carchemish. Both were preceded in rank by the Hittite "Great King" and the heir apparent to the Hittite throne.

The rapprochement with Egypt in the course of the 13th century B.C. undoubtedly took place under Assyrian pressure. The New Kingdom came to an end around 1180 B.C., in the period of the migrations of the so-called "Sea Peoples." Ḫattuša was captured, plundered, and razed, a fate which—with the likely exception of Carchemish—also befell towns in other parts of the empire. That the "Sea Peoples" should be held responsible for the destruction of the Hittite capital is not thought to be very probable; the Hittite Empire was too much of a continental power and most of the important settlements lay far away from the coast. Disastrous occurrences within Anatolia itself are likely to have played an important role in this downfall.

The Neo-Hittite states in the region around modern Kayseri, SE Anatolia, and N Syria thereafter carried on the Hittite-Luwian traditions for another five centuries. Since the references in the Neo-Hittite hieroglyphic texts to different ethnic components—Luwian and Hurrian, but also Northwest Semitic—are indicative of the continuation of a pattern which already existed in the late 14th and 13th centuries B.C., no large-scale migrations need be assumed. As far as the regions outside of Anatolia proper are concerned, one might also evoke the picture of former colonies outlasting the political existence of their mother country. Recent research has indicated that Neo-Hittite kings in the Malatya region claim descent from a "Great King" of Carchemish named Kuzi-Tešub, who is said to have been their grandfather. If this Kuzi-Tešub turns out to be the king now known to have been fifth in line in our listing of Carchemish rulers, the long-sought piece of evidence for continuity between the Hittite Empire and the Neo-Hittite kingdoms would now have been found (Hawkins 1988: 101–3). In a more general sense, vestiges of the glorious past can be discerned in the continued use of the titulature "Great King, Hero," not only in Malatya and Carchemish but also in Karahöyük (Elbistan) and in the group of presumably early Neo-Hittite inscriptions found in the W (Karadağ-Kızıldağ southeast of Konya and Burunkaya in the vicinity of Aksaray). In Tabal (the region around Kayseri) the titles were still adhered to in the late 9th and 8th centuries B.C. Also the more general recurrence of famous Hittite king names, Labarnas, Ḫattusilis, Mursilis, Arnuwandas, and Muwattallis, in the whole region for which Neo-Hittite inscriptions are attested suggests a tradition rooted in the older Hittite dynasties.

In the 9th century B.C. the Neo-Hittite states became involved in renewed Assyrian expansion toward the NW. After a short intermediary period in the first half of the 8th century when Urartu was exceptionally powerful, the Neo-Hittite states were gradually, one by one, incorporated into the Assyrian Empire. At that time, from the middle of the 8th century onward, the Phrygians ruled W

Anatolia. In the E, Urartu was still an important power. During the last stage of their independent existence, the Neo-Hittite states of SE Turkey endeavored in vain to gain the support of the Phrygians and Urartu against Assyria. In the 7th century there was again unrest and apparently intervention from both the Greeks and Phoenicia. After the fall of the Assyrian Empire, the coastal region of the Mediterranean fell under the political influence of the Neo-Babylonian Empire. The further course of events forms part of the more traditional classical ancient history. All that remains to be said is that Luwian population groups would appear to have continued to exist in broad zones of the S coast and in particular in the lands of Lycia and Cilicia Aspera down into the Hellenistic age.

A number of factors make it difficult to give a broad description of Hittite history. For some periods, however, there is an abundance of historical material, both in volume and in genres. Moreover, the historiography of the Hittites is of a relatively high level. This obtains in particular for the reign of Mursilis II (ca. 1321–1298 B.C.). The earliest example of Hittite historiography, the "Text of Anittas," recorded for a king of Kaneš/Nesa (near Kültepe in the vicinity of Kayseri) who belonged to a local dynasty and lived approximately seventy-five years before Labarnas, describes lucidly events which may encompass more than one reign, sometimes even long periods. The presentation is seldom exclusively centered around the main personage, the Hittite king. The achievements of other leaders are fittingly described. Later examples of historiographic texts contain geographical digressions and historical transitions when a change is made to another location or another subject. Letters are cited and sometimes events in the enemy camp are described at length. Often an important opponent is allowed to speak. All this results in an easily readable description of events. Setbacks and defeats are hardly ever mentioned, however, and important omissions are merely ascribed to royal predecessors; these historical texts definitely give a biased account.

The Hittite annals, intended as self-justifying reports to the gods, but also as accounts of personal achievements recorded for the benefit of future successors and probably also for contemporaries of the ruling class, reach a level of sophistication unparalleled in those days. Their notable character as compared with examples from elsewhere in the ANE is probably due to the different administrative structure, by which rights and duties were more evenly spread over a larger number of people.

F. Economy

Hittite economy was clearly based on crop and cattle raising, carried on by farmers who were either independent or belonged to one of the two "Great Organizations" (palace and temple), or to the larger unit of a private estate. The limited number of land grant deeds and of cadastral texts shows that an estate or a farm could comprise dispersed parcels of lands. In the so-called land grant deeds (Old Hittite end Early Empire) in which were registered the royal grants of estates, a distinction is made between arable, horticultural, and pasture land. The horticultural land was divided into vineyards and orchards and mention is also made of forestland. The work of cultivation was done by resident families of farmers (also working on their "own" plots) assisted by slaves. It is remarkable that craftsmen are sometimes listed in the descriptions of these estates. The king was undoubtedly the largest landowner. Oxen (used for plowing), cows and goats (for milk), sheep (for wool), and also pigs and donkeys are mentioned. Horses are already referred to in the Cappadocian texts and also in the texts of the Old Kingdom. The art of metalworking (mines were the greatest asset of Anatolia and apparently continued to attract the Assyrian interest) and the manufacture of textiles must have reached a high degree of perfection, as is evidenced by the archaeological finds and the data in the texts.

G. Languages

Very soon after Hrozný's "decipherment" (1919), it was noted that no less than eight different languages were represented on the roughly 10,000 clay tablets and fragments of tablets found thus far. Although the obvious interpretation of this phenomenon is that it is the first formal indication of the composite nature of Hittite civilization, it could also indicate that the administrative system was less rigid and monolithic than in other parts of the ANE. Only Hittite, the language of the central region within the bend of the Halys River, Luwian, used in the S and W, and Hurrian, spoken in the SE and especially E of the Euphrates, were still living languages at the time of the New Kingdom. The most remarkable aspect of this phenomenon is, therefore, that the texts and linguistic products of six centuries appear to have been kept in a rather large number of places in the administrative and religious center of the kingdom when the capital was devastated about 1180 B.C. Apparently the Hittites were strongly oriented toward the past. To this must be added that Sumerian and Akkadian were included in the teaching of cuneiform, since practically every written Hittite sentence contains Sumerian and Akkadian logograms. Hence the use of cuneiform script implied at least a passive knowledge of some Sumerian and Akkadian. Recent research has revealed that scribes with Akkadian names were employed at the beginning of the New Kingdom and Hurrian scribes in the 14th and 13th centuries B.C. Moreover, two of the extinct languages, Hattic and Palaic, are mainly found in scattered passages in religious texts called "festival texts" or "festival descriptions" where Hattic and Palaic gods are addressed.

The eighth language attested was in all likelihood extinct as well. It can be detected in the scattered evidence for a form of Indo-Aryan among the numerous Hurrian personal names found not merely in Ḫattuša but in a great number of archives which came to light in a broad northern zone of the ANE. The Hurrians, like the Urartians later, spread out from a region between Lake Van and Lake Urmia and took possession of large tracts of present-day SE Turkey, N Syria, and N Iraq during the final phase of the 3d and the subsequent first half of the 2d millennium B.C. The Hurrians reached the pinnacle of their political power in the Mittanni Kingdom (16th–14th centuries B.C.). Originally it was thought that among the Hurrians there was an upper stratum of Indo-Aryans who forced their way in from the N at the beginning of the 2d millennium. The data from the collections of texts from Ḫattuša which provided important new clues are the oc-

currence of a number of Indo-Aryan divine names in a state treaty between Suppiluliumas I and his son-in-law Sattiwaza, at that time vassal king of Mitanni under Hittite sovereignty and protection, and the likewise Indo-Aryan technical terms in the training manual of Kikkulli, the horse trainer from the land of Mitanni. Nowadays the presence of these Indo-Aryan names of gods and persons and these technical terms has been reduced to a minor element in Hurrian studies. See also LANGUAGES (HITTITE).

H. Religion

The Hittite texts speak of the "thousand gods" of the Hatti kingdom. In addition to the Indo-European types of divinities (the storm god of heaven and the male sun god of heaven may be compared to Zeus and Helios respectively) and the numerous divine figures derived from the Hattic substratum who retained their Hattic names, many Hurrian deities also occur in the Hittite pantheon, especially from the beginning of the New Kingdom. Within this Hurrian group some, like Enlil and Ea, ultimately go back to Mesopotamia. The beginning of the New Kingdom period also witnessed the introduction of the state cult calendar with the two main festivals of Spring and Autumn, both lasting originally for 35 days or more. During both festivals the king and the queen visited the sanctuaries in the capital and the temples of the most important towns in the vicinity of Ḫattuša. After the "Upper Town" had become the main terrain for archaeological work, no less than 21 additional temples were uncovered. During the course of the Empire period, Hurrian influence increased steadily, and consequently with regard to the 13th century B.C use is often made of the term *interpretatio hurritica* of the Hittite pantheon, best illustrated in the rock sanctuary Yazılıkaya near the Hittite capital. The hieroglyphs added show that reference is made to Hurrian deities. On the main panel Tešub, leading the procession of gods, and Hepat, leading the goddesses, stand facing each other. They are here apparently identified with the storm god of Hatti and the sun goddess Arinna, the two leading deities of the Hittite pantheon. In the capital itself, both deities shared a double temple, the "Great Temple" located in the "Lower Town" of the old city.

A group of Hittite mythological tales are indigenous to Anatolia, and the Hattic deities figuring in them probably go back to Old Hittite times. Another group is predominantly Hurrian and belongs to the period of the New Kingdom. All of the epic texts (in the introductions and in the colophons, often added to the texts, characterized as "Songs") go back to the Hurrians or to Mesopotamia (presumably through Hurrian mediation; e.g., the Hittite version of the Gilgamesh Epic). A few Northwest Semitic deities and myths also penetrated as far as Ḫattuša. The Hittite royal prayers, particularly the numerous prayers of Mursilis II, are of great historical importance. Most large collections contain many rituals and festival texts. See also ANATOLIA (MYTHOLOGY).

I. Literature

It is of importance to realize that the concept of literature is more limited for the 20th-century reader than for the ANE. Hittite literature comprises everything that was deemed worthy of being recorded in writing. The findspots of the tablets are both "archives" and "libraries" (or, for that matter, "scriptoria") in the later usages of these terms. Even a term like "chancellery" might be applied to the collections found at Büyükkale (buildings A, E, and K). Many genres are represented already among the Old Hittite texts. Unrepresented genres—instructions, oracle texts, and royal prayers—may have been disregarded for highly practical reasons. Historiography is the literary genre that was most productive. The scribe's training was based on Mesopotamian texts, which were traditional in this respect (see Beckman 1983). The high esteem attached to the ability to write in cuneiform is evident from the two groups of persons for whom genealogies are available: the kings of the second half of the Empire period and a fairly large number of scribes.

J. Culture

The Hittite civilization was manifestly composite. Much was derived or borrowed from the autochthonous Hattic population, particularly in matters of religion, court ceremonies, and iconographic traditions in art. Hurrian influence became significantly evident during the New Kingdom or Empire. The most important achievements of the Hittites in the cultural sphere lie in the field of historiography (compositions on a central theme) and in law. The political talent of the Hittites was great. They have sometimes been characterized as the Romans of the East. Such a comparison can also be made on account of their interests in architecture and warfare in addition to historiography and legal matters. It is also applicable to the way in which they, like the Romans assimilated and incorporated cultural achievements from their predecessors and from elsewhere. See *CAH* 2/1: 228–55; 659–83; 2/2: 252–73. See also ANATOLIA (HISTORY).

HITTITE RELIGION. The Hittite royal archives, known since 1907, cover the 18th to the 13th centuries B.C. They constitute one of the richest archives of the ancient Near East, and contain the most religious documents of any archive. These archives are the oldest evidence of an Indo-European language and religion.

A. Sources

These documents were written in cuneiform script on clay tablets, following Mesopotamian practice. The majority of the texts are of religious content, containing myths, hymns, and prayers, cultic inventories, divinatory texts, and descriptions of festivals and magic rituals (Laroche 1971: 321–720). The myths indirectly furnish precious facts about the origins of the kingdom (Laroche 1965: 62–176; Gonnet 1987a, fc.); the hymns and the prayers enlighten us as to the specific character of the relationships that existed between the king and the god (Laroche 1964–65; Houwink ten Cate 1969; Lebrun 1980). The prayers contain promises made by the king to a god in exchange for desired divine favors, while detailed descriptions of the festivals (Güterbock 1960; 1969; Darga and Dinçol 1969–70; Singer 1983–84; Popko and Taracha 1988), rituals (Goetze 1938; Otten 1958; Kümmel 1967; 1987; Neu 1970), and the cultic inventories (Brandenstein 1943; Jacob-Rost 1963; Carter 1962; Güterbock 1983), apprise us not only of divinity lists and the organization of cults (Archi 1973b), but also of the juncture of the human universe with the world of deities. Certain of these rituals are closely linked to mythological texts, of which they give a kind of synchronic equivalent; this circumstance permits both the myths as well as the rituals to be understood (Gonnet fc.).

B. General Characteristics

If one were to name three general and specific traits of the Hittite religion, one would say that it was characterized by the contractual nature of its relationship between the Hittites and their gods, by the importance played by rituals, and by the role played by the king.

In fact, the Hittite god was less attached to a place than to a cult: one could attract him with the promise of giving him a particularly elaborate cult; a god might leave his sanctuary and the country if his cult was not attended to according to the ritual (through negligence, insufficient offerings, or omissions from the cultic calendar), and might take with him everything necessary for life (Gonnet 1988). This departure would bring catastrophies regarded as divine punishments. Mobility is one of the original characteristics of the Hittite gods, and the strength of the Hittite Empire was directly linked to the number of gods that it was able to attract, appropriate, and hold on to. The Hittite land was not in and of itself sacred; it was so only to the degree that it sheltered numerous gods for each of whom a cult was conducted according to tradition: tradition is the very essence of the sacred.

Among the Hittites, proper conduct of a cult is essentially conforming to an archaic ritual, carefully transcribed on tablets found in libraries by scribes, meticulously faithful to their model: the ritual is a succession of *acts* that ends in a *sacrifice* offered, at a *moment* dictated by the liturgical calendar, to a particular *god.*

The importance of the king in the religion is linked to two facts: the king is the head of the clergy, and he becomes a god at his death. When the son of a king evokes the death of his father, he says: "when my father became a god" and this expression is only used for kings and their queens. Like the gods, dead kings have images that receive offerings (Otten 1951; Gonnet 1987b). It is the same for the queen, the king's wife (Bin-Nun 1975). Although the king, while alive, is only human, he is the "favorite of the gods" (Gonnet 1979: 23–24; 1987a). That is to say, he was elected by the gods to exercise royal power in a country and in a capital—Ḫattuša (Boghazköy)—that had likewise been chosen by them (*KUB* II 2: 42–43: "the gods have allotted the nations, they have established the capital at Ḫattuša for the king to rule there"; *KUB* XXIX 1: 17–18: "it is on me, on the king, that the gods, the Sun and the god of Storms have conferred the country and my house"). One of the major aspects of the royal function is directly linked to the divine election: it is the king himself who, seconded by numerous clergy (Güterbock 1975: 129–32; Gurney 1977: 25–43), enacts the cult on behalf of the gods. He is responsible for the proper execution of the cults, a condition for prosperity; and this fact explains the important role of rituals and more generally of religion in the society.

C. Deities

From the beginning, Hittite religion combined two traditions. The one is called Hattic; it was pre-Hittite, non–Indo-European, named for a people located in the Halys River valley; the other was called *nesite,* properly Hittite, from the name of the town of Neša (Kaneš), in Cappadocia. In the course of time, gods of other populations were adopted; those of the Palaites in Paphlagonia and those of the Luwians in the region of Tyane, two Indo-European groups; then a little later, the gods of the Hurrians (a non–Indo-European people of Cilicia/Kizzuwatna; Güterbock 1949; Gurney 1977; Laroche 1980). With all these disparate elements, the Hittites assembled a vast pantheon that they designated as "the thousand Hittite gods." It is in the organization of this pantheon that they left the specific mark of their culture.

In the middle of the 13th century B.C., under the influence of Queen Puduhepa, of Hurrian origin, the Hittite pantheon was founded upon the Hurrian pantheon, which had become official. This pantheon is well known thanks to the rupestral sanctuary of Yazılıkaya (Bittel 1975), located 2 km from Ḫattuša. More than fifty divinities are represented there in relief, wearing above their arm their

Horite name written in hieroglyphic Luwian. It is the oldest representation of a pantheon.

A Hittite god was never isolated (Laroche 1967); he was always part of a divine grouping (Laroche 1952) that one honored according to the hierarchical order of the divinities (Puhvel 1984: 129–35). The place where all the gods assembled was above all, Ḫattuša, called "the city of the gods." But other sacred cities, such as Arinna, Nerik, and Zippalanda, (Tischler and Del Monte 1979) were designated as "places of the Assembly and of the Judgement of the gods" (Beckman 1982; Houwink ten Cate 1987). Outside of Ḫattuša, seat of the state pantheon, each Hittite city possessed its own pantheon, comprising gods, goddesses, mountains, rivers, and springs. In the longest royal prayer known, that of the king Muwattalli (Lebrun 1980: 256–85), there are more than fifty enumerations of provincial pantheons.

The lists of gods are known to us above all from two types of documents: texts that describe the royal offerings during the cults and the festivals, and treaties concluded between the Hittite king and a neighboring country (Weidner 1923; Friedrich 1926–30; Laroche 1980). The difference between these divinity lists is in general slight; they always begin with the sun (dUTU) and his group, followed by three groups of gods: the storm god (dU/IM) and his circle, the protector gods (dKAL) and the group of gods of war (dZABABA). This tripartition recalls the distribution of functions recognized in other civilizations by Georges Dumézil (1966: 68–74; 77), although among the Hittites, the group of war gods is found in the third position. In the lists of royal offerings, before the sun one finds an entity whose nature is still unclear, Tauri(t), a divine concept associated with a tree.

The sun is a complex divinity: when feminine, she can be the solar goddess Arinna, consort of the head of the pantheon, the storm god; or even the solar goddess of the earth (Lelwani), an infernal goddess (Otten 1950). But when the sun is a male god (*Ištanu*) like the Mesopotamian Šamaš, a sort of assimilation takes place between the king and the god (Houwink ten Cate 1987), as the principal royal title, "My Sun" (= My Majesty), indicates. In the Anatolian hieroglyphic system this is represented by a winged solar disk (Laroche 1960 no. 190; Gonnet 1979). Relief number 34 of the Yazılıkaya Sanctuary reflects this ambiguity: the person represented wears a royal costume; he has the royal title "My Sun" above his head but also the name of the sun god above his arm (Bittel 1975: Tafel 22, 1). The Hittite sun seems to be outside the three groups of gods cited above. He floats above these categories, like a guardian angel.

The lists of divinities end with the enumeration of secondary divinities, of which some are only hypostases of the principal divinities mentioned above. The "(favorable) day," deified among the Hittites, often appears at the end of the lists (Otten 1958: 77–78).

D. The Cult

Worship was offered to a divine image. This could be a statuette (Puhvel 1984: 313–15), a stele (Darga 1969), or an object symbolizing the god (a rython or statuette in the form of an animal, for example: a bull for the storm god, a deer for the protector gods, a lion for the gods of war).

A god's cult was initiated by a royal decision. It was the king who decided to have the image made, who fixed the date, the place, and the form of the cult, and endowed the temple with houses for the clergy and temple personnel, lands, vineyards, and storehouses for the harvests (*CTH* 81 II: 79–82; Archi and Klengel 1980; Gonnet 1987a: 91, 96). The clergy assisted the king in the celebration of the cult. The priests and priestesses of the temple took care of and prepared the sacrifices. A priest was elected by lot. After his enthronement, he carried the image of the god to the altar of the temple dedicated to him (Gonnet 1985–86). It is necessary to distinguish the clergy proper from the temple personnel, who were responsible for all the necessary elements for the preparation and the execution of the cult: chefs, bakers, cupbearers, potters, singers, instrumentalists, dancers, etc. At the head of the administrative services was the overseer, who managed the goods and furniture of the temple.

The cult took place in a temple or outdoors, in a "pure" place, "in the mountains where there is water." The cult image and the cultic equipment (throne, hearth, portable altar) were transported to the chosen spot where they were set in place on a rock.

As the excavations at Boghazköy have shown (Neve 1975; Klengel 1975), a temple was located in a sacred enclosure in which other buildings have also been found (library, storehouse). A temple could be dedicated to one or two divinities at a time (Güterbock 1975: 127). In the temple, several sacred places received offerings as well as the divine image: the throne (Archi 1966; Starke 1979), the hearth, the altar, the keyhole (symbolizing the door), and the window (Popko 1978).

Most often the cult of the gods was integrated with a seasonal festival that lasted several weeks. The most important festivals were those of autumn and spring. That of autumn, *nuntariyšhaš*, called the "festival of speed," lasted 21 days (*CTH*, 626; Košak 1976). The spring festival, which bore the name of a plant, AN.TAH.ŠUM., numbered 38 days (*CTH*, 604–25; Güterbock 1960; 1964; Gonnet 1981; 1982; Houwink ten Cate 1986; Popko and Taracha 1988). Both were agrarian festivals. They were centered around the opening (in the spring) and the closing (in the autumn) of the grain jar (Archi 1973a). During the last cultic season, winter, other festivals were celebrated, for example the festival of the winter solstice or that of the New Year (*CTH*, 597–600; Hoffner 1967: 39–41; Carter 1962: 180–83; Neu 1982: 125–27).

The rituals that ended with sacrifices offered to the gods of beverages, bread, and meat (Kammenhuber 1971; Archi 1973b; Rosenkranz 1973) often included the burning of incense; the manipulation of objects pertaining to the throne, the king, and the symbols of power; foot races; horse races; simulated combat (Archi 1978); a banquet (Archi 1979) in which the royal couple and the principal officers of the empire took part; vocal and instrumental music (Kümmel 1973); dances; recitations, and acrobatics. The sequence of these traditional and seemingly very ancient rituals evidently carried significance, but nothing

obliges one to think that it was always perceptible during the time of the empire.

Trans. Stephen Rosoff

HITTITE TEXTS AND LITERATURE. In discussing Hittite texts one must first specify how the term "Hittite" is to be understood. Modern scholars distinguish between two major groups: (1) the Hittite kingdom with its capital at Ḫattuša, modern Boğazkale (Boghazköy), which existed ca. 1750–1200 B.C., and (2) the Neo-Hittite kingdoms of S Anatolia and N Syria, small city-states which carried on some aspects of the Hittite culture after the central administration at Ḫattuša had collapsed with the destruction of the city. The Hittite kingdom used both a distinctively Hittite cuneiform script and a hieroglyphic script. Cuneiform was used for all types of texts, while the hieroglyphs are restricted primarily to seals and monumental inscriptions. Cuneiform texts have not been found at the Neo-Hittite sites; these kingdoms continued the use only of the hieroglyphic script.

D. Hieroglyphic Luwian Texts

A. Terminology

The term "Hittite (abbrev. "Hit") text" can be somewhat ambiguous because of the multilingual nature of the corpus. We may include under this rubric not only texts written in Hit, but also those composed or copied down by the Hittites in other languages such as Akkadian (Akk). There are eight languages attested in the corpus of cuneiform tablets at Boghazköy (Gurney 1981: 119–30): (1) Hittite, the Indo-European language of the founders of the Hittite kingdom. The early Hittites borrowed the cuneiform script of Mesopotamia and adapted it to their own language, allowing them to develop their own literary traditions and to translate the literature of other cultures into Hit. The majority of the Ḫattuša archive is written in Hit. (2) Luwian, a related Indo-European language of southern Anatolia. The Luwian of the cuneiform tablets consists of passages within the context of Hit-language ritual texts, usually incantations to be recited in Luwian. Luwian is also the language of the Hittite hieroglyphic inscriptions. (3) Palaic, another Indo-European language of the Anatolian group, attested only in fragments from the Ḫattuša archives. (4) Akkadian, the Semitic language of Mesopotamia and the language of international correspondence in the Near East of the 2d millennium. The Hittites not only borrowed the cuneiform script of Mesopotamia but also learned to write Akk, using it especially for treaties and letters intended for non-Hit speakers. The influence of the Mesopotamian scribal tradition on early Hittite literature may be seen in the historical texts from the Old Hittite period written in Akk or bilingual Akk and Hit (Güterbock 1964: 108). Texts borrowed from the Mesopotamian tradition, such as omens, epics, and proverbs, also tend to be written in Akk, although they were also

frequently translated into Hit. In addition Akk words occur throughout texts written in Hit, used logographically for Hit words. (5) Sumerian (Sum), the ancient language of Mesopotamia and the first to be written down by the inventors of cuneiform. Sum words occur as logograms throughout Hit texts (as they do in Assyrian and Babylonian texts). Sum also occurs in the Hittite lexical texts, most of which are in three languages: Sum, Akk, and Hit. (6) Hurrian, the language of the Hurrians of northern Mesopotamia and Syria, including the kingdom of Mitanni. An agglutinative language unrelated to any other known language except Urartian, Hurrian occurs at Ḫattuša primarily in passages meant to be recited in rituals, in loan words (especially in divination), and in a few texts written totally in Hurrian, including fragments of the Gilgamesh Epic. The Hurrian material from Boghazköy presently forms the bulk of that language's corpus, as the capital of the Hurrian-speaking kingdom of Mitanni, Waššukanni, has not yet been discovered. (7) The Aryan language of Mitanni's rulers, preserved in some technical terms in a Hurrian-inspired horse training treatise. (8) Hattic, the language of the pre-Hittite inhabitants of Anatolia. This language is preserved only in the Hittite tablets from Ḫattuša. There are some purely Hattic texts, including poetry (Güterbock 1964: 104) as well as Hattic material preserved in bilingual Hattic-Hit texts, and in Hattic passages meant to be recited in rituals and festivals.

The great majority of the Hittite texts come from the capital at Ḫattuša. The Hittites housed their tablets primarily in a large archive in the palace, a major archive in the main temple, and in a building of uncertain function situated on the slope of the acropolis. Additional tablets have been discovered throughout the site of Ḫattuša, especially in the smaller temples.

There are a few Hittite texts extant from areas outside Ḫattuša. From Tell el-Amarna in Egypt comes diplomatic correspondence written in Hit (Hoffner 1980: 283 n. 4). A few tablets from Alalaḫ also are in Hit, and at Ugarit (Ras Shamra) a few Hit texts have been found. The only major archive outside the capital has been found at the Turkish site of Maşat (Hittite Tapikka), a provincial administrative center. Correspondence between Tapikka and Ḫattuša figures prominently in the Maşat archive, although other kinds of texts not specifically related to Maşat's administrative role have been found at the site.

The texts of the Hittite corpus are published in the form of copies made by experienced Hittitologists, who render as exactly as possible the form of the tablet and of each individual sign. Thus scholars all over the world may work with the material without having to travel to the Turkish museums where the actual tablets are housed. Perhaps 30,000 tablets or tablet fragments have been discovered at Boghazköy to this point, of which most of the major texts and perhaps half of the total corpus has been published in copy. A number of Hittite texts in English translation are collected in Pritchard, *ANET*.

B. Types of Texts

Hittitologists profit greatly from the comprehensive (when it was published) *Catalogue des Textes Hittites* of Emmanuel Laroche, which categorizes all published texts from the Boghazköy archives. The following sketch of Hittite text genres depends on this fundamental work. For each section the reader may refer to the appropriate category in Laroche for specific bibliography.

1. Historical Texts. See Hoffner 1980 for an extensive analysis of Hittite historiography and types of historical texts. The Hittites are to be credited with the earliest known examples of annals, a form of historical writing later used extensively by the Assyrian kings. For the Hittites this type of text is perhaps best exemplified by the various versions of the annals of Muršili II, in which each year of the reign is carefully documented with a record of its campaigns. A unique historical document is the "Political Testament" of Ḫattušili I, a bilingual Akk-Hit text in which the dying king describes to his assembled nobles the provisions for his succession. A series of early texts grouped by Laroche under the title "Palace Chronicle" are anecdotes of events in the royal palace in the early days of the Hittite state.

The "Telepinu Proclamation" is an especially important text for the Old Hittite period. In it the king, Telepinu, describes the period of anarchy characterizing the later Old Hittite era and details new rules for succession to the throne designed to reduce dynastic intrigue. The Hittite king not only records in writing his measures to enhance stability, but includes the historical context in which the need for such a proclamation arose. The Hittite corpus contains other royal edicts or decrees as well. An unusual historical text is the "Apology of Ḫattušili III," in which one of the later Hittite kings justifies his usurping of the throne from his nephew. As in the case of the Telepinu Proclamation much of the text is historical background to provide the context and reasons for Ḫattušili's actions.

A major type of historical text is the treaty, of which a number have been discovered at Ḫattuša. The best known of these is the treaty between Ḫattušili III and Rameses II of Egypt, of which both versions are extant, one from Ḫattuša and the other from Karnak. Many of the Hittite treaties are in Akk, as one would expect from documents which by their nature are international. Treaties with local, Hit-speaking Anatolian vassals are usually in Hit. Unique among the treaties is a recently discovered tablet made not of clay but of bronze, with the cuneiform signs carefully chiseled into the metal. It is the only bronze cuneiform tablet ever discovered. The text is a treaty between the king at Ḫattuša and a king in the south, at Tarḫuntašša.

One other major category within the historical genre is letters. These are royal letters, written to or by the Hittite kings in correspondence with other great kings of Assyria, Babylon, and Egypt, or with lesser princes. As with the treaties some of the letters are in Akk, some in Hit.

2. Administrative Texts. Like the historical text category, a number of different kinds of texts may be grouped under this rubric. One type of administrative text is the land donation, in which the king or king and queen make a grant of land to a subject. Other administrative texts include lists of officials, of personnel, or of towns, and inventories of resources, manufactured goods, or tribute.

The "instructions" form a major group of administrative texts. Each instructions text is a written description, developed by the Hittite bureaucracy, of the duties of various government officials. The instructions are addressed to officials such as the majordomo of the palace, the mayors

of provincial towns, the border guards, and temple personnel. They are quite specific, detailing day-to-day duties, overall responsibilities, and the necessity of upright behavior and loyalty to the king in administering his resources.

There are attested from Boghazköy a number of shelf lists or catalogs of tablets, a kind of index system to facilitate finding tablets in the archives. The tablets are described in these catalog texts by author, tablet number if part of a multitablet text, and some descriptive phrase for the tablet by which it may be identified. Thus did the librarians of Ḫattuša organize their archives.

One subset of the administrative texts are the cult inventories, records of the religious resources of the kingdom. These include lists of cult equipment, cult statues, and religious personnel by town, and reflect the importance which the Hittites placed on maintaining local cults in the provinces. The festivals which are to be celebrated for each god are also detailed in these inventories, so that a record is kept not only of each town's cult resources, but also the festivals for which it is responsible.

3. Law. The Hittites, like many ANE peoples, had a written set of laws. The Hittite code comprises 200 individual laws; the many copies and versions of these texts show their importance in Hittite culture. The laws are formulated as hypothetical cases of the type "if a man does *x*" Most punishments are monetary fines, although for some offenses corporal punishment is prescribed.

In addition to this comprehensive codification of the Hittite principles of justice, there are extant several interesting records of actual court cases. The best known of these involves charges brought against GAL-^{d}U and his father Ukkura, palace attendants of some responsibility accused of misappropriating palace equipment and livestock. The court recorder has set forth both the charges of the accusers and the attempts of the defendants to defend themselves and explain the disappearance of the articles in question.

4. Lexical Texts. There are several series of lexical texts, or vocabularies, from Boghazköy. These texts are normally 3-column tablets, one column each for Sum, Akk, and Hit equivalents, with sometimes a fourth column to indicate the pronunciation of the Sum. They are the ancient version of our foreign-language dictionaries, designed to be used by the scribes for looking up words in foreign languages. This type of text is borrowed from Mesopotamia, where the texts are 2-column lists of Sum and Akk equivalents.

5. Mythological Texts. For this genre, see ANATOLIA (MYTHOLOGY).

6. Hymns and Prayers. The Hittites wrote down prayers to their gods, of which approximately 14, plus other fragments, have survived. These prayers sometimes include hymns of praise. They are almost always of royal authorship. Some are addressed to a specific god, some pertain to a particular crisis, and at least one, of Muršili II, addresses all of the gods. They contain elements of praise, confession of sins, and supplication. Perhaps the best known prayers are those of Muršili II petitioning the gods for relief from the plague which was ravaging the Hittite homeland. They are a poignant expression of a monarch's concern for his people as well as his theological speculation on the causes for such a disaster.

7. Rituals. The Hittites distinguished between rituals and festivals, a distinction which Hittitologists maintain in their terminology for these texts. Ritual texts record the magical procedures performed by a professional magician, usually designated as a "seer" or an "old woman." Each ritual text identifies the name of the practitioner and his place of origin, what the ritual is intended to cure, and often a list of required ingredients. The magicians are frequently foreigners coming from areas outside the Hittite homeland, especially from Kizzuwatna in southern Anatolia and Arzawa in the west. Rituals were performed on behalf of individuals suffering from various ills such as black magic, impurity, or impotence. Rituals utilize various kinds of sympathetic magic and may or may not involve offerings to invoke the power of the gods.

A particular type of ritual, in Hit *mugawar*, is a kind of attraction magic, designed to draw back to Hatti a god who has disappeared. See ANATOLIA (MYTHOLOGY) for a discussion of the myths that accompany these rituals.

8. Divination. Under this heading several distinct text types may be discerned. A number of omen texts are extant, some in Akk, some in Hit, but all borrowed from the Mesopotamian tradition of divination. The texts are records of ominous events in the form of protasis, e.g., "If the moon eclipses . . ." and apodosis, "Then *x* will occur" Omens may be astral or lunar, or involve unusual events or malformed births. A major type of omen involves examination of the entrails of animals, again relying on the tradition of extispicy developed in Mesopotamia. A number of liver models, with the omen texts written in Akk (or, rarely, partially in Hit) near the appropriate parts of the organ, have been discovered at Boghazköy.

A distinctively Hittite type of divination text from Boghazköy is the oracle. These texts represent a different approach to divination from the omens. The omen texts record a divination which is not sought, but is rather an observation of unusual phenomena, while Hittite oracles involve a deliberate attempt to learn the will of the gods. The texts describe the process involved, the questions put to the gods, and the answers received. The Hittites employed several methods of oracular investigation, including: (1) "Lot," in which symbolically named objects (lots) moved about among symbolically named locations by a mechanism not yet understood. (2) "Bird," in which the flight of birds, described in bewildering detail in the texts, was interpreted as the response of the gods to the questions put to them. (3) "Snake," in which a water snake was observed swimming about a large basin with symbolically named regions. (4) "Flesh," in which the exta of slaughtered sheep were examined for signs supposed to reveal divine responses.

Matters about which oracles might be consulted to determine the will of the gods included the health of the king, where the king should campaign, or the changing of part of a festival. Since each oracle could only provide a yes or no answer, deciding the will of the gods on questions such as these required a long process of elimination with a correspondingly large number of individual oracles taken to arrive at the answer.

Dreams represent another way in which the Hittites communicated with the divine. In the dream texts the king or queen recorded what he or she had seen in a dream.

The texts also record the vows usually made by the person during the visitation of the god in a dream. Some Hittite rituals involve having the client sleep in the presence of the deity (the cult image) to encourage that deity to reveal himself to him in a dream (Hoffner 1987: 282).

9. Festivals. The most numerous type of Hittite text is the festival text, that is the texts describing how a particular religious festival was to be performed. Such texts detail the cultic equipment, personnel, and offering materials required for the festival, and provide a detailed account of the various ceremonies and where, when, and how they are to be performed. Some festivals lasted for several days and involved travel by the king and priests to surrounding cult centers outside the capital. From the thousands of festival tablets discovered at Boghazköy dozens of distinct festivals have been identified, all part of a well-defined religious calendar. Festivals may be devoted to a particular deity or be associated with a certain season of the year.

C. Hittite Literature

One cannot draw sharp distinctions in the ancient texts between literary and nonliterary texts, and the question of what among these texts may be considered literature must be left to the individual reader of the Hittite tablets. For a careful consideration of this by a scholar thoroughly familiar with these texts, see Güterbock 1964. The mythological texts are certainly literary compositions, as are the Hattic poems. There is some wisdom literature from this area, showing a mixture of Hittite and Mesopotamian elements. The hymns addressed to the gods may also be seen as literary compositions. Some of the historical documents, such as the story recounting the Hittite siege of the city of Urša, or the palace anecdotes could also be considered literary.

D. Hieroglyphic Luwian Texts

The Hittites of the Empire period and the Neo-Hittite states used a hieroglyphic system of writing which includes both logographic and syllabic signs. The language of the hieroglyphs is a dialect of Luwian. The Hittites of the Empire period used the cuneiform and hieroglyphic systems simultaneously, as may be seen on many of their seals, which give the name of the owner in both scripts. The Neo-Hittite states did not use cuneiform, although they did use other writing systems besides the hieroglyphs, as may be seen in the long inscription at Karatepe, a bilingual text in hieroglyphic Luwian and alphabetic Phoenician.

Texts in hieroglyphic Luwian are mostly seals, which give little information beyond the name of the owner, and the monumental inscriptions of kings and princes. The Nişantaş inscription at Ḫattuša, authored by the last Hittite king, Šuppiluliuma II, is the longest hieroglyphic text from the Empire period. It recounts the deeds of the king's predecessor Tudḫaliya IV, but unfortunately its poor state of preservation makes it almost illegible. Hieroglyphic inscriptions often accompany reliefs, as at Yazılıkaya, the rock sanctuary where the figures of the gods are identified by hieroglyphic renderings of their names. There is a rich corpus of Hittite rock reliefs, on orthostats or carved onto living rock, dating from the Empire and Neo-Hittite periods. Many of these reliefs are accompanied by hieroglyphic captions or short inscriptions. Longer inscriptions such as that at Karatepe, a Neo-Hittite site, provide more text and historical information. However, the hieroglyphic corpus does not show the same rich diversity of text genres which makes the Hittite cuneiform archives such a valuable source for so many aspects of Hittite history and culture.

HITTITES IN THE OT. This entry surveys the OT references to "Hittites."

A. Hebrew Terms for "Hittite"
B. The Hittites in OT History
C. Who Were the Hittites?

A. Hebrew Terms for "Hittite"

Several different Hebrew words or phrases in the OT are usually translated "Hittite" or "Hittites." Occurring only in passages concerning Abraham's purchase of the field and cave in which to bury Sarah, especially Genesis 23, is the phrase *bĕnê Ḥet,* "sons [or children] of Heth." Heth is listed in Gen 10:15 and the parallel passage in 1 Chr 1:13 as one of the sons of Canaan, along with other ethnic groups who consistently occur with the Hittites as peoples of Canaan. The analogous phrase *bĕnôt Ḥet,* "daughters of Heth," translated "Hittite women" in RSV and NIV, occurs twice in Gen 27:46, describing the native women from whom Rebekah fears Jacob will take a wife. These phrases reflect the patriarchs' perception of the Hittites as early inhabitants of Canaan, "Canaanites" in the broad sense of the term.

The more common Hebrew word used to denote the Hittites, *ḥittî,* is also based on the name Heth and formed with the regular gentilic *yod.* This form always occurs with the definite article and is used in only two distinct ways. One of these is to designate the ethnicity of an individual, for instance Gen 23:10, *ʿEprôn haḥattî,* "Ephron the Hittite." The passage in Genesis 23, in which *ʿEprôn haḥittî* occurs with many examples of *bĕnê Ḥet,* confirms the identification of the children of Heth with the term "Hittite." Four individuals, Ephron, Zohar (Ephron's father), Beeri, and Elon, are identified as Hittites from the time of the patriarchs, while from the time of David two more, Ahimelech and Uriah, are so identified.

The much more common use of the phrase *haḥittî* is in the lists of the peoples of the promised land. This singular form used in a generic sense is translated in the plural, "the Hittites," in most modern versions of the OT. The Hittites usually occur in first or second position in the "standard" list of the seven major peoples of Palestine: the

Hittites, Girgashites, Amorites, Canaanites, Perizzites, Hivites, and Jebusites (e.g. Deut 7:1).

Two examples of a feminine singular form *ḥittît* exist in the OT, in analogous passages in Ezekiel 16. In Ezek 16:3 and 16:45, in language full of imagery, Jerusalem is castigated with the charge that its mother was a Hittite. There is one attested example of the form *ḥittiyyot* (1 Kgs 11:1), the plural feminine form. This occurs in a list of the foreign (non-Israelite) women admired by Solomon. These singular and plural forms are regular formations of the feminine based on the gentilic *ḥittî*.

There are also five occurrences of a masculine plural, *ḥittîm*. This form differs from the others in that it is used in widely varying contexts. In Josh 1:4 it occurs in the phrase *ʾereṣ haḥattîm*, "land of the Hittites," in the description of the land promised by God to Moses. In Judg 1:26, we again have the phrase *ʾereṣ haḥattîm* in the story of the man who betrayed Bethel to the Hebrews and then went to the land of the Hittites to found a new city. In 1 Kgs 10:29 and the parallel 2 Chr 1:17 we have *malkê haḥittîm*, "kings of the Hittites," to whom Solomon was exporting chariots and horses. Finally in 2 Kgs 7:6 the Syrians lift their siege of Samaria because they think that the "kings of the Hittites and the kings of Egypt" have been hired by Israel to attack their camp.

The LXX does not consistently follow the Hebrew forms, showing both singular and plural forms for the Hebrew singular *ḥittî*. It does not have the reference to the land of the Hittites in Josh 1:4, and it translates the 2 Kgs 7:6 plural *ḥittîm* with a plural form *chettaiōn*. In Judg 1:26 it reads *chettin*, and in 1 Kgs 10:29 and 2 Chr 1:17 *chettiin*, for the plural *ḥittîm*.

There is of course a people known to us as Hittites from their own rich archaeological and epigraphic record in Asia Minor and north Syria. The Anatolian Hittite kingdom flourished ca. 1650–1200 B.C., while its Neo-Hittite successor states lasted down to the 7th century. These people referred to their kingdom as the land of Ḫatti, and to themselves as the people of Ḫatti. In the Bronze Age the land of Ḫatti is primarily Anatolia, while 1st-millennium Assyrian records refer to north Syria in general as the land of Ḫatti *(māt Ḫatti)*, reflecting the presence of the Neo-Hittite states in that area after the fall of the Hittite Empire.

B. The Hittites in OT History

The Hittites were settled in Palestine before Abraham arrived, as may be seen from references to them in the patriarchal narrative. When God described to Abraham the land which he was going to give him (Gen 15:20), the Hittites were already settled there. When Sarah died, Abraham was living among the Hittites as a foreigner and bought the field and cave in which to bury her from Ephron the Hittite in the presence of the Hittite community. Later, while Isaac's family was living around Beersheba, Esau took two Hittite women as wives. Rebekah's concern that Jacob would also take a wife from the Hittite women was so great that Isaac specifically forbade Jacob to marry a Canaanite woman, where "Canaanite" must be understood in a general sense to include all the inhabitants of the area.

Several centuries later, when the Hebrews returned from Egypt and conquered the land which God had promised to them, the Hittites were still one of a number of local ethnic groups of Palestine. Both in God's description of the land before they entered it and in the cataloging of the peoples against whom the Israelites fought in the Conquest the Hittites almost invariably occur in the somewhat standardized list of the local inhabitants of the land. When the spies return and make their report at Kadesh Barnea (Num 13:29), they locate the Hittites, Jebusites, and Amorites in the hill country, while other groups live on the coast or in the Negeb. This is corroborated in Josh 11:3, in which the same three peoples plus the Perizzites are described as living in the hill country. That the Hittite territory is in the heart of the promised land which the Israelites are to conquer is made clear in Deut 20:16–18, where God includes them in the list of peoples of the promised land who must be utterly destroyed. They must have been organized politically, as Josh 9:1–2 talks of the coalition of the Canaanite peoples to defend themselves, which included the kings of the Hittites, Amorites, Canaanites, etc.

The patriarchs encountered the Hittites around Hebron (Genesis 23) and Beer-sheba (Gen 26:34; 27:46), and most of the evidence as to their location at the time of the Conquest is consistent with that location. The exception to this is Josh 1:4, in which the area around the Euphrates is described as the land of the Hittites. This does not fit with the other references to the Hittites as one of the local peoples of southern Palestine, and probably refers to the Neo-Hittite principalities of northern Syria. After Joshua's death the tribe of Joseph received the assistance of a man who betrayed Bethel to them and then fled to the land of the Hittites and founded a new city. Unfortunately no indication is given of where this land of the Hittites was.

The Israelites never completely conquered the peoples they were supposed to have eradicated, and they thus left themselves open to the ever-present danger of Canaanite influence. The Hittites are one of the Canaanite peoples in the period of the judges whom the Israelites continued to encounter in areas which they had conquered and settled. Judg 3:5–6 specifically indicates that the Hebrews had failed to eradicate the Hittites and had in fact now begun to intermarry with them and adopt Canaanite religions.

This failure of the Hebrews to eliminate the Hittites of Palestine can be seen in the continued contact between Hittites and Hebrews in the period of the monarchy. One of David's comrades while he was being pursued by Saul was Ahimelech the Hittite, whom David trusted sufficiently to ask if he would accompany him into Saul's camp at night (1 Sam 26:6). Ahimelech's Hebrew name is an index of how completely he had been integrated into Hebrew society. The story of David and Uriah the Hittite in 2 Samuel 11–12 indicates the presence of Hittites in Jerusalem. Although Uriah, a Hittite, was sufficiently integrated into Hebrew society to serve in the king's army, marry a Hebrew woman, and be listed among David's mighty men, the distinction between Hebrews and other ethnic groups was still maintained, and his ethnicity was an essential part of his identity.

Under Solomon the Hebrews were still in active contact with the Hittites; they were among the Canaanite women

whom that king admired and took in marriage or concubinage (1 Kgs 11:1–2) even though they were one of the peoples with whom marriage had been specifically forbidden by God. They are also listed among the descendants of the early peoples of Canaan whom the Israelites had not exterminated, but who had been made subject and were forced by Solomon to work on his building projects (1 Kgs 9:20–21, 2 Chr 8:7–8).

Two other references to the Hittites in the time of the monarchy reflect a very different relationship between Hebrew and Hittite and must refer to a different people. In 1 Kgs 10:29 (and the parallel 2 Chr 1:17) we learn that Solomon was importing chariots from Egypt and horses from Cilicia, and exporting them to the kings of the Hittites and the Arameans. These Hittites cannot be the same people whom Solomon conscripted for forced labor, but rather a politically independent group of kings. These kings of the Hittites and of the Arameans must be located in the city-states of north Syria, which were Neo-Hittite and/or Aramean. Solomon's geographical location made him an ideal middleman for the shipping of Egyptian chariots to north Syria. However, we must wonder how he could export Cilician horses to the Neo-Hittite states, as they were located between Cilicia and Jerusalem. Did the horses come by sea to Palestine, whence they were then sold to the Neo-Hittite kings?

The Hittites, or at least their reputation, played a major role in the fate of Israel during the divided monarchy. In 2 Kgs 7:6, the Syrians who had been besieging Samaria fled their camp when they thought they heard the sound of a great army, telling themselves that the king of Israel had hired kings of the Hittites and kings of the Egyptians to attack them. Again this powerful group whose very name can terrorize an army can hardly be the Hittites of Solomon's enslavement, but must rather be the Neo-Hittite kingdoms.

Even in the exilic and postexilic periods, the Hebrews remembered or actually encountered the Hittites in Palestine. In one of Ezekiel's prophecies, he refers to the parentage of Jerusalem: "your mother was a Hittite and your father an Amorite" (Ezek 16:45, 16:3 similar, RSV). When the Hebrews returned from Babylon in the 5th century, Ezra encountered the same crisis of intermarriage with the Hittites that had caused problems for Isaac and Rebekah and for Solomon. In Ezra 9:1–3, Ezra is horrified by the information that the Hebrews have taken as wives the women of all the local tribes of Palestine, including the Hittites. As in the period of the Conquest, this is perceived as disastrous to the religious purity of the Israelites. In Neh 9:8, Nehemiah, in recounting the promises of God to Abraham, describes the land promised to Abraham as that of the Canaanites, Hittites, Amorites, etc.

C. Who Were the Hittites?

In the biblical references to the Hittites two different groups may be discerned. One is a local people of Palestine, settled in the area around Hebron before Abraham's arrival, the descendants of Canaan through the eponymous ancestor Heth. They lived in the heart of the land promised to the Israelites, so that God had to expressly command the Israelites to destroy them. That they were not eradicated but continued to inhabit southern Palestine, including the area around Jerusalem, may be seen in the references to Hittites in the Hebrew army, as forced labor conscripts, or as possible wives for the Hebrews, all the way through to the return from the Babylonian exile. Almost all of the references of Hittites in the OT fit into this picture of a local Canaanite people never quite eradicated in the Hebrew conquest of Canaan.

There are, however, five references to Hittites which do not fit with this picture (*IDB* 2: 613–14). The reference in Josh 1:4 to the area around the Euphrates as the Hittite country cannot be the Hittites of Hebron, but rather, depending on the dating of the Conquest, either the Hittite Empire's territories in north Syria or the successor Neo-Hittite kingdoms in that region. See Boling, Wright *Joshua* AB, 122–23 for a different view. The reference in Judg 1:26 to the man who after betraying Bethel goes to the "land of the Hittites" could refer to southern Palestine or to north Syria. In view of the use of the phrase *ʾereṣ haḥattîm*, "land of the Hittites," the only other occurrence of this phrase besides the Josh 1:4 passage, it is quite possible that the Neo-Hittite area is meant. Boling *Judges* AB, 59, indirectly implies his understanding of his phrase as the area of the Anatolian-Syrian Hittites.

The references to the "kings of the Hittites" in 1 Kgs 10:29 and 2 Chr 1:17, where they are importing horses and chariots from Solomon, and 2 Kgs 7:6, in which their very name causes the Syrian army to flee, again imply a powerful and wealthy group of kings, not a local Canaanite people who had been reduced by the Conquest and enslaved by Solomon. Again the Neo-Hittite kingdoms fit perfectly; the chronology is right, they were in the same area as the Syrians and thus known to them, and the plural "kings" fits very well with the nature of these states, which were not unified into one polity, but consisted of a number of small kingdoms.

These five references to the Hittites which on the basis of context may be understood as the Hittites of north Syria, that is, the Neo-Hittites, are also the only five occurrences of the plural form *ḥittîm* in the OT. This may mean nothing, but it could be some indication of a distinction made in the text between the Hittites of Palestine, descendants of Heth, and the Hittites of Anatolia and north Syria, the men of Ḥatti.

We must then distinguish between the "sons of Heth" of Palestine and the "men of Ḥatti" of Anatolia and northern Syria (see already *IDB* 2: 614; *POTT*, 213–14; Speiser *Genesis* AB, 169–70). The similarity of "Heth" and "Hatti" may have led to the use of *ḥittî* to refer to both (*POTT*, 214). This is not to say that these two groups called "Hittites" in the OT may not be related ancestrally from some period antedating our earliest records. Nor do we imply that there was never any confusion between the Canaanite Hittites and Hittites of the Anatolian or north Syrian kingdoms who may have migrated into Palestine and settled there. For the period covered by the OT, however, it is clear that the terms usually translated "Hittites" referred to two distinct groups of people.

GREGORY MCMAHON

HIVITES [Heb *ḥiwwî*]. In the Table of Nations (Gen 10:17) and the corresponding genealogy in 1 Chr 1:15, the Hivites are descended from Ham, one of the three sons of Noah, through the Canaanites. They are therefore not a Semitic people, in spite of the Semitic names given to certain of them in the Bible (e.g., Gen 36:2). Most often, the Bible mentions these people along with others, that is, the Amorites, Hittites, Perizzites, Canaanites, and Jebusites. They are the indigenous inhabitants of the land promised by God to the Israelites. They were to be dispossessed by Israel under Joshua during the Conquest, to fulfill the promises of land made earlier to the patriarchs (Exod 3:8; 23:23; Josh 9:1; 24:11). Contact with them was strictly forbidden to Israel, who had to put them under the ban lest they lead her astray into the worship of their deities (Deut 20:17). This policy was not adhered to, however (Judg 3:5), since even Solomon was able to exploit the yet undestroyed peoples as conscripted labor in his building projects (1 Kgs 9:20–21). One explanation Scripture gives about why God allowed them to remain was to serve as a training field for the Israelites in the art of warfare, and also as a test to see if Israel would finally obey God's command, presumably by exterminating these predecessors of Israel (Judg 3:3–4).

Israel unwittingly made a pact with the Hivite (LXX "Horite") inhabitants of Gibeon, a village just north of Jerusalem, who through trickery were able to escape the eradication God had decreed (Joshua 9, especially v 7; 11:19). Geographically, the Hivites appear to inhabit the central and N regions of the land, ranging from Gibeon, just N of Jerusalem (Josh 9:7; 11:19), through Shechem, where a Hivite raped Jacob's daughter Dinah (Gen 34:14), up toward Lebanon and Mount Hermon (Josh 11:3; Judg 3:3; 2 Sam 24:7). They also seem to have some contacts in Transjordan (Gen 36:2).

Textual variants occur in several of the biblical passages. In Josh 9:7, the MT reads "Hivite" while the LXX reads "Horite." This variant could arise from a simple misreading of two Hebrew letters, *reš* and *waw*, which are physically similar not only in the later, square script, but also at earlier stages in the development of the Hebrew script. The same process in reverse, with one additional step of scribal error could be evident in Isa 17:9. There the LXX reads "Hivites" while the MT has *ḥrš*, from a suggested *ḥry*, "Horite" (BHS; Kaiser *Isaiah 13–39* OTL, 80). Within one passage in the MT itself are both variants: a certain Zibeon is designated a Hivite in Gen 36:2 but a Horite in v 20.

Scribal error could account for these discrepancies, though the number seems somewhat high for this to explain all of them adequately. Another, more attractive suggestion, though itself without any objective evidence, is that a historico-geographical shift such as the incursion of a new group into the area of Canaan caused a change of nomenclature. It has been suggested that an original Semitic Horite group, possibly cave dwellers (from the Hebrew *ḥōr*, "cave"; Speiser 1933: 30) living in Edom (Seir, Genesis 36) were displaced by the ethnically distinct, non-Semitic Hurrians, who took over not only territory but also the name Horite. "Horite" could then have referred to two distinct ethnic groups which shared the same territory. "Hivite" could have arisen from a textual error, or more possibly as another designation of the Horites (Westermann 1985: 562) or of a subgroup within them (Speiser 1933: 30).

DAVID W. BAKER

HIZKI (PERSON) [Heb *ḥizqî*]. Son of Elpaal appearing in the extended genealogy of Benjamin (1 Chr 8:17). The name occurs in no other place in this form—Apocrypha or the deuterocanonical literature. The name is possibly a shortened form of the name Hezekiah or Ezekiel and means "my strength is [Yah or El]." The family of Hizki is associated with Ono and Lod according to 8:12. This association is well preserved in the work of the Chroniclers with other references in Ezra 2:33, Neh 7:37, and 11:35. However, this association proves very interesting since these cities and their surrounding villages are located in the maritime plain in what is traditionally considered to be Danite territory (Adams and Callaway 1965: 55). Myers (*1 Chronicles* AB, 60) suggests that this location may have been settled by Benjamin during the reign of Rehoboam. He also points out that the names in this section of the genealogy occur in the list of Thutmose III but not in the MT until Chronicles-Ezra-Nehemiah. Perhaps, since there is so little mention of Dan in 1 Chronicles (2:2; 27:22), the inheritance had probably been absorbed by Judahite and Ephraimite tribes. The fact that Hizki and others associated with Lod and Ono are called "chiefs living in Jerusalem" (v 28) might further reflect a mixing of the tribal groups of Judah and Benjamin from the time of the division of the kingdom. Coggins (*Chronicles* CBC, 54) points out that this mixing resulted in some areas never being fully absorbed into certain tribal holdings. He considers that the reference to "chiefs living in Jerusalem" shows that Jerusalem itself was never fully absorbed into Judah. References making these two entities distinct are abundant and Judg 1:8, 21 show attempts to control the city by both Judahite and Benjaminite groups.

G. EDWIN HARMON

HIZKIAH (PERSON) [Heb *ḥizqîyāhû*]. The second son of Neariah in the list of postexilic descendants of David in 1 Chr 3:23. His name is identical to that of Hezekiah. The name may mean "Yahweh is strength" or some variant (*TPNAH*, 153).

RUSSELL FULLER

HOBAB (PERSON) [Heb *ḥōbāb*]. A Midianite/Kenite whom Moses asked to guide the Israelites through the wilderness from Mount Sinai to the promised land (Num

10:29–32). Hobab was either Moses' father-in-law or his brother-in-law. In Judg 4:11, Hobab the Kenite is identified as Moses' father-in-law; however, in Num 10:29, Hobab the Midianite is referred to as Moses' brother-in-law while Reuel is mentioned as Moses' father-in-law. Contending that Hobab was Moses' father-in-law, Noth (*Numbers* OTL, 77) claims that the father-son relationship between Reuel and Hobab in Num 10:29 is a later harmonization and that even in the Yahwist's version of Num 10:29 Hobab would have been identified as Moses' father-in-law. Nevertheless, a further difficulty in identifying Hobab as Moses' father-in-law is that Jethro, the priest of Midian, frequently receives this designation (Exod 3:1; 4:18; 18:1–2, 5–6, 12).

Hobab's acceptance of Moses' invitation to guide the Israelites is not recorded in Num 10:29–32. However, evidence that Hobab consented to guide the Israelites may be present in Judg 1:16 which states that the Kenites and Judahites together went up and settled in the wilderness of Judah near Arad. If Hobab was the leader of the Kenites at the time of this concerted action, then he probably forged an alliance between the Kenites and the Judahites (*AIR*, 307). The absence of a response by Hobab in Num 10:29–32 to Moses' invitation to guide the Israelites may be a consequence of the tradition's emphasizing the divine guidance of the Lord from the Ark (Num 10:33–34) and its downplaying of the human guidance which Hobab would have provided. Evidence that the Israelites believed that they received guidance in the wilderness not only from the Lord enthroned on the Ark but also from Hobab may be found in Deut 33:2–3 if Weinfeld's revocalization of v 3a is accepted, reading *ʾap ḥōbāb ʿimām*, "also Hobab was with them," in place of *ʾap ḥōbēb ʿammîm*, "indeed, he loved his people" (*AIR*, 308). So while the Lord's guidance of the Israelites in the wilderness was primary, Hobab provided such guidance on the earthly level.

DALE F. LAUNDERVILLE

HOBAH (PLACE) [Heb *ḥôbâ*]. In Genesis 14, Abraham and Lot separated their herds and flocks. Lot went to the Jordan Valley and camped near Sodom. The area was raided by four kings, perhaps from Mesopotamia (14:1). The kings took loot and apparently captives. Among the latter was Lot and his goods (v 12). When the news reached Abraham, he gathered his fighting men and pursued the raiders as far as Dan (v 14). He routed the enemy and pursued them then to Hobah, N of Damascus (v 15). Some claim this chapter is not historical, though it is written in historical fashion. One may, therefore, argue that Hobah was not a place at all, but Damascus was and presumably Dan was. So it is possible that Hobah was also. The LXX *Chōba* appears in Gen 14:15 and Judith 4:4; 15:5; and maybe 15:4. The first reference in Judith is a list that includes Samaria, Jericho, Choba, and Jerusalem. This would seem to be a Judean or Israelite site, perhaps el-Marmaleh in the Jordan Valley, 30 miles S of Beth-shan, or el-Mekhubbi between Beth-shan and Tubas. But Abel (*GP* 1: 299) identified it with Hobah in Gen 14:15 (Moore *Judith* AB, 149). In chapter 15, after Judith cut off the head of their general, Holofernes, the enemy army panicked and fled. Uzziah, the chief magistrate of Judith's beseiged city of Bethuliah, sent (v 4) for reinforcements to Chobai (Choba, LXX N), etc. This too would seem to be a Judean or Israelite site. However, in v 5, the Israelites pursued the enemy and cut them down as far as Choba, even beyond Damascus and its border. This sounds more like Gen 14:15 and could, of course, be a conscious repetition of Gen 14:15. But whether it is or not, the description is similar, and no more helpful in locating the site.

There are a number of proposed identifications of Hobah. Genesis describes it on the left of Damascus, i.e., to one facing E, and hence Hobah would be to the N. The additional phrase "on the left of Damascus" has been compared with three other explanatory topographical glosses, Siddim (v 3), Enmishpat (v 7), and the King's Valley (v 17), all of which may be of doubtful value. Wetzstein thought it was Hoba, about 20 hours' journey N of Damascus (Skinner *Genesis* ICC, 267). Another Hoba (or the same?), a spring, is ca. 50 miles N of Damascus, on the road to Palmyra; and yet another Hoba is a village mentioned by Troilo as .25 miles N of Damascus (Keil and Delitzch n.d.: 206). Sellin and others have related Hobah to Ubi or Ube, which appears in the 1850 B.C. Execration Texts (*ANET*, 329) and in the Tell el-Amarna tablets (EA 53; 139:63; 146:12; 189) of the 13th century. Here it is the district around Damascus (Skinner *Genesis* ICC). EA Letter 53 is one from Akizzi of Qatna to the Egyptian pharaoh Amenhotep III which says Ube no longer belongs to my lord (53:23, 27, 28, 37, 57, 59; Mercer 1939: 229). The name also appears in letter 189: reverse 12. Haldar (*IDB* 2: 615) considered Amarna Ube a territory with its capital at Damascus; Damascus is unknown before the 16th century. Thus another town was the center of settlement. He suggests this is represented by the mound of Tell el-Salihiye, ca. 10 miles E of Damascus. It is the largest mound found in the region, which may favor the view that this was the capital in the early periods. Accordingly Hobah was probably the name of this place. It was settled in prehistoric times, and in the Old Babylonian period it was a fortified town.

HENRY O. THOMPSON

HOBAIAH (PERSON) [Heb *ḥōbayâ*]. An alternate spelling of *Habaiah* in Neh 7:63. See HABAIAH (PERSON).

HOD (PERSON) [Heb *hôd*]. One of the eleven sons of Zophah in the genealogy of Asher (1 Chr 7:37). Although Hod is placed within the dominant line of the Asherite genealogy (Beriah-Heber-Hotham/Helem-Zophah), this figure appears neither in parallel lists in Numbers 26 and Genesis 46 nor elsewhere in the Hebrew Bible.

Based upon the military terminology used in 1 Chr 7:40, scholars have suggested that the Asherite genealogy reflects military census lists which were organized in genealogical form (for example, Johnson 1969: 64–66). In

keeping with this interpretation, the name Hod ("splendor, vigor") may bear a military connotation.

JULIA M. O'BRIEN

HODAVIAH (PERSON) [Heb *hôdawyâhû, hôdawyâ*]. Var. SUDIAS. **1.** The first of seven sons of Elioenai named in a list of King Solomon's descendants (1 Chr 3:24). The Qere of the MT (Heb *hwdwyhw*) reverses the letters *wy* from the Kethib letter sequence (Heb *hdywhw*); thus, the Massoretes read the long theophoric ending (Heb *-yhw*). The LXX variously renders the Heb form (Gk *hodolia, ōdouia, ōdia,* and *ouadia*), but the NT may have substituted *iōda* (Luke 3:26). See JODA (PERSON). Noth (*IPN,* 194) reconstructs Heb **hôdûyâ* (based on the LXX variant *ōdouia*), and explains the name as the combination of Heb *hwd* + *yhwh* with a *waw* connector (cf. Heb *hôdû lyhwh,* "O give thanks to the Lord," Ps 105:1; etc.). He claims that Heb *hwdwyh,* "Hodaviah," and Heb *hwdyh,* "Hodiah," do not share the same root, yet, as Kuhn notes (1923: 212, n. 1), their forms are frequently confused.

Since Hodaviah is a postexilic descendant of Solomon (ca. 420 B.C.E.), the Heb *-yhw* ending of his name is an exception to the almost exclusive absence of this form in postexilic names (Zevit 1983: 3). The name Hodaviah (Heb *hwdwyh*) occurs once in an extrabiblical source from Palestine (Lachish Ostracon 3 [*ANET* 322], ca. 589 B.C.E.), as well as in documents from Egypt (Elephantine Papyri, ca. 5th century B.C.E.; *CAP* 4, 30–31, 56, 58–59, 70–72, 170). This demonstrates the popular usage of this name by Jews before, during, and after the Exile.

2. Head of his father's household within the half-tribe of Manasseh (1 Chr 5:24). Along with his half-tribe and two other tribes, Hodaviah was carried into captivity by "Tilgathpilneser king of Assyria" (Tiglath-pileser III, ca. 744–727 B.C.E.) because his people sinned against God (1 Chr 5:25–26). This historical note, which concludes a list of tribal leaders and settlements, explains what happened to these tribes (1 Chronicles 5).

3. A Benjaminite whose grandson Shallu was among the first to live in his ancestral city after returning from exile (1 Chr 9:7). In a parallel list (Neh 11:7), the corresponding name is Joed (Heb *yôʿēd;* LXX *iōad;* cf. Syriac *jwdʿ,* which corresponds to Gk *iōda*). See JODA (PERSON). This occurrence of the abbreviated form of the name Hodaviah (the Heb *-yh* ending is missing) in a postexilic list of returnees (1 Chronicles 9) is predictable based on the absence of the Heb *-yh* ending in postexilic biblical material (see Zevit 1983).

4. A Levite forefather of 74 returnees from Babylon (Ezra 2:40; LXX variants include *sodouia* and *ōdouia*). In one parallel list (Neh 7:43), the corresponding name is Heb *hôdĕwâ,* "Hodevah" (LXX variants include *thoudouia, oudouia,* and *ōdouia*), which is a variant of either *hôdawyâ,* or *hôdîyâ.* See HODIAH (PERSON). The parallel in 1 Esdr 5:26 mentions "Sudias" (Gk *soudiou*), which corresponds to a LXX variant of "Hodaviah" in Ezra 2:40, and likely resulted from a scribal misreading of the Hebrew exemplar (see Myers *1 & 2 Esdras* AB, 60). From these parallel lists of returnees it is clear that Hodaviah was an important Levite in the exilic and postexilic community.

MARK J. FRETZ

HODESH (PERSON) [Heb *ḥōdeš*]. A wife of Shaharaim, a Benjaminite (1 Chr 8:9). Shaharaim was one of the Benjaminites who dwelt in Jerusalem (1 Chr 8:28). The Heb word *ḥōdeš* means "new" and thus "Hodesh his wife" might be translated "his new wife" (Meyers *1 Chronicles* AB, 57; see also Curtis and Madsen *Chronicles* ICC, 159–60). "Hodesh" is also the word commonly used for "month" or "new moon."

TOM WAYNE WILLETT

HODIAH (PERSON) [Heb *hôdîyâh*]. **1.** The husband of the sister of Naham, and ancestor of "Keilah the Garmite and Eshtemoa the Maacathite" (1 Chr 4:19). Since the name Hodiah appears in this misplaced and fragmentary list of names (1 Chr 4:16–20), and his descendants appear nowhere else, it is difficult to identify him. Given the preponderance of female subjects in vv 17–18, and the resemblance of v 18 (*wĕʾištô hayhūdîyâ,* "and his Jewish wife") to v 19 (*ûbĕnê ʾĕšet hôdîyâ,* "and sons of the wife of Hodiah"), it is possible to emend v 19 to read "and the sons of his Jewish wife" (Rudolf *Chronikbücher* HAT, 34). While this suggestion eliminates the problem of identifying Hodiah by changing the proper name into an adjective, such emendation is not necessary; the name is part of a damaged and incomplete list, and it may have been intelligible in its original context.

2. A leader of the Levites who lived in Palestine during the time of Ezra (ca. late 5th century B.C.E.). Within the books of Nehemiah and 1 Esdras Hodiah appears as one of the Levites who explained the Torah to the people when Ezra read it publicly (Neh 8:7 = 1 Esdr 9:48; only the Ethiopic version of the LXX of Neh 8:7 reflects the name *Hudia,* while variants of 1 Esdr 9:48 read either *hautaias* or *ōdouia*). Hodiah also helped lead the people in blessing the Lord after they confessed their sins (Neh 9:5; the LXX generally omits the name, although a few mss read *ōdouias*). In the list of those who pledged to keep the Law with Ezra, there are two Hodiahs listed (Neh 10:10, 14—Eng 10:9, 13). Since a patronymic is normally used to distinguish two individuals with the same name, and since neither Hodiah is listed with such, some scholars (Rudolf *Esra und Nehemia* HAT, 172; Williamson *Ezra, Nehemiah* WBC, 324) emend one of the names to "Hodaviah" (the LXX renders Heb *hôdîyâ* in Neh 10:14—LXX 10:13 variously as *ōdoum, ōdouia,* or *ōdoua;* cf. Ezra 2:40). See HODAVIAH (PERSON). Noth (*IPN,* 194) suggests emending one occurrence to Heb **hôdûyâ* which is not related to the root of "Hodiah" (Heb *hwd*). It is likely that the name

Hodiah is used as a personal name, rather than as a gentilic in this list.

3. A chief of the people listed with others who pledged to keep the Law (Neh 10:19—Eng 10:18). This Hodiah was not a Levite, hence he cannot be identified with Hodiah #2 above.

MARK J. FRETZ

HOGLAH (PERSON) [Heb *hoglâ*]. One of the five daughters of Zelophehad son of Hepher of the tribe of Manasseh (Num 26:33; 27:1–11; 36:1–12; Josh 17:3–6; cf. 1 Chr 7:15). The five daughters petitioned to receive legal status as heirs because their father had no sons. Their request to inherit their father's property was judged to be valid. A divine injunction to marry within their father's tribe in order that their inheritance remain in the tribe of Manasseh was given. Hoglah and her sisters followed the divine ruling on their case and married cousins on their father's side. Many have posited a relationship between Zelophehad's daughter Hoglah and the town Beth-hoglah W of the Jordan (Josh 15:6; cf. the Samaria Ostraca 45, 46, 47 and 66 [3876] which refer to Hoglah as a district). Beth-hoglah has been identified with a certain degree of surety as Yaṣid. Lemaire (1972) locates the district of Hoglah N of Shechem, NE of Samaria and S of Noah. Budd (*Numbers* WBC) suggests that the author of Numbers might have transformed the names of towns with feminine endings into the daughters of Zelophehad in order to make the point that women are entitled to inheritance. Others would want to argue that a veritable historical tradition lies behind the present narrative. See MAHLAH (PERSON); MILCAH (PERSON); TIRZAH (PERSON); ZELOPHEHAD (PERSON).

MARION ANN TAYLOR

HOHAM (PERSON) [Heb *hôham*]. The Amorite King of Hebron at the time of Joshua who (along with Piram of Jarmuth, Debir of Eglon, and Japhia of Lachish) joined the coalition led by Adoni-Zedek of Jerusalem against Gibeon, after the Gibeonites had made peace with Joshua (Josh 10:1–5). This coalition was defeated and its five kings were subsequently captured and hanged (10:16–27).

HOLIDAYS. See CALENDARS.

HOLINESS. This entry surveys the subject of "holiness" as it presented in the Hebrew Bible and in the Christian New Testament.

OLD TESTAMENT

In the OT, holiness is a positive cultic or moral condition of God, people, things, places, and time. It may be an inherent condition or achieved through ritual means. It is defined on the one hand as that which is consistent with God and his character, and on the other as that which is threatened by impurity. See D.1. and UNCLEAN AND CLEAN (OT). In the Hebrew Bible, the most extensive material about holiness is in the Priestly writings (= P) of the Pentateuch. Hence the discussion below will focus on this corpus, though non-P evidence will be discussed more completely when possible.

A. Terminology
B. Major Loci and Degrees of Holiness
 1. Divine Beings
 2. Humans
 3. Objects
 4. Places
 5. Time
 6. Miscellaneous
C. Methods of Sanctification and Desanctification

 2. Unintentional or Illegitimate Sanctification and Desanctification
D. Theoretical Concerns
 1. Relationship of Holy, Profane, Pure, Impure
 2. Sanctification Rituals and Ritual Time
 3. Ritual Place

A. Terminology

The main Hebrew root denoting holiness is *qdš*, "to be holy; sanctify," which appears as a verb, noun, and adjective over 850 times (with cognates in Akk, Ar, Aram, Eth, Phoen, Punic, Syr). Other roughly synonymous Heb roots include *bdl*, "to divide" (*Hipʿil* verb); *ḥnk*, "to dedicate" (*Qal* verb and noun); *ḥrm*, "severely dedicate; put under ban" (*Hipʿil* verb and noun); *rwm*, "contribute, devote" (*Hipʿil* verb and noun); *nzr*, "separate, consecrate" (verbs and nouns); *ʿbr*, "devote" (*Hipʿil* verb). The main Heb antonym is *ḥll*, "profane, desecrate" (verbs, nouns, and adjectives; cognates in Akk, Ar, Aram, and Syr) with the approximate synonyms *gʾl*, "desecrate" (verbs); *mʿl*, "betray; commit sacrilege" (*Qal* verb and noun); and the noun *piggûl*, "desecration." See below for discussion of verbs and nouns from these roots. See also UNCLEAN AND CLEAN (OT) for a treatment of terms relating to purity and impurity; Milgrom 1970: 23–24, n. 78; 1976: 16–21, 35–44, 86–89 (and word indexes under the foregoing roots); Haran (1978) under his word index; and Bettenzoli 1979.

B. Major Loci and Degrees of Holiness

We will first review the major loci or bearers of holiness as represented mainly in P and secondarily in other OT literature. This review when possible will discuss gradations of holiness which has been a recurring concern of some recent scholarship (e.g., Haran 1978; Milgrom 1970; 1976; 1983b). Miscellaneous carriers of holiness will be discussed in B.6 below.

1. Divine Beings. a. God. The P and non-P writings both consider God the ideal manifestation, indeed the source, of holiness. Holiness is not inherent in creation but comes by God's dictates. He sanctifies or sets apart the Sabbath (Gen 2:3; Exod 20:11), Israel and its priests (Exod 29:44; 31:13; Lev 21:8, 15; 22:9, 16; Ezek 20:12; 37:28;

cf. also Exod 29:43), classes of creation like the firstborn (Num 3:13; 8:17; cf. also Exod 29:43), and sanctuaries (Exod 29:44; 1 Kgs 9:3, 7; 2 Chr 7:16, 20; 30:8; 36:14). But if he is the source of holiness for creation, creation—specifically his people—must maintain God's holiness and his name's holiness which, in this context, are nearly synonymous with his honor, reputation, and glory. This is mainly a duty of the people's leaders (Lev 10:3; 22:32; Num 20:12–13; 27:14; Deut 32:51). Should the people sin, God or his name becomes desecrated (see sec. C. 2. b.) and his holy spirit, an aspect of his character, is grieved and may abandon them (Isa 63:10, 11; Ps 51:13). In addition to obedience, people bless, sanctify, and rejoice in God and his name (Isa 29:23; Ps 30:5; 97:12; 99:3, 5, 9; 103:1; 105:3; 106:47; 145:21; 1 Chr 16:10, 35; cf. Ps 22:4; 29:2; 96:9; 1 Chr 16:29; 29:16; 2 Chr 20:21; even divine beings: Isa 6:3). The people, too, are charged to emulate God's holiness by keeping the commandments (Lev 11:44, 45; 19:2; 20:26; cf. 20:26). Inscriptions may declare and recall his sacred character (Exod 28:36; 39:30; Zech 14:20). For his own part God sustains and displays his sanctity through miraculous acts and punishments (Isa 5:16; Ezek 20:41; 28:22, 25; 36:23; 38:16, 23; 39:7, 25–27; Hab 3:3; Ps 111.9; cf. God's "holy arm" in Isa 52:10; Ps 98:1). God, as holy, is above any competitors and is eternal (Exod 15:11; 1 Sam 2:2; Isa 40:25; 57:15; Hos 11:9; Hab 1:12) and is to be the sole object of Israel's devotion (Isa 8:13–14; Ps 33:21; cf. Ezek 11:16; Hos 12:1; Job 6:10; Prov 9:10; 30:3). The title "Holy One of Israel" reflects this supremacy (Isa 1:4; 5:19, 24; 10:20; 12:6; 17:7; 29:19; 30:11, 12, 15; 31:1; 37:23 [= 2 Kgs 19:22]; Isa 41:14, 16, 20; 43:3, 14; 45:11; 47:4; 48:17; 49:7; 54:5; 55:5; 60:9, 14; Jer 50:29; 51:5; Ps 71:22; 78:41; 89:19; cf. Isa 10:17; 29:23; 40:25; 43:15; Ezek 39:7). Paradoxically, this high holiness may make it difficult for people to worship him (Josh 24:19; cf. 1 Sam 6:20). On the holiness of God's word or promise, see Jer 23:9; Ps 105:42.

b. Lesser Divine Beings. Subordinate divine beings are also described as holy (Zech 14:5; Ps 16:3; 89:6, 8; Job 5:1; 15:15; Dan 4:10, 14, 20; 8:13; cf. Deut 33:2; some read this as a place-name). From the point of view of Nebuchadnezzar, the spirit of the "holy gods" is in Daniel (Dan 4:5, 6, 15; 5:11; some take this as a plural of majesty for Israel's God).

2. Humans. Not discussed here are so-called cultic prostitutes whose Hebrew designation is formed from the root *qdš* (cf. Gen 38:21, 22; Deut 23:18; 1 Kgs 14:24; 15:12; 22:47; 2 Kgs 23:7; Hos 4:14; Job 36:14).

a. Priests. In P, there are two classes of priests, high and undistinguished. Several points indicate the high priest has a higher degree of holiness than undistinguished priests. First, he is called a *high* priest (Lev 21:10; Num 35:25, 28). Second, there is only one high priest at a time. Third, the high priest has a more elaborate consecration ritual (Exod 29:5–8, 20–21; Lev 8:7–9, 12, 23–24, 30; see also Exod 28:41; 30:30; 40:13–15; Lev 4:3, 5, 16; 6:15; 21:10, 12; Num 35:25; Ps 133:2 and see sec. D. 2.). Fourth, each high priest is newly consecrated (Exod 29:29; Lev 6:15; 16:32; 21:10, 12; Num 35:25; cf. Num 20:25–28) while the undistinguished priests apparently are not, the initial consecration of Aaron's sons sufficing for all generations to come (Exod 40:15). Fifth, only the high priest can enter the adytum (the most holy place) of the tabernacle (Lev 16:3–4, 11–16) and is designated to perform the regular (Heb *tāmîd*) rites within the shrine (the holy place; Exod 27:20–21; 30:7–8; Lev 24:1–4, 5–8; Num 8:1–3; cf. also Exod 25:37; 30:10; Lev 4:3–12 and 13–21; 16:1–28). Ordinary priests generally officiate in the court at the altar outside the tent sanctuary (cf. Leviticus 1–7, passim) and enter the shrine only to aid the high priest in his duties or to perform other auxiliary work (cf. Exod 27:21; 28:43; 30:19–20; 40:31–32; Lev 10:9; 16:17; Num 4:5–20; see Haran 1978: 205–29). Finally, the high priest has more severe marriage, purity, and mourning restrictions than other priests (Lev 21:1–15; cf. Ezek 44:22).

A less holy class of priests among the descendants of Aaron are those with physical defects. While they are still holy enough to eat most holy offerings, they are prohibited from serving at the altar or in the tent (Lev 21:16–23).

Non-P literature distinguishes between high and undistinguished priests (2 Kgs 22:4, 8; 25:18; Hag 1:1, 12, 14; Zech 3:1, 8; Ezra 7:5; Neh 3:1, 20; 1 Chr 9:11; 2 Chr 19:11; 24:11; 34:9, 14; etc.; cf. Ps 106:16). It also mentions deputy priests (2 Kgs 25:18; Jer 52:24) and elders of the priests (2 Kgs 19:2; Isa 37:2; Jer 19:1) which may, but not certainly, indicate further distinctions in holiness. The Chronicles designate Aaron and his sons as "most holy" (1 Chr 23:13), in apparent contrast to the Levites whom it calls "holy" (2 Chr 23:6; 35:3; see sec. B. 2. d.). The priests' holiness allows them access to the temple, to offer incense, and to attend to and guard the sanctums (1 Sam 7:1; Ezra 8:28; 1 Chr 23:13; 2 Chr 23:6; 26:18). See sec. B. 4. a. and LEVITES AND PRIESTS.

b. Israelites. In P, lay Israelites do not share the same holy status as priests. The story of the Korah's rebellion emphasizes this point (cf. Num 16:3, 5, 7). Yet though they are denied priestly holiness attained through inaugural rites and genealogical right, they are charged to achieve another type of holiness: that which comes by obedience. This obligation is the result of Yahweh's separating them from the other nations and redeeming them from Egypt whereby he became their God. As their God, he enjoins them to be holy as he is holy (Lev 11:44–45; 19:2; 20:7–8, 24–26; 22:32–33; Num 15:40–41; cf. Exod 31:13; Ezek 20:12).

While in P holiness is a responsibility ensuing from God choosing Israel, in Deuteronomy it is the resultant state of God's choosing the Israelites which they must attain. Deuteronomy calls the people holy in the present tense (Deut 7:6; 14:2, 21). In the related P passages only God is called holy in the present, not the people (Lev 11:41, 45; 19:2; 20:26). Deut 26:19 and 28:9 (apparently referring back to JE's statement in Exod 19:6) do not necessarily contradict this. As in P, holiness is connected with observing dietary laws (Deut 14:21; cf. Lev 11:44–45 and [JE's] Exod 22:30). Other passages reflect a notion similar to Deuteronomy's (Isa 63:18; Jer 2:3; Ps 34:10; Ezra 9:2). Those who suffer or survive punishment or have been redeemed are often called holy (Isa 4:3; 6:13; 62:12; Obad 17; Dan 7:18, 21–22, 25, 27; 8:24; 12:7). The people's holiness can also derive from the presence of the sanctuary among them (Ezek 37:28; see also Deut 33:3; Isa 43:28).

c. Nazirites. Though, according to P, laypersons cannot

share in priestly holiness, they could for a period of time imitate it by taking upon themselves the vow of a Nazirite (Num 6:1–21). Literature outside P describes lifelong Nazirites; presumably a condition of sacredness attached to them, but perhaps not as high (Judg 13:5, 7; 16:17; cf. Amos 2:11–12). By taking this vow, the person (Num 6:8) or specifically the head, is consecrated (vv 5, 11). The Nazirite, like a high priest, is restricted from all corpses (Num 6:7–8; cf. Lev 21:10–12; note the similarity between Num 6:7 and Lev 21:12). Like priests on duty, the Nazirite is not to drink wine or other strong drink (Num 6:3; Judg 13:4–5; 1 Sam 1:11 [LXX]; Amos 2:12; cf. Lev 10:9–10; Ezek 44:21). The mother of the Nazirite Samson was to avoid unclean food like priests (Judg 13:4, 7, 14; cf. Lev 22:8; Ezek 44:31). See sec. D. 2.

d. Levites and Firstborn Humans. Firstborn humans are holy: God dedicated them to himself in Egypt (Num 3:13; 8:17; cf. Exod 13:2) and they must be redeemed as is required with other holy items (Num 18:15–16; cf. 3:44–51). From this, one would expect the Levites, the cultic substitutes for the firstborn (Num 3:44–51), to be holy. But P never calls them such, even in the long prescription for their installation (Num 8:5–22; on the elevation rites, see C. 1. a. [1]). That they are restricted from the sanctums shows they have not risen in holiness much above the status of lay Israelites (Num 4:4–20; 18:2–4). If one grants them some degree of holiness, it must be strictly distinguished from that of the priests (cf. Milgrom 1970: 29, n. 103).

In contrast to P, the Chronicler designates the Levites as holy (2 Chr 23:6; 35:3; Milgrom 1970: 71, n. 257). For a possible similar perception of Levites in Ezekiel, see Milgrom 1981: 291–94. In other passages, all firstborn are described as belonging or being devoted to God, which intimates they are holy (Exod 13:12–13; 22:28; 34:19–20; see sec. C. 1. b. [1]).

e. Prophets. Only non-P literature speaks of the holiness of prophets, and what it says is meager: Elisha is called a "holy man of God" (2 Kgs 4:9) and God set Jeremiah apart as a prophet (Jer 1:5). The anointing of prophets, understood literally or figuratively, may also imply holiness (1 Kgs 19:16; Isa 61:1; cf. Ps 105:15 = 1 Chr 16:22).

3. Objects. a. Offerings. Offerings fall into two main groups, most holy and lesser. Those called most holy (Heb *qōdeš [haq]qŏdāšîm*) are the sin or purgation offering, the reparation offering, and the cereal offering, which includes the bread of presence in the tabernacle (Lev 2:3, 10; 6:10, 18, 22; 7:1, 6; 10:12, 17; 14:13; 21:22; 24:9; Num 18:9). A mark of most holy offerings is that only the priests may eat them (see foregoing references and Lev 6:11) and then only in the sanctuary court (called a "holy place" or the "place of the sanctuary": Lev 6:9, 19; 7:6; 10:13, 17; 24:9; Num 18:10 appears to refer to eating in a *state* of most holiness). The burnt offering, though not called most holy, must be included in this class by analogy (cf. Lev 14:13; cf. the hint in Num 18:9 with the Heb preposition *min*, "from/of"). The priestly consecration offering was probably also considered most holy since priests were to eat it in the sanctuary court (Exod 29:31–34; Lev 8:31–32).

Lesser holy offerings include well-being offerings (Lev 3:1–17; 7:11–36); firstborn of clean animals (Num 18:15–18); the Passover (Exod 12:3–11, 43:50); the produce tithe (see below; Lev 27:30–31; Num 18:25–32); the animal tithe (Lev 27:32–33); items put under "severe dedication" (Heb *ḥērem;* Lev 27:28; Num 18:14); first-ripe produce (Lev 19:24; 23:10–11; Num 18:13); and first-processed products (Lev 2:12; 23:17–20; Num 15:20–21; 18:12). Some passages technically distinguish these from most holy offerings by calling them simply "holy offerings" (Heb *qŏdāšîm:* Lev 21:22; Num 18:9, 11, 19; note the contrast in Lev 10:12–16). Other passages use this term without contrast (Lev 22:2–4, 6–7, 12, 15–16; Num 18:32) as well as the singular Heb *qōdeš* (Lev 12:4; 22:10, 14; 23:20; Num 18:17). But *qōdeš* and *qŏdāšîm* can include most holy offerings (Exod 28:38; Lev 5:15–16; 23:20; Num 5:9–10; 18:8, 10). The related noun *miqdāš* infrequently refers to lesser holy offerings (cf. Num 18:29). Apart from terminology, the fact that these offerings may be eaten by nonpriests outside the sanctuary precincts shows their distinction from most holy offerings. In connection with this, the designation of things under Heb *ḥērem* as most holy (Lev 27:28) is probably to emphasize their irredeemable nature and not to characterize them technically as most holy. That nonpriests may eat or use *ḥērem* shows its lesser holy character (Num 18:14 and context).

A main subdivision of the holiness of lesser holy offerings is perceptible. The Israelites eat only the well-being sacrifice (excluding portions given the priests) and the Passover (Exod 12:1–14; Lev 7:15–18; 19:5–8; 22:29–30). Because of their restriction to the priests' households, there priests and their households (Lev 22:10–13; Num 18:11, 13, 19) are entitled to the breast and right thigh from the well-being offerings (Exod 29:26–28; Lev 7:31–36; 10:14–15; Num 18:11) and all of the other offerings listed above. The portions of the priests' households presumably are more holy than the Israelites' portions. The prohibition that laypersons not eat the priestly portions supports such a valuation (Lev 22:10–16). A subdivision of the holiness of the well-being offering is detectable also. One type, brought for a vow or a freewill offering, may be eaten over two days and the leftover meat destroyed on the third (Lev 7:16–17; 19:6). Another type, the thank offering, may only be eaten on one day (7:15; 22:30). The shorter period for eating suggests a slightly higher degree of holiness for the latter type (note that most holy offerings can only be eaten for one day; cf. Exod 29:34; Lev 8:32; 10:16–20; see Wright 1987: 139). The Passover offering which can only be eaten for one day may have had a degree of holiness similar to that of the thank offering (Exod 12:10; Num 9:12).

Ezekiel labels the cereal, purgation, and reparation offerings most holy (42:13; cf. Ezra 2:63; Neh 7:65; 2 Chr 31:14). The term *qŏdāšîm,* introduced above, is used for offerings that are lesser holy in P (Deut 12:26; 2 Chr 29:33; 31:6, 12; 35:13; and perhaps Ezek 36:38; 1 Chr 26:20), but it is also used for all offerings (Ezek 20:40; 22:8; 26; Neh 10:34; 1 Chr 28:12) and Ezek 44:13 uses this term to refer to most holy offerings. The singular *qōdeš,* "holy thing(s)," may be used of lesser holy offerings as well (Deut 26:13; 1 Chr 23:28; 2 Chr 30:19; cf. Jer 2:3). Sacrificial meat can be called Heb *bĕśar qōdeš,* "holy flesh" (Jer 11:15). In Hag 2:12 it refers to meat of offerings that P calls most holy. The bread of presence at the sanctuary

of Nob, which in P is most holy, is called Heb *leḥem qōdeš*, "holy bread," or simply *qōdeš*, "a holy thing" (1 Sam 21:5, 7).

A way to distinguish relative degrees of holiness of offerings outside P may be to determine who received them. For example, in Deuteronomy, officiating priests receive the shoulder, cheeks, and stomach from the "sacrifice" (Heb *zebaḥ;* equivalent to the well-being offering in P; 18:3) and the gifts of agricultural produce and wool (18:4; 26:2–11). Lay Israelites, their households, and nonofficiating Levites receive other portions of *zebaḥ* offerings, the firstborn animal, Passover, tithes, and various contributions at the sanctuary (12:6–7, 11–12, 17–18, 26; 14:22–27; 15:19–20; 16:2–7; cf. 16:10–17). The fatherless, widows, resident aliens, and nonofficating Levites receive the third-year tithe in the Israelite towns (14:28–29; 26:12–15; called *qōdeš* in 26:13). However, exegetical problems cloud the conclusiveness of these observations.

b. Sanctuary Furniture. Six pieces of cultic furniture are designated most holy: the ark, the incense altar, lamp stand (or menorah), bread table, the outer or burnt-offering altar, and laver (Exod 29:37; 30:10, 26–29; 40:10; Num 4:4, 19). The base of the laver and the utensils listed for some of these items may also be most holy, like the main furniture pieces (see Exod 30:26–29; but cf. Exod 40:9–11). The furniture may simply be labeled *qōdeš* (Exod 40:9; Num 3:28, 31, 32; 4:15, 16, 20; 7:9; 18:3, 5) or *miqdāš* (Lev 21:23; Num 10:21; 18:1; perhaps included in 3:38), both meaning "holy object(s); sanctums." An auxiliary to the outer altar is the cover made from the censers of Korah and his rebels (17:2–5—Eng 16:37–40).

Location, materials, lethality, and the cultic importance of the pieces suggest a gradation of holiness, with the ark being the highest, the outer altar and laver being the lowest. The ark is located in the adytum; the table, lamp stand, and incense altar in the shrine; and the burnt-offering altar and laver in the court. The ark, table, lamp stand, and incense altar are all made of pure gold, while the burnt-offering altar and laver are made of copper (Exod 25:11, 17, 24, 31, 36, 39; 27:2; 30:3; 37:2, 6, 11, 17, 22, 23, 24, 26; 38:2, 30). When transported the ark is wrapped in the tabernacle veil, a skin cover, then a completely blue cloth; the table is wrapped in a regular blue cloth, a scarlet cloth, then a skin cover; the lamp and incense altar are wrapped in a regular blue cloth and a skin cover; and the outer altar in a purple cloth, then a skin cover (Num 4:5–14). The gold furniture is lethal by sight to nonpriests (Num 4:18–20) but the copper pieces are not (they are on public display). Lastly, the ark is the most important piece of furniture: it is the place where God manifests himself (Exod 25:22; 30:36; Num 7:89; cf. Exod 29:42) and it may be the sole piece of sanctum which was not to be seen at all (cf. Lev 16:2, 12–13). The holy vessels taken into battle in Num 31:6 probably include the ark and the Urim and Thummim, which again shows the ark's importance.

This furniture appears to be more holy relative to the tent structure's planks, columns, bars, footings, lower cover (Heb *miškān*), and entrance hanging, which are also most holy (cf. Exod 30:26–29). The pieces of furniture are made of or covered with pure gold (see above), while the planks, columns, and bars are covered with plain gold (Exod 26:29, 32, 37; 36:34, 36, 38). The furniture pieces are prohibited to the touch and sight of the Levites on the pain of death; they are carefully wrapped by the priests, while the planks, columns, bars, footings, cover, and entrance hanging are not so lethal, nor are they covered (Num 4:4–20 versus vv 24–28, 31–33). The furniture pieces are carried on the Levites' shoulders while the planks, covers, and other items are transported in wagons (Num 7:7–9).

Outside of P, the ark and other holy furniture are brought to Solomon's new temple (1 Kgs 8:4; 1 Chr 22:19; 2 Chr 5:5; see sec. B. 4. a.). As in P, these articles are guarded and carried by priests and Levites (Ezra 8:24–29; 1 Chr 9:29; 23:32; 2 Chr 35:3). Deutero-Zechariah (Zechariah 9–14) hoped for the time that every vessel in the temple, Jerusalem, and Judah would increase in holiness (14:20–21). In addition to these articles, independent altars, pillars (Heb *maṣṣēbôt*), and other legitimate cult objects would be considered holy.

c. Priestly Clothing. All priestly clothing is holy, but that of the high priest has an elevated degree of holiness. First of all, it is more elaborate. Priests wear a fine linen tunic, waistband, headdress, and breeches (Exod 28:40, 42–43; 39:27–28). The high priest wears linen breeches, a tunic with a fancier weave (28:4, 39); a waistband of colored wool and fine linen (28:4, 39; 39:29); a headdress which is designated differently than the regular priest's (Heb *miṣnepet* versus Heb *[pə'ārê ham]migbaʿōt;* 28:4, 39; 39:28) and to which was attached an inscribed golden plate (28:36–38; 39:30–31); a robe worn over these items made out of blue wool with golden bells and pomegranates made of colored wool and fine linen (28:4, 31–35; 39:22–26; cf. Haran 1978: 169, n. 44); and on top of all this the ephod made of colored wool, fine linen, and strips of gold, all woven together, with two framed stones inscribed with the names of the Israelite tribes attached to shoulder straps and a pouch—also with stones with the tribal names inscribed—fastened to the ephod and hanging over the chest (28:4, 6–13, 15–30; 39:2–21). The high priest's clothing is also holier because it consisted of a mixture of wool and linen, a holy mixture (see sec. B. 3. f below). It may be considered holier, too, since it is specifically required for working in the shrine (Exod 28:29, 30, 35, 38). Finally, only the high priest's clothing is called Heb *bigdê (haq)qōdeš*, "holy clothing" (Exod 28:2, 4; 29:29; 31:10; 35:19 [cf. v 21]; 39:1 [cf. vv 27–29]; 41; 40:13; the golden plate is called holy in Exod 29:6; Lev 8:9). Aaron's sons' clothing is only categorized thus once (Exod 28:4), but the context shows that the high priest's clothing is mainly in mind.

Two other sets of priestly clothing are prescribed in P. When removing ashes from the burnt-offering altar a priest is to dress in a plain linen robe and plain linen breeches (Lev 6:3–4). These may be utilitarian to prevent soiling of regular priestly clothing while at the same time to befit the holiness of the altar. After the work at the altar the priest puts on other, perhaps profane, clothing to take the ashes to the ash dump. When performing the blood rites in the adytum, shrine, and court on the Day of Atonement the high priest wears a plain linen tunic, breeches, waistband, and headdress (Lev 16:4, 32; called holy). The reason for the simpler plain linen clothing may also have been utilitarian, to prevent the soiling of the

regular high priestly clothing with blood, which is sprinkled in abundance in this ceremony.

Ezekiel has the most extensive information about priestly clothing but only speaks, it appears, of that of regular priests. It is completely linen, including a headdress, breeches, and, implicitly, a waistband (44:17–18). A tunic is necessarily included. Hence Ezekiel's clothing is exactly like that of regular priests in P. But in contrast to P, Ezekiel calls this clothing holy (42:14). This designation reflects a conception about the clothing not found in P: it has the power to render laypersons who touch it holy (42:14; 44:19). The only piece of high priestly clothing mentioned outside of P is the ephod. While it sometimes appears to be a garment, it often has a character different than P's ephod (Judg 8:27; 17:5; 18:14–20; 1 Sam 2:18, 28; 14:3; 21:10; 22:18; 23:6, 9; 30:7; 2 Sam 6:14; Hos 3:4; 1 Chr 15:27).

d. Real Estate. People may dedicate their houses or inherited land (Lev 27:14–25). Doing so makes them "holy to the Lord," i.e., the property of the sanctuary and priests (v 14). Inherited land which is not redeemed and is sold to another becomes "holy to the Lord" in the jubilee year (v 21). It is then like a field dedicated as Heb *ḥērem* and becomes a priestly holding (cf. v 28).

e. Money and Precious Metals and Stones. Money used to redeem land in the foregoing cases is "holy to the Lord" (Lev 27:23). Analogically, all money or precious metals given to the sanctuary would be holy (Exod 25:3; 30:11–16; 35:5, 22, 24; 38:24–26; Lev 5:15, 18; 27:2–8, 12–13, 27, 31; Num 3:44–51; 7:1–88; 18:15–16; 31:48–53). If not used for constructing the tabernacle, these metals would have been kept in the sanctuary and used for maintaining the structure and supporting the priests (cf. Exod 30:16; Num 3:51, 54).

The holiness of dedicated money and booty is well attested outside of P. These items were put into sanctuary treasuries (Josh 6:17, 19, 24; 2 Sam 8:10–12; 1 Kgs 7:51; 15:15; 2 Kgs 12:5–17; 1 Chr 18:9–11; 2 Chr 5:1; 15:18; 2 Chr 24:5–14; cf. Ezra 8:24–29). The accumulated wealth became vast and was a source for maintenance of the temple and priests (2 Kgs 22:3–7; 1 Chr 26:26–28; 2 Chr 34:8–11; cf. Isa 23:18), paying tribute to invaders or allies (1 Kgs 15:17–22; 2 Kgs 12:19; 2 Chr 16:1–6), or spoil for the enemy (1 Kgs 14:25–28; 2 Kgs 14:11–14; 24:13; Jer 15:13; 17:3; Dan 1:2; 2 Chr 12:2–12; 36:18). Cf. Judg 17:3.

Precious stones were also dedicated to the temple treasury (cf. 1 Chr 29:8; 2 Chr 32:27). Perhaps Lam 4:1 has such stones in mind. Also recall that the high priest's clothing incorporated precious stones.

f. Mixtures. Certain mixtures are prohibited: cross-breeding animals, plowing with an ox and ass together, sowing a field or vineyard with two different types of seeds, and making or wearing a Heb *šaʿaṭnēz* garment, i.e., one made of wool and linen (Lev 19:19; Deut 22:9–11). The reason seems to be that mixtures are holy (Deut 22:9). This explains in part the holiness of the high priest's clothing and of the fabric wall and hangings of the tabernacle which employ a mixture of wool and linen. Israelites are allowed to use mixtures in one case. They are to wear fringes on the edges or corners of their clothing, normally made of linen, and with a thread of blue, implicitly of wool, attached (Num 15:37–41; Deut 22:12; see Milgrom 1983a; 1983c).

g. Oil. Oil used for anointing priests, the tabernacle, and its furniture had a special and restricted composition and was holy (Exod 30:22–33; 37:29; Num 35:25). One would expect this oil to be most holy since it confers a status of most holiness on the sanctuary furniture (cf. the incense below). Oil used on cereal offerings would be most holy as part of the offering (Lev 2:1, 4, 6–7; etc.). The elevated and sprinkled oil in the ritual for purification from Heb *ṣāraʿat* (so-called leprosy) would be holy, but not most holy (Lev 14:12, 15–18, 24–29; see sec. C. 1. a. [1]). The beaten pure oil for the tabernacle lamp may have had a lesser holy status as a dedicated item (Exod 27:20; Lev 24:2). Outside of P, holy oil is used to anoint kings (1 Kgs 1:39; figuratively, Ps 89:21; see sec. C. 1. a. [1]).

h. Incense. Like anointing oil, incense (Heb *qĕṭōret hassamîm*) used on the incense altar and on the Day of Atonement has a unique restricted formula (Exod 30:34–38; cf. Lev 16:12–13). The text calls it "holy" (Exod 30:35, 37), but once calls it "most holy" which is technically more correct (v 36). Relatively less holy, but still most holy, would be the frankincense (Heb *lĕbōnâ*) used on cereal offerings (Lev 2:1–2, 15, etc.). The degree of holiness of plain incense (Heb *qĕṭōret*) offered in censers by priests is unclear (this offering implied in Lev 10:1; Num 7:14, 20, etc.; 16:7, 17–18, 35; 17:5, 11–12—Eng 16:40, 46–47).

i. Water. Holy water is mentioned in the ordeal for a woman suspected of committing adultery (Num 5:17; probably taken from the laver). Water libations (1 Sam 7:6; cf. 2 Sam 23:16) and the river flowing from the temple in Ezekiel's vision (Ezek 47:12; cf. Joel 4:18; Zech 14:8) may be considered holy. Spring water for certain rituals (Lev 14:5–6, 50–52; 15:13; Num 19:17) and that of the Jordan (as in 2 Kgs 5:10–14) are probably not to be considered holy.

4. Places. a. Sanctuaries. P's wilderness tabernacle is marked off by a linen fence 100 by 50 cubits which forms a court whose entrance faces eastward. In the front half of the court is the open-air altar for burnt offerings. In the back half of the court is the tent structure—30 cubits long, about 10 wide, and 10 high—which is divided into two rooms: a foreroom, the shrine; and a back room, the adytum.

Terminology shows a gradation of different parts of the tabernacle. Technically the adytum is called Heb *qōdeš haqqŏdāšîm*, "the most holy place" and the shrine simply Heb *haqqōdeš*, "the holy place" (Exod 26:33–34; 1 Chr 6:34; cf. Heb *miqdāš haqqōdeš* of the adytum in Lev 16:33). But the entire tent structure could be called "most holy" which indicates its collective holiness is greater than the rest of the sanctuary area (Exod 30:26, 29). Less technically, both rooms could be called *haqqōdeš*, "the holy place" (the adytum: Lev 4:6 [unless this refers to both rooms]; 16:2–3, 16–17, 20, 23, 27; the shrine: 28:29, 35; 29:30; 31:11; Lev 6:23; 10:18 [first occurrence]; Num 4:12; both rooms together: Exod 38:24, 27). The sanctuary area in general or the court could be called *haqqōdeš*, "the holy place" (Exod 28:43; 35:19; 36:1, 3, 4, 6; 39:1, 41; Lev 10:4, 18 [2d occurrence]; Num 8:19; 28:7; see Haran 1978: 171–73; cf. Heb *mĕqôm haqqōdeš*, "place of the sanctuary" Lev 10:17; 14:13; Heb *šeqel haqqōdeš*, "sanctuary

shekel" Exod 30:13, 24; etc.), Heb *(ham)miqdāš,* "(the) holy place/area" (Exod 25:8; Lev 12:4; 19:30; 20:3; 21:12; 26:2; Num 3:38; 19:20; plural in Lev 26:31; cf. Milgrom 1970: 23–24, n. 78), and Heb *māqôm qādôš,* "holy place" (Exod 29:31; Lev 6:9, 19, 20; 7:6; 10:13; 16:24; 24:9; Wright 1987: 232–35).

The distribution of furniture, the extent of access to the different parts of the sanctuary, the materials used in the tabernacle, and anointing rites also display the structure's graded holiness. The ark, the most important piece of furniture, is in the adytum; the incense altar, lamp stand, and bread table are in the shrine; and the burnt-offering altar and laver, the least holy of the most holy furniture, are in the court. Similarly, only the high priest, the holiest of the Israelites, is allowed in the adytum; the high priest aided by regular priests performs daily and weekly rites in the shrine; and the Levites and Israelites, both profane, have access only to the court. Some argue the Israelites were even restricted to the area between the burnt-offering altar and the entrance, which would indicate a subdivision in the court's holiness (Haran 1978: 187–87; Milgrom 1970: 17–18). As for materials, the wall planks of the tabernacle and the columns supporting the veil and the entrance hanging are overlaid or covered with gold (Exod 26:29, 32, 37; 36:24, 36, 38) while the columns holding up the fence of the court and the hanging to the court entrance are covered with silver (27:10–11, 17; 38:10–12, 17, 19). The footings for the planks of the tabernacle and for the columns of the veil are made of silver (26:19, 21, 25, 32; 36:24, 26, 30, 36; 38:27) while those for the columns of the tent entrance, of the sanctuary entrance, and of the perimeter of the court are copper (26:37; 27:10–11, 17; 36:38; 38:10–11, 17, 19, 30–31). The tent structure itself is made of four layers: an elaborate underlayer of costly materials (the Heb *miškān,* "tabernacle"; 26:1–6; 36:8–13), another layer made of simple goat hair (Heb *ʾōhel,* "tent"; 26:7–13; 36:14–18), and a top cover of tanned ram skins, and then one of Heb *tĕḥāšîm* skins (26:14; 36:19; 39:34). The veil and bottom layer of the tabernacle is made of blue, purple, and scarlet wool, and fine linen, with cherubim designs (26:1, 31; 36:8, 35; the listing of materials for the bottom layer may indicate it has more linen than the veil), while the hangings to the entrances of the tabernacle and court have blue, purple, and scarlet wool, fine linen, and carry designs but not cherubim (26:36; 27:16; 36:37; 38:18). The fence surrounding the entire court is of fine linen (Exod 27:9, 18; 38:9, 16). The clasps holding the two sections of the bottom layer of the tabernacle together are gold (26:6; 36:13), while those of the overlying goat-hair layer are copper (26:11; 36:18). Finally, when the sanctuary is dedicated only the tent structure, the burnt-offering altar, and the laver are anointed; the court itself is not.

Non-P literature mentions cult places and sanctuaries in towns such as Beer-sheba, Bethel, Gibeon, Gilgal, Hebron, Mizpah (of Benjamin), Nob, Ophrah (of Abiezer), Ramah (Ramathaim), Shechem, Shiloh, as well as in undefined places. These cult places would have been considered holy—if not by a particular biblical book or tradition, which may treat them as illegitimate, at least by worshipers there. Solomon's and Ezekiel's temples, whose descriptions are more complete, exhibit degrees of holiness like those of P's tabernacle. The entire area of Solomon's temple, including courts, was called a Heb *miqdāš,* "holy/sanctuary area" (clearly, Ezek 9:6; 23:39; see also Isa 63:18; Jer 17:12; Ezek 5:11; 8:6; 23:38; 24:21; 25:3; Ps 74:7; 78:69; Lam 1:10; 2:7, 20; 1 Chr 22:19; 2 Chr 20:8; 26:18; 29:21; 30:8; perhaps 1 Chr 28:10; cf. Heb. *bêt miqdāš* in 2 Chr 36:17; for the Second Temple: Isa 60:13; Dan 8:11; 9:17; 11:31; Neh 10:40; of other sanctuaries: Exod 15:17; Josh 24:26; Amos 7:9, 13; Ps 96:6). The plural in Jer 51:51 probably refers to sacred areas of the temple (cf. Ezek 7:24; 21:7; Ps 68:36; 73:17). The entire area was also called a Heb *qōdeš,* "holy place" (Ps 74:3; 1 Chr 24:5; 2 Chr 29:5, 7; 35:5; cf. Ps 20:3; 60:8; 63:3; 68:25; 108:8; 134:2; cf. Isa 64:10; Ps 24:3; 1 Chr 29:3; Heb *har haqqōdeš,* "holy mountain" and variants: Isa 56:7; Ezek 20:40; Ps 3:5; 15:1; 43:3; 99:9; cf. Isa 27:13; 65:11; *qōdeš* for the Second Temple: Dan 8:13, 14; 9:26; cf. Isa 62:9). The temple building itself had two main rooms, but with a vestibule added in front. The adytum can be called the "most holy place" (1 Kgs 6:16; 7:50; 8:6; 2 Chr 3:8, 10; 4:22; 5:7; cf. Ps 28:2; Second Temple: Dan 9:24). The shrine can be called the *qōdeš,* "holy place" (1 Kgs 8:8, 10; 2 Chr 5:11). The adytum, overlaid with gold, contains the ark underneath the wings of gold-covered cherubim (1 Kgs 6:20, 27–28, 31–32; 8:6–9); the shrine, also overlaid with gold, contains a gold incense altar, a gold bread table, and gold lamp stands (1 Kgs 6: 21–22, 30, 33–35; 7:48–50); and the court contains a copper altar, a large copper laver, and ten smaller copper lavers (1 Kgs 7:27–39, 43–45; 8:64; on Ahaz's altar: 2 Kgs 16:10–16). The two pillars standing in front of the temple were of copper (1 Kgs 7:13–22). Only priests, not Levites (2 Chr 29:16) nor laypersons (2 Chr 26:16–21), had access to the building (cf. 1 Kgs 8:6, 10–11; see also Ps 93:5; Eccl 8:10; 2 Chr 2:3).

Ezekiel's visionary temple, described in Ezekiel 40–48 (cf. Ezek 20:40; 37:26–28), has a walled-off area 500 cubits square. This entire area is called a *miqdāš,* "holy area" (37:26, 28; 43:21; 44:1, 5, 7–9, 11; 45:3–4; 47:12; 48:8, 10, 21) and a *qōdeš,* "holy place" (45:2). In a relative sense the sanctuary area is holy *(qōdeš)* while the area outside of it is profane (Heb *ḥōl;* see Ezek 42:20). Calling the sanctuary area "most holy" vis-à-vis the rest of the land also reflects its holier status (Ezek 43:12; cf. 45:3). The sanctuary area has an outer and inner court. The latter is called *qōdeš,* "holy place" (Ezek 42:14; 44:27) and perhaps also *miqdāš,* "holy place" (44:15–16; 45:18–19). The inner court contains the burnt-offering altar and the temple building. The temple building has two main rooms: the adytum or most holy place (41:4; simply *qōdeš,* "holy place" in 41:21, 23), and the shrine. It also has a vestibule at the front. The inner court has an implicit higher holiness. Only priests have access to it (44:15–19, 27; cf. 40:44–46; 42:13–14; 46:19–20). Not even the civic leader, the "prince" (Heb *nāśîʾ*), can enter (46:1–3, 8, 12). The Levites have access only to the outer court and gates of the inner court (44:10–14; cf. 40:38–43). Israelites are restricted to the outer court. Uncircumcised foreigners are restricted from the sanctuary area altogether (44:9). Priests, furthermore, are not to wear their official robes in the outer court (42:14; 44:17–19). Most holy offerings are to be eaten in holy chambers adjoining the inner court (42:13; 46:20),

while lesser holy offerings are cooked in the outer court (46:21–24). See D. 3.

For foreign sanctuaries, see Isa 16:12; Ezek 28:18. For a temple plan reflecting a more complicated gradation of holiness see the Temple Scroll (11QTemple; Yadin 1983). See also TABERNACLE; TEMPLE, JERUSALEM; TEMPLES AND SANCTUARIES.

b. Places of Theophany. Moses was told to remove his shoes on Sinai because the ground was holy (Exod 3:5; cf. Josh 5:15). The mountain's hallowed state was due to God's presence there (Exod 19:9–25; 24:16–17; Deut 4:10–5:29)—it was "God's mountain" (1 Kgs 19:8; cf. vv 8–14). Rules that the people purify themselves for the theophany there (Exod 19:10, 14–15, 22) and not encroach on the mountain's boundaries on the penalty of death (vv 12–13, 17, 21, 23–24) also evidence its sacred character. Milgrom (1970: 44–46) has argued that the mount had a tripartite gradation of holiness similar to that of the tabernacle: the summit where God's presence was and to which only Moses has access, the area below the summit covered by a cloud, and the area below the cloud, the "bottom of the mountain," where the altar was set up (Exod 24:4) and where the people gathered (cf. Ps 68:18).

Other places where God's presence is manifested are implicitly holy, such as Israel's war camp (Deut 23:10–15; cf. Num 5:2–3; 1 Sam 21:6) and the Garden of Eden (Gen 3:8). Tyre, figuratively a man in Eden, lived on the "holy mountain of God" (Ezek 28:14). Places where God or angels appeared to the patriarchs and others, and where they, in consequence, set up altars or pillars, may be considered sacred (e.g., Shechem: Gen 12:6–7; Bethel: 28:10–22; 35:1–5, 9–15; Gideon in Ophrah: Judg 6:20–24).

c. Land of Israel and Jerusalem. Though some of the P laws perhaps hint that the land of Israel is holy (Lev 18:25–28; Num 35:33–34), only the non-P literature explicitly calls it or its cities such (Exod 15:13; Isa 64:9; Zech 2:16; Ps 78:54; cf. Zech 14:20–21; Ps 114:2; Ezra 9:8; perhaps Josh 5:15). The Heb term *har haqqōdeš,* "the holy mountain," and its variations often refers to the entire land of Israel (Isa 11:9; 57:13; 65:25; Jer 31:23; Obad 16; Zeph 3:11; cf. Isa 27:13; Joel 2:1; Ps 87:1). Other passages imply the holiness of the land (Josh 22:19; 2 Kgs 5:17; Ezek 4:14; Hos 9:3–4; Amos 7:17; Ps 137:4; Ezra 6:21).

More specifically, the city of Jerusalem is called holy (Isa 48:2; 52:1; Ps 46:5; Dan 9:24; Neh 11:1, 18), and the term *har haqqōdeš:* "the holy mountain" (and variants) can refer particularly to it (Isa 66:20; Joel 4:17; Zech 8:3; Ps 2:6; 48:2; Dan 9:16, 20; 11:45; cf. Isa 27:13; 56:7; 65:11; Joel 2:1). Jeremiah speaks in detail of a promised increase of holiness to be experienced by the city (Jer 31:38–40; cf. Zech 14:20–21). Because of its holiness, the uncircumcised, foreigners, and the defiled would not be found in the city (Isa 52:1; Joel 4:17). On the dedication or sanctification of Jerusalem's walls, see Neh 3:1; 12:27.

d. Ezekiel's Teruma. Ezekiel's future map (45:1–8; 48:8–22) has a section of land 25,000 cubits square called the *tĕrûmâ* ("contributed portion," 48:8, 12, 20–21). This *tĕrûmâ* contains three horizontal strips for (1) the priests and sanctuary, (2) the Levites, and (3) the city (i.e., Jerusalem) and its outlying area. The northernmost strip, 25,000 by 10,000 cubits, apparently belongs to the Levites. It is called the Levites' *ʾăḥuzzâ,* "possession" (45:5; 48:22). Adjoining on the south is an area of the same dimensions for the priests with the sanctuary at the center (45:3; 48:10, 21), called *qōdeš qodāšîm,* "most holy" (45:3; 48:12); a *qōdeš,* "holy portion" (45:4; cf. 45:1); a *miqdāš,* "holy area" (45:4); *haměquddāš,* "the dedicated portion" (48:11; but see commentaries), the *tĕrūmiyyâ,* "special contribution" (48:12); and probably *tĕrûmat haqqōdeš,* "the holy contribution" (48:21b). The levitic and priestly areas together are called *tĕrûmat haqqōdeš,* "the holy contribution" (45:6–7; 48:10, 18, 20–21a); the "first fruit of the land" which is *qōdeš lyhwh,* "holy to Yahweh" (48:14); and, if emendations are followed, *qōdeš,* "holy portion" (45:1), and *hattĕrûmâ . . . lyhwh,* "the contribution . . . to Yahweh" (48:9). Bordering the priestly land on the south is the *ʾăḥuzzat hāʿîr,* "possession of the city" (45:6–7; 48:20–21) which is *ḥōl,* "profane" (48:15). Despite some overlap of terminology for the priestly area and the priestly and levitic areas combined, a configuration of degrees of holiness is found: the holiest land with the sanctuary and priests, the lesser holy land with the Levites, and the profane land with the city. That these degrees are not arranged more systematically, e.g., in a concentric order, may be due to geographic and historical realities influencing the vision. That the city lies in a profane area, separated from the sanctuary, is striking in view of other prophetic expectations that Jerusalem would be holy.

e. Heaven. As God's dwelling on earth, namely the sanctuary, is holy, so his dwelling in heaven is holy. Various Heb terms are used: *mĕʿôn qodšô/qodšĕkā,* "his/your holy habitation" (Deut 26:15; Jer 25:30; Zech 2:17; Ps 68:6; 2 Chr 30:27); *mĕrôm qodšô,* "his holy height" (Ps 102:20; a Qumran text has *mĕʿôn*); *šĕmê qodšô,* "his holy heavens" (Ps 20:7); *zĕbûl qodšĕkā,* "your holy elevation" (Isa 63:15); and perhaps *qodšô/qodšî/haqqōdeš,* "his/my/the (heavenly) sanctuary" (Amos 4:2; Ps 60:8; 77:14; 89:36; 108:8; 150:1); *miqdāš,* "holy place" (Ps 68:36; 73:17); and some of the instances of *hêkal qodšô,* "his holy temple" (Jonah 2:5, 8; Mic 1:2; Hab 2:20; Ps 11:4; some refer clearly to the earthly temple: Ps 5:8; 79:1; 138:2; cf. 65:5). See also Isa 57:15, and for God's throne, Ps 47:9.

5. Time. a. Sabbath. The OT generally calls the Sabbath sacred and describes or prescribes its sanctification by abstaining from work (Exod 16:23; 20:8; 31:14–15; 35:2; Deut 5:12; Isa 58:13–14; Jer 17:22, 24, 27; Ezek 20:20–21; 44:24; Neh 9:14; 13:22).

b. Holidays. P designates certain holidays as Heb *miqrāʾ qōdeš,* perhaps meaning "declaration of, call for, summoning to holiness" rather than "holy convocation" (cf. Lev 23:2, 4, 37). These days include the first and seventh days of the Feast of Unleavened Bread (Exod 12:16; Lev 23:7–8; Num 28:18, 25); the Feast of Weeks day (Lev 23:21; Num 28:26); the first day of the seventh month (Lev 23:24; Num 29:1); the Day of Atonement (Lev 23:27; Num 29:7); the first and eighth days of the Feast of Tabernacles (Lev 23:35, 36; Num 29:12). The phrase *miqrāʾ qōdeš* is accompanied by a prohibition of work on these days which evidently serves as the means of hallowing these times (cf. the use of the phrase for the Sabbath in Lev 23:3). Observance of ritual requirements at the sanctuary would have also led to the days' sanctification. Degrees of holiness are apparent: the Sabbath and Day of Atonement are the

holiest since they require complete rest; other days, designated *miqrā' qōdeš,* are less holy since they require abstinence only from laborious work; and other special days, such as new moons (apart from that in the seventh month), are least holy since they require no abstention (see Milgrom 1970: 80–81, and n. 297). The differences in sacrificial requirements in Leviticus 23 and Numbers 28–29 also imply more minute degrees of holiness.

Festivals were holy periods outside P, too (Ezra 3:5). A specific indication of this is the idiom of "sanctifying" a festival (Isa 30:29; a fast: Joel 1:14; 2:15; a festival for the god Baal: 2 Kgs 10:20). Holy days require abstention from work or unseemly behavior (Neh 8:9–11; Neh 10:32).

c. Jubilee and Sabbatical Year. The jubilee year is to be sanctified by not sowing or harvesting (Lev 25:10–12). The sabbatical year is not called holy but the requirement to not sow or harvest would indicate it has a holiness similar to the jubilee (Lev 25:2–7; note the terminology with *šabbāt* and *šabbātôn;* cf. Exod 23:10–11). The restrictions enforcing rest indicate that these periods of time are holy.

6. Miscellaneous. a. War. Several passages speak of "sanctifying" or inaugurating war (Jer 6:4; Joel 4:9; Mic 3:5). While the verb may simply mean to "prepare," it may refer to performing preparatory rites, including purification (cf. Jer 22:7; 51:27–28). Like the holiness associated with theophany, it may be the divine presence that makes a war holy.

b. Covenant. A covenant can be called holy (Dan 11:28, 30; here meaning Israel's religion) and can be desecrated (Mal 2:10; Ps 55:21; 89:35; Neh 13:29).

C. Methods of Sanctification and Desanctification

Since holiness is fraught with danger, the movement into or out of it is of great prescriptive concern. Such movement may be legitimate, or unplanned and illegitimate.

1. Legitimate Sanctification and Desanctification. a. Sanctification. Some beings, places, objects, or times are inherently holy (e.g., God, the firstborn) and others become such through the people's proper behavior (e.g., the people through obedience, the Sabbath through cessation of work). Two other means of attaining a holy state require further elucidation: ritual procedures and theophany.

(1) Ritual Procedures. Persons or things made holy by special anointing oil (see sec. B. 3. g.) in P include high and common priests and their clothing (Exod 29:7, 21; Lev 8:12, 30) and the tabernacle and the most holy furniture (Exod 29:36; 30:26–29; 40:9–11; Lev 8:10–11; Num 7:1, 10–11, 84, 88). Pouring of oil on *massēbôt,* "pillars," may have consecrated them (Gen 28:18; 31:13; 35:14). The anointing of prophets, if this was really done, may have imparted holiness (see sec. B. 2. e.). Anointing a person recovered from scale disease (Lev 14:10–29), kings (1 Kgs 1:39; cf. Ps 89:21), and shields (2 Sam 1:21; Isa 21:5) did not sanctify them (cf. Ps 110:3).

Offerings often accompany sanctuary dedications (e.g., Exodus 29; Leviticus 8–9; Numbers 7; 1 Kgs 8:5, 62–64; Ezek 43:18–27; 2 Chr 5:6; 7:1–10; 29:20–36). The purgation sacrifice in particular cleanses and sanctifies the outer altar, readying it for ensuing sacrificial activity (Exod 29:36–37; Lev 8:15; Ezek 43:18–22, 25–26) and is used in recurring purgation rites to maintain sanctity (Leviticus 16, esp. v 19 and Ezek 45:18–20). Consecration-offering blood is placed on the priests and sprinkled on them and on their clothing (Exod 29:21; Lev 8:30).

Priests at their consecration donned special clothing (Exod 28:3, 41; 29:1, 5–9; Lev 8:7–9, 13). When Eleazar became high priest, he was dressed in Aaron's clothing (Num 20:25–28). For Ezekiel, the contagious character of priestly clothing may contribute to the priests' holiness (42:14; 44:19; cf. the tassels in sec. B. 3. f.).

Objects may be dedicated by elevating them (literally or symbolically) in the sanctuary. Sanctification is specifically mentioned in the case of the shoulder of the Nazirite's well-being offering with accompanying bread (Num 6:19–20), and the two well-being lambs and the two firstfruits loaves offered on the Feast of Weeks (Lev 23:17–20). Other cases where it is implicit are the breast of the well-being and priestly-consecration offerings (Exod 29:26–27; Lev 7:30, 34; 8:29; 9:21; 10:14–15; Num 6:20; 18:18), thigh and fat of the consecration offering with accompanying bread (Exod 29:22–24; Lev 8:25–27), the thigh of the well-being offering (Lev 9:21; 10:14–15), the reparation offering and log of oil for a recovered *mĕṣōrā'* (Lev 14:12, 24), the barley *'ōmer* (Lev 23:11–15), the cereal offering of a suspected adulteress (Num 5:25), and gold and copper for the sanctuary (Exod 35:22; 38:24, 29). The Levites are "elevated" (Num 8:11, 13, 15, 21) but this does not necessarily make them holy (see sec. B. 2. d., and Milgrom 1983b: 139–70).

A substance presumably increases in holiness when brought in direct or indirect contact with a most holy sanctum. This is implicit in the cases of putting consecration-offering blood on the altar before sprinkling it on the priests and their clothing (Exod 29:21; Lev 8:30), sprinkling oil "before the Lord" before it is placed on a recovered *mĕṣōrā'* (Lev 14:16, 27), and sprinkling red cow blood toward the sanctuary (Num 19:4). It is also the case with the portions of most holy offerings, which can communicate holiness apparently only after their blood or initial portions have come in contact with the altar (Lev 6:11, 20; Milgrom 1981; see sec. C. 2. a.).

An offerer may verbally declare something holy or dedicate it by physically setting it apart. This dedication generally occurs outside the sanctuary precincts and includes sacrificial animals (Exod 28:38; Lev 22:2–3, 15; 27:9; cf. 2 Chr 30:24; 35:7–9; not the firstborn in P, Lev 27:26, but cf. Deut 15:19), firstfruits and first-processed materials (Num 15:20; 18:12–13), the tithe (Lev 27:32; cf. Num 18:24–32; Neh 12:47), a house or land (Lev 27:14–16, 18–19, 22), the half-shekel (Exod 30:13–15), building materials (Exod 25:2–3; 35:5, 21, 24; 36:3, 6), booty (Num 31:28–29, 41, 52), and oneself as a Nazirite (Num 6:2–21). See in general Lev 22:12, 15; Num 5:9; 18:8, 11, 19; Deut 12:6, 11, 17; Ezek 20:40; 44:30; 45:13, 16; Mal 3:8; Neh 10:38, 40; 12:44, 47; 13:5; 2 Chr 30:17; 31:10, 12, 14; figuratively, Jer 12:3. Verbal dedication or setting apart in the sanctuary precincts presumably occurs with the breads of the thank offering and the right thigh of the well-being offering (Lev 7:14 and Exod 29:27–28; Lev 7:32, 34; 10:14, 15; Num 6:20). Judg 17:3 and perhaps Prov 20:25 show how verbal dedications are made (see Milgrom 1983b: 159–72).

A special form of dedication is Heb *ḥērem,* "severe dedi-

cation; ban." This is found mainly in contexts of war (Josh 6:17–21; 8:26; 10:1, 28, 35, 37, 39, 40; 11:11, 12, 20, 21; etc.) but may apply to one's own property (cf. Lev 27:28, "field of one's inheritance"; cf. v 21). Things placed under *ḥērem* include persons, their buildings, animals, precious objects and metals, and land. Objects, animals, and land so dedicated would be destroyed or become sanctuary property to be used by the priests (Num 18:14; Josh 6:19, 24; Ezek 44:29). Humans would be put to death (Lev 27:29). As with regular dedication, *ḥērem* can take the form of an unconditional declaration or a vow (Num 21:2–3).

(2) Theophany. In addition to the cases discussed in sec. B. 4. b., stories about the major sanctuaries describe God's manifestation at the time of dedication: the desert tabernacle (Exod 40:34–35; Num 9:15 and Lev 9:4, 6, 23–24); Solomon's temple (1 Kgs 8:10–11; 2 Chr 5:11–14; cf. the Chronicler's addition in 7:1–3); Ezekiel's temple (43:1–5; cf. 44:1–3; 46:1–3, 8, 12). These theophanies have not only a sanctifying effect but also show that God accepts the structures and their cult. God's presence or appearance at a sanctuary at other times in its existence would have a continuing sanctifying effect.

b. Desanctification. The prevailing rule in most cases is: Whatever is not offerable on the altar may be desanctified (Milgrom 1976: 52–53). The two main methods are redemption and ritual. A unique example is in Ezra 2:61–63 (= Neh 7:63–65) where priests are "disqualified" (Heb *wayĕgō'ălû;* the verb carries "the notion of desanctification) and not allowed to eat the most holy offerings.

(1) Redemption. Money or, in some cases, another item of equal worth may be paid or given to redeem or purchase a sanctum. The sanctum loses its holiness while the money or other item becomes holy (cf. Lev 27:23). In P, the main method of desanctifying is paying the principal value of an item, assessed by a priest, plus one fifth. This is found in the case of a dedicated or vowed unclean sacrificial animal (Lev 27:11–13), a firstborn unclean animal (vv 26–27; cf. Num 18:15), produce tithe (Lev 27:30–31), a dedicated house (vv 14–15), and a dedicated field of one's inheritance (vv 16–19). A dedicated field of one's inheritance and unredeemed unclean firstborn may be sold at the assessed price, apparently without the added fifth (vv 20–21, 27). Firstborn humans were redeemed at first by being replaced by the Levites, and the extra Israelites and later firstborn were redeemed by paying five shekels (Num 3:44–51; 18:15–16). Outside of P, a firstborn ass, an unclean animal, may be redeemed by a sheep or goat (Exod 13:13; 34:20). Firstborn people must also be redeemed, but no means is prescribed (Exod 13:13; 34:20); perhaps a sacrificial redemption is intended. An object designated as *ḥērem* is not redeemable according to P (Lev 27:29). Jonathan's redemption, if he was under *ḥērem* after eating honey in violation of Saul's oath, could be legitimate since his violation was unintentional (1 Sam 14:24, 27, 45).

(2) Ritual Procedures. The removal of a holy portion from a batch desanctifies the rest. The tithe given to the Levites at first is holy (Num 18:32). When they give a tithe of the tithe to the priests, itself called holy (v 29), the remaining nine tenths becomes profane (cf. v 31). The same desanctification process may be seen in the selection of the animal tithe (Lev 27:32), the implicit donation of the fourth-year produce of a new tree to God before personal consumption can begin in the fifth (Lev 19:23–25; cf. Deut 20:6; 28:30; Jer 31:5), and the separation of firstfruits and first-produced materials from a large batch.

Some sanctums are unusable and cannot be redeemed. To prevent desecration they are disposed of or destroyed. The Nazirite's hair and leftover portions of sacrifices are burned (Num 6:18–19 and Exod 12:10; 29:34; Lev 7:17; 10:16–20; 19:6; cf. Lev 7:19). Altar ashes and the crop and plumage of a burnt-offering bird are taken outside the camp to the ash dump (Lev 1:16; 6:3–4). Carcasses of inedible purgation sacrifices are also taken to the ash dump and burned (Exod 29:14; Lev 4:11–12, 21; 6:23; 8:17; 9:11; 16:27; cf. Ezek 43:21). The blood of purgation and other sacrifices is collected or poured at the base of the altar where it will sink into the ground (Exod 29:12; Lev 4:7, 18, 25, 30, 34; 5:9; 8:15; 9:9; cf. Exod 29:16, 20; Lev 1:5, 11: 3:2, 8, 13; 7:2; etc.). Outside of P, persons and things under *ḥērem* are killed and burned, or otherwise destroyed (Deut 13:17; Josh 6:24; 7:15, 25; 8:28; 11:11, 13). Necks of unredeemed firstborn of asses could be broken (Exod 13:13; 34:20; see Wright 1987: 129–59, 284–90).

At the successful completion of their vows Nazirites bring sacrifices which mark their departure from a holy status (Num 6:13–20; see sec. D. 2.). The high priest's bathing in Lev 16:24 may be for desanctification after working in the most holy place of the sanctuary. The washing or disposal of pots in which purgations offerings were cooked may be due to impurity rather than for desanctification (Lev 6:20–21; Wright 1987: 93–113, 129–31).

2. Unintentional or Illegitimate Sanctification and Desanctification. a. Sanctification. Four times P says "anyone/thing that touches *x* becomes holy" (Exod 29:37; 30:29; Lev 6:11, 20). The sanctums specified in these verses are the Tent of Meeting, the six most holy pieces of furniture, and the portions of the cereal, reparation, and purgation sacrifices. Objects becoming holy in this way perhaps may be redeemable or become property of the sanctuary and priests. It is arguable whether people are included in this rule (Milgrom 1981; Haran 1978: 179). At any rate, the consequence for contact with the furniture for nonpriests is death (by divine agency; Num 4:15, 19–20; 18:3). The tent structure, however, is not lethal, at least for the Levites, who may touch it (Num 4:24–33). In Ezekiel the priestly clothing and most holy offerings can sanctify persons and objects (42:14; 44:19; 46:20). See also Hag 2:12; 2 Chr 8:11 and perhaps Isa 65:5 (reading a *Pi'el*).

Another form of unplanned and detrimental consecration is *ḥērem* contagion. If a person misappropriates a cult object that is under *ḥērem,* the person acquires that status (Deut 7:25; Josh 6:18; cf. Exod 22:19). A person having this status would be put to death (cf. Achan in Josh 7, esp. v 12; cf. 1 Kgs 20:42).

b. Desanctification. It is in the case of illicit desanctification—desecration—that the dramatic character of holiness appears. Such profanation rouses God's destructive ire against malefactors and the community at large. Any impurity threatens the sanctity of any holy place, object, being, or occasion (e.g., Lev 7:19–21; 12:4; 21:1–4, 10–12; Num 6:9–12; 9:6–13). Desecration—making something profane but not necessarily impure—is often im-

plied. It occurs when someone of a profane or even holy status infringes upon what is holy or misuses it. Sanctuaries or holy places are desecrated by encroachment of those unauthorized (Lev 16:2; 21:21, 23; Num 1:51; 3:10, 38; 16:1–35; 17:5—Eng 16:40; 18:7, 22; outside P: Exod 19:12–13, 16, 21–24; Ezek 44:7; 2 Chr 26:16–18 = 2 Kgs 15:5), priests' misdeeds (Exod 28:35, 43; 30:20–21; 40:32; Lev 10:1–6, 9; 21:12; cf. Zeph 3:4); and enemy incursions (outside P: Ezek 7:22, 24; 24:21; 25:3; Ps 74:7; Dan 11:31). Sanctum desecration occurs by mishandling holy furniture (Num 4:15, 20; 18:3; outside P: 1 Sam 6:19; 2 Sam 6:6–7); eating a well-being offering outside its proper time (Lev 7:16–18; 19:7–8); mishandling the tithe (Num 18:32); a layperson eating sacrificial portions of the priestly households (Lev 22:14); substituting sacrificial animals (Lev 27:10, 33); eating sacrificial blood and fat (Lev 7:25–27; 17:10–14); and outside P, working a firstborn ox or shearing a firstborn sheep (Deut 15:19); misappropriating *ḥērem* (Josh 7:1; 22:20; 1 Chr 2:7); and using iron on an altar (Exod 20:25). Priests are profaned by illicit mourning rites and harlot daughters (Lev 21:6, 9), and a high priest's lineage by marrying a prohibited woman (21:15). The people are profaned through harlotry (Lev 19:29), mixed marriages (outside P: Ezra 9:2, 4; 10:2, 6, 10, 19; Neh 13:27, 29; cf. Mal 2:10, 11), and enemy assault (outside P: Ezek 22:16). God or his name are desecrated by various sins: false swearing and breaking an oath (Lev 5:21–26; 19:12; Num 5:6; cf. 30:3; outside P: Ezek 17:20); idolatry and improper worship (Lev 18:21; 20:3; Num 31:16; cf. 25:1; outside P: Josh 22:16, 22, 31; Ezek 13:19; 20:39; Mal 1:7–12; 1 Chr 10:13; 2 Chr 28:2–4, 19, 22–24; 29:6, 19; 33:19); improper priestly impurity (Lev 21:6); not sanctifying God (outside P: Deut 32:51); misuse of sanctums (Lev 22:2; outside P: 2 Chr 26:16–18; cf. Ezek 43:7–8); enslaving freed slaves (non-P: Jer 34:16); sexual sins (non-P: Amos 2:7); general sins (Lev 22:32; 26:40; Num 5:6; outside P: Isa 48:11; Ezek 14:13; 15:8; 18:24; 20:27; 22:26; 39:23, 26; Dan 9:7; Neh 1:8; 1 Chr 9:1; 2 Chr 12:2; 30:7; 36:14); and God's necessary punishment of his people (non-P: Ezek 20:9, 14; 36:20–23; 39:7). The land is profaned by idolatry and enemy attack (non-P: Jer 16:18 and Isa 47:6). Holy occasions are profaned by work (Exod 31:14; outside P: Isa 56:2, 6; Ezek 20:13, 16, 21, 24; 22:8; 23:38; Neh 13:18) and not observing prescriptions (cf. Exod 12:15, 19; Lev 23:29–30; Num 9:13). Covenants and commandments may be profaned by not abiding them (outside P: Mal 2:10; Ps 55:21; 89:32, 35; cf. Ezek 7:21; 28:18).

Desecration carries penalties (these have been fully discussed by Milgrom 1970; 1976). In P, inadvertent profanation, when one does not know of the desecration until after the fact, can be required by restoring the price of the sanctum plus one fifth, and bringing a reparation offering (Lev 5:16–18; cf. 5:20–26; 22:14; Num 5:5–8; Ezra 10:19). For suspected sanctum trespass a reparation offering is brought (Lev 5:17–19; cf. Num 6:12). Even if people do not intend desecration, but are conscious of their act, death may ensue (Num 4:15, 20; 18:3; 2 Sam 6:6–7). Intentional sacrilege is perilous. Only in the case of a false oath, where God's name has been desecrated, does P prescribe rectification procedures (Lev 5:20–26; cf. Num 5:6–8). Death by deity, however, is the usual consequence (described with the Heb *Qal* form *mût*, "die": Exod 28:43; 30:20–21; Lev 10:6, 9; 16:2, 13; 22:9; Num 4:15, 19–20; 17:28; 18:3, 22, 32; or with Heb *kārēt*, "be cut off": Exod 12:15, 19; 31:14; Lev 7:18, 20–21, 25, 27; 17:4, 9–10, 14; 19:8; 20:2–5; 22:3; 23:29–30; Num 4:18; 9:13; 19:13, 20; see Wold 1979). Some cases of sanctum trespass involve execution after judgment or preemptory execution by sanctuary guards to prevent God's fury from being poured out on the community (Exod 19:12–13; 31:14–15; 35:2; Lev 20:2; 24:16; Num 1:51; 3:10, 38; 15:35; 18:7; 2 Chr 23:6–7; cf. Judg 6:25–32; and see the passages in the previous paragraph). It is the danger inherent in the holy that lies behind fear of the divine presence (Gen 28:17; Exod 20:18–19; 24:11; 33:3, 5, 20; 34:30; Num 17:27–28—Eng 17:12–13; Deut 5:24–27; Judg 6:22–23; 13:22).

D. Theoretical Concerns

In addition to the foregoing observations about gradations of holiness, some additional general comments are in order. Much can be said about holiness from a more comprehensive theoretical perspective (see bibliography). Here we discuss the relationship of the conception of purity/impurity to holiness/profaneness and some recent contributions from anthropology and the theoretical study of religion to the understanding of sanctification rituals, sacred time, and ritual place.

1. Relationship of Holy, Profane, Pure, Impure. P and Ezekiel expressly view the states of holiness, profaneness, purity, and impurity in terms of two pairs of opposites: pure vs. impure and holy vs. profane (Lev 10:10; 11:47; Ezek 22:26; 42:20; 44:23; cf. 1 Sam 21:5). While it is true that impurity is a state opposed and detrimental to holiness, profaneness is its technical antonym. The presence or lack of a dynamic quality distinguishes the opposites from one another: profaneness is the lack of holiness; and purity is the lack of impurity. Any object, place, or person bears one state from each of the pairs at the same time (time is not called pure or impure). Four states, all of which are legitimate in certain contexts, are possible: profane and pure, profane and impure, holy and pure, and holy and impure. "Profane and pure" is a neutral and basic state since it lacks dynamic elements of holiness and impurity. Most laws that talk about becoming holy or impure assume a person or object starts with this combined state. Being profane and impure is the concern of most purity legislation. "Holy and pure" is the state of most persons, objects, and places considered holy. Only the last, ostensibly contradictory pairing of holiness and impurity demands attention. While this is not an expected or desired state, it is legitimate, even demanded, in cases of purgation offerings. A regular purgation offering removes impurity adhering to sanctums in the sanctuary. That it can pollute others after it is used for purification indicates it has become impure (Lev 16:27–28), but the requirement that it be eaten by the priests or be burned at the pure ash dump where other sanctuary materials are disposed indicates it is holy as well (Lev 6:19–23; see sec. C. 1. b. (2) on disposal). Similarly the scapegoat, part of a purgation offering complex (16:5), becomes impure when loaded with the community's sins while apparently remaining holy (cf. v 26). And the red cow, also a purgation offering (Num 19:9), pollutes those who prepare it (vv 7–

8, 10), yet it is still holy as suggested by the rule that the water made from the resulting ash can only be handled by a pure person (v 18).

J. Milgrom recognizes the two pairs of opposites above, but treats them in terms of their dynamic *interactions* and the consequences involved (1970: 1; *Leviticus* AB). He distinguishes between most and lesser holy, assumes that these holy states and the profane state are pure, eliminates the cases where same states would interact with one another, and treats the impure state without regard to whether it is in addition holy or profane. He then posits five interactions: (a) most holy with profane, (b) lesser holy with impure, (c) lesser holy with profane, (d) profane with impure, and (e) most holy with impure. One regularity Milgrom observes is that the interactions of (a), (b), and (e) are illicit and lead to dire consequences while those in (c) and (d) are not necessarily so. Profane Levites who touch, even look at most holy sanctums, are liable to death (Num 4:15, 19–20) and those who pollute a well-being offering (which is lesser holy) are liable to *kārēt,* "cutting off" (Lev 7:19–21), while the profane can legitimately contact what is lesser holy (but not misuse it), and the profane can generally contact what is impure (cf. sec. C. 2). If a spectrum of holiness and impurity strength be set up (most holy—lesser holy—profane—impure) only contact between noncontiguous categories poses a threat. This exhibits the systematic character of P's rules about holiness and purity.

2. Sanctification Rituals and Ritual Time. The anthropologist Edmund Leach (1976: 77–93) has developed insights proposed by van Gennep (1960) and has applied them to the priestly consecration ritual in Leviticus 8–9. He argues that many rituals involve a movement in social status and often have a threefold division: (1) rites of separation where the subject is demarcated from his or her surroundings by actual removal or symbolic rites (disrobing-clothing; purification; etc.), (2) a marginal or liminal period—of "social timelessness"—of long or short duration which often continues the subject's separation with prohibitions to be observed and which may be accompanied by rites, and (3) rites of aggregation or incorporation where persons return to their previous state or, at least, having a new social status, to a state of integration with society. To this scheme he adds a structuralist perspective that ritual is a type of language: not one which communicates in detail like speech, but which communicates more abstractly and generally like art and music. The parts of each ritual derive their meaning in relationship to one another, and a ritual complex derives its meaning in relationship to other complexes. Though not everything he says about the biblical material is acceptable, his approach generates many insights into biblical sanctification rituals. Following Leach's leads, we can offer the following abbreviated analysis of the priestly consecration ceremony and the Nazirite vow and desanctification. These two rites which raise the status of persons are actually quite different and convey thereby different ritual messages.

In the priestly consecration ritual the rites of separation cover almost all of Leviticus 8. Aaron and his sons are brought forward from the congregation, a physical separation (v 6). Though all are washed at first, Aaron is treated differently: he is dressed first (vv 7–9) and uniquely anointed (v 12). Aaron's special treatment, which continues throughout the rite, marks him as holier than his sons. After the sons are dressed and Moses offers sacrifices (vv 13–28), he places blood on Aaron's extremities first, and then on those of his sons (vv 23–24). Later, anointing oil and consecration-offering blood from the altar is sprinkled upon Aaron's clothes and perhaps Aaron, and then on his sons and their clothes (v 30). At this point the rite of separation has come to an end. The initiates now have a holy character (vv 12, 30). As vv 2–6 indicate the congregation has been present during this entire ritual segment. Their presence is not incidental but actually part of the ritual itself. The separation of the priests from the group and the latter's observation signifies or communicates the advancement of the priests' status. The period or rites of marginality or transition immediately ensue: the priests remain in the sanctuary area for seven days (vv 32–36; cf. Exod 29:35b–37). After this week of separation, rites of incorporation begin (Leviticus 9). On the eighth day offerings of the priests and the people are brought (vv 2–6). Though Moses instructs what is to be done, it is Aaron and his sons, not Moses, who now perform the sacrifices (7–20). Aaron, too, blesses the people (v 22). All this reveals the extent and nature of the priests' reintegration. While they can deal again with society, they are not on the same level as they were before. They are now the community's cultic representatives: they are holy. The appearance of God's glory gives closure and sanction to the entire tripartite ritual (v 24; cf. vv 4, 6).

To be compared, and contrasted, is the Nazirite vow and desanctification. The Nazirite period is simply initiated by a vow, a statement of intent (cf. Num 6:2). The "rite" of separation if therefore quite simple in comparison with the priestly ritual. The marginal or transitional period is one of restrictions (vv 3–8). The rite of aggregation consists of bringing offerings (vv 13–20) and cutting the hair (v 18–19). After this the Nazirite "may drink wine" (v 20). The cutting of the hair is a reversal of the initiation of the rite. As opposed to the priestly rites, this brings the person back to the profane status where he or she began. The Nazirite ritual is also private: there is no assembly when the vow is made and apparently none when the offerings are brought at the end. This is one of the great differences between this and the priestly ritual. Though both of them increase the holiness of the subjects, only the sanctification of the priests has broad social significance and relevance.

Leach's model is a temporal one. Ritual complexes such as those of the priests and Nazirite take place over and in time. As Leach notes, these rituals break up social time: they give meaning, direction, and order to an otherwise undifferentiated and homomorphous temporal continuum. There is thus a similarity between the rituals just discussed and the regular holy festival times of Israel. The regular recurrence of Sabbath and holidays also gives definition to Israelite time. These days punctuate it with focal points to which the group orients itself and works toward and from. Such orientation brings social unity and solidarity. Holy days, moreover, are periods of marginality or, better, timelessness, when the everyday is set aside for the unique; they are periods of restriction. If we had enough evidence we might find that these days or times were preceded by rites of separation or inauguration and

rites of incorporation or termination which returned the people to regular time, as are found, for example, in postbiblical Judaism for the Sabbath (cf. Lev 25:9–10).

3. Ritual Place. Leach also offers a model for understanding ritual space (1976: 81–93). For the human mind, reality consists of the real world and another, metaphysical world where things are the reverse of the real world: gods live there, they are immortal, power which can ultimately be beneficial to humans exists there, etc. Sacred space is where these two worlds are brought into contact with one another through various rituals. Religious specialists, e.g., priests, serve as intermediaries between the two worlds in these places, and purity and other restrictions prevail. For the P material specifically, Leach sees the adytum as symbolic of the other world, the veil being what separates the real from the other world. Inside the rest of the sanctuary area are graded intermediate zones. His model includes the area outside the sanctuary: the camp is the area of "tame culture" and the area outside the camp is that of "wild nature."

While Leach's model explains why sacred space exists functionally, it does not explain why societies have different conceptions of sacred space. Scholars argue that specific ideas about ritual space derive in part from social structure and other social concerns. Recently J. Z. Smith (1987) has applied some of these ideas to the verbal maps of the temple and land in Ezekiel 40–44. He suggests that the social hierarchies of a particular society determine its gradation of ritual space and the access that groups have to its different parts. One may disagree with his interpretation of some of the verses (particularly with the view that the Levites had access to the inner court), but his theoretical ideas are worthy of consideration and development.

To review, in Ezekiel's temple God's residence is the adytum; undistinguished priests have access to the inner court; Levites have access only up to the gates of the inner court; the civil ruler is barred from the inner court but allowed to enter the hall of the east inner gate from the outside; and laypeople have access to the inner court. The supposition is that the more access one has, the higher is one's social rank. This seems a fair supposition; Ezekiel's style in particular substantiates it. The book's gradation is not descriptive but prescriptive; yet not just prescriptive, but revisionist. It is a polemical reformulation of social and religious relationships. The Zadokite priests are exalted while the Levites are demoted and castigated. Civic leaders—kings—are criticized for their breach of purity rules and are restricted in the future from access much beyond laypersons and Levites. Compare the redefinitions in 43:7–9, 19; 44:1–16; 45:8–9; 46:16–18. By changing access to the temple, the prophet is changing the constitution and organization of society.

P's access rules are similar to Ezekiel's: God's place is the adytum; the high priest has access to the adytum; the high priest aided by undistinguished priests has access to the shrine; the priests mainly work in the court and the Levites and people have access only to this area; more specifically, the people may be restricted to the area between the altar and the entrance to the court. (P does not clearly define how a civil ruler would fit in.) P's rules are not polemic like Ezekiel's, but the social tensions underlying them and in part giving rise and justification to them are visible in narratives about Levites vying for power (Numbers 16) or about priests committing sacrilege (Lev 10:1–5). The access laws in P and elsewhere do not just protect the sanctuary from encroachment and sacrilege, they sustain the borders between categories of persons in society. To carry it further, encroachment prohibitions (see C. 2. b.) do not just protect potential encroachers and the community from God's wrath, they protect the group from the confusion of social boundaries and thereby from social dissolution.

Finally, a case of ritual redundancy. Within a ritual corpus, practices and rules often symbolically articulate the same or similar messages of other practices and rules. Such is found with Ezekiel's Teruma (see B. 4. d.). The Teruma, we recall, consists of three portions: the holiest portion in the center where the sanctuary was and where the priests resided, a lesser holy section on the north for the Levites, and a southern profane section containing the city (i.e., Jerusalem). On the east and west of the Teruma was the land of the civic leader (Ezek 45:7–8; 48:21–22). This map repeats the same hierarchical relationships of the temple, with the priests at the top and with Levites and civic leader below them. One refinement is perhaps perceptible. In the temple map, it is difficult to determine whether the civic leader has a greater status than the Levites. If the Teruma is a deciding factor, the Levites seem to have a higher status since they are closer to the sanctuary. But this conclusion is confounded by the facts that the Levites are cultic officials and hence expected to have some proximity to the sanctuary and that the civic leader, though further from the sanctuary, is given more land.

NEW TESTAMENT

In the NT, holiness is an attribute of God that the people of God are urged to reflect in their lives (Luke 1:75; 2 Cor 7:1; Eph 4:24; etc.).

D. Summary

A. Introduction

1. Terminology. The language of holiness in the NT and other early Christian literature is almost entirely represented by a word family that is rare in Attic Greek: *hagios,* "holy," *hagiazein,* "to make holy," and cognates (possibly derived from the Sanskrit *yaj,* "sacrifice"). The few instances of *hagios* in classical writers occur chiefly among the historians (Herodotus 2.41, 44; Xenophon, *HG* 3.2.19), rhetoricians (Demosthenes, *Ep.* 25.11), philosophers (Plato, *Criti.* 116c; *Cri.* 51a; *Lg.* 729e; 904e; Aristotle, *Mir.* 834^{b} 11), and comedians (Aristophanes, *Av.* 522; *Nu.,* 304). For the historians it is temples or shrines that are holy, while for Demosthenes and Aristophanes it is the rites of the mysteries. In the philosophical tradition oaths (Aristotle) and contracts (Plato, *Lg.* 729e) as well as the moral life (*Lg.* 904e) and fatherland (*Cri.* 51a) count as holy.

Among the Hellenistic writers in which *hagios* occurs Lucian (*Syr. D.* 13) and Appian (*Syr.* 50) may be named. The latter identifies Jerusalem as a holy city.

Greek *hagios* corresponds with *sanctus* in Latin, *ouaab* in Coptic, and *qdš* in Syriac. Other Greek words occasionally express holiness or the related idea of purity (*hosios* in Acts 2:27 and *2 Clem.* 1:3; *hosiotēs* in Eph 4:24 and *1 Clem.* 29:1; *hagnos* in 2 Cor 7:11 and Pol. *Phil.* 5:3; *hagnotēs* in 2 Cor 6.6 and *Herm. Vis.* 3:7; *hieros* in 1 Cor 9:13 and *1 Clem.* 43:1). But their association with Hellenistic religions of the period prevented any widespread use among NT and early Christian authors. Also the preponderance of *hagios* in the LXX as a translation for the Hebrew *qdš,* "holy," made this word group ready at hand for early Christian writers.

It is in the LXX, in fact, that *hagios* developed luxuriantly (ca. 700 occurrences), spawning a full family of cognates: *hagiazein,* "to make holy" (ca. 200 occurrences); *hagiasma,* "holy place" (ca. 64 occurrences); *hagiasmos,* "holiness" (10 occurrences); *hagiastērion,* "holy place" (4 occurrences); *hagiōsynē,* "holiness" (4 occurrences). Lev 19:2, "you shall be holy, for I, the Lord your God, am holy" (cf. 1 Pet 1:16; 1 Thess 4:3); Ps 2:6, "I have set my king on Zion, my holy hill"; and Wis 1:5, "For a holy and disciplined spirit will flee from deceit," illustrate the breadth of usage: ontology and theology, social description, cult, and ethics.

2. General Definitions. Schleiermacher (1955: 19–82) and Durkheim (1968: 37) placed the idea of holiness at the center of the study of religion, and since then a variety of biblical and theological disciplines has unfolded its general meaning. For the psychology of religion, holiness is a category of interpretation and valuation which describes the numinous (Otto 1958: 5–8); holiness reveals itself in encounters with a *mysterium tremendum,* evoking feelings of creatureliness, awe, and fascination.

For the phenomenology of religion the holy reveals itself in whatever is not profane (Eliade 1959: 14). It is experienced in hierophanies or manifestations of power (Van der Leeuw 1963 1: 23–36). In principle everything may disclose the holy: time, space, action, word, plant, animal, or person (Eliade 1963: 1–4). For the sociology of religion holiness marks status within a community, maintains boundaries vis-à-vis outsiders, and creates group identity (Hodgson 1986: 65–91). For traditional scholastic philosophy holiness remains a fundamental ontological category, designating what belongs to or is united with God and the divine will.

B. *Hagios* and Cognates in the NT

1. Jesus. To the extent that Jesus' sayings can be distilled from the faith of the early Church and the editorial work of the evangelists, one sees that Jesus rarely, but deliberately, spoke of holiness. The Lord's Prayer invokes the Father with the petition "hallowed [*hagiazesthai*] be thy name" (Matt 6:9, Luke 11:2, *Did.* 8:2). The holiness of God's name, a common motif in Hebrew prayer (Ps. 30:4; 97:12; Tob 3:11), evolved into a powerful symbol and rallying point for Christian life and faith (cf. Luke 1:49; John 17:11; *1 Clem.* 58:1; 64:1; 9:1; *Did.* 10:2). Apart from the Lord's Prayer, the word "holy" turns up in four sayings attributed to Jesus. At Mark 8:38 (cf. Matt 16:27 and Luke 9:26) Jesus speaks of the *hagioi angelloi,* "holy angels," who will accompany the Son of Man upon his return. An important part of Jewish and early Christian faith was the belief in holy angels (Ps 89:7; Zech 14:5; Acts 10:22; *1 Clem.* 39:7; *Herm. Vis.* 2.2.7; 3.4.1–2; *Herm. Sim.* 5.5.3). By the mid–2d century C.E. this concept had grown to include the idea that the just were the holy angels (*Herm. Vis.* 2.2.7; *Herm. Sim.* 9:25; *Mart. Pol.* 2.3) who would return with Jesus (*Did.* 15:7; cf. 1 Thess 3:13).

In another saying (Matt 7:6; cf. *Did.* 9:5 and *Gos. Thom.* 93) Jesus declares, "Do not give dogs what is holy *(to*

hagion)." If this meant for Jesus that his mission did not include gentiles, then so too in Matthew. In the *Didache* the saying becomes a rationale for excluding the catechumens from the Eucharist. In each case holiness serves to fix a boundary that restrains the outsider.

In the Synoptic apocalypse only Matthew reports that the desolating sacrilege will stand in the "holy place" *(hagios topos,* or temple (Matt 24:15; cf. Mark 13:14).

And finally, in Matthew's Woes against the Pharisees one reads at 23:17, "What is then greater, the gold or the temple which sanctified *(hagiazein)* the gold?" Presupposed in this saying is the dialectic of holiness (Eliade 1963: 12) or the belief that the holy (temple) can raise ordinary things (gold) to the level of the sacred.

2. Synoptic Sayings Source. Apart from the Lord's Prayer there is only one other occurrence of the idea of holiness in the synoptic sayings source: "The devil took him to the holy city, and set him on the pinnacle of the temple" (Matt 4:5; cf. Luke 4:9).

3. Mark. In Mark, holiness is twice attributed to a person. Once (Mark 1:24) a demoniac recognizes Jesus as "the holy one of God" *(ho hagios tou theou),* that is, as one removed from the profane order of things for the service of God (cf. Luke 4:34; John 6:69; Exod 22:31; Lev 11:44–45; 19:2; 20:7; 26; 21:6; Num 15:40; 1 Sam 7:1; 1 Esdr 8:58; Hab 3:3; Isa 4:3; Jer 1:5). In the second instance (Mark 6:20; cf. Matt 14:5; Luke 9:7–9) Herod Antipas fears to put John the Baptist to death because he was a righteous and holy *(hagios)* man.

4. The Special Material in Matthew and Luke. Apart from the four sayings of Jesus discussed above Matthew's special material refers only once more to holiness. Matt 27:52–53 narrates that upon the death of Jesus "the tombs also were opened, and many bodies of the holy who had fallen asleep were raised, and coming out of the tombs after his resurrection they went into the holy city and appeared to many." Whatever the origin of this tradition, whether in a saying of Jesus (cf. John 5:25) or in Jewish-Christian apocalypticism (cf. Dan 7:18–27), the holy ones became in the course of the 2d century C.E. identified with the Hebrew prophets (Ign. *Phld.* 5:2), thus expanding again already existing conceptions of who constituted the holy ones of the end time.

In Luke's special material holiness is an attribute of God's name or of those set apart for his service. The texts appear only in the infancy narrative (Luke 1:35, 49, 70, 72; 2:23). At the Annunciation Luke writes, for example, that "the child to be born will be called holy [*hagios*]." The view that the summons to holiness takes place through a "calling" *(kalein)* in traditional (cf. Isa 4:3; 35:8; 62:12; *klētē hagia,* "holy assembly": Ex 12:16; Lev 23:2; passim). Mary's hymn of praise, the Magnificat, celebrates God's holy name *(hagion to onoma autou),* and if Ps 110:9 LXX lies behind this verse (Fitzmyer, *Luke* AB, 368), then "holy" is equivalent here to "awe-full" *(phoberon).*

5. Acts of the Apostles. The 14 occurrences of *hagios* and cognates in Acts (apart from its use in the "Holy Spirit") reflect conventional Jewish usage. Eight belong to kerygmatic and sermonic material (3:14, 21; 4:27, 30; 7:33; 20:32; 26:10, 18); three to the traditions of Peter in Lydda, Joppa (9:32, 41), and the seacoast city of Caesarea (10:22); and three to the charges raised against Paul (9:13; 21:28) and Stephen (6:13). In Peter's sermon at Solomon's portico Jesus is identified as the holy and righteous one (3:14: *ho hagios kai dikaios;* cf. 4:27, 30; otherwise of John the Baptist at Mark 6:20). Among the earliest christological titles, "the holy and righteous one" and "the holy servant" *(pais)* combine traditional Jewish designations for Moses (Wis 11:1), the Suffering Servant (Isa 53:11), and Elijah (2 Kings 4:9) and apply them to Jesus (Fuller 1965: 48).

In another sermon Peter calls the prophets of old holy (3:21; cf. Luke 1:70), while the charge against Stephen is that he "never ceases to speak words against this holy place" (6:13; cf. Matt 24:15; in ancient Jewish piety a favorite circumlocution of God's name was *hammāqôm* "the place," while the graves of saints in late antiquity were known simply as *ho topos,* "the place" [cf. *1 Clem* 5:7]).

In Paul's farewell discourse at Miletus and in his defense speech before Herod Agrippa II, holiness becomes a category of social and religious identity. Paul commends the assembled Miletians to God and his word, who will give them "the inheritance among all those who are made holy" (20:32). Likewise, before Agrippa, Paul says that it is "the holy ones" (26:10; cf. 9:13) whom he formerly persecuted, before God called him to preach the gospel to the gentiles so "that they receive a portion among those who are made holy by faith in me" (26:18). Here Paul identifies faith as the social and religious wellspring of holiness.

At Joppa Peter seeks out believers described as the holy ones and the widows (9:41; cf. 9:32), a designation which suggests that while "the holy ones" serves as a blanket designation for "believers," there are also nuances to be considered, since the category of "holy" may from time to time mark a special role or function in early Christianity (cf. Eph 4:11–12; Heb 13:24; Rev 11:18).

6. Paul. Of the undisputed letters of Paul, Romans, 1 Corinthians, 2 Corinthians, and Philippians begin and end by addressing themselves to Christian communities whose members are designated as holy. Among the disputed letters, Ephesians and Colossians open in this manner. Philemon and the Thessalonian letters do not use this form of opening address, and *hagios* and cognates are completely wanting in Galatians. In Rom 1:7 and 1 Cor 1:2 the addressees are "those called to be holy" *(klētoi hagioi).* According to 1 Cor 1:2 the addressees enjoy this status because they are "made holy in Christ."

For Paul, Jesus incarnates holiness *(hagiasmos;* cf. 1 Cor 1:30). A pre-Pauline formula says that Jesus was designated son of God at his resurrection "according to the Spirit of holiness" *(kata pneuma hagiōsynēs,* Rom 1:4).

At the end of Romans Paul encourages the Church to receive Phoebe the deaconess in a manner "worthy of the holy ones" (16:2), and to "greet Philologus . . . and all the holy ones" (16:15). Similarly at the end of 1 Corinthians (16:15), 2 Corinthians (13:13), and Philippians (4:21) Paul uses the designation "the holy ones" as an epithet for the faithful.

Within the general designation of all believers as the holy ones there are special usages that derive from Paul's own theological and pastoral concerns. There is first the special status accorded the Jerusalem Church, most visible in the collection for its benefit. Everywhere except in Galatians, where the word "holy" is missing and the collection is a "remembering of the poor," the subscriptions of

the gentile churches are earmarked for the holy ones. Paul prays at Rom 15:16 that the Holy Spirit will render holy the gifts of the gentile churches. From Corinth, Paul traveled to Jerusalem "to relieve the holy ones (Rom 15:25)," bringing Macedonia and Achaia's donation "for the poor among the holy ones at Jerusalem" (15:26) in the hope that his ministry to Jerusalem will be acceptable to the holy ones (15:31; cf. 12:13). Similarly, in the Corinthian correspondence Paul appeals on behalf of the holy ones in Jerusalem (1 Cor 16:1; 2 Cor 8:4; 9:1,12). Their vulnerability to economic and political distress gives their status as the impoverished holy ones a special sense of urgency and connects them with the tradition of the pious and persecuted poor of Hebrew scriptures and intertestamental literature (Osiek 1983: 15–24).

Secondly, there is the conception of the eschatological holy ones: those who join Christ at his second coming. Only 1 Thess 3:13 and 2 Thess 1:10 (this latter often reckoned among the disputed letters) articulate this role of the holy ones clearly, although it is assumed in other texts (e.g. 1 Cor 6:2; cf. above on Mark 8:38 and Matt 27:53). 1 Thess 3:13 envisions the holy ones appearing with Jesus at his second coming, at which time their holiness will be completed. At 2 Thess 1:10, it is the holy ones *in whom* Jesus' final glory is encompassed. At the end of time the holy ones will judge the world (1 Cor 6:2). To the extent that the end has already begun for Paul, the holy ones already incur certain obligations within their communities, and this leads to a third special usage, the ethical.

Rom 12:1, "present yourselves as holy and living sacrifices," opens the ethical section of a letter which sets forth the day-to-day dimension of holiness in a series of exhortations on brotherly love, civil obedience, and tolerance (Rom 12:3–15:6). Elsewhere the holy ones serve as arbiters at internecine suits (1 Cor 6:1) and persevere even in marriage with an unbeliever, since "the unbelieving husband is made holy by his wife, and the unbelieving wife by the husband" (1 Cor 7:14). Thanks to the holy marriage partner, the unclean *(akathartos)* children of such a marriage become holy (1 Cor 7:14b). The search for holiness in body and spirit informs the life of the single woman (1 Cor 7:34). At 1 Thess 4:1–12 Paul frames his earliest set of ethical instructions in concepts that derive ultimately from the holiness code of Leviticus 17–26 and from Hellenistic popular philosophy.

Loyalty to moral, doctrinal, and liturgical traditions both precede and deepen the "holiness of the spirit" (2 Thess 2:13–15). The churches of the holy ones are invoked as precedents for the silence of women (1 Cor 14:33). In his discussion of dying and rising with Christ Paul points to righteousness as the ethical and theological ground of holiness: "Yield your members to righteousness for holiness" (Rom 6:19; cf. 6:22). Holiness, Paul boasts, is a benchmark of apostolic life (2 Cor 1:12), and in a section with close ties to the ideology of the Essenes Paul envisions the life of holiness as a wearing down of defilement in order to "make holiness perfect" (2 Cor 7:1).

Fourth, Paul knows that the following are holy: Scripture (Rom 1:2); law and commandment (Rom 7:12); firstfruits, root, and branches (in the allegory of ancient Israel; Rom 11:16); and the temple (1 Cor 3:17). Finally, Christian liturgical and prayer life set off certain traditional rituals as holy. In 1 Cor 6:11 baptism is explicated as a moment of holiness *(hagiazein;* Dinkler 1967: 226–27), while Paul recognizes the holy kiss as a fitting greeting among Christians (Rom 16:16; 1 Cor 16:20; 2 Cor 13:12; 1 Thess 5:26; cf. 1 Pet 5:14; *Gos. Phil.* II,*3*:59,5; Asting 1930: 148). The prayers of the holy ones rise up to God on the intercession of the Spirit (Rom 8:27).

7. The School of St. Paul. In Colossians, Ephesians, and the Pastorals, holiness has a distinctive trait which lies in its application to the routine life of Christians both individually and corporately. Almost completely lacking are the more specialized usages characteristic of the undisputed letters which associate holiness with eschatology, ritual, and the special position of the Jerusalem church. Col 1:2 and Eph 1:1 address themselves to the holy and faithful ones whose hallmark is the love of the holy ones (Col 1:4; Eph 1:15). To a life without blemish God has set apart (*eklegein* not *kalein*, "to call"; cf. 2 Tim 1:9) his holy ones individually (Eph 1:4) and corporately (Eph 2:21; 5:27; cf. Col 1:22) in order that they will acquire "a share in the inheritance of the holy ones in the light" (Col 1:12; cf. Eph 1:18; Acts 20:32; *Gos. Eg.* III, *2*:51,3). The holiness of the faithful stems from possessing the long-hidden but now-revealed mystery of Christ's presence to the world (Col 1:26; cf. Eph 3:5 [where the mystery is revealed to the holy apostles and prophets] and 3:18). The routinization of holiness is evidenced in Col 3:12 where a conventional list of virtues *(Tugendkatalog)* discloses the ethical duties of "God's chosen ones, holy and beloved." Fornication, impurity, and covetousness belong to the vices which the holy ones avoid (Eph 5:3; cf. 1 Thess 4:1–12). Positively, "the work of ministry, for building up the body of Christ" and "prayer" contribute to the day-to-day agenda of the holy ones (Eph 4:12; 6:18). Lists of household duties *(Haustafel)* further domesticate holiness by lifting up the ideal ancient household, managed by husband and wife in a spirit of love, as an analogy for that love between Christ and the Church which makes the Church holy (Eph 5:26; cf. 1 Cor 7:14). Such lists also provide a strategy through which the "ignoble vessels" in a great household, that is the servants, can become holy and useful (2 Tim 2:21). Even more concretely, a woman is saved by childbearing, if she perseveres in "holiness" *(hagiasmos;* 1 Tim 2:15). Mention should be made, too, of the test with which 1 Tim 5:8–10 discerns the authentic widow. Full of good deeds, a mother of children, hospitable, she has also washed the feet of the holy ones (cf. John 13:4).

Although it is more characteristic of pre-Pauline and Pauline writings to say that holiness creates identity and status in the Church, this idea nonetheless shines faintly through in the self-designation of the author of Ephesians as the "least of all the holy ones" (Eph 3:8). Eph 2:19 belongs here as well: the gentile Christian readers of the letter are no longer "strangers and sojourners" but "fellow citizen with the holy ones and members of the household of God."

8. Gospel of John. In the gospel of John there are only five occurrences of "holy" *(hagios)* and its cognates, although in the apocalyptic side of the subsequent school the Revelation of John owes a substantial debt to the concept of holiness. The Father is the foremost bearer of holiness in John. In his high priestly prayer Jesus prays to

the Father as "Holy Father" (17: 11; cf. Matt 6:9; Luke 11:2) that he "make them holy in the truth" (17:17; cf. v 19). As the Holy Father sanctifies (or sets apart) through truth, so too Jesus becomes the "Holy One of God" by speaking the "words of eternal life" (John 6:69; cf. Mark 1:24; Luke 4:34; Acts 3:14; 4:27). At John 10:36, Jesus advances the "works of God" which he performs as evidence that God has sanctified him, that is, has set him apart as son of God.

9. The School of St. John. Within the Johannine letters only 1 John 2:20 mentions holiness: "You have been anointed by the Holy One." In the Revelation of John, however, there are some twenty-two instances of "holy" and cognates. The most distinctive feature is the belief that the holy ones, along with the apostles and prophets, constitute the martyrs who await in heaven their final vindication.

At the blast of the seventh trumpet (Rev 11:18) the elders announce (cf. Ps 2:1) that the time has come for rewarding "the servants, prophets, and holy ones." The holy ones belong to those against whom the beast raged (13:7) but whose sterling qualities of "endurance and faith" (13:10), that is their ability to "keep the commandments of God" (14:12; cf. John 8:51; 14:15, 21, 23; 15:10; 17:6; 1 John 2:3, 5; 3:22, 24; 5:3) helped them persevere.

The spilling of the third bowl of wrath occasions a heavenly hymn which laments the blood of the holy ones and prophets (16:6). Of the great harlot it is said that she is drunk with the blood of the holy ones and martyrs (17:6). Babylon's doom is sealed because an angel laments that the blood of the prophets and holy ones runs within her walls (18:24). This same angel celebrates the vindication of the "holy ones, apostles, and prophets" (18:20) whose "righteous deeds" *(dikaiōmata)* are symbolized by the linen worn by the Lamb at his marriage (19:8; cf. 22:11; Rom 6:19) and whose prayers are to God as incense (5:8; 8:3, 4). The holy ones participate in the first resurrection (20:6) that opens the thousand-year reign of Christ after which Satan will surround the camp of the holy ones for a time (20:9; cf. Matt 27:52–53).

In Relevation God is the holy one whose heavenly court resounds with the epithet "holy" (4:8; 6:10; cf. *1 Clem.* 34:6). His angels are holy (14:10) as is his city Jerusalem (11:2; 21:2, 10; 22:19).

10. Hebrews. Hebrews borrows the idea of holiness from Hellenistic Judaism at a time when Platonism and the Roman destruction of Jerusalem and its temple in 70 C.E. impelled 1st century C.E. Judaism (e.g., Philo) to moralize and idealize the language of the Jewish cult, including the idea of holiness. Hebrews 9 and 10 represent in this regard the classic NT statement of the ideal, heavenly cult over against the earthly one. The earthly sanctuary *(hagion kosmikon)* belongs to the first covenant (9:1; cf. 13:11; *Gos. Phil.* II, *3*:69,15–36), while the heavenly sanctuary is the one into which Christ entered to render his sacrifice (9:10–11; cf. 9:24–25). The high priests of old entered the earthly sanctuary repeatedly in order to "make holy for the purification of the flesh" (9:13), but Christ entered the heavenly sanctuary once, and immolated himself to "purify the conscience" (9:14). Inspired by the prophetic and sapiential criticism of sacrifice, Christ's will was that "we be made holy through the offering of the body of Jesus Christ once for all" (10:10; cf. 10:14; 13:12).

The blood of Jesus, shed for his followers, gives them confidence that they too can enter the same sanctuary (10:19). Sharing in Jesus' heavenly call *(klēsēos epouraniou metochoi;* cf. 2:11), these followers acquire the status of holy associates *(adelphoi hagioi)* of the new apostle and high priest, Jesus Christ (3:1; cf. *1 Clem.* 64:1; Ign. *Phld.* 9:1).

Occasionally the more primitive Christian connotations of holiness stand out. At 6:10 the readers are praised (cf. Rom 12:13) because they have loved the vulnerable holy ones. At 13:24 the author of Hebrews greets two groups, the leaders and the holy ones. Holiness *(hagiasmos)* and peace are the presupposition and goal, respectively, of the moral life (12:14; cf. 1 Thess 5:23). Holiness *(hagiotēs)* represents, too, the crown toward which God's discipline directs his people (12:10).

11. The Catholic Epistles. 1 Peter, 2 Peter, and Jude combine traditional Jewish views of holiness (the concept is missing in James) with an ecclesiological emphasis. Echoing the language and levitical sources that Paul drew upon, 1 Peter urges that the holiness of God issue in the holiness of his people (1 Pet 1:15–16; cf. 1 Thess 4:1–12; Lev 11:44 passim), and that they consider themselves a "holy priesthood." The readers are a "holy nation" (1 Pet 2:9; cf. Exod 19:5–6), and are "made holy by the Spirit for obedience to Jesus Christ and for sprinkling with his blood" (1 Pet 1:2; cf. Heb 10:19). In a traditional list of domestic duties, the holy women of old serve as a model for submission within the Christian household (1 Pet 3:5). Persecution calls for "revering as holy the Lord Christ in your heart" (1 Pet 3:15; cf. 1 Thess 3:13; *Ep. Barn.* 6:15). For 2 Peter, holiness is a property of the mountain on which Jesus was transfigured (1:18) and the commandments from which the apostates have turned (2:21). It is also an attribute of the prophets (Christian? Hebrew?) whose predictions have come true (3:2), and the life which Christians lead (3:11). For Jude the holy ones are those to whom the faith was once entrusted (v 3; cf. v 20). When the Lord returns, his holy myriads will accompany him (v 14).

C. *Hagios* and Cognates in Early Christian Literature

Since some noncanonical early Christian literature is older than or contains traditions older than the canonical writings, scholarship increasingly turns to it for illumination of the NT.

1. Apostolic Fathers. Among the Apostolic Fathers it is principally in 1 Clement and Hermas that holiness plays a significant role in theology and exhortation. The most notable feature is the appropriation of the category of holiness for purposes of Church order. *1 Clem.* 46:2 exhorts the rebellious Corinthians, "Cling to the holy ones, for those who cling to them will be themselves made holy" (cf. 1 Cor 7:14; *Herm. Vis.* 3.6.2; *Herm. Sim.* VIII. 8.1). God's holy words *(hagioi logoi)* set the course for Christian life and require obedience (*1 Clem.* 13:3; cf. 56:3; on God's holy name cf. 58:1; 64:1; 59:3). God's wisdom chastens those who flaunt the holiness of God (*1 Clem.* 58:1; cf. 39:6). As God's holy portion (*hagia meris;* cf. Col 1:12, Eph 1:18, Acts 20:32), Christians do all holy things (*1 Clem.* 30:1; *ta tou hagiasmou panta*). In the interests of Church order, one prays to God and the holy ones (*1 Clem.* 56:1;

angels? heavenly saints? living Christians?; cf. Fischer 1970: 95, n. 332).

The apocalyptic theology of *1 Clem.* 22:8–29:3 teaches that God as the Holy One will return suddenly, and as the Holy of Holies he will step forth from his people (*1 Clem.* 23:5 and 29:3). The traditional common prayer of the Roman liturgy which *1 Clem.* 59:3 quotes reveres God as the Holy One who reposes among his holy people (cf. 34:6).

Familiar associations of holiness also include the designation of the readers as those called to be holy (*klētoi hēgiasmenoi; 1 Clem.* Salutation; cf. Rom 1:7; 1 Cor 1:2) and of Paul's final resting place as the holy place (*1 Clem.* 5:7; cf. Matt 24:15; Acts 7:33; John 14:2). The Scripture is holy (*1 Clem.* 45:2; cf. Rom 7:12), and an ancient creedal formula states that God has sanctified his people through his servant Jesus (*1 Clem.* 59:3; cf. Acts 4:27; 26:18; John 10:36; 17:17,19; 1 Pet 1:2; 1 Cor 1:2,30; 2 Tim 1:9; Heb 2:11; 10:10; 13:12). Increasingly, however, holiness becomes a property of God's spirit (*1 Clem.* 2:2; 8:1; 13:1 passim).

In Hermas' Mandates, the spirit alone is declared holy (5.1.2–3; 2.5; passim), while Christians evince reverence (*semnotēs;* 4.4.3; 5.2.8; *1 Clem.* 41:1; cf. 1 Tim 2:2; 3:4; Titus 2:7). In the Similitudes, holiness is also a property exclusively of God's spirit (5.6.5; passim) or angels (5.4.4; cf. 9.13.2) except for a single text in which the holy ones are the believers to whom the apostates no longer cleave (*Herm. Sim.* 8.8.1; cf. *Herm Vis.* 3.6.2; cf. *1 Clem.* 46:2). Like the Mandates, the Similitudes prefer reverence *(semnotēs)* to indicate the quality of the Christians' interior life (cf. 5.6.5; 8.3.8).

In the Visions, by contrast, social description, an apocalyptic ecclesiology, and ethics as well as early Christian pneumatology are the frames of reference for holiness. The Church is holy (1.1.6), because God in his wisdom and forethought created it holy (1.3.4; cf. 4.1.3). Individually the members of the Church are holy, both in this life (3.3.3; 8.8.9, 11) and in the next (1.3.2). Holiness especially means separation from sin (3.9.1; cf. 1 Cor 6:11), although—here a new note is sounded in the development of holiness' relationship to sin—postbaptismal sin is forgivable once (2.2.4; cf. 1.1.9) but not twice (2.2.5). The Visions also teach that God (3.2.1) and the angels (3.4.1, 2) are holy.

Barnabas, for all its OT citations, allusions, and images, shows little interest in the idea of holiness. In *Barn.* 6:16, the churches of the holy appear in a composite quotation of Ps 31:23 and 107:4 (cf. *Barn.* 14:6), and once the heart is depicted as a holy temple for God (cf. 1 Pet 3:15). Allegorizing Deut 14:6, *Barn.* 10:11 determines that the cloven hoof means that the just live in this age but await the holy time. Teaching the two ways, *Barn.* 19:10 exhorts the readers to search out the holy ones for right counsel (cf. *Did.* 4:2). Only a lengthy section on the correct understanding of the Sabbath appeals regularly to the idea of holiness (15:1, 3, 6, 7).

In the Didache, one traditional saying (cf. Matt 7:6 with *Did.* 9:5) and two traditional prayers (cf. Matt 6:9 with *Did.* 8:2; cf. John 17:11 with *Did.* 10:2) include holiness. At *Did.* 9:5 and 10:2 Jesus' words belong to the ancient Eucharistic ritual and theology of the Church. (Wengst 1984: 28, 81). Older apocalyptic traditions appear at 16:7 where the holy ones return with the Lord at the end of time (cf. 1 Thess 3:13). And finally, the holy ones are those of special rank whom readers should daily seek out (4:2; cf. *Barn.* 19:10).

For Ignatius, holiness is above all a property of God's spirit (*Eph.* 9:1; 18:2). It is also the reward for obedience to bishops (*Eph.* 2:2), Paul's crown for martyrdom (*Eph.* 12:2), and the mark of presbyters (*Magn.* 3:1) and of the Church (*Trall.* salutation). Prophets (*Phld.* 5:2; 9:2) are holy, as well as believing Jews and gentiles (*Smyrn.* 1:2).

The use of holiness in *2 Clement* is restricted to the spirit of God (14:3, 5). There are no instances of holiness in Polycarp's Letter to the Philippians, Diognetus, or Quadratus.

2. The Apocryphal NT. The theological and philological opulence of the apocryphal NT make broad statements about the use of holiness risky. Nonetheless some general observations are possible. In the surviving literature of late Jewish Christianity (e.g., *Gospel of the Nazoreans, Gospel of the Hebrews, Gospel of the Ebionites, Protoevangelium of James,* the *Apocryphon of James*) holiness is chiefly the property of God's spirit: *Gos. Heb.* 2 (Cameron 1982: 85); *Gos. Naz.* 15a,b (Cameron 1982: 100); *Gos. Eb.* 4 (Cameron 1982: 105); *Prot. Jas.* 14:2; 19:1; 24:4 (Cameron 1982: 116, 118, 121). The nascent Mariology of *Prot. Jas.* 13:2 and 14:2 teaches that Mary grew up in the holy of holies within the Jerusalem Temple, and that Jesus already at conception was a "holy thing" (11:3; cf. Luke 1:35; Cameron 1982: 115–16).

In the sapiential sayings tradition, the Coptic *Gospel of Thomas* reports traditional sayings of Jesus about blaspheming against the Holy Spirit *(appna etouaab)* (logion 44 = Mark 3:28–29 and parallels) as well as against throwing what is holy *(petouaab)* to the dogs (logion 93 = Matt 7:6; *Did.* 9:5).

Within the older portions of the apocryphal Johannine literature ("John's Preaching of the Gospel" from the *Acts John; Ap. John*) the spirit of God is designated as holy (*Acts John* 96 and—in a complex mythological drama typical of Sethian gnosticism—*Ap. John* II,*1*:3,19; 5,8; 7,16 passim). Otherwise God is the holy one (*Acts John* 94) whose will is that holy souls *(psychai hagiai)* be prepared for him (*Acts John* 96; cf. *Ap. John* II, *1*:9,17).

The literature of Christian gnosticism makes varied but incisive use of the concept of holiness, especially in the construction of an elaborate story of creation, fall, and redemption. Taking the Sethian Gnostic literature as representative (without any discussion of its complex literary and ideological history [Turner 1986: 279–312]) one may note that the ineffable high God is holy (*Hyp. Arch.* II,*4*: 92,34; *Melch.* IX,*1*:16,16–18,4). In one text he praises his holy warrior Melchizedek-Jesus (cf. Heb 7:3) for triumphing in the great eschatological battle (*Melch.* IX, *1*:26,2–9; Pearson 1981: 33). God's dwelling place and all the heavenly citizens who dwell within it (thus the pleroma and aeons) are holy (*Ap. John* II,*1*.25:14–15). Naturally, God's spirit is holy as well (*Hyp. Arch* II, *4*:93,6 passim). Through holy books (*Gos. Eg.* III,*2*:69,7,16) and decrees (*Ap. John* II,*1*:19,19), God signals to the temporarily estranged race of the Sethians their ultimate restoration to him.

Apart from its use in the ontology and mythology of Sethian gnosticism, holiness is part of the self-designation

of the Sethians. They spring from a holy seed (*Apoc. Adam* V,5:85,30) and are set apart through a holy baptism (*Apoc. Adam* V,5:85,25) as a holy race (*Gos. Eg.* III,2:68,21; cf. 1 Pet 2:9). They are the holy men of the great light (*Gos. Eg.* III,2:51,3; cf. Col 1:12).

D. Summary

Distinctive features of the Synoptic use of holiness include its use as a category for describing the awesomeness of God (or his name), and the marking of others (Jesus, John the Baptist, Hebrew prophets, angels) for his service. As a quality of things, actions, time, and place, it plays only a modest role. Holiness in Acts, as in the Synoptic tradition, identifies Jesus as one set apart by God, but it also describes the temple precincts in Jerusalem. The idea that the followers of Jesus share in God's holiness and become the "holy ones" originated according to Acts in earliest Jewish Christianity, but Paul popularized the idea.

Paul used the designation "holy ones" for early Christians in general, although he uses the expression in more particular ways to call attention to the special status of the Jerusalem Church or to speak of those who would accompany the Lord upon his return. The holy life is, for Paul, one in conformity with established moral and ethical norms of the Hellenistic Jewish world. Paul borrows from contemporary Judaism the view that Temple, Law, Scripture, certain forms of ritual, and God's spirit are holy. In the school of Paul the depth and breadth of the Pauline view of holiness have given way to a more stereotyped use of holiness to describe a preeminent quality of day-to-day Christian life.

In the gospel of John and the subsequent school that formed around it holiness plays a leading role only in the theological life of Revelation, designating especially in the martyrs whose keeping of the commandments constitutes their peculiar form of testimony *(martyria)*. In Hebrews, holiness is the paramount quality of the ideal, heavenly world, whose high priest Jesus, by means of a once-and-for-all self-sacrifice, established a new heavenly covenant. The holy ones are those whom the covenant has set apart with a fresh identity and moral purpose. Ecclesiology provides the chief frame of reference for holiness in 1 Peter. 2 Peter and Jude use holiness to describe an important feature of the common life and faith of God's people.

In the Apostolic Fathers holiness is increasingly associated with God's spirit. When the Holy Spirit dwells in believers the interior transformation is described more and more in the language of Hellenistic popular philosophy and ethics. Naturally conceptions of holiness originating in prophetic, levitical, and apocalyptic thought, as well as in early Christian self-understanding, still persist. The apocryphal NT, like the Apostolic Fathers, assigned holiness increasingly to God and his spirit. Although holiness in this sense predominates, other traditional usages such as the social, phenomenological, and psychological persevere.

ROBERT HODGSON, JR.

HOLINESS CODE. The label conventionally assigned to Leviticus 17–26 (*Heiligkeitsgesetz,* and abbreviated as H), generally thought to contain an originally independent legal corpus which was later edited from the perspective of the Priestly School.

A summary of the contents will outline the sections, and thereby the issues of H. Lev 17:1–9 contains two apodictic laws concerning illegitimate sacrifice. Vv 10–12 form a third apodictic law prohibiting the consumption of blood (cf. Deut 12:16, 23–25; 15:23), while vv 13–14 and 15–16 prescribe the proper treatment of the blood of nonsacrificial animals, and the ritual treatment for one who eats an animal carcass. Lev 18:6–23 prohibit a variety of sexual crimes for which vv 1–5 and 24–30 form a parenetic framework. The absence of a prohibition against sexual relations between a man and his daughter (cf. also Lev 20:10–21; Deut 27:20–23) is usually explained as a textual (copyist) error but it may be deliberate (cf. Bassett 1971; Rattray 1987). Chap. 19 contains a variety of texts which illustrate the call to "be holy" (v 2). Chap. 20 prescribes the death penalty for a father who offers his son or daughter to Molek (vv 1–5), for one who consults a soothsayer (vv 6–8 = v 27), for one who curses his parents (v 9), and for the violation of many of the sexual crimes prohibited in chap. 18 (vv 10–21). Vv 22–26 form a parenetic appeal to obey the law, and v 25 recalls Lev 11:43–45. Chaps. 21–22 contain texts dealing with a variety of concerns related to the priestly office and its con-

duct. Chap. 23 details a festival calendar (cf. also Exod 23:14–19; 34:22–26; Numbers 28–29; Deut 16:1–16; Ezek 45:21–25). Lev 24:1–9 prescribes the manipulation of certain elements of the Priestly tabernacle, while vv 10–14, 23 form an illustrative narrative for the apodictic law concerning blasphemy (vv 15–16; vv 17–22 are unrelated to this topic though similar in form). Lev 25:1–7 prescribes a fallow year every seventh year (cf. Exod 23:10–11) while vv 8–17, 23–55 treat a variety of topics related to jubilee redemption. (Verses 18–22 do not indicate knowledge of the jubilee year prohibitions of v 11.) After two prohibitions (26:1) and commands (26:2), and based upon obedience and disobedience (cf. Deut 28), Lev 26:3–45 promises rewards and threatens punishments. Lev 26:46 is a subscript, but the extent of the corpus is disputed. Eerdmans (1912: 121) argues for a connection with chap. 25, and Wagner (1974) wishes to relate it to chap. 11, whereas scholarly consensus generally takes it back to chap. 17. The corpus as a whole is often thought to be theologically unified around the notion of holiness (purity, cleanliness, etc.), both of Yahweh and consequently of Israel. See LEVITICUS, BOOK OF.

Among the genres contained in H, one may mention especially the following. The prohibition uses the negative adverb *lō*ʾ plus a 2d person (sing. or pl.) impf. verb to prescribe certain types of behavior which must be avoided, as in Lev 18:8: "The nakedness of your father's wife you must not uncover" (Gerstenberger 1965 defines the genre; see also Richter 1966; Knierim 1989). Apodictic law combines the definition of a crime (using principal or relative syntax) with a prescribed punishment in a singlar sentence: "The man who sleeps with his father's wife . . . shall surely be executed" (20:11; Liedke 1971: 101–53). Traditiohistorically, prohibitions and apodictic laws are intimately connected, the prohibition constituting the (customary) ethical basis for the penalties prescribed in apodictic form (Schultz 1969). Although it is often thought that the series of ten prohibitions or apodictic laws constitutes an ancient genre, recent research more and more sees such decalogues as late combinations of small groups of laws (Gerstenberger 1965). The casuistic "if you" laws contain a protasis which sets forth a legal situation in the second person followed by its apodosis (19:5–8, 9–10; Gilmer 1975). The priestly Heb *daʿat* is the genre in which professional, priestly knowledge and lore is transmitted (chaps. 21–22; cf. Begrich 1936). The exhortation and admonition appeal to the audience's will and volition in an attempt to persuade or dissuade certain kinds of behaviors; together, the exhortation and admonition constitute a parenesis (Tiffany 1978). Pure casuistic law (the typical form of ancient Near Eastern legislation) is not found in H (though cf. Lev 25:25, 35–37, 47–54); Lev 19:20–22 is a late mixture of the casuistic and apodictic form. See LAW. The name "Holiness Code" was coined by A. Klostermann (1893: 385), though Leviticus 17(18)–26 had already been isolated as a separate unit (e.g., Graf 1866: 75–83; Wellhausen 1963: 149–72). Early research concentrated on the literary-historical identification of the original legislation and later (Priestly and non-Priestly) redaction (Horst 1881; Baentsch 1893; Paton 1894; Bertholet *Leviticus* KHC) and the relationship between H and Ezekiel (Horst 1881; cf. Haran 1979; Zimmerli *Ezekiel 1* Hermeneia, 46–52). Both Eerdmans (1912: 83–87) and Küchler (1929) denied the existence of an independent legal corpus behind these chapters, while Rabast (1948; cf. von Rad 1953) studied the prohibitions in H and Deuteronomy, and Kornfeld (1952) concentrated especially on the laws concerning sexual ethics. Reventlow (1961), using form-critical and traditiohistorical methods, proposed that H is a legal document whose setting from start to finish was the ancient Israelite covenant (renewal) festival. According to Reventlow, much of this material reaches back to the very beginnings of Israel's historical existence, being pre- or non-Israelite in origin. Kilian (1963), using mostly literary-critical methods, attempted to reconstruct the literary process which produced the present shape of the original H (essentially Leviticus 18–25). He concluded that Leviticus 17 is not part of H proper. Feucht (1964) proposed the reconstruction of two corpora which were later combined into H: H 1 (= chaps. 18–23A [= vv 9–22]; Num 15:37–41) and H 2 (chaps. 25–26). At the same time, he considered chaps. 17, 23B (= vv 4–8, 23–37), and 24 to be later additions. Elliger (*Leviticus* HAT) denied the existence of an originally independent legal corpus, positing instead two main redactional hands (Ph^1 and Ph^3) with two related supplementary layers (Ph^2 and Ph^4) which took independent legal texts and brought them into their present literary context (with some textual relocation during this literary process). For Elliger, no independent legal corpus can be detected in this material. Thiel (1969) argued that both a homiletic (originally oral) and a priestly redaction are reflected in H. The later homiletic material presupposes the Deuteronomistic preaching, as its affinity with Ezekiel and its priestly redaction shows. Thiel therefore dates the composition of H to the exilic period. Wagner (1974) rejected the identification of Leviticus 17–26 as a distinct corpus. In its place, Wagner sees several themes treated in Exodus 25–Leviticus 25: (1) the sanctuary, Exodus 25–31; (2) rituals, Leviticus 1–7; (3) cultic impurity, Leviticus 11–22, and (4) calendric concerns, Leviticus 23, 25, for which Leviticus 26 forms the conclusion. Using redaction-critical methods Cholewinski (1976) reconstructed a highly complex composition process involving several compositional strata, some of which involve more than one redactional hand. He too denied the existence of H as an originally independent legal corpus (following Elliger). Knohl (1987) isolates a Holiness School (distinct from the Priestly and Deuteronomistic schools) whose redactional activities are also found in the legislation of Exodus, Leviticus, and Numbers.

A number of critical issues emerge from the history of research. The most important is the question, does an originally independent legal corpus lie beneath Leviticus 17–26 in its present shape, and if so, what is its date of composition? The arguments in favor of such a view are linguistic, formal, and theological in nature. Linguistically, there are numerous words and phrases which are found only (or mostly) here, and on this basis other texts (notably Exod 31:12–17; Lev 11:1–23, 41–47; Num 15:37–41) are sometimes assigned to the original corpus (Wurster 1884: 123–27; Driver 1913: 59). Formally, the subscription in 26:46 clearly brings a corpus of some kind to a close, and it is often argued on the basis of analogy with Deuteronomy 12 and Exod 20:24–26 that Leviticus 17 is the open-

ing section of the code which 26:46 concludes, though the connection between chap. 17 with chaps. 18–26 is often denied (e.g., Kilian 1963: 176–79). Some scholars hold that 17:2 ("This is what Yahweh commands") constitutes the original superscription for this unit, but this is doubtful. Theologically, the content of some of the legislation appears to contradict other Priestly texts. The date of this originally independent corpus is hotly debated, with pre-Deuteronomic and post-Deuteronomic dates (some as late as the exilic period) finding their advocates. The lack of any structural integrity to the reconstructed corpus, acknowledged by virtually all interpreters, does not bolster the case for this view. Klostermann puts it well: "Lev. 18–26 preserves only fragments of a more comprehensive legislation" (1893: 378). Moreover, assuming the originally independent status of the legislation contained in these chapters, one would expect to find at least one redactional stratum which cuts through or presupposes the existence of an originally independent corpus; but attempts to identify such a layer have not resulted in any consensus. The following formal considerations are not suggestive of an originally independent legal corpus: (1) the plurality of speech report formulae (17:1; 18:1; etc.); (2) the two compliance reports (21:24; 23:44); (3) the repetition of material within the corpus (e.g., 19:3 = 19:30; 19:4, 30 = 26:1–2; 19:5–8 = 22:29–30 [cf. Lev 7:15–18]; 19:9–10 = 23:22; 19:27–28 = 21:5; 19:31 = 20:6; 19:34 = 24:22; 20:6–8 = 20:27; 25:18–19 = 26:4–5). From a historical perspective, the fact that the earliest recoverable literary layer of some of the laws may be relatively old (e.g., chaps. 18, 19), while others are demonstrably post-Deuteronomistic or Priestly (see below) is also problematic for the assumption that an originally independent legal corpus lies beneath this material. Finally, the subscription in 26:46 mentions "laws" (Heb *tôrōt*), but the word *tôrâ* does not appear in Lev 17:1–26:45, though it appears with some frequency in other portions of Leviticus (chaps. 6–7; 11–15). No consensus has as yet been reached, but the arguments against seeing an original independent legal corpus are compelling. Second, the relationship between H and the preaching of the prophet Ezekiel (one part of the larger question of the relationship between Ezekiel and P; cf. Haran 1979) is striking, so much so that earlier interpreters identified the author (Graf 1866: 81–83) or compiler (Horst 1881: 69–95) of H as Ezekiel, though Klostermann (1893: 385–416) argued that Ezekiel's preaching is wholly dependent on H. Some vocabulary is found only (or mostly) in these two corpora (cf. Horst 1881: 72–79). More importantly, Ezekiel appears to know some of the legislation presently contained in H (cf. especially Ezek 14:1–11; 18:5–17; chap. 20; 22:6–12; 34:25–31). Pfeiffer (1948: 241–46; cf. Zimmerli *Ezekiel 1* Hermeneia, 52) argued that the relationship moves in two directions: Ezekiel knows the legislation while the compiler (to whom Pfeiffer assigned the parenetic sections) knows Ezekiel, and this appears to be the consensus of recent scholarship. The third critical problem concerns the relationship between the (parallel) legislation of H and Deuteronomy 12–26 (Cholewinski 1976; Bettenzoli 1984). (Traditiohistorically, both corpora harken back to the Covenant Code of Exodus 21–23, the oldest legal corpus preserved from ancient Israel.) Thus, Lev 17:1–9 is often thought to presuppose the Deuteronomic demand for cult centralization which here takes the form of the Tent of Meeting. The earliest form of the festival calendar of chap. 23 already appears to be later than Deut 16:1–16 (and closer to Numbers 28–29), while the Sabbatical Year legislation of Lev 25:2–7 presupposes the seven-year cycle of Deut 15:1. The nature of the historical relationship between Leviticus 26 and Deuteronomy 28 (within the context of similar ANE rewards and punishments) remains a subject of dispute.

HENRY T. C. SUN

HOLOFERNES (PERSON) [Gk *Olophérnēs*]. The archenemy of the Jews in the book of Judith. Though ms evidence fluctuates between *holo-* (= Vg) and *olo-*, the latter is clearly original to the Greek text. Likewise original is *olo-* as opposed to *oro-*, the more correct Persian form of the name. Inscriptional and numismatic evidence from Priene and Knidos of the 2d century B.C. gives both spellings, and literary evidence likewise attests some fluctuation. Polybius (3, 5.2; 32, 10; 33, 6) and Aelian (*Var. Hist.* 2, 41) support *oro-*, while Appian (*Syr. Wars* 47) and Diodorus (31, 19.2–3, 7) read *olo-*. Because of uncertainy in the mss, editions vary on the aspiration of *olo-*.

Second in command to Nebuchadnezzar, "king of Assyria," Holofernes was sent to wreak vengeance on "the entire western region" for failure to obey a royal call to arms against "Arphaxad king of the Medes." The punitive expedition is said to have taken place shortly after the Jews' return from exile. Part of its alleged purpose was the destruction of local cults in order to promote the worship of Nebuchadnezzar.

When Holofernes stood poised to capture the (unknown) Jewish town of Bethulia, the reputed gateway into Judea, with its inhabitants suffering from lack of water and contemplating surrender, Judith, a pious widow, set out for the enemy camp. Armed with piety, beauty, and cunning, she killed the great general, whose severed head was carried to Bethulia as a trophy and hung from its wall.

How the author came by Holofernes as the name for one of the protagonists in his romance is not clear. No general of the historical Nebuchadnezzar is likely to have borne a Persian name. A broad consensus of modern scholarship, however, assigns the book to Maccabean times and sees it as a reflection of Jewish altercations with the Syrian government. Interesting parallels have been noted between the Seleucid general Nicanor (cf. 1 Macc 7:26–49) and Holofernes. Connection with Orofernes, a Cappadocian prince who in 159/58 B.C. usurped the throne with the assistance of Demetrius I Soter of Syria (who sent Nicanor against the Jews), seems not unlikely. The new king lost no time in making himself odious on account of his avarice. Moreover, almost two hundred years earlier (341 B.C.) another Cappadocian prince by the same name had assisted Artaxerxes III Ochus in his reconquest of Egypt. Our author may have fused the two Cappadocian princes as a basis for his Holofernes.

ALBERT PIETERSMA

HOLON (PLACE) [Heb *ḥōlôn*]. One of the most obscure levitical cities in the Judah/Simeon list. There are numerous textual variations, which present some difficulties when reconstructing the text. The Hebrew name in Josh 21:15 is *ḥōlōn*, while 1 Chr 6:43—Eng 6:58 reads *ḥilēn*. See HILEN (PLACE). Albright (1945: 66) has suggested that the original vocalization was *ḥîlôn* which later became *ḥîlên* by dissimilation, which is closer to the form presented in the MT of the Chronicler. The different LXX texts also show variations in the spelling of the name. These variations indicate that this city was either not well known or not known at all by the copyists of the Scripture. Besides the references to Holon/Hilen in the levitical city lists, the city's name appears in only one other text. Holon was assigned to Judah as one of the villages in the hill country district of Debir (Josh 15:51). There are no references to Holon/Hilen in any ancient nonbiblical texts.

Biblical Holon has been identified with Khirbet ʿAlîn (M.R. 152118) by scholars such as Albright (1924: 10–11) Simons (*GTTOT,* 201) and Wright (*WHAB,* 124). Khirbet ʿAlîn is bordered on the immediate W and NW by a narrow valley, which in turn is separated from a major valley by a fairly broad ridge. To the E the mound slopes gently into a saddle which then rises to another hill, higher than ʿAlîn. S of ʿAlîn there are also mountains directly blocking the view; however, SW of the tell the valley basin continues. Directly to the N are low rolling hills and a wadi; 2 km to the N the high mountains begin. Khirbet ʿAlîn can be described as a mound completely surrounded by hills to the N and S with a valley on the W and, to the E, hills except for the wadi pass. The terrain indicates that the tell was isolated from the normal flow of traffic found on major or secondary roads. See Peterson 1977: 509–16.

At Khirbet ʿAlîn there appears to be virtually no artificial mound resulting from accumulation of habitation debris. Although Guérin (1869: 340) was the first geographer to visit the site, he made no identification. It was Albright (1924: 11) who first argued for its identification as Holon on philological grounds and the following year he (1925: 9) found Early Iron pottery from the second phase (10th–6th centuries) and Byzantine sherds.

Cross and Wright (1956: 220) reinstituted interest in the identification of biblical Holon with Khirbet ʿAlîn in their boundary and province list study. They pointed out the

one serious difficulty of associating ʿAlîn with this biblical city: it had been "displaced" from Province VIII (Bethzur) into Province V (Debir). However, because of the inexactness of the references to the city there are no other "candidates" for the site on philological grounds in Province VIII. The "movement" that occurred must be one of the reasons why the LXX had such a difficult time with this city. Not only was Holon out of its province, but Khirbet ʿAlîn was an obscure town, very difficult to visit.

JOHN L. PETERSON

HOLY OF HOLIES. See TEMPLE, JERUSALEM.

HOLY ONE [Heb *qādoš*]. A title used in the Hebrew Bible for God. The most frequent use of the title is in the book of Isaiah, where the phrase occurs thirty times as a reference to Yahweh. The term appears also in the writings of some of the other prophets (Hosea, Jeremiah, Ezekiel, and Habakkuk), in the book of Psalms, and in Job. To speak of God as "the Holy One" is to emphasize God's separateness, God's otherness, God's mystery. This idea is expressed in Hos 11:9 when Yahweh says, "I am God and not man, the Holy One in your midst." Likewise, Deutero-Isaiah reports the words of "Yahweh your God, and of the Holy One of Israel," who says, "My thoughts are not your thoughts, neither are your ways my ways" (Isa 55:8). In the NT, Jesus is called the Holy One (Gk *hagios*, Mark 1:24; Luke 4:34; John 6:69; Acts 3:14; Rev 3:7; cf. 1 John 2:20 where "the Holy One" could be God or Jesus).

MITCHELL G. REDDISH

HOLY PLACE. See TEMPLE, JERUSALEM.

HOLY SEPULCHER, CHURCH OF THE. The Gospels agree that Jesus was buried in a tomb belonging to Joseph of Arimatheia (Matt 27:57; Luke 23:50–51; John 19:38) and that after his burial the entrance to the tomb was blocked with a stone (Matt 27:60; Mark 15:46; Luke 24:2; John 20:1). Luke explicitly says (23:53) that the tomb was hewn from stone, and Matthew (27:60) and John (19:41) indicate that it was new; Matthew adds that Joseph had meant it for himself. John (19:41–42) states that the tomb was in a garden near the place where Jesus was crucified and that the place of execution was "nigh to the city" (19:20). This was known as the place of the skull (Luke 23:33, translated as Calvary) or in Hebrew, Golgotha (Matt 27:33; Mark 15:22; John 19:17). From the Epistle to the Hebrews it is clear that it was outside the walls of Jerusalem at the time: Jesus suffered "without the gate" (13:12—an analogy is being drawn with the sin offerings made by the priests as in Exodus 29:14).

The site at Jerusalem which has been venerated since at least the reign of Constantine the Great (306–37) as the place of Christ's death on Golgotha-Calvary and his burial in the tomb in the garden is now covered by the Church of the Holy Sepulcher where worship is offered by various Orthodox Churches and by the Roman Catholics. The history of the building is complex. A comprehensive account was given earlier in this century by Fathers Vincent and Abel (1912–26), but restoration work between 1960 and 1980 made possible important archaeological investigations, which have resulted in lectures by Father Coüasnon (1974) and a comprehensive report by Father Corbo (1981). Problems remain in understanding the history of the buildings, but the excavations suggest nothing on the site at the time of Christ that is incompatible with the gospel stories.

According to the Gospels, Christ was crucified and buried outside the city. Although the Holy Sepulcher is within the present Old City of Jerusalem, it stands on ground which at the time of Christ was outside the walls; the "second wall" of Jerusalem built by Herod the Great (37–4 B.C.) was not supplemented by the "third wall" until the reign of Herod Agrippa (A.D. 41–44). The distinction between the old wall and the outer wall was still apparent to a writer of the mid–4th century A.D. (Cyril H. *Catech.* 14.9). Outside the present Damascus Gate, which stands above a gate in the "third wall," is a cave known as the Garden Tomb, which was identified as the tomb of Christ by the zealous General "Chinese" Gordon during a visit to the city in 1882–83; his reasoning is reproduced by Wilkinson (1978: 198–200). Archaeology has established the chronology of the walls more firmly since the time of Gordon and his identification is no longer credible.

The excavations under the present Church have shown that between the 7th and 1st centuries B.C., the site of the Holy Sepulcher was a quarry for malaky stone. When this was abandoned at the beginning of the Christian era, the area was given over to burials and gardens: "we can picture to ourselves some patches of fertile ground among rocky cliffs" (Corbo 1981: II, plate 67). Two tombs of the period survive at the site, the traditional Tomb of the Lord and that known to the excavators as Tomb 28 (Corbo 1981: I, 31–32). The latter is of the *kokh* type, designed to hold several burials in *kokhim* (ovens) radiating from a central passage. The Tomb of the Lord, now surmounted by an aedicule and severely damaged in 1009, was a cave with a rock-cut bench intended to accommodate a single body. It seems that it originally had, like other tombs of this type, a rock-cut antechamber, destroyed in the 4th century during the process of Christian adornment (Cyril H. *Catech.* 14.9). At the same time the cliff from which the Tomb of the Lord had originally been carved was cut down to ground level to leave it in freestanding splendor. At a stone's throw from the tomb is a rocky eminence, vener-

ated as Golgotha-Calvary, the site of the Crucifixion; this was similarly isolated in the 4th century by having the rock around it cut back. However, parts of the present church do still rest on the cuttings of the quarry (Corbo 1981: III, photo 11, 12, 29, 37, 54–55).

The site remained unbuilt upon until the time of the emperor Hadrian, who in A.D. 135 put down a Jewish revolt, expelled the Jews from their homes, and refounded Jerusalem as a Roman *colonia* named, after himself, Aelia Capitolina (Eus. *Hist. Eccl.* 4.6.3; Dio Cass. 69.12–13). The area immediately contiguous to the Holy Sepulcher was laid out as the forum and the site of the sepulcher itself became sacred to Jupiter and Venus (Hieron. *Ep.* 58. 3; Eus. *Vita C.* 3.26 mentions only Aphrodite). The Hadrianic construction involved considerable filling-in of the former quarry, thereby preserving the configuration of the land beneath the temple. Stretches of wall from Hadrian's temple survive, for instance under the Crusader façade of the present church (Corbo 1981: II, plate 68).

Hadrian's temple survived until after the emperor Constantine (306–37) became master of the eastern half of the Roman Empire in 324, when it was replaced by a great church. The earliest surviving reference to Constantine's constructions is made by a pilgrim from Bourdeaux who made a visit in 333; his summary account mentions Golgotha, the tomb a stone's throw from it and the basilica built by Constantine with its font (*Itin. Burdig.* 593.4–594.4). The fullest account is in Eusebius's *Life of Constantine* (3.25–40), which also reproduces a letter of the emperor to Macarius, Bishop of Jerusalem (*Vita C.* 3.30–32); this *Life* was left unfinished by Eusebius when he died in 339 and combines the characteristics of a history and a panegyric (Barnes 1981: 265–71). The oration given by Eusebius on the occasion of the dedication of the church in 335 survives in his *Triacontetericus* or *Praise of Constantine* (*l.C.* 11–18). Further evidence comes from the *Catechetical Orations* ascribed to Cyril, Bishop of Jerusalem, in the third quarter of the 4th century, and from the description of her pilgrimage by Egeria, who spent three years in Jerusalem in the early 380s (*Itin. Egeriae*). The accounts of the Bourdeaux Pilgrim and Egeria have been translated with copious annotation by Wilkinson (1981).

Eusebius describes Constantine's intention as the removal of Hadrian's temple from the traditional site of Christ's death and resurrection (*Vita C.* 3.25–27). It came as a surprise that once the overburden had been removed the "most holy cave" of the Tomb of the Lord was revealed (*Vita C.* 3.28); Eusebius understands the event as a type of the resurrection itself. The letter of Constantine expresses similar wonder (*Vita C.* 3.29) and gives the bishop facilities to build a magnificent church on the spot (*Vita C.* 3.31–32). It is not possible to look behind Eusebius's narrative at Constantine's intentions. In other places the emperor had temples destroyed simply to eliminate pagan cults (e.g., *Vita C.* 3.54–58), but at the Holy Sepulcher he is said explicitly to have wanted to purify the place which had seen the Resurrection. Though the substantial survival of the tomb was a wonder, there was, Eusebius implies, no difficulty about where to look for it.

Eusebius also describes the visit to the Holy Land of Constantine's mother, the empress Helena, in 326–27, but does not associate her with the Holy Sepulcher; he ascribes to her only two foundations in the Holy Land, those over the "sacred caves" of the Nativity at Bethlehem and at the place of the Ascension on the Mount of Olives (*Vita C.* 3.41–45). See HELENA (PERSON). Egeria in the 380s is the first to associate her with the buildings at the Holy Sepulcher (*Itin. Egeriae* 25.9).

Though he says that Constantine's constructions were "sacred to the Saving Sign" (*l.C.* 9.16), Eusebius does not mention the Invention of the Cross. However the relic of the True Cross was venerated already in the mid–4th century (Cyril H. *Catech.* 10.19) and Egeria describing the kissing of the cross during the Good Friday ceremonies says that it was closely guarded by the clergy because on a previous occasion one of the faithful had bitten off and carried away a mouthful of it. It is not until the end of the 4th century that stories are told associating Helena with the Invention (Gel. Caes. *fr.* 20; Amb. *In ob. Theod.* 46).

By the end of the 4th century there were two principal buildings at the site of the Holy Sepulcher, which came to be known as the Martyrium and the Anastasis. The entrance from the street was from the east; a courtyard gave onto a large five-aisled basilica, the Martyrium. The apse of this basilica was at its west end. Beyond it was a further courtyard from which eight doors led into a rotunda, the Anastasis, in the center of which, surrounded by columns, was the profusely decorated Tomb of the Lord. In the SE corner of the second courtyard rose the stony outcrop of Golgotha-Calvary (Corbo 1981: I, 94–100). The chronology of these buildings raises difficulties. The solemn dedication by many bishops, with costly offerings of gold and silver, at which Eusebius spoke, took place in September 335 (Eus. *Vita C.* 4.43–47). The Martyrium was clearly by this time complete; Eusebius describes the glittering sea of its gilded ceiling (*Vita C.* 3.36). Eusebius mentions also the adornment of the Tomb of the Lord and the highly polished courtyard in front of it (*Vita C.* 3.34–35). Father Coüasnon (1974: 15) suggested that although "the Rotunda over the Tomb was, indeed, part of the original project of Constantine," the lengthy works involved in quarrying the cliffs around the tomb for the blocks from which the rotunda was built meant that it was not completed in the lifetime of Constantine or his biographer. Father Corbo, on the other hand, has argued that there was not only a single program of work but that it was carried out all at one time (1981: I, 51). There is also disagreement between reconstructions of details of the building, such as the half-columns which form a circle around the Tomb of Christ. What is certain is that when Egeria frequented the Holy Sepulcher in 381–84 both the Martyrium and the Anastasis were being used for worship and continued to be the focus of great devotion throughout Late Antiquity.

Liturgy evolved in and around the holy places. Lectures given to catechumens in the middle of the 4th century at the Holy Sepulcher (Cyril H. *Catech.* 4.10) show how the drama of baptism during the Easter vigil fitted into a larger program of observances (19.32–33); they also suggest the deeper levels of meaning to be found in the physical relics which had witnessed the Resurrection: "the Holy Sepulcher is his witness and the stone which lies there to this day" (10.19). Egeria gives a vivid account of the Holy Week ceremonies, and also of the regular wor-

ship. She describes the Anastasis in the early morning ablaze with lamps, and the incense offered with prayers and psalms "so that the whole Anastasis basilica is filled with the smell." Then the bishop, standing at the door of the cave, read the story of the Resurrection from the gospel: "at the beginning of the reading the whole assembly groans and laments at what the Lord underwent for us and the way that they weep would move even the hardest heart to tears" (24.9). The Armenian liturgy published by Dom A. Renoux (1969) gives details of what was done in the early 5th century.

Golgotha came to be thought the center of the world (Cyril H. *Catech.* 13.28). Even before Constantine, Christians had come to Palestine "for the purpose of prayer and investigation of the sacred places" (Eus. *Hist. Eccl.* 6.11.2); subsequently their numbers increased and in the circuit of their visits, the Holy Sepulcher customarily came first (Wilkinson 1976: 95–101). Those who left accounts of their visits include the Bourdeaux Pilgrim of 333; Egeria, an abbess from Spain or Gaul; a pilgrim from Piacenza in Italy of ca. 570; and Arcult, a Gallic bishop whose observations were recorded by Adamnan, Abbot of Iona (died 704). These have all been edited in *Itineraria et alia geographica* (1965) and the last two translated by Wilkinson (1977).

Some visitors came to stay; by the end of the 4th century these included Christians from the Greek east, such as Euthymius from Melitene near the Persian frontier; fashionable Roman ladies such as Melania the Elder and the religious friends of Jerome; and, for eighteen years in the mid–5th century, the empress Eudocia herself. It is typical that Euthymius's first visit was to the True Cross and the Anastasis (Cyril of Scythopolis *Life of Euthymius* 14.1).

From Jerusalem relics spread across the Christian world. Already in the mid–4th century pieces of the True Cross had been "distributed piecemeal to all the world" (Cyril H. *Catech.* 13.4; cf. 4.10; 10.19 and Frolow 1961). Pilgrims took home flasks of oil which had been blessed by being placed against the cross—the oil boiled on contact (*Itin. Antonini Placentini* 20). Some of these flasks survive, and some bear engravings of the Tomb of the Lord; Weitzmann (1974) discusses these and other artifacts he considers to be associated with the holy places. Stories also spread, especially about Constantine and the True Cross; a tale from Egypt has been published, with references to other legends, by Orlandi, Pearson and Drake (1980).

The buildings of the Holy Sepulcher were burnt by the Persians in 614 (Antiochus Strategus 510), but did not suffer irreparable damage. When the Caliph ʾUmar received the surrender of Jerusalem on behalf of the Muslims in 637, the patriarch Sophronius showed him around the Holy Sepulcher. Christians were left in undisturbed possession until 1009 when the eccentric Fatimid Caliph Hakim gave orders to destroy the church and even to dig up its foundations. Demolition was thorough, the Tomb of the Lord was attacked with pickaxes and hammers, but parts of the Anastasis, including walls up to a height of over 30 feet, survived. The Byzantine emperor Constantine IX Monomachus eventually provided funds for restoration of the rotunda, which was completed in 1048, and when the Crusaders occupied Jerusalem in 1099 they added to the east of it a church in the Romanesque style. These buildings substantially survive, though they have been damaged at various times, notably by a fire in 1808. Restoration was carried out under the auspices of the Orthodox and Roman Catholic guardians between 1960 and 1980. Pilgrimage and devotion have also been continuous. Pilgrims from the Christian East came to see a visit to Jerusalem in somewhat of the same way as their Muslim neighbors regarded the Haj, and in the years before the revolution, large numbers of simple pilgrims from Russia journeyed to the holy places. The modern pilgrim will find Wilkinson (1978) a convenient guide.

OLIVER NICHOLSON

HOLY SPIRIT. The manifestation of divine presence and power perceptible especially in prophetic inspiration. The concept was only incidental in late biblical thought, but developed in early Judaism and Christianity to a fundamental dogma. Theological conceptions or teachings concerning the spirit are referred to as *pneumatology.*

A. Concept and Occurrence.

1. Concept. The combination of the terms "holy" (Heb *qōdeš* [lit. "holiness"]; Gk *hagios*) and "spirit" (Heb *rûaḥ*, Gk *pneuma*) does not occur in Greek literature, and in the OT only in two historically late texts. The juxtaposition of *rûaḥ* and *qōdeš* is oxymoronic in that a concept of dynamic power beyond human control, *rûaḥ*, has been combined with a word of static character, *qōdeš* (Westermann 1981: 224). The combination becomes a technical expression in Christian usage first through the evangelist Luke and in rabbinic literature.

2. Occurrence. The only OT instances of the combination are Isa 63:10, 11; and Ps 51:13. Belonging in the postexilic period, they probably presuppose the foretelling of the gift of the spirit (Ezek 36:26–27), but understand the bestowal of the holy spirit as an individual gift, as do also the following references from the LXX: Ps 142:10; Dan 5:12; 6,4 (Sym); 4:8, 18 (Th); Wis 1:5; 9:17; Sus 45 (Th); Ps Sol 17:37; Sir 48:12. The Apocrypha and Pseudepigrapha likewise contain few instances of the phrase: *Jub.* 1:21 (cf. Ps 51:12, 13); 4 Ezra 14:22; *Ascen.Is.* 5:14 (post-Christian); *Test Lev* 18:11. Philo and Josephus do not attest the combination *pneuma hagion*, but prefer *pneuma theion*. In the pre-NT period it is the scrolls of Qumran which first mention "holy spirit" in this way: 1QS 3:7; 4:20, 21; 8:16; 1QH 7:6; 9:32; 16:2, 3, 12; 18:26; CD 2:12; 5:11; 7:4 and others.

Most NT writings attest the combination (*to*) *pneuma* (*to*) *hagion* or *to hagion pneuma* (both meaning "the holy spirit"). In the earliest NT writings, the letters of Paul (1 Thessalonians, 1–2 Corinthians, Galatians, Romans, Philippians, Philemon), *pneuma hagion* is used only 13 times, as compared with *pneuma* alone, which occurs 113 times. In order to understand Paul's pneumatology, it is primarily the absolute usage (*to pneuma*) or adverbial constructions (*en pneumati*) which must be considered.

In the remaining NT writings likewise, a technical usage of *pneuma hagion* is not yet apparent (see Mark 1:10; cf. Luke 3:22; Matt 3:16; 1 Cor 12:3). Only Luke and John manifest a considered use of the phrase. Luke makes an effort to subsume his broadly developed pneumatology under the expression *to pneuma to hagion*, "the holy spirit." John avoids the phrase *pneuma hagion* in his gospel. Only the Transfigured One imparts the spirit to the community (John 20:22; anticipated in 14:26).

Outside biblical texts, the expression *pneuma hagion* is encountered in the Greek Magical Papyri, which come from the post-NT period (*PGM* 2:69; 3:289; 4:510).

Why, during the NT period, does *pneuma hagion* evolve as a specific element of Christian theology? On the one hand, a borrowing from Qumran usage is probable. On the other hand, it must be noted that in pre-NT times *pneuma* was often qualified in order to clarify a contrast; for instance, in *T. Jud.* 20 "spirit of truth" is contrasted with "spirit of error"; 1QS 3:18–19 contrasts spirits of truth and of blasphemy (cf. *T. Naph.* 10:9 [Heb]). Hence it has been conjectured that *pneuma hagion*, "holy spirit," represents an ethical concept contrasting with *pneuma akatharton*, "unclean spirit" (*TDNT* 6: 396).

The use of this concept provides distance, factually and terminologically, from the neutral use of *pneuma* in Greek-Hellenistic usage. The qualifier *hagion* also implies the beginnings of a personal understanding of spirit analogous to the development of conceptions of the holiness of God (Schmidt 1981). Thus *pneuma hagion* may be understood as a relatively new construction emphasizing the transcendence of the spirit in contrast to the Hellenistic notion of immanence (Kremer 1973: 77). The later rabbinate also speaks of *rûaḥ haqqōdeš*, using this construction to link the spirit with the God manifest in the sanctuary (*TRE* 12: 175).

A survey of references to "holy spirit" in the NT reveals that despite its frequent use in Luke–Acts, the concept remains peripheral compared with the absolute use of *pneuma*, "spirit." Not until the post-NT period, and as a result of the formulation of pneumatological dogma in 381 C.E., does the concept of "holy spirit" move to the center of Christian theology.

The interpretation of the biblical understanding of "spirit," therefore, cannot start with the use of the concept "holy spirit" alone, but must also take into account the semantic field of "spirit" in its entirety, including its derivatives and synonyms. Since the biblical authors in their application of the concept borrow from secular usage both linguistically and with respect to content, it is imperative that the history of religions be considered in any attempt to understand the biblical statements.

B. Secular Greek Usage

1. Meaning of the Term. The Gk noun *pneuma* derives from the verb **pneuo* and denotes air in movement, experienced as wind, breeze, or breath. Even "breath" and "wind" express only a part of the more comprehensive sense of movement implicit in *pneuma*. The concept itself involves a surplus of meaning which must have abetted its spiritualization and metaphorical extension. Contemplation of the animating effect of breathing might have suggested the psychological phenomenon of inspiration (PWSup 14: 387). Notwithstanding such extension, the basic sense of natural energy is retained.

In classical Greek texts the word *pneuma* is used with four discernible meanings: wind, breath, life, and metaphorical extensions of these.

a. Wind. From at least the time of Aeschylus and Herodotos, *pneuma* is used as a synonym for *pnoe/pnoie,* used previously by Homer and Hesiod for "wind" and its reduced and refined materiality (Aesch. *PV* 1086: *anemon pneumata;* further evidence in Leisegang 1922: 35).

b. Breath. The phenomenon of wind in the macrocosm (the natural world) is paralleled physiologically in the microcosm of the human being by the phenomenon of breathing, which can be discerned and measured according to its strength (Eur. *Or* 277). It can even animate inanimate objects such as wind instruments (Eur. *Bacch.* 128).

c. Life. "Spirit" in its connotation of animating power is itself occasionally characterized as life or living being (Aesch. *Pers.* 507: *pneuma biou,* "breath of life"; Polyb. 31.10.4). This is the starting point for the occasional synonymous use of *pneuma* and *psyche,* "breath, life, spirit, soul." But *pneuma* is to be sharply distinguished from *nous,* "mind"; the latter, with its implications of reason, differs practically and theoretically from the dynamic-enthusiastic sense of *pneuma* (Arist. *Metaph.* 11.7 1072b.21).

d. Metaphorical Uses. The word *pneuma* is used metaphorically because the phenomena to which it directly refers are invisible but nonetheless perceptible in their effects; this dichotomy generates a surplus of meaning. A distinction should be made, however, between an initial spiritualization and later religious and mythical metaphysics. The word *pneuma* is used to characterize human-to-human relations and political sentiments (Soph. *OC* 611; Aesch. Supp. 29, 30). In Greek *manticism* (divination), *pneuma* is seen as divine breath inspiring enthusiasm; as *hieron pneuma,* "sacred spirit" (Democr. frg. 18); *mantikon pneuma,* "prophetic spirit" (Plut. *De def. or.* 40); *enthousiastikon pneuma,* "inspired spirit" (Strab. 9.3.5). This *pneuma* imparts knowledge of transcendent events to occasional prophets, priests, and artists.

2. History of the Concept. The earliest evidence of a religious understanding of *pneuma* is found in connection with the inspiration of the oracle of Apollo at Delphi. The god Apollo fills the priestess with his spirit during the cultic event (Eur. *IA* 760–61). The noun *pneuma,* however, does not occur until the 1st century B.C.E. in the context of the somatic-psychic divination of Pythia via the spirit which rises up into her from the earth and enables her to prophesy (Leisegang 1922: 32–34). This Apollinian inspirational mantic was remarkably popular and appears even in the Greek magical papyri of the post-NT period (*PGM* 289). A characteristic feature of the mantic spirit is the circumvention of the individual's rationality and the ecstatic-enthusiastic possession of the person for a limited time (Cic. *Div.* 1.31, 49; *N.D.* 2.6).

Alongside the mantic use, early Greek philosophy employs the term *pneuma* scientifically. According to Anaximenes, macrocosm and microcosm correspond by means of the correlation guaranteed by the spirit (Anaximen. *Vorsokr.* 13 B 2). *Pneuma* moves with the blood through the human veins (Diog. *Apoll. Vorsokr.* 64 B 5). Its seat—here the Sicilian and Hippocratic schools diverge—is either in the heart or in the brain.

Stoicism developed the medical schools' scientific theory of *pneuma* into a comprehensive philosophical theory. Spirit, a sublime material substance superior to the four basic elements, encompasses and permeates the whole cosmos (Chrysipp. *Stoic. SVF* frg. 473; 479; 1027) and is at the same time its rational soul (Zeno *SVF* frg. 88). It is the substance of the godhead and of the individual soul. Spirit represents the god within the human being; indeed, humankind participates in the divine *nous,* "reason" (Seneca *Ep.* 41.2). Here, the distinction between *pneuma* and *nous* upheld by Aristotle is abandoned. In Stoicism, finally, there is frequent evidence of an identification of "spirit" and "god" (Chrysipp. *Stoic. SVF* frag. 310; 913; *TDNT* 6: 356).

C. Spirit in the OT

1. Meaning of the Term. In the OT *rûaḥ* occurs 378 times in Hebrew texts and 11 times in Aramaic passages. Its basic meaning is "wind, moving air," and "breath." Between the latter and the two former there is no strict distinction (Johnson 1964; Lauha 1983: 57–58; *THAT* 2: 727–28). Accordingly, *rûaḥ* may be an onomatopoeic word (Lys 1962: 19–21) connoting the power of wind to move objects. Nominal qualifiers indicate the direction or origin of winds (Jer 13:24; Exod 10:19; Prov 25:23; Ezek 5:10). Verbs reinforce the aspect of its movement (Num 11:31; Ps 103:16) or effect (Isa 7:2; Ps 48:8).

Beyond this essentially physical meaning, *rûaḥ* is used to refer to qualities of human beings, God, and—less frequently—animals and supernatural spirits. Anthropologically (*THAT* 2: 734–42; Wolff 1984: 57–67; Lauha 1983: 57–64), it denotes breath (Jer 2:24; Job 8:2) and psychic states (Ps 76:13; Ezek 3:14). In this context, *rûaḥ* often overlaps *lēb,* "heart, mind" (Josh 2:11; Ezek 21:12). Its intimations of a vitality that expresses itself dynamically attenuate with time, and this trend continues in postexilic literature even as the term comes to stand for the breath of life which God imparts (Isa 42:5) or creates (Isa 57:16). As intimated in Ezekiel 37 and Isa 57:14–21 (in adumbrations of redemption for the exiled community), the gift of the spirit is understood as analogous to creation. Thus *rûaḥ* came to be understood as a term for life itself (*THAT* 2: 736–37).

In the context of demonology, likewise, the basic dynamic meaning "wind, breath" gradually disappears. Originally the focus was on sudden experiences ("spirit of jealousy" [Num 5:14]; "unclean spirit" [Zech 13:2]; "evil spirit from God" [1 Sam 18:10]), but in Judaism this usage eventually devolves into demonology (Bietenhard 1951).

It is not always possible to distinguish theological from profane usage (Wolff 1984: 57; Lys 1962: 336). It was reasonable to associate *rûaḥ* with God in view of the wind's immateriality on the one hand and its palpable power on the other. Furthermore, *rûaḥ* was understood as a means of divine judgment (Exod 14:21; Jonah 4:8): God commands the wind (Ps 104:4), which accompanies God's self-manifestation (Ezek 1:4) or symbolically heralds God's coming (Jer 4:11; Ezek 17:11–13; Hos 4:19).

2. History of the Concept. References to the power of the spirit of God in the OT period occur first with the charismatic judges and ecstatic prophets. Here we seem to be dealing with a temporally limited gift of the spirit for the purpose of executing an extraordinary task (Schunck [1979: 7–30] sees a permanent gift of the spirit). God's spirit touches the charismatic person without human inter-

vention (e.g., a Judge) and he/she in turn inspires a small group of people opposing a large inimical power (Judg 3:10; 11:29; 13:25; 14:6, 9; 15:14; 1 Sam 11:6).

In parallel fashion, early ecstatic prophecy likewise seems to have led to conferral of the spirit to a group (1 Sam 10:10; 19:23). In this context, the reference to the *rûaḥ ʾĕlōhîm*, "spirit of God," points to Canaanite origins of ecstatic prophecy (Schmitt 1977: 270). Ecstasy can be induced (1 Sam 10:5–6 mentions music). As far as the oldest strata of tradition indicate, the spirit does not facilitate words or actions, nor is it related to history. The emphasis, rather, is on ecstasy as manifestation of religious inspiration (Westermann 1981: 226–27). In addition to ecstatic prophets, visionaries also appeal to the *rûaḥ Yhwh*, "spirit of the Lord," or the *rûaḥ ʾĕlōhîm*, "spirit of God" (1 Sam 23:2; Num 24:2). Here, as in the Elijah/Elisha tradition, the gift of the spirit appears for the first time as simultaneously dynamic and static (2 Kgs 2:9).

With the exception of Ezekiel, scriptural prophecy of the 8th–7th centuries does not appeal to the spirit of Yahweh (concerning the exceptions Hos 9:7; Mic 3:8; Isa 30:1; 31:3, see *THAT* 2: 747–48). The classical prophet disappears completely behind his task as messenger and is precisely not characterized by proofs of spiritual power. Not until the exilic and postexilic period is prophecy viewed in retrospect as wrought by the spirit (Neh 9:30; Zech 7:12).

The transition from charismatic leadership to kingship changes the perception of the spirit of God. The dynamic aspect gives way to a static understanding of spirit as related to office. The spirit of Yahweh is bestowed (Num 11:25, 29) and rests on the blessed one (2 Kgs 2:15), who is thus filled with the spirit (Deut 34:9). The rite of anointing (1 Sam 16:13, 14) as well as the laying on of hands (Deut 34:1) symbolizes this change of perception. The gift of spirit and blessing become related concepts. The narrative of 1–2 Kings consistently refers to the "spirit of God" only in the context of royal accession or rule, never as an indication of special deeds or words (Westermann 1981: 227). Though it cannot always be determined with certainty whether this static understanding of spirit has been introduced retroactively from a later time, the notion is clearly present in the expectation of the Messiah king. His actions derive solely from the spirit bestowed on him (Isa 11:2; 42:1; 61:1). See MESSIAH. Alongside the gift of the spirit to the Messiah, we find in the exilic and postexilic writings the announcement of the gift of the spirit to the whole people—chiefly in the form of a word of Yahweh. Here, too, the spirit appears as a permanent gift. The verbs employed indicate this by suggesting a substance in liquid form ("pour out" [Ezek 39:29; Joel 3:1, 2]; "be emptied out" [Isa 44:3; 32:15]). According to Ezekiel, the gift of the spirit enables the people to live according to the commandments (36:27); it creates new life (37:5, 14; cf. Gen 2:7; Eccl 12:7). In addition, there is reference to the "gift of prophecy" (Joel 3:1–5), the end of social inequalities (Joel 3:2 and Jer 31:34), understanding and learning (Isa 29:24), growth in nature (Isa 32:15), peace and community (Isa 32:17), and immediate relation to God (Ezek 39:29).

The LXX translates *rûaḥ* predominantly as *pneuma*. Even though both words originally describe the selfsame reality of moved and moving air, the LXX participates in the completed philosophical extension of the concept. In terms of the history of its impact, the reception of OT statements concerning the spirit concentrates on Ezek 36:26, 27; 37:5–6, 9–10, 14 and Joel 3:1–5, the proof texts for the eschatological gift of the spirit in Judaism and Christianity.

Confronted with the deep depression felt by the exiled community (Ezek 33:10; 37:11), Ezekiel announces over the field of dry bones the gift of the spirit which causes revivification (37:5–6, 14). Whereas Ezek 37:9 suggests the winds from the four points of the compass and 37:5 anthropologically implies the breath, 37:14 unequivocally specifies the "spirit of God" which is given to the dead and animates them. In Ezek 36:26–27a the bestowal of the spirit of God is related to the gift of a new heart (Heb *lēb*) and a new spirit (*rûaḥ*). The gift of the spirit makes Torah obedience possible (36:27b). A subsequent passage (Ezek 39:29) harks back to these statements and at the same time prepares the way for Joel 3:1–5 (Zimmerli *Ezekiel* Hermeneia, 2.321; Wolff *Joel and Amos* Hermeneia, 66).

Joel 3:15 presupposes the traditions of Ezekiel and Deutero-Isaiah. The interest in establishing historical periods for the eschatological events (2:23b, 25; 3:1, 2, 4—Eng 2:28, 29, 31) represents rudiments of apocalyptic thinking. The pouring out of the spirit is the beginning of the day of Yahweh, who passes over converted Israel (2:12, 13). This will be followed by the judgment of the gentiles (4:1–8—Eng 3:1–8) and by cosmic signs (3:3–4—Eng 2:30–31). The consequences of the pouring out of the spirit are prophetic utterances and dreams and visions. The gift of the spirit—a sign, not the content, of the approaching end of time (Volz 1910: 93–94)—establishes a direct relation to God. In concurrence with Zech 12:10 and Ezek 39:29, Joel 3:1–5 (Eng 2:28–32) locates the expectation of the eschatological community of faith not in the cultic restoration according to Torah but in the prophetic relationship to God manifested in God's immediate call (Wolff *Joel and Amos* Hermeneia, 69).

D. Spirit in Judaism

1. Occurrence. a. Doctrine of the Prophetless Era. In rabbinic theology, "spirit of God" and "spirit of prophecy" are used almost synonymously (*y. Sanh.* 10; 28b, 51: if no prophets, then, no holy spirit). This synonymity led to the formation of the rabbinic doctrine stating that after the time of the last prophets, Haggai, Zechariah, and Malachi, the spirit abandoned Israel (*t. Soṭa* 13:2ff); or that since the destruction of the First Temple the spirit left Israel and would be absent from the Second Temple (*b. Yoma* 21b; in detail, Schäfer 1972: 89–111). Historically, however, it is the period of the Maccabeans which manifests a relative absence of prophecy (1 Macc 4:46; 9:27), a situation presumed also by primitive Christianity (Acts 2:17–21; John 7:39; Mark 1:8). Pneumatics, prophets, and an awareness of individual spirit endowment are documented, however, for the intertestamental period (Leivestad 1972–73; Foerster 1961–62). Not until the collapse of the Second Temple and the loss of this cultic center as the locus of God's presence, however, did the notion of a prophetless-spiritless era become a possibility. The decisive stimulus for the formation of this dogma lies in the estab-

lishment of the canon. Ezra was the last inspired prophet. The normative period for Israel, therefore, is the time governed by the Law, which ends with Ezra (Smend 1984: 13–20; Barton 1986: 105–16).

There are two further motives contributing to the formation of the doctrine: *2 Bar.* 85:3; 1 Macc 4:46; 9:27; and 14:41 already intimate a tripartite historical schema (prophecy at the time of the First Temple, prophetless present, prophecy of the end-time). Since nomism had prevailed, it needed to disclaim the spirit as a present medium of revelation to the point of asserting that prophecy was dormant.

Concepts in Hellenistic and Palestinian Judaism provide the immediate presuppositions for NT pneumatology. In view of the multiple strata of evidence, only an illustrative understanding can be provided here.

b. Spirit in Philo Judaeus. Philo represents an exponent of Jewish theology of the Hellenistic synagogue of the Diaspora at Alexandria. In an apologetic proselytizing effort, he attempts to square the Stoic-Platonic theory of *pneuma* with the OT statements in the LXX, or rather, to find the former in the latter. See PHILO OF ALEXANDRIA. Consonant with Hellenistic Jewish literature, *pneuma,* according to Philo, denotes wind, air, breath, the human spirit, the spirit of God, and supernatural beings (itemization by Isaacs 1976: 150–52). Cosmologically, *pneuma* is the substance which pervades matter and holds it together (*Aet* 125; *Op* 131; *Heres* 242; cf. Wis 1:7). Anthropological reflection repeatedly refers to Gen 2:7. The natural human being had the gift of *nous,* "reason," but it is *geōdēs,* "earthlike," and *phthartos,* "corruptible" (*Leg All* 1: 32, 37). The inspiration of *pneuma theion,* "divine spirit" (*Op* 135, 144), also provided the *nous* (*Gig* 27) and thus distinguishes the human soul from that of the animal. Thus, humankind is allowed to share in the divine spirit. This qualification reveals the dichotomized view of humanity: the human being consists of *pneuma theion,* "divine spirit," and *geōdēs ousia,* "earthlike being" (*Op* 135; *Heres* 55). Nevertheless, Philo's statements containing the tradition-historical and religio-historical disparities are not consistent within themselves. Animistic and dynamistic notions are intermingled. The Philonic notion that *pneuma prophetikon,* "prophetic spirit," represents the highest gift derives from both Hellenistic and OT-Jewish notions of spirit (Wolfson 1948: 2.26). In analogy to the Platonic critique of inspiration manticism, *pneuma theion* facilitates higher insight than does *nous* (*Heres* 265). Moses is the interpreter gifted with *pneuma theion* and serves as Philo's model.

c. Spirit in the Qumran Texts. Multiple uses of *rûaḥ* are evident also in the Dead Sea Scrolls. Frequently the referent of *rûaḥ* is "human spirit," and the word can often designate the self or a person's attitude. Theologically *rûaḥ* denotes both evil spirits and the holy spirit of God. It also has the meaning "breath" and, far less frequently, "wind" (see Anderson 1962; Nötscher 1957).

The original traditional material of the Qumran community includes the so-called "doctrine of the two spirits" presented in 1QS 3:13–4:26 as basic doctrine (Lichtenberger 1980: 123–42). It postulates that from the outset human behavior is determined by two kinds of spirits which are appointed by God, the spirits of truth and the spirits of wickedness. *Rûaḥ* thus appears to be the predestined existence of humanity. The sons of righteousness and the sons of wickedness are subject to the domination of those spirits. At present, the sons of light are in danger of perdition (1QS 3:24); only the judgment ordained by God will bring future purification when God will pour out his spirit on a part of humankind and thus cleanse it (1QS 4:20, 21).

The work of God's spirit on humanity takes place in three ways according to the Qumran texts: (1) with the gift of the spirit during creation (1QS 9:12; 1QH 9:32); (2) when initiants become part of the community (1QH 13:19; 16:11; 17:17); (3) in the outpouring of the spirit during the end-time (1QS 4: 18–23). However, there is no causal connection between the bath of purification and the gift of the spirit (O. Betz 1960: 133–34; Schreiner 1965: 176–77). It is in character with the exclusive self-consciousness of the community that it claims the presence of the spirit in its midst (and within at least some individuals; note the formula *rwḥ ʾšr nṯn by,* "the spirit which you placed in me" [1QH 12:11; 13:19; 16:11; 17:17, etc.; see Kuhn 1966: 130–36]). A specifically eschatological understanding of the presence of the spirit should not be inferred from this, however. Only the end-time will bring the full outpouring of the spirit (1QS 4:2–23 with reference to Exod 36:25–26).

d. Spirit in Rabbinism. A systematic itemization of the particular statements on "holy spirit" in rabbinic literature will schematize the source material. Thus, salient aspects of the rabbinic literature spanning several centuries can be listed together (Goldberg 1969; Schäfer 1972). The construction *rûaḥ haqqōdeš,* lit. "spirit of holiness," implies the divine origin of the spirit. Yet this does not mean that the holy spirit was regarded as a hypostasis distinct from the divine presence (*šĕkînâ*). The holy spirit is a mode of God's self-revelation (Goldberg 1969: 462; *TRE* 12: 174) and is imparted primarily in the sanctuary, the place of God's presence. The high priest has the gift of the spirit qua office (*Lev. Rab.* 21:12; *Yoma* 73). The destruction of the First Temple caused the dormancy of the spirit (*t. Soṭa* 13:2ff). In the interim, the *bat qôl* (lit. "daughter of a voice"; audible divine speech) is a poor substitute. Not until the end-time will the spirit return to the sanctuary (*Num. Rab.* 15:10) as a national charism (*TRE* 12:175). Both the Messiah (*Gen. Rab.* 2:3) and the just will then be spirit bearers. The expectations of salvation follow Ezekiel 36–37 and Joel 3.

In rabbinic literature there is no systematic theory concerning the spirit's presence. Alongside the official charisma of the high priest, there are gifts of the spirit for good works, study of Torah, and keeping the commandments (Schäfer 1972: 127–34).

2. Conclusions. a. The Semantic Field. Under the influence of theological reflection and philosophical speculation, both the Hebrew term *rûaḥ* and the Greek term *pneuma* underwent a semantic development from a concrete, material meaning in everyday language to a metaphysical meaning. The physical sense of the word persisted alongside the new meaning. Thus, *pneuma* is "a word into whose mythical depths everyone has deposited all that fit into his range of ideas, and out of which everyone heard what he could or would, according to the level of his own

understanding" (Leisegang 1919: 16). Anthropological and theological use cannot always be strictly distinguished. With Philo, Stoic influence prompted their synonymous use. Thus, the concept of *pneuma* approaches a generic abstraction to which the addition of qualifiers provides specificity. These qualifiers include prepositional expressions (*en pneumati,* "in [the] spirit"), genitival constructions (*to pneuma tou kosmou,* "the spirit of the world"; *to pneuma theou,* "the spirit of God"); coordination of nearly synonymous terms (*pneuma kai dynamis,* "spirit and power"); and antithetical pairs (*pneuma/sarx* "spirit/flesh"; *pneuma/gramma* "spirit/letter"). In the imagination, obvious substances such as water (Sir 24:33; Philo *Op* 135) or fire (frequent in Stoicism; cf. *TDNT* 6: 930) were used increasingly alongside wind, because they were able to convey and promote not only the aspect of external and independent power, but also an understanding of spirit as substance within the sacramental act. Given this OT and Greek-Hellenistic history, it is natural that animistic and dynamistic statements are used interchangeably. Even in the NT a conception of a unique and visible manifestation of the spirit in baptism (1 Cor 12:13) is juxtaposed with instances of intervention and empowerment by the spirit for a specific action (Acts 13:4). The exact meaning of *pneuma* in the NT period can be discovered only by observing the larger context.

b. Anthropology. The contrast between *sōma,* "body," and *psychē,* "soul," in Hellenistic Judaism was enhanced through the influence of Greek-Hellenistic anthropology. The body is of earthly origin, the soul of heavenly origin. No consistent conceptual differentiation between *nous, psychē,* and *sōma* is evident. In the Greek-Hellenistic arena, the Platonic tripartition of the person into *nous, psychē,* and *soma* was normative. Popular usage in the pre-NT period, however, had led to such a generalization of the concept of *pneuma* that its meaning was no longer precisely set (*RAC* 9: 503–4). *Pneuma* could now be used in its anthropological sense to the exclusion of a metaphysical dimension; the juxtaposition of *sarx,* "body," and *pneuma,* "spirit" (Col 2:5), could describe the totality of the human being. The word *pneuma* alone can designate the self (Rom 8:16; *PMG* 12:327).

c. Demonology. In contrast to the idealist concept of "spirit" in F. C. Baur, history-of-religions research into NT pneumatology discovered demonology as a common myth within popular belief (Everling 1888; Dibelius 1909; Weinel alluded directly to demonology in the title of his work *The Effects of the Spirit and of the Spirits* [1899]). NT demonology corresponds to that of ancient Judaism. Good and evil spirits confront each other in their allegiance to the archangel Michael and the devil respectively (*1 Enoch* 19; *Jub.* 10; 22:17; 1QS 3:13–4:26). The evil spirits are often linked to the fallen angels (Genesis 6), or considered fathered by them in intercourse with human women (*1 Enoch* 15). In the Greek-Hellenistic arena, likewise, contrary powers may be called pneumata (*CIG* 3: 5858b; *PMG* 13: 198; 36: 160). The use of terms for the world of the spirits in the NT is as varied as in the Hellenistic Jewish sources: *to pneuma to akatharton,* "the unclean spirit" (Mark 1:23, 26; *T. Benj.* 5:2); *to pneuma to ponēron,* "the evil spirit" (Acts 19:15–16; *1 En.* 99:7); or absolutely ("the spirit[s]"), Mark 9:20; Luke 10:20, to denote evil spirits. In addition, *daimonia* and *daimones* are used frequently. On the other hand, "pneumata" can also denote benign spirits: Acts 23:8, 9; Jos *Ant* 4: 108; Heb 1:14; Rev 1:4.

d. Eschatology. In OT texts, the gift of the spirit to the Messiah (Isa 11:2; 28:5; 42:1; 61:1) and to the people (Ezek 36:27; 37:14; 39:29; Joel 3:1, 2; Isa 32:15; Zech 12:10; Hag 2:5) occur together. Before the NT period, both strands are transmitted independently alongside each other and only in late NT writings are they combined to state that a spirit-endowed Messiah will transmit the spirit to the elect on behalf of God. Sectarian believers claim individual and collective anticipation of the eschatological spirit in the present (*1 En.* 91:1; 4 Ezra 5:22; 14:22; 1QH 7:6, 7; 17:26).

The following texts affirm the gift of the spirit to the Messiah during the end-time: *Pss. Sol.* 17:37; 18:7; *1 En.* 49:3; 62:2; *T. Levi* 18:7; *T. Jud.* 24:2 (the latter passages are a Christian postscript); *Tq. Isa.* 11:2; 42:1–4; 1QS Sb 5:24, 25; 11QMelch 18.

The concept of the latter-day gift of the spirit to the elect relies primarily on Joel 3:1–5 and Ezek 36:27; 37:14, and is extensively attested in the rabbinic literature. Testimony to spirit endowment of the Messiah, conversely, is strikingly rare in the same sources. A few intertestamental texts, moreover, are suspected of having been reworked by Christian redaction: 4 Ezra 6:26; *Jub.* 1:23; *T. Levi* 18:11; *T. Jud.* 24:3; *1 En.* 61:11; 1QS 4: 20–22. *T. Levi* does not witness to the agency of the Messiah in the gift of the eschatological spirit, but rather of God's agency; by contrast *Sib. Or.* 3:528 and *T. Jud.* 24:2 do associate the Messiah with an eschatological gift of the spirit. Both latter texts, however, reasonably suggest Christian interpolation (Becker 1980: 76), so that this whole idea becomes understandable only as a theme of Christian theology.

E. Spirit in the NT

1. Terminology. Of the 379 occurrences of the substantive *pneuma,* only John 3:8, Heb 1:7, and 2 Thess 2:8 reflect the original meaning "wind/breath," the latter two being influenced by OT quotations. In approximately 275 instances *pneuma* must be understood as "spirit of God"; of these, 149 are absolute; *pneuma hagion,* "holy spirit," 92 times; *pneuma hagiosynes,* "spirit of holiness," once (Rom 1:4); *pneuma theou,* "spirit of God," 18 times; *pneuma tou patros,* "spirit of the Father," once. Referring to *Christos* it is used 3 times; as *pneuma tou huiou autou,* "the spirit of his Son," once; and as *pneuma Iesou,* "spirit of Jesus," once. *Pneuma* is used roughly 47 times in the anthropological sense, mostly with reference to breath (Matt 27:50; John 2:26). *Pneuma* may describe the whole human being, like *sōma* and *psychē* (2 Cor 7:1; 1 Thess 5:23), also in rhetorical pathos within the final greetings (Gal 6:18; Phil 4:23; Phlm 25; 2 Tim 4:22) and thus approaches the meaning of "I." Therefore *pneuma* may also be interpreted, under the aspect of the acting and thinking "I," as *pneuma praytētos* (1 Cor 4:21), as the locus of feelings (Luke 1:47), intellect (Luke 1:80), and, in a single instance, as reason (1 Cor 2:11).

Used either absolutely or with modifiers, *pneuma* denotes evil spirits approximately 38 times. Jesus and the disciples attack the *pneumata akatharta,* "unclean spirits" (Mark 1:23); *ponēra,* "evil [spirits]," (Luke 7:21); *alala,* "dumb

[spirit]," (Mark 9:17) and exorcise them, since the power of the spirit of God in them overcomes the power of Satan. Unique uses of *pneuma* are Luke 24:37 (ghost); Heb 12:33; 1 Pet 3:19 (souls); Heb 1:14; Rev 1:4; 3:1; 4:5 and 5:6 (angels). Heb 12:9 calls God *pater ton pneumaton* "Father of spirits." The adjective *pneumatikos,* "spiritual," is used 23 times in the NT, and the adverb *pneumatikōs,* "spiritually," 3 times. Beyond its use in contrast to words for the flesh and carnality (*sarkikos/sarkinos/psychikos;* Rom 7:14; 1 Cor 1:15; 3:1; 9:11; 15:44, 46), or its substantival use in reference to things spiritual (Rom 15:27; 1 Cor 9:11) or spiritual persons (1 Cor 14:37; Gal 6:1), the adjective *pneumatikos* is used as a qualifier for the law (Rom 7:14), prayer (Eph 1:3; 5:9; Col 3:16), the Church (1 Pet 2:5), the resurrected body (1 Cor 15:44–46), and sacrifice (1 Pet 2:5).

2. Preliminary Methodological Reflections. In exilic and postexilic Jewish literature, some writings manifest expectation of the future outpouring of the spirit. On the other hand, the NT writings generally regard the gift of the spirit as a present eschatological event. This demarcates the historical location of the NT era. Here we trace the NT evidence for early Christian pneumatology. A review of the history of research will conclude with methodological reflections.

F. C. Baur and H. Gunkel significantly influenced the perception of primitive Christian pneumatology. Baur (1831; 1845) saw in Pauline thought a parallel to his own understanding of existence (which he derived from Hegel; concerning the following see *BTNT* 2: 244–45). Accordingly, he disregarded the lexical content and semantic field of *pneuma,* or rather, he understood it a priori as "spirit" in the sense of absolute self-consciousness. This "spirit" stands in fundamental contrast to what is finite, to flesh, insofar as "spirit" is identical with "spirit of God." This view set forth by Baur could be applied to the understanding of the history of early Christianity at a time when Baur was still uninfluenced by Hegel and when his historical studies had led him to recognize the compelling contrast between Paulinism and Judaism, between pneumatism and nomism.

Baur's idealist view of the NT concept of "spirit" was shaken by Gunkel's phenomenological approach (1888; 3d ed. 1909). To Gunkel, speculation concerning spirit is secondary compared to experiences of, and encounters with, the spirit (1909: 8). Thus he made it his task to describe and sensitively interpret. In the mysterious effects of power and unexplained phenomena, according to Gunkel, we encounter not the subsequent conclusions regarding the power of God by a disinterested outsider, but the immediate experience of one inspired (1909: 3–4). Therefore, according to Gunkel, the exegete must "in some way put himself in the place of the pneumatic to empathize with his experience"; indeed, "he who clings to the letter cannot see the life" (1909: 4, 6).

Even though Gunkel's slogan would soon be passionately contradicted (Bousset 1901; Harnack 1899), the characterization of the NT concept of *pneuma* as a supernatural power which affects life has nevertheless met with appreciation to this very day.

For the present understanding of the NT concept of *pneuma* with its derivatives and related concepts, a survey of its uses in the respective historical contexts of the earliest Christian writings is essential. In contrast to Gunkel, we must not begin with phenomena of the spirit. In so doing we would neglect the religiohistorical parallel phenomena in Judaism and Hellenism, as Gunkel later conceded to Bousset's critique (1909: 5–6). When one disregards these connections, the particularity of NT pneumatology is sought solely in the realm of phenomena. But phenomena themselves are ambiguous and cannot be interpreted unequivocally. And since the conceptual framework evaluates phenomena and experiences, it must be given particular attention in the early Christian tradition.

3. Primitive Christian Preconditions for the Consciousness of Spirit Endowment. All NT writings present the Christian community as a spirit-endowed entity. Late communal theology has anchored this claim in history via a narrative of the event in which the spirit was bestowed. In terms of the history of its impact these ideas represent not the primary form, but the most significant form, of the consciousness of spirit-endowment.

a. Pre-Easter Gift of the Spirit. The redaction of the Gospels has viewed the synoptic mission narrative (Mark 6:6b–13 par) also as a communal missionary etiology. This is reflected in the dramatic framework (Mark 6:6b, 7, 12): the inspired actions of the community reflect the pre-Easter spirit endowment of the disciples through Jesus. The gift of exousia empowers the disciples to subjugate the demons, as was the case with Jesus. Vv 11 and 12 develop the content of this gift, in keeping with the typical spheres of activity of the communal theology. Functions of this spirit endowment are the preaching of repentence (Acts 2:38; Rom 2:4), exorcisms (Acts 19:11, 12; *Acts John* 37), anointing with oil (John 5:14) and healings (Acts 5:16; 8:7; cf. also the lists of charisms 1 Cor 12:9, 28, 30).

b. Gift of the Spirit at Easter. In the Fourth Gospel's account of post-resurrection appearances, Easter and Pentecost are collapsed (John 20:19–23). Jesus appears to the band of disciples and imparts his spirit to them on the evening of the day of resurrection. Comparison with Luke 24:36–49 suggests that John 20:19–23 represents a pre-Johannine tradition which presupposes the Lukan text (Dauer 1984: 207–96). John 20:20–22 combines the act of transmission of the spirit with the explication and function of the gift.

The act by which Jesus imparts the spirit to his disciples is itself a significant biblical allusion. In its use of the verb *enephysēsen,* "he breathed on them" (John 20:22), the gospel tradition recalls the same form in the creation narrative (Gen 2:7 LXX). This would contradict an animistic interpretation of the action. The word of explication ("receive the *pneuma hagion* [Holy Spirit]" John 20:22) likewise suggests a substratum of earliest Christian terminology. The motifs of gift of the spirit and forgiveness of sins are likewise attested together in earliest Christianity (1 Cor 6:11; Titus 3:4–11); John 20:19–23 manifestly represents a stage of communal theological reflection which combines earliest Christian statements and incorporates them into the history of Jesus. This applies to both its content and its place in the history of tradition.

c. Post-Easter Gift of the Spirit. More influential was the position that the post-Easter gift of the spirit occurred

on the first Pentecost after Easter (only Acts 2:1–4 in the NT). According to the Lukan construction these events, the outpouring of the spirit, enabled the disciples to preach in foreign languages. Peter's speech following the account (Acts 2:14–36) explains the event as an eschatological fulfillment of Joel 3:1–5 (Eng 2:28–32), but attributes the gift of the spirit to the Exalted One himself (2:33).

Inconsistencies in the text suggest fragments of pre-Lukan tradition. An immediate result of the gift of the spirit is the ability *lalein heterais glōssais,* "to speak in other tongues" (Acts 2:4). Luke interprets this as empowerment to speak in foreign languages, to judge from the observation that each member of the multitude heard the disciples speaking *idią dialektō,* "in his own language" (vv 6, 8). Should Luke have also inserted the word *heterais* into this tradition in keeping with this line of interpretation (note that *heteros* appears 52 times in Luke, in Mark and John only once each), and thus critically altered the stock phrase *glōssais lalein,* "to speak in tongues" (Mark 16:17; 1 Cor 12:30; 14:2, 45), then his tradition was probably concerned only with spirit endowment and glossolalia. If v 8 likewise represents an allusion to a miracle of hearing, then it, too, would have fundamentally misunderstood the tradition of a glossolalic phenomenon.

It is therefore conceivable that a fragment of tradition spoke of a glossolalic event, possibly in connection with a house (v 2 differing from v 5). Further details of this event cannot be inferred from the pre-Lukan substance of this text. It is very unlikely, however, that the Jerusalem community could have regarded an outbreak of glossolalia as the advent of the spirit. Glossolalia does not figure among the anticipated phenomena of the eschaton. Apart from isolated remarks (*T. Job* 48–50), it is a phenomenon totally rooted in the Hellenistic world.

The association of this event with the festival of Pentecost in Jerusalem has possibly been influenced by the reinterpretation (after 70 B.C.E.) of Pentecost as the covenant-renewal festival. It is conceivable that the reestablishment of the band of disciples took place on the first festival day after the crucifixion. But this cannot be demonstrated decisively, even with reference to the undated appearance to the 500 (1 Cor 15:6) (see also Dunn 1975: 144–46). The association with Pentecost, in any case, reinforces the universal and public importance which Luke attaches to the Christ event. It is specifically this festival which repeatedly had been the occasion of outbreaks of political rioting (Roloff *Apostelgeschichte* NTD, 40). The three quoted theories, without exception late formations, manifest the need of the community to explain the gift of the spirit within a theory of transmission. However, the fact that all three accounts present Jesus rather than God as the bestower of *pneuma* indicates the late NT location of the notion.

The community's awareness of having received the spirit is not based on one basic event of spirit transmission. It is rather the theological consequence of primitive Christian theology and arises from definite presuppositions about the nature and activity of the spirit.

d. The Spirit and the Raising of the Dead. The conviction that God raised Jesus from the dead (1 Thess 1:10; Gal 1:1; 1 Cor 6:14; Rom 4:24; 8:11; 2 Cor 4:14; Acts 2:32; 3:15) is expressed in some of the oldest Christian formulas (Becker 1976: 14–15; Hoffmann 1982: 14–15).

Because the resurrection of both Jesus (Rom 1, 3, 4; 8:11) and Christians (1 Cor 6:14; 15:45; 2 Cor 3:6; Phil 3:10) is linked to the spirit in early NT tradition, it must be asked whether the eschatological notion implied in the resurrection formula allowed room for the anticipated outpouring of the spirit.

Ezek 37:5, 9–10 had already envisioned the revivification of the dead as an effect of the gift of the spirit. In an altered form this idea is picked up in 2 Macc 7:23; *Jos. Asen.* 8:9; *Soṭa* 9:15; *Exod. Rab.* 48 (102d); *Midr. Ps* 104:30; Rev 11:11. The second of the Eighteen Benedictions offers a direct parallel, in both form and content, for the combination of resurrection and spirit. In the older Palestininan version (which recalls Ezek 37:5; Isa 26:19) it reads : "you make the spirit return . . . which cares for the living and makes alive those who are dead" (Müller 1980: 25–30). Admittedly, the integrity of the text has been questioned. If it is presumed to be intact here, the statement may be seen as the interpretive framework for the resurrection event on the basis of its familiarity in the NT period. The raising of Jesus from the dead is an act of God and, at the same time, evidence of the activity of his spirit (Rom 1:3–4; 8:11).

e. The Spirit and the Activity of Jesus. The primary basis of the believed efficacy of the spirit lies in the Easter experience. The attention of the community is initially focused on the ascended Messiah whose return they anticipate without immediately interpreting his earthly activity as messianic. Gradually however, the community appropriates the OT-Jewish tradition of the spirit-filled Messiah and applies this perception to the earthly activity of Jesus. The redaction of the Gospels gives purposeful expression to this conviction by placing the spirit-baptism at the beginning of the story of Jesus as fulfillment of the messianic prophecies of Mal 3:1 and Isa 40:3 (Mark 1:2–11 par); by the inclusion of Isa 42:1 within the fulfillment quotation Matt 12:18; and by the interpretation of Isa 61:1 implicit in Jesus' inaugural sermon (Luke 4:16–30). Beyond the Easter event, Jesus' claim and activity themselves are likely to have formed the matrix for this application of the tradition of the spirit-filled Messiah to Jesus. Admittedly, not one synoptic word concerning the spirit (Mark 3:29 par; 13:11 par; Matt 12:28; Luke 4:18, 19; 11:13; Matt 28:19; Luke 11:2) can be positively claimed as Jesus' own. Nor does he himself seem to have explicitly appealed to the spirit of God to substantiate his claim. The exorcisms by themselves were ambivalent and certainly did not prove the presence of the spirit (cf. Luke 11:19). On the other hand, isolated images (Luke 10:18; 11:20) can be regarded as veiled metaphorical references to the presence of the spirit (Jeremias 1973: 81–84). Finally, the portrayals of the exorcisms of Jesus as conflicts with satanic powers (Mark 3:27 par); the working of miracles and the proclamation of the kingdom (Luke 6:20 par; Mark 1:15); and the authoritative interpretation of the law attributed to Jesus under the rubric *egō de legō hymin,* "but I say to you" (Matt 5:21 etc.) together yield a total impression which approaches an implicitly pneumatic self-consciousness. Even though Jesus neither declared his deeds as evidence of the spirit nor held out the prospect of a universal gift of the spirit for the future, the community was able to see,

retrospectively in the light of the Easter event, confirmation of the working of the spirit in the activity of Jesus.

f. The Eschatological Self-Consciousness of the Church. The factors mentioned so far permitted belief in the present working of the spirit, but not yet awareness of a universal gift of the spirit. Faith in Christ placed Christians in a special position within Judaism, comparable to the sect of Qumran or the groups around baptizers.

It is likely that in the context of this eschatological self-consciousness the anticipated bestowal of the spirit for the end-time was thought to be taking place (Kuhn 1966: 138–39). In the OT tradition itself, the relation between the present and future eschatological spirit was not precisely established (Volz 1910: 93, 94 A1). The reception of Joel 3:1–5—Eng 2:28–32 (Acts 2:17–21; Rom 10:13, etc.) within the Christian community identifies the gift of the spirit as an event preceding the Day of the Lord (Acts 2:20b).

g. Phenomenological Proofs of the Spirit. E. Schweizer has steadfastly maintained as "historically assured" that the primitive Church experienced an outpouring of the spirit in some form (1952: 5; *TDNT* 6: 408; in agreement, Lohse *TDNT* 6:51–52; Goppelt 1978: 298; Kremer 1973:59). Historical analysis, however, demands the following verdict: "All such hypotheses have too little definite evidence in their support to ever become more than interesting possibilities" (Foakes Jackson and Lake 1933: 1.5.121). It has been shown above that in the Palestinian region glossolalia (Acts 2:1–13) would not have been perceived as proof of the anticipated spirit of the end-time. It is a counsel of despair to suspect a different ecstatic experience behind the event described in Acts 2:1–13 (Goppelt 1978: 298). None of the stated phenomena is unequivocal proof of the gift of the spirit. Experiences can only be interpreted in the context of a preexisting self-consciousness or framework of expectation. Historically, a process of interpretation moving back and forth between faith and experience is likely. At the same time, the group situation of the primitive Church and its eschatological ethos (mission, community, expectation of the Messiah, etc.) posed a situation where certain experiences could be understood as the workings of the spirit. In view of the overwhelming number of reports of pneumatic experiences within the early Christian literature of the first two centuries C.E., however, it should be noted that reports of pneumatic experiences do not necessarily always reflect real experiences but could very well have served other purposes as literary inventions (Harnack 1899: 515).

Once these preconditions are appreciated, belief in the outpouring of the holy spirit at or after Easter becomes plausible. Now we trace the development of this notion.

4. The Hellenists. Their eschatological claim to possess the spirit places the group of Hellenists in opposition to the Jewish-Christian community of Jerusalem. Although it is hardly possible to reconstruct an Antiochian source for Acts 6–7, we must nevertheless retain the notion of a preexisting tradition.

The reasons which led to the separation of the Christian Hellenists from the original Aramaic-speaking community probably were linguistic in nature. (Note that the body of leaders elected from among the Hellenists comprises men with exclusively Greek names [Acts 6:5].) The formation of a community for the sole purpose of worship is a common and perfectly legitimate process within Judaism (Hengel 1975: 178).

Historically it is likely that along with the linguistically motivated separation of the Hellenists, a simultaneous theological dispute took place, a dispute which can still be detected below the surface of the Lukan redaction. In the Lukan account, Stephen is portrayed as an early Christian pneumatic. His speech is characterized by "wisdom" and "the Spirit" (Acts 6:10); his deeds, known to all (v 8), are possible because he is filled with the spirit, a fact which the list of names (v 5) emphasizes by setting him apart from the other apostles. Luke linguistically adapted this image of Stephen to that of other pneumatics: *plērēs pneumatos*, "full of (the) Spirit" (Acts 6:3, 5, 8; 7:55; cf. Luke 4:1; Acts 11:24). Moreover, the combination of motifs, wisdom/spirit/working of miracles (Acts 2:22, 43; 7:36), expresses the Hellenistic ideal of the Christian pneumatic. The emphasis on the gift of the spirit is inseparably linked with references to criticism of the law (Acts 6:11, 13, 14; 7:51–53). Acts 6:11 raises the charge of blasphemy provoked by Stephen's utterances against Moses (= Torah) and God. Verse 13 attributes similar charges to false witnesses, but pointedly places criticism of the Temple first. Verse 14 has Stephen say further that Jesus will destroy the Temple and alter the ceremonial law which originated with Moses (*ethē*). The source, or tradition, is presumed by most to be contained in the general statements (v 11) (Conzelmann *Apostelgeschichte* HNT, 51; Hengel 1975: 187). Verse 14, however, is a deliberate variation of the Temple saying in Mark 14:58. It lacks the promise that a new temple will be built and is expanded to include an announcement of the future alteration of the ceremonial law. Roloff (*Apostelgeschichte* NTD, 112–13) surmises that these alterations in the Temple saying represent the interest and bias of the Hellenists. Critique of the Temple and the Temple saying of Jesus have been included, and with them have been combined a criticism and modification of the ceremonial law. That all this is still far from Paul's rejection of the law is perfectly clear to Luke, who renders the anti-Pauline accusations more brusquely (Acts 21:21, 18; 24:5). It can be presumed that the intended effect of this cultural critique was a focus on the true will of God in view of the end-time, similar to Jesus' critique of Temple and culture. The Hellenists, as returned Jews of the Diaspora, hold a more conservative view that separates them from Hellenistic enlightenment theology.

Mention of possession of the spirit in the Stephen narrative cannot be attributed exclusively to martyriological motives (Acts 7:55) but is part of the tradition. This is made plausible by the following considerations: (1) besides Stephen, Philip also belongs to the Seven; he too, the tradition stresses, had pneumatic characteristics (Acts 8:6, 13; 21:8–9); (2) the Temple saying of Jesus (Mark 14:58) omits reference to the building of a new temple. It is likely that among the Hellenists the Church was already spoken of as the new temple.

The mob justice for Stephen (Acts 7:56–57) culminates the persecution of the Hellenistic Christians, who subsequently embark on a mission to the gentiles in Phoenicia, Cyprus, and Antioch (Acts 11:19).

Pauline theology is rooted primarily in the Hellenistic

community of Antioch (Gal 1:21; Acts 11:19–20; 13:1). Since no direct sources for its theology are extant, only sketches of its ideas can be inferred from the traditions of Paul's letters (Köster 1982: 2.91–93). It must be remembered, however, that the community continued to produce original theology independent of Paul, and that all traditions and accounts do not point to Antioch. If one subscribes to the early date of 1 Thessalonians (Lüdemann 1980) it is likely that this letter most closely reflects Antiochian theology and the founding sermon in Corinth.

It is with the Hellenists and in the Hellenistic community that we must look for the roots of primitive Christian pneumatology. Early Palestinian Christianity, by contrast, maintained a basic aloofness toward the pneumatology evolving there.

5. Pneumatology in Pre-Pauline and Non-Pauline Communities. The primary sources of Antiochian pneumatology are formulas and formulaic statements in Paul's letters.

a. The Community and the Spirit: Formulaic Traditions. (1) "God had given us the spirit" (Acts 5:32; 15:8; Rom 5:5; 11:8; 2 Cor 1:22; 5:5; 1 Thess 4:8; 2 Tim 1:7; 1 John 3:24; 4:13). The following features are evidence for formulaic crystallization: (a) the author of the gift of the spirit is always God; (b) the gift is always described in the aorist tense (except 1 Thess 4:8; 1 John 4:13); (c) the gift of *pneuma* is described with minimal grammatical variation, e.g., articles, addition of adjectives, or in combination with appositions; (d) the object is predominantly *hēmin*, "us."

This suggests that a relatively fixed phrase, probably a formula (*ho theos edoken to pneuma hēmin*, "God has given us the spirit"), circulated in the communities. The phrase is older than the Pauline letters since Paul makes use of it secondarily, or rather, interprets it and in each case incorporates it into his own line of argument.

In the LXX, beyond the related statements of 1 Kings 22:23; 2 Kings 19:7; Isa 42:1; Ezek 11:19, particularly Ezek 36:26–27 and 37:5, 14, two passages deserve mention: *pneuma kainon (mou) dosō en hymin*, "I will put (my) new spirit in you (pl.)" (Ezek 36:26–27); *dosō pneuma mou eis hymas*, "I will put my spirit in you" (37:5, 14; both of these are 1st-person prophetic pronouncements of God).

A similar formula expressing assurance that God has given his spirit appears in hymns from Qumran (1QH 12:11–12; 13:18–19; 16:11; 17:17, 26). It is probable that the NT and Essene formulas each make independent use of the OT, since the respective contexts of the formulas differ (Kuhn 1966: 139). What is consistent, however, is that the gift of the spirit, a future gift in Ezekiel, is here a present occurrence which facilitates an eschatological outlook.

(b) "You have received the spirit" (John 20:22; Acts 2:33, 38; 8:15, 17, 19; 10:47; 19:2; Rom 8:15; 1 Cor 2:12; 2 Cor 11:4; Gal 3:2, 14; 1 John 2:27). It is the Pauline evidence which most likely displays the original formula (verb always in the aorist). The formula is used by Paul in his reference to the ongoing dispute with his antagonists.

The succinct, thematic character of both formulas suggests a social setting of proclamation, possibly baptismal catechesis (Paulsen 1974). The use of this formula in the Qumran hymns could suggest its origin within the Palestinian community. It is more probable, however, that it originated in a reflection on Scripture within the Greek-speaking community, because all the NT passages are found in the area of Hellenistic Christianity, and a positive relation between spirit endowment and fulfillment of the law—in contrast to the OT tradition—is missing.

(c) "The spirit of God dwells within you" (1 Cor 3:16; 6:19; Rom 8:9, 11; Eph 2:21; 1 Pet 2:5; *Ep. Barn.* 16:10). The formulaic origin of this sentence is still evident despite its secondary use and its combination with additional motifs. In 1 Cor 3:16; 6:19, for instance, Paul calls to mind a familiar subject of Christian preaching by using the rhetorical question "Do you not know?" The interpretation of this formula must not be based on its treatment in the Pauline context (in connection with the temple motif in 1 Cor 3:16; 6:19; antithesis of spirit/flesh in Rom 8:9). However, since the motifs of indwelling and temple are not consistently linked in Paul, we must insist on an independent origin of the formula.

As Paul's rhetorical question suggests, the social setting of this formula is probably early Christian catechesis and proclamation. The history of the motif points more clearly to the Hellenistic community than does the history of the two former formulas. The concept of the indwelling of God in the believer (Wis 3:14; 2 Macc 14:35; Philo *Somn* I 148–49) as well as that of the indwelling of the spirit (Philo *Heres* 264; Seneca *Ep.* 41:2; Lactantius *Inst. Div.* 6 25:3; *Corpus Hermeticum* 1:6, par. 329) have precedents in the Hellenistic world. This indwelling of the spirit, a first interpretation of the concept of spirit endowment, must be understood in terms of a substance. This is likewise suggested by its secondary connection with the temple motif. The return of the spirit to the eschatological temple anticipated in OT theology has become present reality within the community as the temple of God.

Thus, on the one hand, the temple motif is likely to refer to the OT Jewish expectation of the new eschatological temple (Ezekiel 40–48; Mal 3:1–4). On the other hand, the generally similar use of the motif in Qumran (1QS 8:4–8; 9:3–6; 11:8; CD 3:18–20) raises the question (with Klinzing 1971: 92–93), whether the decisive impetus for the motif's spiritualization was the separation from the Jerusalem Temple.

(d) 1 Cor 6:11. This Hellenistic Jewish-Christian, pre-Pauline baptismal tradition refers to a primary locus of the conveyance of the spirit (for form-critical classification, see Schnelle 1986b: 39). This tradition does not yet approach the later, mystery-like baptismal theology of the main Pauline letters (Reitzenstein 1977: 261) but does manifest a degree of liturgical crystallization (Plummer *1 Corinthians* ICC, 120) which makes it unsuitable for explaining the primary early Christian concept of baptism. The tradition contrasts the present state of salvation with the past, describing the former effectively as washing, sanctification, and justification. The adverbial construction *en tō onomati tou kyriou Iēsou Christou kai en tō pneumati*, "in the name of our Lord Jesus Christ and in the Spirit" (1 Cor 6:11), describes the means by which transition to the state of salvation is effected. This means is the invocation of the name of the exalted Lord over the baptizand, and the baptizand's dedication. The second adverbial construction, *en tō pneumati*, "in the Spirit," corresponds quite naturally,

because originally the naming had an exorcistic function and cleared the way for the baptizand to receive the spirit (Bultmann *Johannes* MeyerK, 142). In that sense 1 Cor 6:11 indirectly also suggests a conveyance of the spirit. Primarily, however, it is the power of the spirit of God to cleanse the baptizand which is emphasized, a function which originally was part of the rite itself.

b. The Function of the Spirit for the Community. Since there are no primary sources, and the tradition analysis of the letters is controversial, there can be no far-reaching hypotheses regarding the theology of the pre-Pauline Hellenistic Jewish-Christian community of Antioch. This community consisted of Jewish and gentile Christians who knew themselves called to render service to God in anticipation of the Messiah's imminent return, as the pre-Pauline tradition of 1 Thess 1:9 records. Their service to God also includes mission to the gentiles. Thus Paul, with his roots in Antiochian theology, emphasizes the pneumatic character of his mission in Thessalonica and Corinth (1 Thess 1:5–6; 1 Cor 2:4–5) and identifies his ministry to the gentiles as a sacrifice made holy by the holy spirit. As Luke reports (Acts 11:19–20), the Hellenists in Antioch, banished from Jerusalem, had formerly begun a mission to the Greeks. Historically, this probably refers to previous mission activity in Samaria and the coastal area of Palestine-Phoenicia (cf. the legendary tradition of Philip [Acts 8]). While the Jewish Christians in Palestine, having adopted the synoptic mission tradition, for the time being continue with their mission to Israel specifically (Matt 10:6; 15:24), the Hellenistic Jewish Christians approach the gentiles, in likely continuity with the orientation of their precursor, the Synagogue of the Diaspora (Hahn 1963: 15–18). The gift of the spirit is here perceived as empowerment for this service. The messengers thereby validate their eschatological claim to being empowered for a mission to the gentiles, a mission which, according to OT-Jewish tradition, was reserved for God's own eschatological action (Hahn 1963: 46; Käsemann 1970a: 87).

c. Christ and the Spirit. This Hellenistic Jewish-Christian community speaks of the gift of the spirit to the Messiah as well as to the community. Rom 1:3b–4 has long been recognized as a formulaic tradition of Jewish Christianity (Wilckens *Brief an die Römer* EKKNT, 56) which has undergone secondary redaction. With the first words of the sentence the community acknowledges the messianic descent "from the seed of David" (cf. *Pss. Sol.* 17:21; John 7:42; 2 Tim 2:8). However, in keeping with the kerygmatic tradition of resurrection (1 Cor 15:3–5(4), it emphasizes that only his resurrection from the dead is evidence of Jesus' sonship. This presumably is the prototype of the formula "designated Son of God . . . by his resurrection from the dead" (Rom 1:3b). Redaction-critical analysis of the passage warrants the conclusion that the contrast "according to the flesh"/"according to the Spirit" represents Paul's christological redaction of the older formula. In Hellenistic Jewish discourse, exaltation into the heavenly realm indicates only transformation into and participation in spirit-substance (Vos 1973: 80).

6. Jewish Christianity of Palestine. The Lukan portrait of the original Jerusalem community cannot be taken as evidence of the universal spirit-endowment of the early Palestinian community. Historical inquiry leads no further than a theologically shaped tradition. This point is highly controversial in the history of research: Goguel (1954: 113–14), Bultmann (*Johannes* MeyerK, 41), and others see the evolution of primitive Christian pneumatology as a product of the Hellenistic community. On the other hand, Käsemann (1970a; 1970b), Vielhauer (*NTApocr* 2: 426), and others, on the basis of form- and tradition-historical considerations, regard Palestinian Jewish Christianity as a pneumatically determined entity. It must be remembered, however, that the Jewish-Christian community in Palestine does not share the claim of its Hellenistic sister community of possessing the spirit of God, a claim, morevoer, which the gentile-Christian community broadens into the contention that they are actually living in the spirit (1 Cor 12:13; Gal 5:25).

In the Jerusalem community, according to von Campenhausen (1963: 196–98), even the form of community leadership by the Twelve, or rather by James and his successors, became a hindrance to a spiritual understanding of community. Later sources, moreover, never mention a spirit endowment of James (Lohmeyer 1936: 76, 98). The reference to Agabus (Acts 11:28; 21:10–11) in no way proves a universal spirit endowment of the Jerusalem community. It shows, rather, that as an occasional phenomenon, prophecy had not ceased in Jerusalem (*TDNT* 6: 819–28). The following observation is significant: the primary source of anti-Paulinism is the Jewish-Christian community of Jerusalem (Lüdemann 1983). Paul's adversaries accuse him (1 Cor 10:1, 10; 13:1–3) of not being endowed with the spirit. It is unlikely that they raise this charge in comparison with their own behavior; they rather seek to disprove Paul's own claim (1 Cor 7:40) and thereby to undermine his apostolic authority. This specific charge of lacking spirit endowment seems to originate primarily with the Corinthian enthusiasts and to have been seized upon by the Jerusalemites as an additional point of argument (Windisch *Der zweite Korintherbrief* MeyerK, 107; Lüdemann 1983: 125). In his reply Paul himself does not reflect a proven spirit endowment of the anti-Paulinists. Furthermore, in 2 Cor 11:4 he intimates that the preaching of his opponents does not impart the spirit which distinguishes Paul's communities. Paul's boast of ecstatic experiences (2 Cor 12:1) is proof of his own spirit endowment (Lüdemann 1983: 136–37); yet here, too, the only thing clear is the point of the debate: the "visions and revelations" which Paul's Jewish-Christian opponents deny he ever had (cf. 1 Cor 1:22). The point of contention is not the positive reference to these manifestations in Paul's self-characterization. On the contrary, Paul substantiates his apostolate as pneumatic and it is this basic position that the Jerusalem antagonists do not share. Their own authority is established by the letter of commendation and by their origin in Jerusalem (2 Cor 3:1, 10, 12; 11:22) (Käsemann 1969: 490).

In Luke 7:22 (= Matt 11:4–5) and 6:20 (= Matt 5:3; allusions to Isa 61:1), Q speaks implicitly (and in Luke 11:20 [= Matt 18:28] explicitly [pneuma in Matt is secondary]) of a functional spirit endowment of Jesus for his messianic office. In Luke 12:12 (= Matt 10:20) Christians are promised the spirit in the event of a trial. All further references to the spirit in Q are probably a result of retroactive influence of the Mark tradition on Q and thus

are presumably located later in time and written in the context of Hellenistic redaction.

In Luke 3:16 *en pneumati hagiō* (cf. Mark 1:8) is inserted into the image of the future baptism by fire. Luke 4:1 par may be prompted by Mark 1:12. The final clause of the prohibition against blaspheming the spirit (Luke 12:10 = Matt 12:32) conforms largely to Mark 3:29. While in Mark the phrase referred to the Beelzebul controversy (Mark 3:30), the Q version introduces a salvation-historical periodization (time of the Son of Man/time of the holy spirit) which sees the present as a time marked by the spirit. The parallels in Mark suggest that the quoted references to "spirit" were secondarily introduced into the Q tradition. Beyond that there is the form-critical aspect of the genres of the "disputation" and the "miracle story" in Luke 11:14–23 = Matt 12:22–30 = Mark 3:22–27, which are typical for Mark but atypical for Q. Therefore, there is no positive, unequivocal statement concerning a universal spirit endowment of the Christians and the Christ in the basic material of Q prior to Hellenistic redaction.

Schulz (1972: 63–64) concurs but proceeds on the assumption that the Q community lives in the knowledge of the being endowed with the spirit of Jesus, not of God (!). This spirit, according to Schulz, intensifies the apocalyptic expectation into prophetic enthusiasm which manifests itself in the use of "but I say to you" in the beatitudes and "woe" in the *ius talionis*, and the amplification of Torah (1972: 57–66). However, inferring a consciousness of participation in the spirit of Jesus from an intensification of traditional prophetic forms of speech is a dubious undertaking. Tradition-historically, an association with prophecy is questionable (Polag 1877: 26–27). And the attribution of the body of sayings to either Palestinian or Hellenistic communities also has to be reexamined (cf. Berger 1970; Boring 1982). Enthusiasm is based on the present activity and expected imminent return of the Son of Man. While the spirit is experienced as power in special situations (Luke 4:1; 12:12), the Q community does not anticipate fire- and spirit-baptism until the Son of Man returns as judge (Matt 3:11 = Luke 3:16). The prophetic post-Easter enthusiasm described by Käsemann and Schulz does not have its basis in pneumatology as in the Hellenistic communities (Corinth), but is the result of proclamation and of the anticipation of the return of the Son of Man as judge.

Palestinian Jewish Christianity seems to have maintained a distance from a distinctly pneumatic Christianity. Thus, Matt 7:22–23 relegates prophets and miracle workers to the periphery and inveighs against a lack of work righteousness (cf. Strecker 1985: 171–75). Mark 9:38–40 knows of exorcisms in the name of Jesus which do not take place in accordance with following Jesus, that is to say here with following the apostles (Bultmann 1979: 23). In 2 Corinthians, Galatians, and Philippians, Paul must defend his pneumatic gospel against the nomism of Jewish Christians which appears unconscious of spirit endowment. On the contrary, the Judaizing Christians seek to establish a position of authority over the universal community which undermines its charismatic character.

The sources for post-NT Jewish Christianity likewise lack positive evidence concerning the relative significance of the spirit within the community (cf. Strecker 1981: 203–4; Lohmeyer 1936: 76; von Campenhausen 1963: 196–98). The reasons for this situation are probably basic. Christological differences between Palestinian and Hellenistic Christianity could have led to differences in the understanding of spirit. Whereas Hellenistic Christianity was open to perceiving paranormal phenomena as spirit-caused (Volz 1910: 198), Palestinian Christianity was more reluctant to see enthusiastic states as manifestations of the spirit (Schlatter 1927: 27). These differences soon coalesce with other disagreements (mission to the gentiles, question of circumcision, doctrine of justification).

7. Spirit in Paul. a. 1 Thessalonians. This letter assumes a special place as a document of early Pauline theology (Schade 1984: 115–16) and must be seen as removed in time from the later Pauline letters.

Beyond the anthropological use of *pneuma* (5:23), there are the following three aspects which characterize early Pauline theology:

(1) The gentile-Christian community of Thessalonica belongs among the *eklogē*, "chosen," as brethren "beloved by God" (1:4) (customarily, *eklogē* refers to Israel: Rom 9:10; 11:5, 7, 28; however, see 1 Cor 1:27–28). Historically, their calling is based on the proclamation of the gospel which, through the mediation of the word, revealed the power of God, the holy spirit, and confident hope (concerning the contrast logos/dynamis, see 1 Cor 2:2, 4; 4:13). The *eklogē* of the community, wrought by the spirit, in turn leads to imitation of the apostle and of the Lord, and to joy wrought by the spirit. The condition of the gentile-Christian community is the work of the manifest spirit of God (in principle, later, Rom 15:16–20).

(2) The ethical precept, the will of God, is described as "sanctification," as such behavior is manifested in the renunciation of immorality and dishonesty (4:3–6). Because of their calling, the members do not continue in the previous condition of "uncleanness" but enter into "sanctification" (4:7). Human and divine aspects of sanctification are not sharply distinguished (4:3–6 stresses the aspect of demand, 5:23 that of gift). Both aspects are pneumatologically linked in 4:8. God continuously pours his spirit into the faithful (reminiscent of Ezek 36:27; 37:14). The gift of the holy spirit is related to the goal of sanctification.

(3) 1 Thess 5:19–22 forms a sayings unit separable from its surrounding context. Structurally, two prohibitions (vv 19–20) and two commandments (vv 21b–22) frame an admonition to "nevertheless weigh everything" (*RAC* 11: 130–32). The statement of Paul reads: prophets are to be highly esteemed if they occur within the community as a work of the spirit. The admonition to weigh everything is not to be limited to the problems inherent in prophecy. As a form of rhetorical conclusion, it urges the rejection of everything evil (*RAC* 11: 131) and leaves this task to the judgment of the whole community rather than individual members (1 Cor 12:10). Paul commends prophecy as the essential gift of the spirit knowing that in the Hellenistic community it was held in low esteem when compared with glossolalia (cf. 1 Cor 14; on the topic see *RAC* 11: 131).

The pneumatology of 1 Thessalonians can be distinguished from the pneumatology of the later Pauline letters. The characteristic contrasts in these later writings (*pneuma/sarx*, "spirit/flesh," *pneuma/gramma*, "spirit/letter,"

pneuma/nomos, "spirit/law") are not yet present. The spirit as "spirit of God" is still separate from the later christological qualification (1 Cor 15:45; 2 Cor 3:17; Rom 8:9). Spirit endowment via baptism is not mentioned (the imperfective aspect of the verb *didonta* "gives" [1 Thess 4:8], furthermore, would contradict the notion of a single event of impartation). It is true, however, that in this earliest letter of Paul there is an association of spirit and mission (1:5–6), ethics (4:8) and prophecy (5:19–20). The concept of spirit in 1 Thessalonians shows strong OT and Jewish influence (imitation of Ezek in 4:8).

Romans 8 is a precis of Pauline pneumatology. The statements of this chapter are the product of a twofold dispute with an enthusiastic interpretation of spirit endowment as something sacramentally conferred which lifts believers out of the secular realm and promises them participation in the heavenly glory (1 Cor) and with a Jewish-Christian nomistic reaction to the Pauline mission, which includes the relation of spirit to letter and law (2 Corinthians; Galatians; Philippians).

b. Dispute with Pneumatic Enthusiasm. The textual basis is primarily 1 Corinthians; 2 Corinthians reflects influence of Jewish-Christian agitation against Paul within the Corinthian community and refers to a different situation. 1 Thessalonians interpreted spirit endowment functionally as the power of proclamation and sanctification for the time prior to the Parousia. In the environment of the Corinthian community a view emerged which saw "spirit" as a salutary substance which is conveyed to the believer, or rather into which the believer is transplanted. This is where the self-characterization *pneumatikos* appears (1 Cor 2:13; 3:1; 12:1; 14:37), where believers are conscious of having the spirit of God (7:40). If 15:46 reflects a view held by the community, it highlights a consciousness of living in the spirit rather than in the flesh (see Sellin 1986: 175–81). Slogans which evidence this eschatological consciousness of participation in the spirit are conspicuous: "all things are lawful" (6:12; 10:23); "all of us possess knowledge" (8:1); "there is no resurrection of the dead" (15:12). The intellectual slogans are congruent with a communal practice which turns out to be enthusiastic pneumatism: devaluation of bodily existence (6:12–20), libertinistic or ascetic marriage ethics (7:1–40), an individualistic conception of liberty (10:23; 11:1) and emphasis on an individual's gifts as manifestations of spirit endowment (14:1–40). Paul's evaluations ironically confirm the self-definition of the community: "Already you are filled! Already you have become rich!" (4:8); they are puffed up, Paul accuses (4:6, 18–19; 5:2; 8:1). Superimposed on this condition is a factious spirit (1:10–17; 3:3) which threatens the unity of the community. The factions are probably based on a high esteem of the baptizers Apollos and Cephas (1:12). Paul gives thanks, on the other hand, that his own practice, hardly one of baptizing, could not lead to schism (1:14–17). The contrast between his preaching and that of his opponents is stated in terms of *logos tou staurou* versus *en sophia logou* (1:18–2:16).

The material concept of *pneuma* is evident in an essentially pre-Pauline baptismal tradition, 1 Cor 12:13: baptism incorporates the baptizand into the body of Christ and nourishes him with the spirit. Baptism works a substantive transformation through transferral into the sphere of the *Kyrios*, "Lord" (pre-Pauline baptismal tradition may be inferred from Rom 6:4 and Col 2:12). A further pre-Pauline baptismal tradition in 1:30 locates the existence of the community within the sphere of the *Kyrios*. Salvation consists in the sacramental incorporation into the pneumatic *Kyrios* and does not require a bodily resurrection yet to come (15:12).

In order to explain this Corinthian pneumatology, researchers have proposed primarily external influences and have pointed to the influence of mystery religions (Reitzenstein 1977), gnosis (Schmithals 1969), Hellenistic materialistic thinking (*TDNT* 6: 415–16) and Greek orgiastic practices (Leisegang 1922: 120). The reference to Apollos who, as an Alexandrian (Acts 18: 24–25) had combined Christian theology and Alexandrian philosophy—a precursor of later gnostic practice—suggests an intermediate position between external and local influences (Sellin 1986). It must be granted immediately, however, that our knowledge of Apollos is minimal (Acts 18:24; 19:1; 1 Cor 1:12; 3:4–22; 4:6; 16:12) and that his dependence on Alexandrian philosophy is mere speculation. Accordingly, introduction of this philosophy into Corinth can hardly be demonstrated.

Rather than explaining pneumatic enthusiasm in Corinth through external influences, Vielhauer (1978: 139), adopting Lütgert's position (1908), correctly views this pneumatism as primarily an internal development in the theology of the community and only secondarily as external influence. This raises the question of Paul's own role in this development (likewise PWSup 14: 399; *TRE* 12: 191; Lüdemann 1983: 125). Here the baptismal rite is interpreted for the first time as an efficacious event which imparts justification, sanctification, and salvation and, beyond 1 Cor 6:11 (baptismal tradition), places the baptizand *en Christō*, "in Christ" (1:30). This is of fundamental significance for understanding the pneumatology of the Corinthian community. Since 1 Thessalonians shows no trace of this baptismal theology, its origin at Corinth is probable (Holtzmann 1911: 451; Bultmann *Johannes* MeyerK, 42; Käsemann 1970a: 121–25; Becker 1976: 61–65; comprehensively, Schnelle 1986b: 34–53). This may have been the social setting of the parting formula of Rom 8:9c. This baptismal theology may also be understood as a solution to the problem of the death of members of the community. While 1 Thessalonians 4, in anticipation of the impending second coming (4:17), emphasizes the future aspect of being "with the Lord" for both the living and the dead, this baptismal theology by contrast includes both the living and the dead of the present in the body of the Lord and can therefore assert that there is no resurrection of the dead (1 Cor 15:12). The effects of this new existence are knowledge (1 Cor 8:1), participation in the reign of God (4:8), suspension of former customs (11:1–16), and speaking in the heavenly language (14:1–40).

This sacramentally mediated incorporation into the Christ who was himself exalted into the sphere of the spirit is the determinant factor in explaining pneumatism. It does not derive directly from Paul, who baptized only in exceptional cases, as 1 Cor 1:13–17 attests, and who explicates his baptismal theology only through retrospective reference to Corinth (Romans 6). Other Pauline concepts, however, have been incorporated. The indwelling of the

spirit was one of the subjects of his founding sermon (1 Cor 3:16; 6:19). Most importantly, Paul does not dispute a spirit endowment of the community. In principle he commends their spiritual riches (1:49) and admonishes them to continue striving for the gifts of the spirit (12:31; 14:1, 12). In Romans 6, the baptismal theology itself is the starting point for Paul's exposition.

Pre-Christian enthusiasm (1 Cor 12:2) and the Hellenistic concept of *pneuma* as substance may certainly be considered secondarily as external factors. The application of the idea "as Christ, so the Christians" to the baptismal rite (Rom 6:3–4; Col 2:12), finally, points to the influence of the mystery religions.

c. Pauline Dispute with Pneumatic Enthusiasm. Pauline criticism is aimed primarily at refuting an enthusiasm of transcendence. In opposition to the latter, 1 Corinthians 15 develops a theology of the resurrection of the dead by analogy to God's raising of Jesus (6:14; 15:20–22); but it is a future hope yet to be realized. The Corinthian position is simply reversed in 15:46: "it is not the spiritual which is first but the physical." This future cannot be experienced in this world but only *ex ouranou,* "from heaven" (v 47). The gift of a "spiritual body" is a transference into the future of the "last Adam" (1 Cor 15:45), who is raised into the heavenly sphere and made a spiritual body. By thus maintaining an apocalyptic-eschatological perspective, Paul dealt a vital blow to transcendence enthusiasm. And further statements now have to take on the soteriology of the ontological baptismal statements, the anthropology of the satisfied, the libertines' ethic, and the ecclesiology of the individualists. In principle, Paul affirms the baptismal theology: baptism is the occasion of the bestowal of the spirit and of the incorporation into the salvific sphere *en Christō,* "in Christ." Yet the eschatological reservation does not invalidate the ethical demand. It is especially in the realm of physical existence that the spiritual life manifests itself. Thus, in 6:19 Paul inserts *soma,* "body," into the traditional statement and designates it as the place of the temple, even though the believers are already "members of Christ" (6:15). Into the pre-Pauline baptismal formula Paul inserts the purpose clause "so that . . . we too might walk in newness of life" (Rom 6:4), which recurs in slightly altered wording: "walk . . . according to the Spirit" (Rom 8:4; cf. Gal 5:25). In opposing enthusiasm, Rom 8:11 includes mortal bodies in the hope of the resurrection. In contrast to the ontological claims of the baptismal theology, this also indicates that the believer is at the same time both old and new human being. The claim of *gnosis* by the "spiritual" is likewise deflated (2:10–16; cf. Wilckens *Römer* EKKNT). Despite the gift of *pneuma,* a person can still turn out to be *psychikos,* "unspiritual, worldly," or *sarkikos,* "carnal." In early Pauline theology the relationship between Christ and the spirit had remained unclear. Here, however, Paul defines the ascended Christ himself as *pneuma zōopoioun,* "a life giving spirit" (1 Cor 15:45).

Even though the Corinthian enthusiasm of transcendence proved to be divisive for the community (1:10; 3:1–5; 8:12; 10:24; 11:18), Paul validates the spirit manifestations of the community as genuine gifts; but they are differing apportionments of the spirit and subject to critical evaluation (12:10) and to the supreme test of that love whose constant intention is the edification of the body, the Church (3:9; 14:3, 4, 12, 26). With the Church seen as one body with many members (12:12), baptism leads to the service of the one body, rather than to freedom from constraints (pre-Pauline in Gal 3:26–28; 1 Cor 12:13). It is not individual pneumatics who represent the community: rather, the community as a whole has received the spirit in baptism and is part of, and subordinate to, the body of Christ (10:17; 12:27). Finally, the concept of edification becomes the critical norm, and self-aggrandizing gifts such as the glossolalia, prized in Corinth, where uninterpreted are to be subordinated to prophecy (14:4, 39).

d. Dispute with Jewish-Christian Nomism. *2 Corinthians.* It is likely that Paul's opponents in 2 Corinthians were of Jewish-Christian origin (2 Cor 11:22–23; 11:5; and 12:11; Lüdemann 1983: 125–43), even though it seems they did not demand circumcision and Torah obedience. In the biographical statement of 12:1–10, Paul answers his opponents' chief accusation (10:1, 10; 13:3) that he did not demonstrate himself to be the spirit-endowed person he claimed to be. He disdains the immediate use of letters of commendation (3:1; 5:12; 10:12) in favor of vindicating the pneumatic character of his apostolate (2 Cor 3). Of even greater importance is the passage in which he describes his apostolic office (2:13–7:4). The personal statement in 2:16b–3:6 refers to Paul's sincerity (2:16b–17), to the existence of the community as a letter of commendation (3:1–3), and to his divinely endowed qualification for ministry (3:4–6). Verse 3c extends the metaphor of the letter of recommendation by an allusion to the historical antithesis "old covenant/new covenant" (referring to Jer 31:33) which v 6 employs to intensify the contrast of "letter" with "spirit."

The verses which follow, 7–18, have long been recognized as a "Christian midrash" on Ezek 34:29–35 (Windisch *Der zweite Korintherbrief* MeyerK, 112). In contrast to Schulz (1958), our task here is not to discover, through literary criticism, a prototype which might shed light on the theology of the opponents (for a critique, see Luz 1968: 130). The contrast of "letter" and "spirit" (also Rom 2:27–29; 7:5), appearing here for the first time in Pauline writings, denotes both two contrasting powers and two opposing sides. The consequence of "the letter" is death (v 6), but the consequence of "the spirit" is life (v 6; cf. vv 7, 9). The ministry of the apostle constitutes a fulfillment of the promise of Exod 34:34: his ministry is directly from God and lacks the separating "veil" (v 16). This is the way the apostle is different from Moses (v 13), and the Christian community from Israel (v 18); Israel is "veiled" in its reading of the OT (v 14). The removal of the veil through Christ (v 14) makes it possible to enter the sphere of *pneuma* and exit the deadly sphere of *gramma.* Acceptance of this "Lord" (v 16 harks back to v 14, Christ) places the believer in immediate eschatological relation to God, the sphere of the life-creating *pneuma.*

Galatians. The gentile-Christian community which Paul founded in Galatia exists in the spirit. Six times within his *probatio* 3:1–4:31 (Betz *Galatians* Hermeneia, 16–23), and always at critical points, Paul reminds the community of this new existence. In 3:1–5 he refers to their reception of the spirit as a result of their obedience in faith (3:2–3) and to God who, since the time of that spirit endowment, continuously grants the spirit and works miracles (3:5).

Gal 3:14 summarizes the arguments of the first part of the Abraham example with a Christian interpretation: the promise of blessing given to Abraham is made universally inclusive (3:14a) and its content is the gift of the spirit. The explication of sonship (4:1–5) is framed by two traditional passages which corroborate the pneumatic existence of the community: the baptismal tradition in Gal 3:26–28 (compare with 1 Cor 12:13) and the "Abba" saying in 4:6, which brackets present sonship, past bestowal of the spirit, and present effect (for the passage's traditional character see Luz 1968: 282). Both 3:14 and 4:6–7 demonstrate the fulfillment of the promise within the gentile-Christian Church through the gift of the spirit. In a similar way 4:29 contrasts birth "according to the flesh" with birth "according to the Spirit" in order to Christianize the present gentile-Christian community as a pneumatic entity.

After the apostle's departure, anti-Paulinists who insisted on observance of the Jewish law (4:21; 5:4), circumcision (5:2; 6:12–13), and observance of the Jewish religious calendar (4:10) infiltrated the community. (On the nature of Paul's opponents in 2 Corinthians, see CORINTHIANS, SECOND EPISTLE TO THE.) In dealing with these opponents, Paul formulates his doctrine of law and justification for the first time within a context of polemic (Strecker 1976: 257). The transferral of the community from the realm of the law to a condition of the liberty of the children of God has effected its participation in the spirit of God (3:14; 4:6). Thus, the actualization of faith can take place only in the sphere of this liberty and this spirit. A reintroduction of legal rules would betray this condition and would be tantamount to a return to slavery (4:9; 5:18). Refusal of a complementary relationship between law and spirit does not lead to unbridled libertinism. The boundaries of freedom are determined by the contrast between the spheres of "flesh" and "spirit" (5:16–25) which are temporally irreconcilable (5:17) since "law" itself leads back to the sphere of "flesh" (compare 5:17 and Rom 7:7–11, 15, 23). The tables of vices and virtues set out respectively the "works of the flesh" (5:19) and "fruits of the spirit" (5:22).

Betz (1974: 92) took the "naive trust in the spirit" as a basis for locating Galatians at the beginning of the apostle's work, certainly before the apostle's Corinthian experience (in agreement, Hübner 1982: 57; Köster 1982: 2.53; at variance, Lüdemann 1980: 273). In all phases of his work, however, Paul reiterates the fundamental exhortation to strive for the spirit (1 Thess 5:19; 1 Cor 14:1, 39; Gal 5:16–25; Rom 12:11). Moreover, it is especially the spirit references in Galatians 5 which most closely parallel Romans 8 (Paulsen 1974: 67), even though other differences clearly demonstrate a more considered approach for Romans.

Philippians. In the fragment of a letter to the Philippians which starts at 3:1b, Paul contends for the last time with opponents of a Judaizing Christian origin. The term *kakous ergatēs,* "evil-workers" (3:2), relates them to those agitators named in 2 Cor 11:13, but clearly makes the question of circumcision (3:2–4) central (Gnilka *Philipperbrief* HTKNT, 211–18).

The pointed reply of Paul (3:2) deprives the opponents of the distinction of as well as the demand for circumcision, and, interpreting it figuratively in a play on words, transforms it into a mark of the Christians ("we are the true circumcision" 3:3). The metaphorical extension of circumcision as an ethical symbol (Deut 10:16; Jer 4:4; 9:25; 1QS V 5:25) means that insistence on circumcision fails to appreciate the eschatological position of the community. Outward circumcision is set aside (Rom 2:28): circumcision of the heart is wrought by the spirit "inwardly" (Rom 2:29; Col 2:11). The opponents' demand that believers be circumcised would insist on linking the old and new condition of the community and merely revalidate "confidence in the flesh" (3:3). To counter this, Paul exhorts the community to reorient their thinking (Phil 3:15) toward their newly given Christian status.

Romans. Paul's doctrine of the spirit is most fully expounded in Romans. The body of primitive Christian formulas which surfaced in the dispute with enthusiasts and Pauline opponents has been incorporated in Romans as well. In the style of a dialogue (6:3; 7:1) addressing both Jewish and Christian interlocutors, the letter probes the relationship between law and spirit. In Romans, Paul values *nomos,* "law," more highly than he did even in Galatians (Hübner 1982).

Rom 7:1–6 describes the "change of regime" from "law," which brings enslavement to sin and flesh, to the service "in the new life of the Spirit" (7:5–6) which took place in baptism.

7:7–25 describes previous pre-Christian existence (7:5); 8:1–17, the new spiritual condition (7:6). 8:1–4 here explains for the Christian the meaning of the law which no longer enslaves to sin. In 8:5–8 Paul contrasts an orientation according to the flesh and an orientation according to the spirit. In 8:9–11, 12, and 13–17 he describes consequences of the new life in the spirit. Paul uses the opposition then-now to describe the present condition of the Christian as being dead to the law (7:4) and liberated from the law (7:6), in analogy to the images in 7:1–3. This basic notion is further developed in 7:7–8:17. Exegetes argue, however, whether *nomos,* "law," according to Paul, is completely abolished as a norm for the Christian (Käsemann *An die Römer* HNT, 181) or whether it is the power of the spirit which is supposed to facilitate the fulfillment of the *nomos* (Wilckens *Römer* EKKNT, 119).

While the image in vv 1–3 and the arguments in vv 7–11 are concerned with the individual command, in 7:6, Paul explains the liberation from *nomos* specifically as liberation from *gramma* "[the] letter." It is not the law, therefore, which is on the side of death, but sin which inhabits the human being as a power (7:23) and which has reference to the law (7:8, 11, 13). If, therefore, the human being is identified with *sarx,* "flesh," then the law is holy and the commandments are just and good (7:12); indeed, the law is "spiritual" (7:14) in contrast to the human carnality.

With Christ, redemption from the snare of law, sin, and flesh (7:23–25a) is accomplished. Consequently, the accusatory role of law is canceled. Liberation from the "law of sin and death" was brought about, as Rom 8:2 explains, by the "law of the Spirit of life in Christ Jesus." Many exegetes read this "law" in the figurative sense, as norm (Bultmann *Johannes* MeyerK, 260; Käsemann *An die Römer* HNT, 205; Paulsen 1974: 64; Räisänen 1979–80). Yet the figurative use of *nomos* is almost nonexistent in Greek literature and

at best has parallels only within Pauline writings (Rom 3:27; 7:23; Gal 6:2). On the other hand, vv 2b–4 clearly speak of *nomos* as Torah, an unambiguous figure. The broader context should also be considered. According to Rom 7:2–4, until Christ the law was weak because of the flesh. Since *sarx*, "flesh," was judged in Christ, and Christ's mission consisted in freeing *nomos* from *sarx*, the demands of the law can now be fulfilled in the realm of life in the spirit.

Nevertheless, this does not reinstate the *nomos* as absolutely valid. The ethical statements in Paul's letters demonstrate that he concurs with the Hellenistic Jewish tradition in systematically applying the love commandment to the law (Gal 5:14; Rom 13:8–10), and that he is able to embrace the pagan ethic when it comes to portraying the content of the will of God (Strecker 1978).

In contrast to *sarx*, which works death (7:13; 8:6), *pneuma* effects "life and peace" (8:6). While in 8:5–8 "then and now" are contrasted once more, the following section (8:9–11) provides an ontological description of the state of salvation. Here Paul builds his argument exclusively with traditional formulations. The effect is that the statements here are not quite consistent, although their goal is: those who believe are in the sphere of the spirit; the spirit, Christ himself, dwells in the believer. Rom 8:10 may approximate early Pauline statements (1 Cor 5:5) which dualistically separate flesh and spirit. But v 11 adjusts this statement to reflect a more holistic theology of resurrection.

In congruence with the antienthusiastic arguments in 1 Cor 3:16 and 6:16, Paul concludes that the state of salvation "in the Spirit" is demonstrated in the sphere of the body, which indeed shall be accorded the high honor of resurrection. Flesh continues to exist as a contrary power. However, it can no longer misuse the letter of the law, from which the Christian has been liberated (Rom 7:6). At the same time, the Christian can combat it since it is no longer flesh which lives within him (Rom 7:17, 20), but Christ and the spirit. To return to "life according to the flesh" would be a manifestation of having left the sphere of Christ's rule, and its consequence would be future death (Rom 8:10).

e. Aspects of Pauline Pneumatology. The primitive Christian starting point is critical: the latter-day outpouring of the spirit which was anticipated in OT and Jewish theology has been realized in Christ and his community. Although Paul as a Jew shared this anticipation in a specific form, only traces of the pneumatology of a pre-Christian Paul can be inferred. It is also unlikely that at the inception of his mission Paul would have had at his disposal a fully formed pneumatology (according to Schnelle 1986a: 219; 1986b: 112). Paul's theology of the spirit rather expands from the primitive Christian doctrine of the eschatological gift of the spirit into his distinctive teaching. The development can be traced in the three phases discussed above: his early theology, represented in 1 Thessalonians; his dispute with pneumatic enthusiasm; his dispute with Jewish-Christian nomism.

The conclusions which Paul drew from the fundamental conviction that an endowment of the spirit had taken place remain unchanged in all three phases:

(1) Proclamation of the gospel is wrought by the spirit and (a) it is addressed to the gentiles (1 Thess 1:4–5; Gal 3:14; Rom 15:16); (b) it is accompanied by powerful phenomena (1 Thess 1:5; Gal 3:5; Rom 15:18–19); (c) it thus inspires faith (1 Thess 1:6–7; 1 Cor 2:9; Gal 5:22); alternatively, faith receives the spirit (Gal 3:2, 5, 14; 5:5).

(2) In all three phases of Pauline pneumatology the gift of *pneuma* is parallelled by a pledge "to walk according to the spirit." It is inaccurate to claim, however, that Paul was the first to propose a direct link between spirit and ethic (Gunkel 1909: 71). Even OT and Jewish thinking saw latter-day spirit endowment as also directed toward latter-day behavior (Bousset 1901: 760–61; Ezek 36:26–27; Ps 51:12–13). Hellenistic Judaism also emphasized the ethical significance of the spirit (Wis 1:5; 7:20; Philo *Leg All* I 34–35; *T. Benj.* 8:2). Finally, the pre-Pauline tradition of 1 Cor 6:11 already links liberation from a sinful past to orientation toward a new life. In 1 Thess 4:8 the gift of *pneuma* is related to the obligation of holiness. Physical existence is the locus of the spirit (1 Cor 3:16; 6:19) and leaves no room for immorality. Gal 5:16–25 and Rom 8:1–17 define the Christian life as walking in (or according to) the spirit.

(3) In all phases Paul stresses the gift of prophecy as a special gift of the spirit (1 Thess 5:19–20; 2 Cor 12:10; 13:2, 8; 14:3, 6, 21, 31; Rom 12:6). 1 Cor 12:28–29 and 14:37 suggest that the prophets of the community are resident rather than itinerant prophets. Their function as described in 1 Cor 14:3 is to speak to the community "for their upbuilding and encouragement and consolation," so that "all may learn and all be encouraged" (14:31). Prophecy is distinguished technically from glossolalia through its orderly procedure (4:29–33) and intelligible speech (4:19–20). Prophecy takes place in proportion to faith (Rom 12:6).

The dispute with pneumatic enthusiasm leads to clarification of the relationship between pneumatology and Christology, eschatology, anthropology, and ecclesiology.

The denial of physical resurrection resulted from an overvaluation of participation in *zoē*, "life," via possession of the spirit, and from an undervaluation of the difference between *soma psychikon*, "physical body," and *soma pneumatikon*, "spiritual body." The enthusiasts saw transformation in mystical terms as incorporation into the exalted body of Christ. Paul concurs that *zoopoioun*, "being made alive," does take place in the sphere of the Christ but maintains that it does so in the future resurrection. Accordingly, being in Christ is conceived historically. It has its beginning in baptism in Christ and is consummated in the resurrection with Christ. The polemic emphasis in 1 Cor 2:16 and the traditional departure formula of Rom 8:9c suggest that the correlation of Christ and the spirit first occurred in the context of pneumatic enthusiasm. Through an historical differentiation Paul distinguishes his interpretation from an identification of Christ and spirit. Further correlations of Christ and spirit in later letters (2 Cor 3:17; Gal 4:6; Phil 1:19) are not pivotal and are contingent in part on the larger context. This opposes Bousset's famous postulate (1926: 112) that 2 Cor 3:17 is the heart of Pauline christology.

(b) Since the gift of the spirit—existence *en pneumati*—does not implicitly include the *eschaton*, the "firstfruits of the Spirit" (Rom 8:23) and the "seal of the spirit" constitute a reservation (2 Cor 1:22; 5:5). The spirit is a down payment and sure indication of the redemption to come

(2 Cor 5:5; Rom 8:23) and is thus intended as gift for the time between baptism and redemption.

(c) In anthropological terms this means that the gift of the spirit achieves its object not merely in a transformation of consciousness, but through action in the present and in universal liberation in the future (Rom 8:21–23). Since human life is always determined by an indwelling power (Rom 6:12; 7:1, 17, 20; 1 Cor 3:16; 2 Cor 6:16), this power is manifested in the sphere of *soma* (Rom 6:13; 7:23–24; 1 Cor 6:17).

(d) Finally, the dispute with the enthusiasts yields some ecclesiological conclusions. The community is not composed solely of individual pneumatics (1 Cor 3:1; 14:37); spirit is related to body (1 Cor 6:13–17; 12:12–13), which takes its form as the body of Christ within the entire community (1 Cor 12:14, 27). In this way it is possible to appreciate the diverse gifts as charisms of the one spirit (1 Cor 12:7–11; Rom 12:6–8) insofar as they do not conflict with the norm of edification (1 Cor 14:5, 12). In order to counter enthusiasm by introducing the term *charismata,* "gifts," to replace *pneumatika,* "spiritual gifts (marg. persons)," a term which was probably more current in Corinth (12:1; 14:1), Paul also creates a conceptual distance between the cause and effect of the spirit.

The dispute with Jewish-Christian nomism deepened the insights previously gained. The results of that dispute are basically unrelated to pneumatology. As a consequence of the dispute that the doctrine of justification could be formulated on the basis of the pneumatic doctrine of redemption (Strecker 1976), a sharply defined concept of law in the context of anthropology was developed (Hübner 1982). The combination of indicative and imperative in formulaic statements (Gal 5:16, 25; Rom 8:4, 14) was employed by Paul as a vehicle for ethical argument.

Rom 8:26–27 ascribes to the spirit the function of intercessor which otherwise had been reserved for the Son (Heb 7:25; 1 John 2:1).

Beginning with the Corinthian correspondence, the view that life in its entirety is determined by Christ and the spirit is expressed in antitheses: "spirit"/"flesh" (Gal 3:2–5; 6:8; 4:29; 5:17; Rom 1:4; 8:4–5, 9, 13; Phil 3:3; cf. also 1 Cor 3:1); "spirit"/"letter" (2 Cor 3:6; Rom 2:19; 7:6); "freedom"/"slavery" (Rom 6:18; 8:21; Gal 5:1); "grace"/"law" (Gal 5:4; Rom 6:14).

8. The Deutero-Pauline Letters. In Colossians, christology assumes a more prominent place in comparison with statements relating to the spirit (Schweizer 1982). Ephesians, however, though dependent on Colossians, places great weight on matters of the spirit but subordinates its testimony to a characteristic ecclesiological perspective (Schnackenburg 1973). When Col 2:18 is seen as the kerygmatic heart of the letter (Mussner *Brief an die Epheser* ÖTK, 88) then gentile and Jewish Christians are viewed as having access to the Father (note here the already triadic form!) through one spirit (probably christological rather than anthropological; *TDNT* 6: 443). The influence of the pre-Pauline and Pauline traditions is still seen in the emphasis on one spirit (Eph 4:4–5), the inclusion of the temple motif (2:22), and the model of "then/now" (3:5). Even though Ephesians specifically emphasizes the present nature of salvation specifically with the help of pneumatology (Mussner *Brief an die Epheser* ÖTK, 27), the ethic of the letter nevertheless manifests a notion of spiritual growth (1:17; 3:16; 4:23; 5:18). The spirit, accordingly, is both a past gift in baptism (1:13; 4:3c) and a present reality capable of decrease (4:30) or increase (5:18) in quantity. Ephesians does not relate spirit to the idea of ecstasy.

9. Hebrews. Most of the references to *pneuma* in Hebrews are dependent on Jewish or Christian tradition. The terminology is uneven. In 1:14, *pneumata,* "spirits," refers to angels; in 12:23, to the deceased. The name for God, "Father of spirits" (12:9), is formulaic and has an OT-Jewish history (Michel *Brief an die Hebräer* MeyerK, 442–43). In 3:7, 9:8, and 10:15 the holy spirit is considered the author of scriptural passages. Hebrews 2:4 names signs and miracles, powers and endowments as gifts proceeding from God. The formulaic character of the phrase argues against its being a direct reference to pneumatic experiences. Participation in the spirit is mediated through the sacraments (6:4–6). Apostasy precludes the possibility of second repentance. The contrast of sacrifice under the old covenant and sacrifice in the person of the mediator Jesus Christ illustrates the surpassing worth of the latter through the implicit antithesis between the sphere of flesh (v 13) and the sphere of *pneuma aionion* (v 14).

10. 1 Peter. For 1 Peter, spirit is primarily the power which inspires proclamation. The proclamation of the OT prophets was already determined by the "Spirit of Christ" (1:11)—a unique statement within the NT. Present proclamation of the gospel takes place through the power of the holy spirit (1:12), whose heavenly origin calls to mind Acts 2:2 (the Pentecost account). Christ himself, as the Risen One who is translated into the sphere of the spirit, preaches to the spirits. This is most likely a reference to the generation of the flood rather than to demons in general (Goppelt *Erste Petrusbrief* MeyerK, 246–54). 4:14, finally, is determined by the context of proclamation. The blessing praises particularly those who are reviled for their witness to Christ and promises them the succor of the God and the spirit of glory (cf. Mark 13:11). At the same time, 4:14 clearly indicates that "spirit" no longer connotes something which is given once for all and determines the life of the community as a whole, but identifies an extraordinary power which gives succor to the individual believer. By contrast, the statement of the prescript (1:1–2) which credits sanctification to the work of the spirit in the traditional manner of baptismal terminology remains isolated.

11. Apocalypse of John. In regard to the various uses of *pneuma,* four are particularly striking:

1. 1:4; 3:1; 4:5 and 5:6 mention the "seven spirits of God." They may be compared with the seven archangels and represent here the spirit of God in its all-encompassing form (Schweizer 1951–52).
2. The plural *pneumata* denotes demons (16:13–14; 18:2).
3. The spirit is the power of ecstasy (1:10; 4:2; 17:3; 21:10).
4. The formulaic warning (2:7, 11, 17, 29; 3:6, 13, 22) in the letters to the churches (cf. Müller *Offenbarung des Johannes* ÖTK, 93–94) has Christ himself speaking through the prophet in the spirit.

In Rev 19:10, the addendum concerning the "spirit of prophecy" may be taken as a marginal note (Müller *Offenbarung,* 310). The parallelism between bride and spirit in 22:17 places both on the side of the temporal church which invokes Christ (Müller, 371).

12. Johannine Writings. John takes over certain primitive Christian formulaic phrases of spirit transmission (John 3:24; 4:13) and shares the primitive Christian traditional notion that the gift of the spirit cannot be bestowed until after the glorification of Jesus (John 7:39; 20:22). The spirit and the two sacraments shepherd the Church (7:39; 19:34–35; 1 John 5:7–8; cf. Porsch 1974: 53–81) and remain with it (John 14:17); this is told the Church for its comfort (1 John 2:27; 3:9; cf. also Schnackenburg *Johannesevangelium* HTK, 41). The spirit manifests itself, however, not in ecstatic or charismatic phenomena, but in the area of the proclamation of the word, specifically in remembrance (14:26), doctrine (14:26), imitation (16:13), and prediction (16:13). *Pneuma* is the power which leads to the knowledge of Jesus Christ. Beyond this functional definition, the harsh antithesis of spirit/flesh in John 3:3–6 and 6:63 is conspicuous. 3:3–6 establishes a parallel between being born from above/anew (3:3), of water (3:5), of the spirit (3:5–6), and of the flesh (3:5). While this indicates a division between higher and lower spheres, baptism transfers (a person) into the sphere and substance of the spirit (3:6). Becker (*Evangelium nach Johannes* ÖTK, 1: 226) closely associates this assertion with the Corinthian sacramentalists. 6:63, likewise a Johannine tradition (Bultmann *Johannes* MeyerK, 34–35 n. 9), also points to this context of opposing spheres of influence of flesh and spirit. It was the life-creating function of *pneuma* which the pre-Pauline tradition in Rom 8:11; 1 Cor 15:45; 2 Cor 3:6; and 1 Pet 3:18 emphasized. Over against such a static ontology of salvation the evangelist champions a concept of the spirit as a power for proclamation (cf. even 6:63 as a recasting). It is the spirit who makes the revelation of Christ accessible. As the spirit of truth (14:17; 15:26; 16:13; 1 John 4:6; 5:6) he is the one who reveals the truth of God in contrast to the lie. In the farewell discourse this spirit of truth is termed *parakletos,* "Counselor" (except in 16:7). The paraclete, introduced as person in the farewell discourse, guarantees the abiding presence of the revelation of *zoē* as continuing the presence of Jesus (14:16). In this way the locus of the experience of the spirit is defined christologically—possibly countering Docetism (1 John 4:1–6)—without declaring Christ and the spirit to be identical (PWSup 14: 398–99).

The Johannine references to the spirit must be seen in relation to the overarching, divinely established contrasts to *kosmos,* "world," *skotia,* "darkness," *sarx,* "flesh" (Bultmann *Johannes* MeyerK, 98–100, n. 3; Schottroff 1970: 272–76). A comparison with Paul must take into account the authors' different settings within early Christianity. The view that the sphere of the spirit is the basis for action, a view so central to Paul, is also shared to some extent by 1 John 2:24; 4:12–13.

13. Luke–Acts. Luke is surely the theologian of the spirit, not only in terms of statistics (*pneuma* 106 times; *pneuma theou,* 75 times; *pneuma hagion,* 54 times) but also in terms of his reflection on primitive Christian testimony and ideas concerning the spirit from the perspective of a concept of salvation history. The action of the spirit is already evident in the birth and infancy narrative of Luke 1–2 (1:15, 35, 41, 67, 80; 2:25–27), especially as the creator power of God who effects the pregnancy of Mary (1:35). Tatum (1974) subsumes the references to the spirit in Luke 1–2 within Conzelmann's periodic schema of history by contrasting prophetic/creative to messianic spirit. It is nevertheless the prophetic spirit which remains central for Luke, so that the references to the spirit transcend periodization typical of historical thinking. In his baptism the spiritual origin of Jesus is manifest in the dove as the physical form of spirit endowment (3:21–22). Hellenistic substantive thinking and a tendency toward objectification accounts for the visible manifestation of the spirit's power both in this passage and in Acts 2:3–4; 4:31. In contrast to Mark there is a less animistic description of Jesus' spirit endowment here (cf. Mark 1:12; Luke 12:10 derives from the Lukan context); Jesus is Lord of the spirit and, until Pentecost, the only bearer of the spirit (Conzelmann 1977: 168). This is corroborated by Jesus' testimony about himself in 4:18–19, verses incorporating Isa 61:1. Thus, while the gospel presents Jesus as the paradigmatic spirit bearer (1:35; 3:21–22; 4:1, 11, 18–19), in Luke's view it is the task of the Messiah to pass on this spirit after Easter. That which the baptizer announces in Luke 3:16–17 (fire and spirit) is fulfilled in Acts 2:3–4 as the work of the Exalted One (Luke 24:49; Acts 2:33). This proximity of the spirit and the Exalted One—expressed also in their common functions (Luke 12:12 = 21:15; Acts 10:14, 19; Acts 7:55: the pneumatic sees the glory of God and of Jesus)—speaks against a notion of an interim between Easter and Pentecost which is devoid of the spirit (Conzelmann 1977: 26–27, 171).

The Pentecost account describes the spirit endowment of the Twelve (Acts 2:1–13). Even though Dietrich (1972: 294–95) speaks of a triple Pentecost in reference to the gift of the spirit to Jews (2:38–41), Samaritans (8:15, 17) and gentiles (Acts 10:44–45), the reference of 10:47, "just as we," places Jews and gentiles on the same level of spirit endowment. Obviously, therefore, as in 2:4 so also in 10:46, glossolalia is repeated for the gentiles as proof of the spirit. Although Luke is not opposed to associating ecstatic phenomena with the spirit (Accts 8:39; 2:4; 10:46) for both the time of Jesus and that of the Church, according to Luke the power of the spirit is manifested primarily in proclamation and prophecy. A fundamental connection between spirit and prophecy/preaching occurs in Luke 4:18–19 and Accts 2:17. The inaugural sermons of Jesus (Luke 4:16–21) and Peter (Acts 2:14–36) are each presented as the consequence of a preceding endowment with the spirit (Lampe 1967: 159).

The course of the Church is presented as determined by the spirit sent by Jesus and is often characterized in personal categories (Acts 8:29, 39; 20:39). The holy spirit is present at important decisions (2:1–4; 4:31; 8:17–18; 9:17–18; 10:44–45; 19:6), contributes to the formulation of the apostolic decree (15:28), and appoints the presbyters in their offices (20:28).

Acts 2:17–21 indicates the salvation-historical location of the works of the spirit. In contrast to Joel 3:1–5, Luke inserts *en tais hemerais,* "in those days," into the quotation, thus identifying the time before the end as the time of the

Church when the promises are fulfilled (2:17; cf. also 10:46; 19:6; 22:17–18).

According to Luke, the community is an entity endowed with the spirit and presently living in the power of the spirit (Luke 11:13; cf. Matt 7:11). The ecclesiological orientation of Lukan pneumatology is evident in such passages; but the issue, so critical for Paul, is absent here: the idea of the pneumatic body of Christ, the doctrine of the *charismata*, the pneumatic basis of faith and action (Horn 1986: 283–86). Contrasts between *pneuma* and *sarx/gramma/nomos* are also absent. On the other hand, other ecclesial aspects are evident. Prayer prepares for reception of the spirit (Luke 3:21; Acts 4:31; 9:9, 11; 13:1–3), but is not an effect of the spirit. Baptism and spirit are related (Acts 2:38; 8:14–17; 10:44–45; and 19:2–6 confirm these as valid exceptions; Haenchen *Apostelgeschichte* MeyerK, 147). The practice of the laying on of hands for transmission of the spirit surfaces once in Acts 8:14 and 17. The gift of the spirit as power to proclaim the gospel is predominant (positioned thematically at the beginning Acts 1:8).

14. Individual Passages. Matt 1:18, 20; and Luke 1:35 attribute Jesus' origin to the action of the *pneuma* as the creative power of God. Though Isa 7:14 was similarly interpreted in Hellenistic Judaism, the closest parallels to the NT statements are found in Hellenistic accounts of the supernatural origins of kings, philosophers, and other prominent persons (see Luz *Evangelium nach Matthäus* EKKNT, 98–107).

According to Matt 5:3, it is the poor "in spirit" who are blessed. In contrast to the original Q formulation (Luke 6:20) Matt adds *tō pneumati*, "in spirit," in order to attribute the beatitude to those who are humble in will and thereby distinguish themselves from the haughtiness of the Pharisees (Strecker 1985: 33).

Matt 28:19 along with 1 Cor 12:4–6 and 2 Cor 13:13 form the NT point of departure for later triadic formulations and theological constructions. Matthew receives as tradition the tripartite baptismal formula and combines it with the mission command. The notion of baptizing in "the name of the spirit" along with the Father and the Son is unique. Abramowski suspects an expansion of the unitary baptismal formula parallel to the blessing of Aaron (1984; cf. also Schaberg 1982 and Friedrich 1983).

For further developments, see Hauschild 1972; *TRE* 12: 96–217; Opitz 1960.

Trans. Dietlinde M. Elliott

HOMAM (PERSON) [Heb *hômām*]. A clan name in the genealogy of Seir the Horite in 1 Chr 1:39. Homam is listed as the second son of Lotan, son of Seir, and he is thus the grandson of Seir. The name in this form appears only in 1 Chr 1:39, but it is equivalent to the name Hemam (MT and KJV, while RSV reads incorrectly HEMAN) in the parallel genealogical listing in Gen 36:22. For discussion of these clans, see JAAKAN.

VICTOR H. MATTHEWS

HOMER [Heb *ḥōmer*]. See WEIGHTS AND MEASURES.

HOMICIDE. See PUNISHMENTS AND CRIMES.

HOMILY FORM (HELLENISTIC AND EARLY CHRISTIAN). Christian preachers of the 3d century and later had clearly adopted explicit forms and methods for their preaching. They inherited and adapted these homiletical techniques from their predecessors in the art of persuasion, namely the rhetoricians of Greek and Roman culture. The Greeks gave names to certain rhetorical techniques and organized speech and the art of persuasion into a system which was taught within schools of formal rhetoric (Kennedy 1984: 9). These schools produced rhetorical handbooks which were intended to train a student to speak effectively and to acquire the ability to move an audience. The primary arena for the use of these rhetorical techniques was the court of law, though formal rhetoric would not have been restricted solely to this setting. Plato's dialogue *Phaedrus,* Aristotle's *Rhetorica,* Cicero's *Brutus, De inventione, De oratore,* Cornificus' *Rhetorica ad Herennium,* and Quintilian's *Institutio oratoria* are the most important works from the Hellenistic and Roman period on the subject of rhetoric and persuasion. These works provide us with valuable early information concerning the nature and importance of formal rhetorical training and the art of persuasion in the period leading up to the development of a form of early Christian preaching.

By the 4th and 5th centuries C.E. the formal rhetorical techniques and forms employed by the orators of Greece and Rome had clearly influenced Christian writing and preaching. In the 4th century Gregory of Nazianzus, for example, gave a sermon precisely in the form of a Panegyricus, a form of speech intended originally for a pagan festival. At the end of the 4th and beginning of the 5th century Augustine wrote *On Christian Doctrine,* which is itself a major contribution to the history and theory of rhetoric, although now from a decidedly Christian perspective (Kennedy 1980: 39, 155). Even earlier in the common era, Clement of Alexandria, Tertullian, Jerome, John of Chrysostom, and Melito of Sardis all demonstrated familiarity with formal rhetorical forms and techniques, and their own sermons reflect the impact classical rhetoric had upon them.

However, when we move earlier into the 1st century C.E. and inquire about a homily or sermon form, the matter is less clear. The role and influence of Greek oratory and

rhetoric have long been recognized within NT studies. Paul's letter to the Romans (Scroggs 1976), Philemon (Church 1978), and the Epistle to the Galatians (Betz 1975; cf. Vouga 1988) have all been studied within the context of, and according to, formal Greco-Roman rhetoric. The influence of other classical Greco-Roman conventions on Paul has also been recognized within Pauline studies. Prominent in this regard has been the influence of the cynic-Stoic diatribe (Bultmann 1910; Stowers 1981).

However, when looking for a distinctive homily form within Jewish or Christian preaching in the 1st century, scholars have heretofore found little. In fact, it has been said that "we know virtually nothing about the contours of such a genre in the first century" (Donfried 1974: 26). Recently attention has been drawn to a form of early Christian and Jewish preaching which seems to be an explicit homily form, and which appears to be indebted to the formal rhetoricians of the Greek and Roman periods (Wills 1984; Black 1988). However, it should be noted that the *degree* to which formal rhetoric influenced this homily form remains a matter of debate.

In 1984 L. Wills referred to the homily form within early Jewish and Christian preaching as a "word of exhortation." The word of exhortation typically has three parts: an *exempla,* which is a reasoned exposition of the points to be made, usually with examples from the past or scriptural quotations for support; this is followed by a *conclusion* based on the "facts" laid out in the exempla, and "therefore" the audience should respond or behave in such and such a manner. The conclusion is often introduced with a participle and *dia, dio, touto,* or some other Greek particle of conjunction. This is followed by an *exhortation,* usually expressed with an imperative or hortatory subjunctive (Wills 1984: 279).

Examples of this early Christian and Jewish homily form can be seen in Acts 2:14–40; 3:12–26; 13:14–41; 20:17–35; 1 Cor 10:1–14; Heb 1:1–2:1; 1 Pet 1:3–11; *1 Clem* 6:1–7:2; 42:1–44:6. Wills claims the pattern of "the word of exhortation" can also be found in Ignatius of Antioch's *Letter to the Ephesians* and the *Epistle to Barnabas* (1984: 291–92). Within Jewish sources the same pattern of exempla, conclusion, and exhortation can be seen in *Wisdom of Solomon* 13–15 and the *Testament of the Twelve Patriarchs* (*T. Reu.* 5:1–5; *T. Levi* 2:6–3:8; *T. Benj.* 2:5; 3:1; 6:6; 7:1; 8:1).

The structure and outline of this homily form, like formal rhetoric itself, are not concrete. The homily can be modified, broken up, or used in a cyclical fashion at the author's or speaker's discretion. The background for this early Christian and what seems to be Hellenistic Jewish homily form is formal Greek rhetoric. Wills finds this threefold form in the speeches of the Greek orators. Broadly speaking, there are three types of speeches, according to the handbooks: deliberative, forensic, and epideictic (Quintilian, *Inst.* 3.4.16). The deliberative speeches were intended for audiences before a governing or authoritative body, forensic speeches were given before the courts, and epideictic speeches were meant for public and honorary gatherings. Wills, having isolated this early homily form, and having suggested the background out of which the form developed, remains cautious about how directly one should connect it with the structure of speeches given within *formal* Greco-Roman rhetoric (1984: 298–99).

Building upon the work of Wills, C. C. Black has argued for a stronger correlation between this earlier homily form—the "word of exhortation" in the NT and other early Christian and Jewish documents—and classical rhetoric. Black maintains that the word of exhortation appears to be in fundamental agreement with the judicial (forensic), deliberative, and epidiectic address. This form of early Christian and Jewish homily is perfectly understandable in terms of the rhetorical conventions outlined in Aristotle's *Rhetorica* or Quintilian's *Institutio oratoria.* Viewed in such a way, 1st-century Jewish Hellenistic and Christian preaching can be located far more within the mainstream of classical rhetoric (Black 1988: 3, 10, 16).

It was not long after the 1st century that Christian preaching began explicitly to employ and engage classical rhetoric. It was precisely this influence of classical philosophy and rhetoric upon 2d-century Christians which provoked Tertullian to ask rhetorically, "What has Athens to do with Jerusalem?" What concord is there between the Academy and the Church?" (*De Praescr. Haeret.* 7). Jerome follows Tertullian in his concern over the influence of Greco-Roman rhetoric, saying, "What has Horace to do with the Psalms, Virgil with the Gospels or Cicero with the Apostles?" (*Ep.* 22.29). As early Christian preaching was more and more influenced by classical rhetoric and its techniques and conventions, certain Church Fathers began to feel a tension between rhetoric and Christian preaching. Ironically, however, both Jerome and Tertullian display significant ability and schooling where the same rhetoric is concerned. Perhaps, as Cicero said of Plato, it is when they are most concerned with orators that they themselves appear the consummate orators (*De oratore* 1.11.47).

Yet other early Christian preachers embraced the rhetorical forms and the techniques of persuasion taught and practiced by the classical orators. Lactantius (ca. 250–300 C.E., known as the "Christian Cicero") taught rhetoric prior to his conversion, and following it was made tutor to Emperor Constantine's son. In his *Divinae institutiones* he attempted to put in "literate style" the teachings of Christianity for pagans. Out of this work emerges a philosophical Christian rhetoric (Kennedy 1980: 148).

Gradually the Church began to employ more formal and classical rhetoric in order to address the culture and world of which they were becoming a part and which they were beginning to embrace with enthusiasm. The definitive expression of the coalescing of Christian doctrine and classical Greco-Roman rhetoric would be Augustine's *De doctrina christiana.* In this book Augustine tried to provide the preacher with the necessary skills of interpretation and homiletics. In the 4th book he is explicitly in dialogue with classical rhetoric. A teacher of rhetoric prior to his conversion, Augustine was largely dependent on Cicero for the writing of this "Christian Rhetoric" (Kennedy 1980: 156–57). This work represents the culmination of a process of enculturation and education of the early Christian orators and preachers which resulted finally in the synthesis of classical rhetoric and Christian doctrine and preaching.

The literature of the 1st century, and the NT in particular, evidences the influence of classical culture and rhetorical conventions. Out of this influence and sociocultural

interaction a homily form emerged, "the word of exhortation." This form, it can be recognized, owes a significant degree of its shape and form to the conventions of classical rhetoric. The homily form seems to have been rather widespread, and is seen in both Jewish and Christian documents. Over the next century Christianity would begin explicitly to engage and employ the techniques and forms associated with Greek and Roman oratory. Classical rhetoric was a major contributor to the nature and form of Hellenistic Jewish and Christian preaching. Though some expressed concern about the influence of these "pagan" rhetorical practices upon Christians, it seems clear that the classical forms of persuasion and rhetoric, which played such an important role in the Greco-Roman period, did indeed influence Christian preaching and were finally adopted by Christians in order that they might speak persuasively to that same world.

HOMOSEXUALITY. See PROSTITUTION; PUNISHMENTS AND CRIMES; ROMANS, EPISTLE TO THE; and SEX AND SEXUALITY.

HONI. A righteous Jew who received the name "Ḥoni the Circle-Drawer" because he once reportedly refused to leave a circle he had drawn until rain relieved the parched land (*m. Taʿan.* 3.8; *y. Taʿan.* 3.9 [8]; *b. Taʿan.* 23). His Greek name is "Onias" (Joseph. *Ant* 14.22). He lived in the early 1st century B.C.E. and was stoned to death during the civil war between Hyrcanus II and Aristobulus II by fellow Jews (*Ant* 14.22). Josephus (writing in 93 or 94 C.E.) says that Ḥoni was righteous, was revered for his efficacious words—especially prayers—and was martyred outside the walls of Jerusalem, where Aristobulus and his men were being besieged, probably just before the Passover feast in April 65 B.C.E.

From rabbinic literature we also learn the following about Ḥoni: (1) he was a wise teacher and revered in the Beth Hamidrash (*b. Taʿan.* 23a); (2) he was a righteous individual, but not an Essene as some scholars have stated (and certainly not the famous Righteous Teacher of Qumran); (3) he was able to do miraculous things through prayer, notably to cause rain to fall; (4) he apparently understood himself to be "son" of God in a special way, "like a son" in God's house (*m. Taʿan.* 3.8); (5) he was honored by the masses and Sanhedrin (*b. Taʿan* 23a), but grudgingly acknowledged by Simon ben Shetah, the most influential rabbi in his time (*m. Taʿan.* 3.8); (6) legends subsequently developed about him, most notably that he slept for seventy years (*b. Taʿan.* 23a; cf. *4 Bar.*), and that the violent wind that destroyed crops throughout Palestine (*Ant* 14.25–30) was God's punishment on the inhabitants for the murder of Ḥoni. Despite some scholarly attempts to prove otherwise (see Vermes 1981: 58–82), there is no unambiguous evidence that Ḥoni performed healing miracles; although it is also clear that our sources are late and selective and it is conceivable that he did cause miraculous cures as did another Palestinian, charismatic Ḥanina ben Dosa.

HOOK. Several different Hebrew terms are rendered "hook" in the RSV. The various hangings of the tabernacle are suspended from hooks or pegs *(wāwîm)* attached to the pillars. Some of these were gold (as Exod 26:32), and others were silver (as Exod 27:4, for the courtyard pillars), the choice of material being related to the degree of holiness of the pillars involved. That is, hooks closest to the holiest zone of the tabernacle were made of gold, and those farther away were silver. See also TABERNACLE. A completely different term *(ḥaḥ* or *ḥôaḥ)* is translated "hook" and denotes a ring put in the nose of an animal (as Ezek 19:4, 9; 29:4) or a human taken captive (as 2 Kgs 19:28 = Isa 37:29).

HOOPOE. See ZOOLOGY.

HOPE (NT). Even if the noun "hope" (Gk *elpís*) is not found at all in the Gospels and the verb "to hope" (Gk *elpízein*) is found only five times in the Gospels—with the OT sense of "to trust" (Matt 12:21; John 5:45) or with a purely secular and nonreligious sense (Luke 6:34; 23:8; 24:21)—the idea of hope as confidence in God "whose goodness and mercy are to be relied on and whose prom-

ises cannot fail" (Barr 1950: 72) is everywhere presupposed in the NT (see also *TDNT* 2: 517–35 and *LTK* 5: 416–24).

In the Synoptic Gospels the notion of hope is conveyed through the sense of "expectation" (Gk *prosdechomai*) generated by Jesus' preaching of conversion in the face of the imminent arrival of the kingdom of God. Paul's theology, which is oriented around the twin poles of Christ's resurrection as the in-breaking of the kingdom and Jesus' parousia as its fulfillment, manifests the most fully elaborated theology of hope (1 Thessalonians, Romans, 1–2 Corinthians, Galatians, Philippians, Philemon). This line is continued with various additional nuances in Hebrews, in the Deutero-Paulines (Colossians, Ephesians, 2 Thessalonians), and in the Pastoral and Catholic Epistles. While a great deal has been made of the Johannine emphasis on "realized eschatology," there can be little doubt that John also speaks of the glory of the heavenly world as the goal of the believer's hope (John 13:33, 36). Finally, although Revelation also lacks the vocabulary of hope, the notion is manifestly conveyed by the call to "patient endurance," which undergirds the theology of the whole work.

E. Conclusion

A. The Gospels and the Acts

In the Synoptic Gospels the strong sense of assurance that the divine promises articulated in the OT are soon to be fulfilled in the Messiah, Jesus, calls forth from the reader sentiments of expectation and longing. The parenetic dimension of the gospels urges the community of believers to steadfast patience and to "keeping watch" (Mark 13:37).

1. The "Q" Source. In the Q source, which is comprised of the bulk of the Jesus sayings common to Matthew and Luke, Jesus' mode of proclaiming the kingdom implies the incarnate presence of divine wisdom (Luke 7:35 = Matt 11:19) and an implicit Christological claim that in his ministry God's salvation is offered. Just as the harvest is "already" implicitly present in the farmer's handful of seed though "not yet" gathered in (Luke 10:2 = Matt 9:37), so God's kingdom is near in the proclamation of the good news (Luke 10:9 = Matt 10:7), and finds an echo in the petition Jesus taught regarding the coming of God's reign (Luke 11:2 = Matt 6:10). Hope's tensile dynamic, stretching between the "already" and the "not yet," and found in Jesus' heralding of conversion, gets taken up by Paul in his proclamation that "by faith we wait for the *hope* of righteousness" (Gal 5:5) and "in *this hope* we were saved" (Rom 8:24).

2. Mark and Matthew. The "Little Apocalypse" of Mark 13 carefully interweaves strands of the tradition which assert that the end is "near" and still is "not yet." The disciples are informed by Jesus that they will follow the path of suffering (Mark 13:9, 11–12) already realized by John the Baptist (1:14; 9:13) and the OT prophets (12:3–4) and soon to be embarked upon by Jesus himself (14:21, 42). The negative cast given to the disciples elsewhere in Mark disappears here, indicating that Mark intends to present a proleptic portrait of the post-Easter Church—the only such depiction in this gospel, given the absence of resurrection appearances. This hopeful characterization of the disciples is attributed to the gift of the Holy Spirit (13:11), which enables them to save their souls by "enduring patiently" (13:13) and "keeping watch" (13:37).

For Matthew, the future appearance of the Son of Man in glory will reveal the true state of affairs; e.g., which members of the Church are "wheat" and which ones "tares" (Matt 13:41–43). Matthew is quite serene in encouraging members of the Church to face the future with hope, for Christ promises, "I am with you always" (28:20; cf. 1:23; 18:20). Only those who divorce their faith from their deeds need to be concerned about the future (7:21–23), for Matthew knows with the OT that "hope in the sense of confident expectation of future well-being proved to be ill-founded whenever it was divorced from the perfect and upright character and will of God and applied instead to merely self-regarding matters of well-being, escape from distress and so forth—even when these were dressed up in respectable, religious phrases" (Moule 1970: 10–11).

3. Luke-Acts. Luke stresses, in both the gospel and Acts, the continuity of Judaism and the Church, the piety of the OT and that of "the way," under the rubric of longing or expectation. Thus, in the infancy narrative, Simeon is said to be "looking for the consolation of Israel" (Luke 2:25), and Anna spoke of the child Jesus to all who were looking for the redemption of Jerusalem (2:38). When John the Baptist preached, people were "in expectation" (3:15), as they also were when they inquired of Jesus whether he were "he who is to come" (7:19–23). For Luke, this sense of hopeful expectation will characterize the Church in the end times (12:36, 46); though bringing fear to those unprepared, it bids confidence and peace to those who await their salvation (21:26–28). In Acts, except for an OT quotation (2:26) and two instances of hope used with a purely secular meaning (16:19; 27:20), Luke regularly places the word on Paul's lips (23:6; 24:15; 26:6–7; 28:20) to show that he shares with his people Israel's eschatological expectation of the resurrection of the dead (Grossouw 1954: 531).

4. John. Scholars have noted the juxtaposition in the Fourth Gospel of "futurist" and "realized" eschatologies ("the hour *is coming* and *now is*," John 4:23; cf. 16:32). This should not lead one to conclude that hope plays little or no role in the Johannine view. Texts which refer either to the final judgment or to the resurrection of the dead, taken together, manifest a strong futurist dimension (John 5:28–29; 6:39–40, 44, 54; 12:48) and the object of the Christian's hope is clearly mentioned in several texts

(12:25–26; 14:1–3; 17:24). What is clear is that John's focus is a double one: the present union of the disciple with Jesus the Revealer (realized eschatology) *and* the believer's continuing and future union with Christ in the father's glory (futurist eschatology). Human existence in this world (the possession of one's "soul" [Gk *psychē*]) will give way to the inheriting or gaining of "eternal life" (Gk *zoē aionios*). Of this hope Christ is simultaneously guarantor and mediator (Woschitz 1979: 705–7).

B. The Pauline Epistles

1. The "Faith-Love-Hope" Triad. Paul's well-known assertion that in the end "faith, hope, love abide" (1 Cor 13:13) has prompted speculation on the how, when, and by whom of their association. Since the three theological virtues appear listed in different orders—with hope and love alternating in the third position (e.g., 1 Thess 5:8)—one may surmise that at one time faith and love were found paired without hope, perhaps as a summary of the double commandment of love of God and of neighbor (cf. 1 Thess 1:3; Gal 5:5). Living the commandment of love within the "already/not yet" tension brings the Christian personal experiences, denominated "trials" or "tribulations." At this point, there enters upon the scene a gift of the Holy Spirit to sustain the believer amidst adversity, that of "hope" which is sometimes accompanied by "perseverance" (Gk *hypomonē*). Perseverance is so closely allied with hope that at times hope can even be called perseverance (1 Thess 1:3; Léon-Dufour 1980: 231). Indeed, in the post-Pauline literature, perseverance takes the place of hope as a characteristic of faithful discipleship (Titus 2:2; 1 Tim 6:11; 2 Tim 3:10; Rev 2:19).

2. Being "with Christ." The parallels noted between the death and resurrection of Christ and the sufferings undergone by believers led Paul to describe the object of Christian hope as a share in the glory of God (2 Cor 4:16–18), which marks the state of the risen Christ. In 2 Corinthians and elsewhere, when Paul describes his experience of tribulation, he uses the concept of "trust" or "confidence" in God to describe the hope that wells up in him (2 Cor 3:4, 12; cf. Philemon 21). Later, Paul describes all Christians as groaning in their anticipation of being clothed with the glory of the resurrection body (2 Corinthians 5). When, in Philippians, Paul contemplates the possibility of his own death, he describes his hope as one of going to be with Christ in that divine glory into which Jesus has already entered (Phil 1:23; cf. 3:20–21).

3. "Hoping against Hope." In Romans, Paul reflects on Christian hope as an attribute shared not only by human persons but, in some sense, also by the whole of creation, which "has been groaning in travail until now" (Rom 8:22). Léon-Dufour notes (1986: 233) that in Romans 8 Paul uses a series of Greek words to communicate the various tonalities of hope; these include *apekdechomai*, a violent waiting that he translates "spy out attentively," and *apokaradokia*, an attitude of craning one's neck to observe what is coming about, translated as "stalking." This vocabulary serves to underline not that creation "keeps hope" but that God does so by situating the created world on a firm foundation of hope.

Paul's vision extends as deeply into the past as it does into the future which God has reserved for the world in Christ. As he gazes into salvific history, Paul focuses on Abraham, his father in faith, whom he characterizes as *"hoping against hope"* (Rom 4:18) in order to stress how great was the trust Abraham put in the promises God had given him. Here Paul says that Abraham believed or trusted in God ("hoped") against all human evidence or odds ("against hope"). For Paul, Abraham's hope, as his own, was in the God "who gives life to the dead and calls into existence the things that do not exist" (Rom 4:17).

C. The Deutero-Pauline and Pastoral Epistles

The Deutero-Pauline and Pastoral Epistles continue the Pauline emphases, except that the tension between the "already" and the "not yet" has been diminished somewhat, possibly under the impact of the delay of the parousia.

1. Hope in the Person of Christ. What was looked to as future by Paul is somehow already given in Colossians and 2 Thessalonians. Thus God is said to have given the Thessalonians "eternal comfort and good hope through grace" and Christ is said now to be "in you," and this is, for the Christians of Colossae, their "hope of glory" (Col 1:27). Even so, the "hope of the gospel" (1:23) does have a future dimension, being "the hope laid up for you in heaven" (1:5). Ephesians contrasts the former condition of the pagan converts, who formerly were "without hope because without God" (Eph 2:12), with their present status in Christ, having the "one hope that belongs to your call" (4:4), the riches of Christ's "glorious inheritance" (1:18).

2. Hope in Eternal Life. The object of Christian hope is one of the themes of the Pastorals. In 1 Timothy we read that hope is not in "uncertain riches but on God" (1 Tim 6:17), who is further characterized as "the living God who is the Savior of all men, especially of those who believe" (4:10; cf. 5:5). Christ, too, is described as "our hope" (1 Tim 1:1), especially in his parousia which completes Christian hope (Titus 2:13). On two occasions "eternal life" is presented as the goal of hope (Titus 1:2; 3:7).

D. Hebrews, the Catholic Epistles, Revelation

The variety of ways of describing the object of Christian hope, begun in the Deutero-Paulines and continued in the Pastorals, continues in the later NT writings.

1. The Hope of "Seeing God." The context of suffering, which marks the later NT period, leads to the view that hope can be tested and found solid "in steadfastness" (Jas 1:2–4); also that if hope is alive it must be rooted in the living God and proclaimed to a world which may not share it but asks about it (1 Pet 1:3, 21; 3:15). Christians are called upon to be steadfast in bearing sufferings so that they not be put to shame on the day of judgment (1 Pet 4:14). The positive issue of hope is described in the Johannine tradition as "seeing God," for "when he appears we shall be like him, for we shall see him as he is" (1 John 3:2–3).

2. "The Anchor of Hope." The book of Hebrews as an extended exhortation to a community wavering in its commitment in time of persecution, introduces the anchor as the image that symbolizes hope (Heb 6:18–19). In effect, Hebrews summarizes the biblical teaching on hope, which it regards as rooted in God's promises and related to Christ (10:23). Just as Christ bore patiently with the shame of the

cross to enter into God's glory (12:1–2), so the Christian is to keep focused on where Christ has gone as trailblazer, into God's heavenly presence. Belonging to Christ's household is the Christian's "pride in our hope" (3:6) and God's oath to Christ is one's surety of a "better hope" than was had even by Melchizedek, the high priest to whom Abraham paid tithes (7:19–22).

3. Hope as "Patient Endurance." In the book of Revelation, the letters to the whole Church (represented by the seven churches of Asia Minor) constitute a word of purification and judgment from the exalted Christ. Threats are addressed to believers to shock them into holding fast, turning back to youthful vigor or to waking up (Rev 2:1–3:22). This is the risen Christ's prophetic judgment which urges confidence and patient endurance; it is the other side of the apocalyptic manifestation of God's saving plan for the elect. It is the same God standing behind Revelation who makes possible the Church's "patient endurance," which, in this scheme, describes the same reality that elsewhere in the NT is described as "hope."

E. Conclusion

As in the Bible generally, so also in the NT, hope is rooted in God. For the Christian, God has revealed the way to salvation in Jesus' preaching of the kingdom and his call to conversion in light of its imminence. God has authenticated this saving design by raising Jesus from the dead, which at once ushered in the "end of the ages" and prefigures the believer's own hoped-for resurrection. Between Jesus' resurrection and his parousia, tension caused by the "already" and "not yet" dimensions of this salvation stirs the disciple to hope. Both the delay of the parousia and the outbreak of persecution against the Church challenged the NT authors to rethink the notion of hope and, to a degree, to spiritualize it. However, neither these nor other factors served to attenuate hope's role within the armor of the Christian life (Titus 2:13; cf. 1 Thess 5:8).

TERRENCE PRENDERGAST

HOPHNI (PERSON) [Heb *ḥopnî*]. Hophni is one of the sons of Eli, the priest. The name is probably from Eg *ḥfn(r)* meaning "tadpole," and thus suggests an Egyptian connection for Hophni. Hophni only appears in 1 Samuel and only in association with his brother PHINEHAS.

Hophni and Phinehas are first mentioned as priests and as the two sons (1 Sam 1:3) of Eli, who was also a priest (1 Sam 1:9). They all served at the temple at Shiloh (1 Sam 1:3, 7, 9, 24), where the "LORD of Hosts" (= YHWH *ṣĕbā'ôt* ["armies"]) was worshipped (1 Sam 1:3).

The attitude of this introduction of Hophni and Phinehas is neutral toward them, and it is set within the context of the story of the early years of Samuel. As the story continues, it becomes clear that the author, probably the Deuteronomistic Historian, is using Hophni and Phinehas as foils in contrast to Samuel. Samuel emerges as the true priest of Israel, and Eli's sons become examples of evil, greedy priests who have rejected Yahweh. This has larger implications for understanding the struggle between priestly factions, for the Elide faction is being rejected and the Zadokite group is being advocated.

The first indication of trouble for Hophni and Phinehas appears in 1 Sam 2:12–17. The brothers are described as "worthless men" ("sons of Belial") and as "not knowing" Yahweh (2:12). The phrase "sons of Belial" *(bĕnê bĕliyya'al)* suggests the degree of condemnation of Hophni and Phinehas by the writer. The phrase literally means "not *(bly)* of use *(y'l)*," but implies the worship of gods other than Yahweh (Deut 13:14—Eng 13:13); Judg 19:22; 2 Sam 20:1). Later usage (*Liv. Pro.* 4:6, 21; 17:2; *T. Dan.* 1:7; *T. Levi* 3:2–3; 2 Cor 6:15) suggests that Belial is associated with Satan and that in this earlier instance evil is at least hinted at. See also BELIAL. In addition, there may be a wordplay between Belial *(bĕliyya'al)* and Baal *(ba'al)*, which would also suggest the evilness of the two sons. A similar understanding of evil is implicit in the statement that they "did not know" ("had no regard for"—RSV) Yahweh. The clear implication is that their activities were evil, and that they had turned away from Yahweh.

This perspective is reinforced in 1 Sam 2:13–17, where the greed of Hophni and Phinehas is displayed in their demands for an excessive portion of the offering and in their threatening of violence (v 16) if the extra portion was not surrendered. Finally, in 2:22, Eli is told about his sons' "lying" *(škb)* with the women who guarded *(ṣb')* the door of the "tent of meeting." Eli speaks to his sons (vv 23–24a), but they ignore him, and thus Yahweh "takes delight" *(ḥps)* in slaying the sons.

The special relationship of Eli to Yahweh is rehearsed on the occasion of the appearance of "a man of God" (= a prophet). Eli's house was chosen in Egypt (1 Sam 2:27) to be priests (2:28), but since Eli's sons became greedy (2:29), Yahweh will destroy Eli and his house, and Eli's sons shall no longer serve as priests (2:30–34).

In place of Eli, Yahweh will raise up a faithful priest, for whom he will build a faithful house and who will forever stand before Yahweh's anointed (i.e., his king) (2:35). The statement in 1 Kgs 2:27 indicates that Solomon's expulsion of Abiathar from the priesthood in Jerusalem fulfills the prophecy concerning Eli (Abiathar is supposedly the great-great-grandson of Eli [1 Sam 4:19; 14:3; 22:20; 2 Sam 8:17]). In place of Abiathar, Solomon appoints Zadok (1 Kgs 2:35). By implication, then, this is support for worship in Jerusalem by the Zadokites and a rejection

of the Elides and their worship in Shiloh. This, in turn, fits the Deuteronomistic Historian's perspective on history: only worship Yahweh, and only in Jerusalem. Anyone who violates these norms is not fit to be a priest and at best can only become servants of the faithful priests (1 Sam 2:36).

The last appearance of Hophni and Phinehas is connected with the battle of the Israelites against the Philistines at Ebenezer and Aphek. The first encounter was a victory for the Philistines. Seeking reinforcements, the Israelites bring the "ark of the covenant of the Lord of armies (hosts)" from Shiloh to the battle. Hophni and Phinehas accompany the ark on its journey, but neither they nor Eli are now identified as priests. The subsequent battle is a total disaster. The Israelites lose the battle in a great slaughter (1 Sam 4:10), the ark is captured, and Hophni and Phinehas are slain (4:11). Upon hearing of the disaster, Eli falls over in his chair, breaks his neck, and dies (4:18)

Given the ANE conceptualization of war, the loss of the ark would imply the defeat of the god of the ark. However, the power and efficacy of the ark persist after its capture, with plagues and evil events taking place among the Philistines (1 Sam 5:3–12). Since the power of the ark is not lost, there must be another reason for the defeat of the Israelites. That reason goes back to Hophni and Phinehas. Their faithless activities and subsequent coming into contact with the ark lead to the defeat. The fault is not in the god or the ark, but in the actions of the people. So like the conquest of Ai (Joshua 7–8), the story seeks to reinforce the necessity of the righteousness of the people in holy war. Any violation of that righteousness can lead to disaster.

So the story of Hophni and Phinehas serves three functions (1) it is a counterexample of the good, righteous priest, Samuel; (2) it explains the rejection of the Elide priesthood in favor of the Zadokites; and (3) it supports the necessity of ritual cleanliness for participating in holy war.

JOHN R. SPENCER

HOPHRA (PERSON) [Heb *ḥopraʿ*]. The king of Egypt who opposed Nebuchadnezzar, king of Babylon, in the days of the prophet Jeremiah (Jer 44:30; cf. 37:5). In Egyptian, his name was *Ḥꜥ-ib-rꜥ*, "Happy-hearted is Re" (Gk *Apriēs*), which should not be confused with his birthname, *wꜣḥ-ib-rꜥ* (Gk *Oaphrēs*; LXX *Ouaphrēs;* Aram *whpr*ʿ; and Akk *Uḫ-pa-ra* [Wiseman 1966: 155]).

Fourth king of the 26th (Saite) Dynasty, son and successor of Psamtek II, Hophra ascended the throne in mid-February 589 B.C. He actively pursued the policy of intervention in SW Asia begun by his grandfather Necho II and furthered by his father Psamtek II (Freedy and Redford 1970: 470–76). When Nebuchadnezzar appeared in the W in the spring of 588 and besieged Jerusalem, Hophra quickly led forth a relief army, but was obliged to withdraw in the face of superior Babylonian forces (Jer 37:5–11; Oded *IJH*, 473). A counterthrust in the form of a naval operation against Phoenicia, perhaps designed to undermine the Babylonian flank, was partly successful and Cyprus was reduced in the action (Diod. 1.68.1); however, it failed to avert the fate of Judah, which was soon annexed by Nebuchadnezzar.

In the aftermath Hophra received and settled Judean refugees (*IJH*, 486–87) and maintained the fortifications in the E delta (Oren 1984). Indeed, the delta seems to have captivated his whole attention, to judge from the fact that almost all his building operations are attested from there.

Internally the country remained stable and prosperous. Hophra resided at Memphis where his large palace has come to light (Petrie and Walker 1909; Kemp 1977; 1978). In 586 his sister Ankh-nes-neferibre was confirmed as Divine Adoratress (high priestess and regent) in Thebes, and in 578 an Apis bull was buried at Saqqara with the customary pomp (see also APIS). In the spring of the following year, Hophra endowed the temple of Ptah at Memphis with extensive tracts of land in the central delta (Gunn 1927); and similar endowments for other gods are widely attested from the reign (Drioton 1939; Jacquet-Gordon 1972).

In the military sphere, several of Hophra's native generals are known. Like his predecessors, Hophra relied heavily on foreign mercenaries, especially Carians and Ionian Greeks, but he suffered from poor liaison with his troops. On one occasion he was narrowly able to avert the wholesale defection of a foreign mercenary garrison stationed at Elephantine (Schäfer 1904). If Jeremiah's assessment is close to the truth (he derisively named Hophra the "overconfident one who misses the opportunity"; 46:17), Hophra may have gained a reputation for arrogance and indecision (Hoffmeier 1981).

Certainly the events which terminated his reign betray a lamentable lack of judgment. Perceiving a threat in the growing power of the Greek colony at Cyrene, Hophra directed his attention first to buffering the Kharga and Bahriya oases, finally to sending an expeditionary force against the town. This army, composed largely of native levies, was soundly defeated by the Cyreneans. At the news of this disaster, open revolt broke out back in Egypt, and despite a desperate effort to employ his Carians, Hophra was deposed in favor of one of his generals, Amasis, and was forced to flee (570 B.C.). Three years later, when Nebuchadnezzar attempted to take advantage of the stasis in Egypt to invade the land, Hophra threw in his lot with the foreigners. But the invading force was repulsed, and Hophra was captured and put to death. His tomb at Sais was still visible in Herodotus' day (Herod. 2.161–67; Diod. 1.68.1; Edel 1978).

DONALD B. REDFORD

HOR (PLACE) [Heb *hōr*]. **1.** A mountain on the border of Edom where Aaron died and was buried (Num 20:22–28; Deut 32:50). Since the name Hor always is given with the definite article it is suggested that it is a prominent mountain ridge. It is alleged that there are two conflicting traditions regarding the place where Aaron died and where he was buried. Deut 10:6 states that these events occurred at Moserah; however, Deut 20:27–28 records that Aaron died and was buried on Mt. Hor. There appears, however, to be no conflict since the name Moserah (Moseroth), meaning "chastisement(s)," was applied to the event, not to the location of Aaron's death. Aaron died in Edom on Mt. Hor as punishment for the Meribah incident (Num 20:24; Deut 32:51), while the people of Israel were encamped below. To commemorate this event, the incident and the campsite were called Moseroth (Num 33:30).

A tradition going back at least to the 1st century A.D. (*Ant* 4.4.7), identifies Mt. Hor with Jebel Nebī Harun ("mountain of Aaron") near Nabatean Petra; however, this two-topped sandstone mountain some 4800 ft (1460 m) high, is in the middle of Edomite territory rather than on the border. Its rugged summit is the location of a tomb allegedly belonging to Aaron, the upper portion of which is a Muslim mosque. The tomb, however, is more likely a reconstructed Christian church dating to the time of Justinian (A.D. 527–65). Any tradition placing Mt. Hor in the middle of Edomite territory rather than on its border (Num 20:22) would be open to serious question. Also, since the Edomites were able to prohibit the Israelites access to their land, and could do so with a powerful border force (Num 20:17–21), Israel could never have reached Jebel Nebī Harun without crossing Edom, which obviously was an impossibility. Again, such a location is too distant from Kadesh, and the mountain peak too lofty and inaccessible, for the Israelites to witness the ceremonies transferring the high priestly office from father to son (Num 20:22–29).

A more likely location would be Jabel Madurah, 15 miles (24 km) NE of Kadesh. This place stands at the extreme NW boundary of Edom yet outside Edomite territory. For topographical reasons it appears more suitable since Israel began its detour around Edom at Mt. Hor (Num 21:4), and the entire area was more accessible for the Israelites to witness the subsequent ceremonies conducted there. Positive identification of Mt. Hor is uncertain, owing to insufficient evidence, leaving Jabel Madurah the most widely accepted site.

2. A mountain mentioned only in Num 34:7–8 as a point of reference delineating the N boundary of Israel's promised land which they were about to conquer. The actual location is not identified. The Mediterranean was the W border; the first point was Mt. Hor, and the second point of reference was "the entrance to Hamath." It may describe a prominent peak in Lebanon. Suggested possibilities include Mt. Hermon and Jabel Akkar, a spur of the Lebanon range W of Tripoli. The reference may also refer to the whole Lebanon range of mountains.

RAY L. ROTH

HOR-HAGGIDGAD (PLACE) [Heb *hor-haggidgād*]. The seventeenth encampment of the Israelites, after leaving the wilderness of Sinai, as listed in Num 33:32–33, where it is placed between Bene-jaakan and Jotbathah. The meaning of the site's name is "Hollow of Gidgad," but LXX and the Vg understand this as *har*, instead of *hor*, rendering it as "Mountain of Gidgad." In Deut 10:6–7 the Israelites are said to have traveled from the wells of Bene-jaakan to Moserah (the reverse of the order in Num 33:31), and from Moserah to Gudgodah, which is evidently a variant of Gidgad. A suggested location is the wadi Ghadhaghedh (*GP*, 215–16; Simons 1959: 259 and map VI; M.R. 117094); though Robinson (1856: 181) camped in that area he did not mention it as a possible location. For a discussion of the location of any of the places associated with the journey of the Israelites from Egypt through Sinai, see DOPHKAH.

JEFFREY R. ZORN

HORAM (PERSON) [Heb *hōrām*]. A king of Gezer who was slain by Joshua when he came to help the city of Lachish in its struggle against the Israelites at the time of Conquest (Josh 10:33). A king of Gezer is listed among the defeated kings of the land in Josh 12:12, but Gezer itself remained in the possession of the Canaanites (cf. Josh 16:10; Judg 1:29) until the time of Solomon when it was conquered by the Egyptian pharaoh and given as a dowry to his daughter, Solomon's wife (1 Kgs 9:16).

PAULINE A. VIVIANO

HOREB, MOUNT [Heb *ḥōrēb*]. See SINAI, MOUNT (PLACE).

HOREM (PLACE) [Heb *ḥŏrēm*]. A town in the allotment of Naphtali (Josh 19:38). Horem is mentioned with towns

in N Galilee, such as Yiron. Thus, Horem is also thought to have been in upper Galilee. Its exact location, however, is unknown.

DAVID SALTER WILLIAMS

HORESH (PLACE) [Heb *ḥōreš*]. A place in the Judean hill country in the Wilderness of Ziph (1 Sam 23:15–19) equipped with strongholds and located on the hill of HACHILAH (v 19). It was used by David as a hiding place from Saul and is the location at which David and Jonathan made a covenant of friendship (v 18). Horesh has been identified with Khirbet Khoreisa (M.R. 162095) by many scholars, though the association between the two is still uncertain (*IDB* 2: 644; *MABL*, map 43; *RAB*, 30, 95). Some have questioned the interpretation that Horesh was an actual site name. Since the word Horesh means "forest" or "wood," it may have been a forest or thicket in the wilderness of Ziph, a place that would have provided ideal hiding conditions for David and his men as they continued to evade Saul (*RAB*, 103); however, limited rainfall in the area poses a problem for this theory.

LAMOINE F. DEVRIES

HORI (PERSON) [Heb *ḥōrî; ḥôrî*]. **1.** A son of LOTAN (Gen 36:22; 1 Chr 1:39) and grandson of "Seir, the Horite." See also HORITES. In at least one other case, the genealogy of Gen 36:20–28 seems to have entered the same "individual" twice (see DISHAN) without recognizing the identity. Hori means "Horite"; as a son of Lotan the son of Seir the Horite, Hori/"Horite" is the grandson of a Horite. Such a genealogy may reflect a struggle between two tribal groups for supremacy, each claiming its eponymous ancestor to have fathered the other, and/or a desperated scribe's attempt to deal with conflicting traditions.

2. The father of Shaphat, of the tribe of Simeon, one of the spies sent by Moses into Canaan (Num 13:5). The list of the spies' names in Num 13:3–16 is usually regarded as a late addition to the P source; i.e., it derives from a time when all the tribes except Judah (and Benjamin) had disappeared. It is unlikely that the list contains traditions of any sort. Thinking of Hori in Gen 36:20, 22, the compiler of the Numbers list may have attributed an "Edomite" father to his "Simeonite" spy because his source—the earliest scriptures—already had this tribe dwelling in the Negeb (which, in turn, seems to be the result of speculations about what happened to the tribe of Simeon rather than a reliable tradition; cf. Mittmann 1977: 217–19).

It is, therefore, doubtful whether a biblical personal name "Hori" ever existed; if it did, see HUR for a possible interpretation.

Mittmann, S. 1977. Ri. 1, 16f und das Siedlungsgebiet der kenitischen Sippe Hobab. *ZDPV* 93: 213–35.

ERNST AXEL KNAUF

HORITES [Heb *ḥōrî*]. A tribe or group of tribes in the mountains of Seir (Gen 14:6; 36:20–30; Deut 2:12, 22). According to Gen 14:6 and Deut 2:12, 22, the Horites inhabited the country of Seir until they were conquered and expelled by the Edomites. This, however, is a reconstruction of Edomite history which originates from a preconception of the Deuteronomistic school fashioned after the model of the Israelites' treatment of the Canaanites as commanded by Yahweh in Deut 7:1–2. The Deuteronomists and their successors learned from Gen 36:20 that Horites were the inhabitants of Seir. Because (like most of the biblical tradition) they regarded "Edom" and "Seir" as synonymous, they concluded that the Horites had been the Edomites' predecessors in the country of Seir. However, Seir and Edom originally referred to separate areas in S Transjordan. See also SEIR. The 7th-century B.C. coexistence of the "sons of Esau" in Edom (the agricultural land on the Transjordanian plateau) and the Horites in Seir (the wooded mountain slopes) is attested by the genealogical list in Gen 36:20–28 (its copy, 1 Chr 1:38–42, drops the Horites and retains only Seir). Together with Gen 36:10–14, this list belongs to the most ancient traditions in Genesis 36 (Weippert 1971; for a probable date in the 7th century B.C., cf. Knauf 1989: 10–11, n. 45; 61–63). As can be deduced from the name of the state, "Edom," and from the geographical factors, the more agricultural Edomite tribes eventually gained supremacy over the more pastoral Horite/Seirite tribes in the process of Edomite state formation.

Neither geography nor chronology favors the equation of the Horites (or Edomites) with the Hurrians of the 2d millennium B.C., as is sometimes suggested (e.g., Mendenhall 1973: 158). The tribal names in Gen 36:20–28 argue more decisively against such an assumption: they are easily explained by parallels within Semitic, but only laboriously brought into connection with Hurrian (Weippert 1971). This does not exclude the possibility that Hebrew scholars of the 1st millennium B.C. applied the term "Horite/Hurrian" to the tribes of Seir; comparably, the "Hittites" and the "Amorites" mentioned by biblical and neo-Assyrian authors do not refer to the same nations and areas who were known by these names in the 2d millennium B.C. See also AMORITES. One may as well, however, assume that "Horites" was the name by which these tribes referred to themselves. In this case, the name can be explained either by Heb *ḥōr*, "cave" (Ar *ḥaur* "bay, gulf"), and would denote "cave dwellers," troglodytes, in perfect accordance with geology and geography and the portrait of Esau in Gen 25:27; or it could be explained by Heb *ḥor*, Ar *ḥurr*, "free, noble."

ERNST AXEL KNAUF

HORMAH (PLACE) [Heb *ḥormâ*]. A city or cluster of cities in the Negeb region of Judah. Hormah plays a role in the episode of the aborted S invasion of Canaan by the Israelites. When their invasion was repulsed by the Amo-

rites, the fleeing Israelites were pursued as far as Hormah (Num 14:45; Deut 1:44). Another tradition speaks of a destruction of Arad by the Israelites on their way around the S part of Canaan (Num 21:1–3). The town was subsequently renamed Hormah ("destruction"). A third tradition holds that the name "Horman" was applied to the destroyed remains of a city formerly called Zephthah, taken after the initial conquest by Simeon and Judah together (Judg 1:17). Altogether, these traditions demonstrate the difficulties inherent in reconstructing the sequence of events which lay behind Israel's settlement in Canaan. Hormah appears in the list of conquered cities in Joshua 12 (14) and was allotted to the tribe of Judah (Josh 15:30), though technically part of Simeon's allotment (Josh 19:4; 1 Chr 4:30) which was incorporated into Judah's. Hormah is also listed as one of the cities to which David sent spoil after his defeat of the Amalekites at Ziklag (1 Sam 30:30).

Several sites have been proposed for Hormah, as one might imagine from the multitude of traditions attached to the name. Among them are Tell el-Milḥ (M.R. 152069), 7 miles NE of Beer-sheba (*IDB* 2: 645; Aharoni 1968: 31); Tell esh-Sheri'ah, 12 miles NW of Beer-sheba (*IDB* 2: 645); Tell Masos (M.R. 146069; Boling *Joshua* AB, 327; Aharoni 1976: 71–73); and Tel Ira (M.R. 148071; Aharoni 1976: 73). All of these sites lie within the same general region, and the tradition-layer one counts as most authentic would determine which of them would seem most likely. The connection of Hormah with Arad (the Numbers 21 tradition) favors Tell el-Milḥ, while the listing of Arad and Hormah as separate cities in Josh 12:15 inclines one toward Tell Masos, and the identification of Zephthah and Hormah (Judg 1:17) favors Tell Ira. The possibility that the process of abandonment and resettlement at each of these sites, and hence their being renamed, complicates the picture enormously. See Aharoni 1976 (who settles on Tell Masos) for the most complete discussion of this issue.

HORN. See MUSIC AND MUSICAL INSTRUMENTS.

HORONAIM (PLACE) [Heb *ḥōrônayim*]. A name which occurs four times in the Hebrew Bible and once in the 9th-century B.C.E. inscription of the Moabite king Mesha (Isa 15:5; Jer 48:3, 5, 34; *ANET*, 321, lines 31–32). The biblical references are included in prophetic oracles against Moab; the inscriptional reference is unfortunately fragmented, but it occurs in the context of a revelatory word to the king to "go down to Horonaim and fight" *(rd hlṯm bḥwrnn)*.

Most scholars have located Horonaim in central or S Moab between the Wadi Mujib and Wadi Hasa (respectively the Arnon and the Zered of the Hebrew Bible). This conclusion appears confirmed by extrabiblical sources that refer not to Horonaim but to a neighboring town, Luhith. Luhith is associated by parallelism with Horonaim in Isa 15:5 along an ascending roadway from Zoar at the S edge of the Dead Sea to the Moabite plateau. A further geographical indication is found in Isa 15:6, which refers to the waters of Nimrin. These waters should be identified with the modern Seil en Numera, a stream which cuts through the cliffs on the SW edge of the Moabite plateau to flow down to the Dead Sea. The extrabiblical sources—a Nabatean inscription from Madeba and a Hebrew contract from the time of Bar Kokhba—place Luhith in the SW quadrant of the Moabite plateau, probably along a Roman road that descends the plateau to circle around the S end of the Dead Sea.

Archaeological research has demonstrated the existence of a roadway that led to the Dead Sea from what is now the modern town of Kathrabba, SW of Kerak on the edge of the Moabite plateau. The roadway dates from the Roman/Nabatean period, and surface sherds suggest that Kathrabba itself was inhabited during this period. If this roadway follows the way of an earlier one from the Iron Age, then the sites of Horonaim and Luhith are most likely along it. Indeed, Ai (M.R. 211060), a town just E of Kathrabba, produced surface sherds from the Bronze, Iron, and Roman periods, suggesting that it and Kathrabba (M.R. 209061) would make good candidates for the sites of Luhith and Horonaim. Furthermore, there are Iron Age and Nabatean sites around these two towns, demonstrating the importance of this area in these periods. Khirbet Meidan, a twin site with remains from both periods, is located on a strategic hill W of Kathrabba overlooking the Dead Sea and approaches to the plateau from it. Tell el Mise, an outpost or small fort on a high hill just SE of Kathrabba, also has Iron Age and Nabatean pottery associated with it. This site arguably has the most strategic view in this section of the Moabite plateau. From the crumbled walls of the site one can see the Dead Sea to the W and traffic on the modern King's Highway to the E.

Other proposals for the location of Horonaim have been made. One candidate is the modern town of el-Iraq (M.R. 211055), 7 km S of Kathrabba at the head of the Seil en Numera. Two others located in the SW corner of the Moabite plateau near the Wadi Hasa are Medinet er Ras and Khirbet Dhubab. The former is a fort or outpost, the latter is a tell on the N bank of the Hasa with surface sherds suggesting almost continuous occupation from the EB period.

A recent suggestion equates Horonaim with the isolated, hilltop ruins of ed-Deir, a site SW of Rabba on the W edge of the plateau. Though clearly a strategic site, it is probably too far N to be identified with Horonaim. On the other hand, ed-Deir is located along a secondary Roman road that connected the Dead Sea with the plateau. Thus it cannot be ruled out as a possible location for Horonaim.

HORSE. See ZOOLOGY.

HORSE GATE (PLACE) [Heb *ša^{c}ar hassûsîm; ʾel-mĕbôʾ ša^{c}ar-hassûsîm; derek-mĕbôʾ hassûsîm*]. Two separate entrances for horses in Jerusalem. The Horse Gate (Heb *ša^{c}ar hassûsîm*) mentioned by Jeremiah (31:40) and Nehemiah (3:28) was a gate through the outer defensive wall on the E side of the city (not to be equated, however, with the East Gate of Neh 3:29 or Ezek 10:19; 43:1–5). The second Horse Gate, the "entrance of the gate for horses" (2 Chr 23:15 [Heb *ʾel-mĕbôʾ ša^{c}ar-hassûsîm*]), and the "way of the entrance of the horses" (2 Kgs 11:16 [Heb *derek-mĕbôʾ hassûsîm*]) was an entrance for horses into the royal compound from the Horse Gate in the outer wall. Avi-Yonah suggests (1954: 240, fig. 1; 247) that this entrance was to the stables in the House of the Forest of Lebanon in the palace compound and was situated between the palace and the temple precints. It is this entrance that figures in the execution of Athaliah at the coronation of her grandson Joash (2 Kings 11; 2 Chronicles 23).

The Horse Gate mentioned by Nehemiah (3:28) was located N of the wall of Ophel opposite "the great projecting tower" that was a part of the SE corner of the royal compound (Avi-Yonah 1954: 240, fig. 1). This, coupled with the fact that Jeremiah (31:39) associated the Horse Gate with the sacred temple precincts and the priests repaired the walls from the Horse Gate N (Neh 3:28), indicates that the Horse Gate was in close proximity to the temple precincts and would place this gate near the SE corner of the present-day Haram esh-Sharif.

HORVAT RIMMON (PLACE). See RIMMON, HORVAT.

HOSAH (PERSON) [Heb *ḥōsâ*]. A gatekeeper of the levitical family of Merari. According to 1 Chr 16:38, Hosah (whose name means "refuge"), along with Obed-edom, was one of two gatekeepers at the tent which David pitched for the ark in Jerusalem. However, the status of Hosah and his descendants appears considerably less significant in the more elaborate organization presented in 1 Chr 26:1–19. The mention of Hosah and his sons in vv 10–11 may be attributable to the Chronicler (Williamson *1 and 2 Chronicles* NCBC, 169) or to a later source (Rudolph *Chronikbücher* HAT, 173). Here they are the fewest in number (13) among the ranks of gatekeepers (compare 18 for Meshelemiah in 26:9 and 62 for Obed-edom in 26:10). In vv 12–18, attributable to a reviser of the Chronicler's work (Williamson, 170–71; Rudolph, 173), they were stationed at the W, or back, gate of the temple. According to this passage, Hosah and his sons were responsible for posting daily four men at the gate called Shallecheth (its meaning is unknown), and two men at the nearby PARBAR.

J. S. ROGERS

HOSAH (PLACE) [Heb *ḥosâ*]. A town located in the territory of the tribe of Asher (Josh 19:29). Hosah occurs immediately after the fortified city of Tyre, so some scholars (*GP* 2: 12; *LBHG,* 436) have suggested that the OT Hosah was identical to the Usu mentioned in extrabiblical texts as the mainland city which supplied Tyre. Usu had a long history, occurring in an Egyptian inscription of Seti I, the Amarna archives, the Papyrus Anastasi I, and in the Assyrian records of Sennacherib and Esarhaddon. During the Hellenistic period and later, Usu came to be called Palaityros, or "Old Tyre."

Most scholars (*LBHG,* 443) have located Hosah/Usu at Tell Rashidiyeh (M.R. 170293), but Dussaud (1927) suggested an identification with Kh. el-Hos (M.R. 172293). Kallai objects to the link between Hosah and Usu, noting that the Egyptians wrote the latter with an initial *i* rather than *ḥ* (*HGB,* 215–18). He also places Hosah at Kh. el-Hos, suggesting that Usu was located either at Rashidiyeh or at Tell Masuq (M.R. 170297).

MELVIN HUNT

HOSANNA [Gk *hōsanna*]. *Hōsanna* occurs five times in the gospels (Matt 21:9 *bis;* Mark 9:11; 11:10; John 12:13) as the cry raised by the crowd when Jesus entered Jerusalem the first day of the week ending with Passover and his crucifixion. The term is simply a transliteration of the Heb imperative *hôša^{c},* "save," augmented by the enclitic precative particle *-(n)nā,* which adds a note of urgency, "save, now/please." The form *hôša^{c}nnā* actually is not found in the Hebrew Bible, but the imperatives *hôša^{c}* and *hôšî^{c}āh,* without the precative particle *-nnā,* "please," occur 29 times, addressed to deity, mostly in the Psalter, and twice directed to royalty.

The cry "save" or "help" is elemental whether addressed to mortal, king, or deity. The long or so-called "emphatic" form of the imperative *hôšî^{c}āh* occurs only once in the Hebrew Bible with the precative particle *-nnā, hôšî^{c}ā(h)-nnā,* in Ps 118:25 where the precative or pleading tone is doubly emphasized by introducing appeal with the sigh *^{c}annā,* "Oh, please" (as in Gen 50:17 and elsewhere), and ending with an added note of urgency by means of the precative particle affixed to the imperative:

^{c}annā YHWH hôšî^{c}ā(h)nnā	"Oh, please, Lord, save (us), please!
^{c}annā YHWH haṣlîḥā(h)nnā	Oh, please, Lord, prosper (us), please!"

This is followed by the *benedictus qui venit* liturgical formula which has been misunderstood because of poetic variation in the word order, but lately properly translated in the

New JPS Version: "May he who enters be blessed in the name of the Lord." It is obvious that this passage, Ps 118:25–26, is echoed with variations, additions, omissions, and distortions in all the gospel accounts of the cry of the crowd at Jesus' Palm Sunday entry into Jerusalem.

The imperative cry *hôšîʿānnā* > *hôšaʿnnā* in Jewish liturgy was a feature of the post-harvest celebration Sukkoth, or Booths/Tabernacle, concerned with the vital need for rain. Given the climatology of Palestine-Syria, similar rain rites must be very ancient. The seven-day celebration of Sukkoth ended with sevenfold cries of *hôšîāʿnnā*, "save/help, please," i.e., by giving rain, the prayers accompanied by waving and beating the ground with branches of willow and palm (cf. Mishnah *Sukk.* 4:3–6). This is obscurely mentioned in Ps 118:27, "bind festival (with) branches as far as the horns of the altar." This climax was called the "Great Hosanna," *hôšaʿnā rabbā*, the great "Save Please," whence the nominalization *hôšaʿnā*, plural *hôšaʿnôt*, came to be applied to these rain prayers and later to prayer(s) in general. Even the branches beaten on the ground were called Hosannas, hence the proverbial Hebrew and Yiddish expression "a beaten *hosanna*" for a person buffeted by misfortune.

There is, however, no evidence whatsoever that Hosanna in biblical or postbiblical Jewish usage was ever an acclamation of praise. It was Christian misapprehension of a well-known Hebrew term that has confused even scholars to this day. The difference between acclamation and a stark cry, "Help, please!" is too great to be glossed over. How could such misapprehension occur? Why did not the gospel writers look to the Gk of Ps 118:25 and some thirty other passages where the Hebrew imperative is duly rendered by the Gk imperative *sōson*, "save"? The crux of the problem lies in the nonsensical cries "*hōsanna to* the son of David" and "*hōsanna in* the highest" which indicates that the cry was not understood because of the Semitic particle *l-* before the addresses "Son of David" and "highest."

C. C. Torrey (1933) surmises that in the original cry the Aramaic use of the proclitic particle *l-* as the object marker was mistaken for dative sense, "to/for the Son of David," thus distorting the imperative cry for help: "Save the Son of David!" and "Give him help on high!" Recently a new and compelling clue has emerged from the oldest corpus of W Semitic poetry exhumed at Ugarit, dating to the middle of the 2d millennium B.C., wherein proclitic *l-* is a common vocative particle. Accordingly, Albright and Mann boldly translated Matthew 21:9, 15 "Hosanna, O son of David" and noted that "the meaning of vocative *la-* was misunderstood quite early, and the Gk translation therefore rendered the vocative *'O son of David'* as 'to the son of David,' because the Hebrew *la, lĕ* is also used to indicate 'to' as a dative. What we have, therefore, is an ancient liturgical text, a cry to the anointed king for deliverance" (*Matthew* AB, 252).

Albright and Mann, however, failed to apply the same logic to "Hosanna in the highest" and rendered it awkwardly "(Cry) Hosanna in the heavenly heights!" taking this as an echo of Ps 148:1. This appears to be precisely the flawed logic of the author of Luke 2:14 and 19:30 where the Gk noun *doxa*, "glory," is used instead of *hōsanna*, which was wrongly supposed to be equivalent in the sense to the "*hallĕlû-Yāh* in the heights" of Ps 148:1. Luke's errant surmise that *hōsanna* (which he avoids) means something like *hallĕlû-Yah* has misled readers of the gospels to this day. Even Albright, who perceived that "*hōsanna* to the son of David" misconstrued the ancient and long obsolete vocative *l-* as dative, failed to realize that in the nonsensical "*hōsanna* in the highest" we have also the original vocative particle *l-* similarly mistaken for the dative. "Highest" or "Most High" (Semitic *ʿelyôn;* Gk *hypsistos*) was an ancient divine title applied to the first of the four great gods in the ancient tradition of divine succession (1) Elyon, (2) Heaven, (3) El/Kumarbi/Kronos, (4) the Weather-god Baʿl/Hadd/Teshub/Zeus. The title "Highest" is used many times of God in both the OT and the NT. Accordingly, thanks to ancient W Semitic usage of vocative *l-*, we can finally explain how the cries *hôšaʿnnā lĕ-ben dāwîd* and *hôšaʿnnā lĕ-ʿelyon*, "Save/help, please, O Son of David!" and "Save/help, please, O Highest!" came to be misunderstood.

It is manifest that the cry *hōsanna*, meaning "help, please!" addressed first to the carpenter from Nazareth as the Messiah and secondly to (God) the Highest, was politically and religiously provocative, to both Jews and the Roman rulers, especially at the paschal season celebrating the great rescue of the past and the hope of present liberation from Roman rule. There has long been puzzlement at the unseasonal use of elements of the autumnal rain rites of Sukkoth, especially the palms (cf. John 12:13) during the spring paschal celebration of liberation from political and religious oppression. The provocative impact of cries of "Help!" accompanied by palm waving can be appreciated by reference to 2 Macc 10:5–8, which tells us how the first Hanukkah celebrating hard-won but short-lived political and religious independence was actually a repeat performance of the crucial rain rites of Sukkoth given new political significance by coincidence with recent victory over foreign rule. Memories of this delivery some two centuries earlier made the cries of Hosanna, "help, please," a powerful appeal calculated to incite the oppressed and alarm the oppressors.

MARVIN H. POPE

HOSEA, BOOK OF. The book of Hosea is the first of twelve prophetic books called the "minor prophets" not because of their insignificance when compared with the "major prophets," but because of their relative brevity. Chronologically, it is second only to Amos among the twelve. The prophet Hosea was the only one of the writing

prophets who was a native of the northern kingdom who also prophesied there. His ministry extended from around the mid-eighth century to the fall of Samaria in 721 B.C.E.

G. Theology

A. Text

With the possible exception of Job, the book of Hosea has the dubious distinction of having the most obscure passages of the entire Hebrew Bible. Apart from the frequent and sudden shifts in mood and subject, and the difficulty of establishing the historical contexts, the book is replete with linguistic peculiarities. The text is traditionally regarded as the most corrupt and poorly preserved of the Hebrew Bible. A little fragment containing parts of Hos 1:7–2:5 is found among manuscripts from Qumran (4Q XII). It is very similar to the MT and, hence, of little value for reconstruction of the text. The LXX is frequently literalistic and incomprehensible in part. The other versions are, likewise, garbled at critical junctures. It appears that the translators of the versions were themselves struggling to understand the texts before them. Sometimes the literalistic readings actually help us to reconstruct the consonants that the translators may have seen but not understood. The linguistic peculiarities in much of Hosea may be explained as dialectal idiosyncrasies, rather than errors or textual corruptions. Many of the difficulties one encounters in the book may be attributed not to the scribal process, but rather to our lack of familiarity with the N dialect of Hebrew. Hosea is, after all, the only one of the writing prophets who had his home in the N. And so, in this century, scholars have called on new understandings of Hebrew grammar in the light of epigraphic evidence, especially from Ugarit, to explain many linguistic problems in the book.

B. Literary History

As the different moods, styles, and historical allusions in the book suggest, the final form of the book has come to us through different hands and in several stages. Some commentators would attribute a major portion of the book to a Judean redactor in the Josianic period (late 7th century B.C.E.) or in the Babylonian exile (6th century). There is no reason to doubt, however, that Hosea was responsible for most of the oracles in the book, which appear to have been delivered in the second half of the 8th century. It is impossible to outline here the literary history of the entire book, but even a cursory examination of the first three chapters will show the complexity of the process. The autobiographical account of Hosea's call in 3:1–3 may have indeed come from the prophet himself. The woman is not named here and the children are not mentioned. She is said to be "the beloved of another" and an adulteress. But there is also an extended and somewhat different account written in the third person about Hosea's call and his misfortunes with his family (1:2–6, 8–9). The woman is named Gomer bat-Diblaim. She is called the wife of the prophet, is said to be a harlotrous woman, *ʾēset zĕnûnîm*. The three children are given symbolic names. This biographical account may have been written by a disciple or some other close associate of the prophet. An editor (perhaps the author of the biographical account) collected the two accounts of Hosea's call and wove them together with an oracle of judgment against Israel for her unfaithfulness to Yahweh (2:4–15—Eng 2:2–13) and an oracle of hope (2:16–23—Eng 2:14–20). These Hoseanic oracles are framed by two short redactional units that link the unfaithfulness of Israel with Hosea's family (2:1–3, 23–25[—Eng 1:10–2:1, 21–23]). This redaction may be dated to the period after the fall of Samaria in 721 B.C.E., if one includes the call for reunification of Israel and Judah (2:2—Eng 1:11). The superscription for the entire book (1:1) is the work of editors in the exilic or postexilic period who were also responsible for the superscriptions on other prophetic books (cf. Joel 1:1; Mic 1:1; Zeph 1:1; Zech 1:1).

A similar process may be discernible in the rest of the book. While scholars are virtually unanimous that the book has a long history of transmission and that there is at least one Judean redaction, there is no agreement on the number and extent of the redaction. Major studies have appeared in recent years precisely on this question (Emmerson 1984; Yee 1987). The last verse of the book (14:10) is usually taken to be a late, perhaps postexilic, gloss by a scribe associated with wisdom circles. This conclusion, however, exaggerates the difference between prophetic and wisdom circles and fails to do justice to the vocabulary and thematic connections between this verse and the rest of Hosea (Seow 1982).

C. The Prophet

Nothing is known of the prophet Hosea ben-Beeri or his family outside this book. The name Hosea (properly Hoshea) is fairly common in the 8th and 7th centuries. Several seals and seal impressions bearing that name have been found from that period. The last monarch of the N kingdom, a younger contemporary of the prophet, was also called Hoshea (2 Kgs 17:1). The name is probably a shortened form of *hwšʿyh(w)*, "YHWH has delivered," or "Deliver, O YHWH!" This name appears as an alternate of Joshua (Num 13:8; Deut 32:44).

In the opening chapter of the book, Hosea is called by YHWH to marry a certain Gomer bat-Diblaim. She is called a promiscuous woman (*ʾēšet zĕnûnîm*). Some say she was a cultic prostitute, but others suggest that she was or became a harlotrous woman, but was not a professional whore. She bore Hosea two sons, Jezreel ("God will sow") and *lōʾ ʿammî* ("Not my people") and a daughter, *lōʾ ruḥāmâ* ("Not pitied"). It is no surprise, given the shocking divine command to marry a harlot and the symbolic significance of the children's names, that many commentators through the ages have treated the first three chapters of Hosea as pure allegory, parable, vision, or dream. The medieval commentators Ibn Ezra, David Kimḥi, and Maimonides, for instance, regarded the whole experience as a prophetic vision. Finding the command morally offensive, many modern scholars have insisted that there was no real marriage with such a woman; Gomer bat-Diblaim is unfaithful Israel personified and nothing more (see the survey in

Rowley 1963). Others have conceded that Hosea did marry the harlotrous woman as a symbolic act. Still others argue that God did not in fact command Hosea to marry such a woman. Rather, the prophet interpreted his marriage as divinely arranged when he learned of his wife's adultery and saw in his own experiences the meaning of God's love and commitment. In this line of thinking, Hosea's firstborn Jezreel ("God will sow") was so named as a sign of impending doom for "Israel," specifically the Jehu dynasty (1:4–5) on account of its bloodshed at the valley of Jezreel (cf. 2 Kgs 9:17–26; 10:1–11). By the time the second child was born, Hosea had learned of his wife's unfaithfulness. Hence that child was named "Not pitied" and the third child "Not my people." In the third chapter of the book the prophet is asked to love a woman who is beloved of another and an adulteress. It is not certain if this woman is Gomer; many argue that this is a different woman here (Stuart *Hosea-Jonah* WBC, 11–12, 65–66). The adverb "again" (*ʿôd*) in 3:1 may be taken with the call (thus, "YHWH called to me again") or with the imperative ("love again!"). Some maintain that Hosea was asked to take another promiscuous woman after his marriage with Gomer had failed or, as others would have, after Gomer died. If Gomer is the woman of chap. 3, then she must have abandoned her family or been cast out. Eventually, she was put out for sale in the slave market where Hosea found her and bought her back (3:1–3).

According to the prophet himself, he was labeled "a fool" and "a crazy fellow" (9:7). The former is a technical term in the wisdom tradition, characterizing a person who is quarrelsome, hot-tempered, lacking self-control, promiscuous, or associating with promiscuous people. Perhaps in the eyes of Hosea's opponents his frequent tirades and his association with the promiscuous Gomer marked him as a fool, a simpleton who was easily seduced by the wicked temptress. It would be farfetched, however, to suggest that Hosea belonged to the class of the wise, or that he was educated in a wisdom school. Wisdom themes and vocabulary were known to the prophets of the 8th century, as studies of Isaiah, Amos, and Micah have borne out. Even though there are certain features in the book that would normally be associated with the wisdom tradition, Hosea's insistence on the certainty of divine intervention in history and his covenant theology place him firmly within the prophetic tradition. Yet, like his contemporaries in the 8th century, Hosea appears to have been familiar with the language and imagery of the sages, and so he uses them in his oracles and disputations. His central claim concerns Israel's lack of knowledge (Heb *daʿat*). The choice of "knowledge" is apt, for it is at home in both the wisdom and covenant traditions. Israel is portrayed consistently as a recalcitrant fool who has no understanding and makes foolish choices (Seow 1982). So the people will "come to ruin" like the typical fool (4:14; cf. Prov 10:8). They are drunk (4:1, 18; cf. 20:1) and gluttonous (4:8). They brag about not fearing YHWH (10:3). They are likened to stupid animals and birds that wander about aimlessly. The mention of foreigners who sap the strength of Israel (7:9) is reminiscent of the warning given to the simpleton regarding unsavory alliances with "foreigners" (Prov 5:10). Indeed, the foolish people have borne "foreign children" (5:7). Israel's reliance on foreign powers is deemed futile, and compared with the pursuit of wind (12:2 [1]). In the book, one also finds references to the use of false balances (12:7; cf. Prov 11:1; 16:11) and to the shifting of boundary markers (5:10), unjust practices against which the sages repeatedly warned (e.g., Prov 22:28; 23:10). The prophet considered Israel an unwise fetus that does not know its proper time—as the wise always did (13:13).

Hosea was thoroughly familiar with the prophetic and historical traditions. Although he condemned a certain prophet ("the prophet" in 4:5), Hosea held the prophetic office in highest regard. The prophets received their authority from YHWH. Through the prophets God dealt with humans (12:10; 6:5) and through them God delivered Israel (12:13). The prophet was a watcher of and a snare to the people (9:8). In this connection, Moses is regarded as the prophet to whom the prophetic office may be traced.

Hosea was apparently well schooled in the historical traditions. Wolff (1956) has proposed that Hosea was so well versed in the traditions because of his close associations with certain priestly families and Levites. He was able to use his knowledge of Israel's history to call his people back to a correct relationship with YHWH. So he refers to the tradition of Jacob, who grabbed the heels of his brother and strove with God (12:2–6).

The date of Hosea cannot be set with certainty, but the material in the book suggests at least the period from the end of Jeroboam's reign to the fall of Samaria, approximately 752–721 B.C.E. This makes Hosea a contemporary of Amos, who prophesied in the N kingdom, and of Isaiah, who prophesied in the S. When Amos prophesied at Bethel, he was confronted by Amaziah, the royal priest at the national sanctuary (Amos 7:10–17). Since Hosea was a contemporary of Amos, Andersen and Freedman (*Hosea* AB, 38, 351–53) have proposed that Amaziah was the wicked priest against whom Hosea prophesied (4:4; cf. Amos 7:10–12).

There is no mention of Hosea's hometown anywhere in the book, nor is anything said about Beeri's origin. Nevertheless, it is accepted by all scholars that Hosea prophesied in the N kingdom, probably in the vicinities of Samaria, the capital, and near the sanctuaries at Bethel and Gilgal.

D. Historical Context

Scholars are by no means agreed on the extent to which one can reconstruct the historical events that lie in the background of the book. Hosea rarely mentions his contemporaries by name. He may have intended to be vague in his oracles, or the details may have been eliminated by someone in a later period who sought to generalize the oracles for later generations. Several of the oracles may be placed in any number of historical situations. The specific details are usually not spelled out in the oracles. Hence, some scholars hold that at best only one or two passages may be pinned down historically, but others are more optimistic about historical reconstructions. Among the latter, it is commonly assumed that the present sequence of passages in the book corresponds roughly to the chronological sequence in Israel's history—with the earliest events in the earliest part of the book and the latest at the end.

The superscription (1:1) places the prophecies of Hosea in the reigns of the Judean kings Uzziah, Jotham, Ahaz, and Hezekiah, but only Jeroboam II is mentioned of the

kings of Israel. This is peculiar, since Hosea was a N prophet preaching to the N kingdom. The priority given to the Judean kings and the inadequate reference to the N monarchy indicate that the superscription belongs to a Judean editor, following the fall of Samaria.

Some of the oracles of Hosea probably originated during the last years of the reign of Jeroboam II (786–746 B.C.E.), as the superscription suggests. Several passages in the book reflect the relative political stability and wealth in the Jeroboam era. The people were gluttonous, drunk, and far too complacent, if not arrogant (4:1–5:7). The atmosphere of Israel described here is very similar to that which Amos confronted in the days of Jeroboam. The sanctuaries of Gilgal and Beth-aven (Bethel) had been abused and foreign elements were introduced into the cult of YHWH (4:15–5:7; 9:15). The people had misplaced their trust on cultic acts (8:13; 6:6). They were more concerned about accumulating wealth than they were with justice (12:8–9—Eng vv 7–8). They had become overly confident in the military might of the nation (10:13–14; 8:14). The wealthier they became, the more readily sanctuaries multipled. This Hosea condemned, as the Deuteronomist(s) did. God would destroy their altars, their pillars, and their high places.

Even during the stable reign of Jeroboam, political intrigues threatened the Jehu dynasty. In such a climate, Amaziah accused Amos of plotting to assassinate Jeroboam (Amos 7:11). The oracles of Amos were too subversive and the country could not tolerate them. The possibility of sedition was certainly in the air. Indeed, from the death of Jeroboam in 746 till the fall of Samaria in 721 six kings ascended the throne in Israel; all except one died by violence. Assassination was the order of the day. Several of Hosea's oracles reflect this state of instability and confusion (5:1; 7:5–7; 8:4; 9:15; 13:10–11).

In 743, Tiglath-pileser III (745–727) of Assyria launched his infamous W campaign. The Syro-Palestinian states had to decide to acquiesce in the face of Assyrian threats or to join other states in a united front to stem the Assyrian tide. In this period Israel vacillated between submission and resistance, turning alternately between the rival powers of Assyria and Egypt (7:11). Israel's king Menahem (745–738) decided to submit in the face of Tiglath-pileser's superior military power. Israel paid a heavy tribute which was raised by a head tax levied on every landholder (2 Kgs 15:19–20; *ANET*, 283). Hosea alludes to the capitulation of Ephraim (*ʾprym*) to the Assyrians in this period, depicting Ephraim as a stupid dove (7:11) and a wild ass (*pr*ʾ) wandering alone (8:9).

Menahem was succeeded by his son Pekahiah, who was himself quickly assassinated by nationalistic elements headed by Pekah ben-Remaliah with a gang of fifty Gileadites (2 Kgs 15:23–26). Gilead is known in Hosea is a "a city of evil doers" (6:8; cf. 12:12 [11]). The mention of Gilead and bloodshed there may be a veiled reference to the murder of Pekahiah. Under Pekah, Israel joined the Arameans and the Philistines in an anti-Assyrian alliance. The coalition tried to persuade and then coerce Judah to join their ranks, thus initiating the Syro-Ephraimitic war (735–733). Albrecht Alt's thesis that this war lies in the background of 5:8–6:6 is accepted by most scholars. Against the pleading of the prophet Isaiah, King Ahaz of Judah turned to Tiglath-pileser, who gladly complied by seizing Galilee and some territories in the Transjordan. The prophecy concerning the "breaking of Israel's bow" at Jezreel (1:4–5) probably alludes to the decisive battle which Tiglath-pileser won in 733. Only Samaria and the hill country of Ephraim remained in Israelite control. Tiglath-pileser ravaged the land and deported a large segment of the population (5:13–14; 2 Kgs 15:29). Pekah was assassinated by a pro-Assyrian faction led by Hoshea ben-Elah, who quickly sued for peace and sent a tribute to the Assyrian king (2 Kgs 15:30). This triumph of Assyria is recorded in Akkadian in one of the annals of Tiglath-pileser:

> (Israel's) inhabitants (and) its possessions I led to Assyria. They overthrew their king Pekah (*Pa-qa-ḫa*) and I placed Hoshea (*A-u-si'*) as king over them. I received from them 10 talents of gold, 1,000 (?) talents of silver as their [tri]bute and brought them to Assyria (*ANET*, 28).

As long as Hoshea was content to be a vassal of Assyria, there was some measure of peace in Israel. But Hoshea sought to cast off the Assyrian yoke by turning to Egypt (cf. 7:11). Thus, when Tiglath-pileser died in 727, Hoshea withheld tribute from the Assyrians (2 Kgs 17:4). These events may form the background of the references to Israel's "return to Egypt" in 9:3; 11:5; 12:1.

Succeeding Tiglath-pileser, Shalmaneser V launched his punitive expedition against Israel in 725. The oracles about the demise of Israel's king (10:7; 13:10–11) are commonly taken to be allusions to the punishment of Hoshea by the Assyrians. The mention of Shalman who destroyed Beth-arbel (10:14) is sometimes taken to be a reference to Shalmaneser V, who was supposed to have destroyed Beth-arbel (modern Irbid?) en route to Samaria. This would put the oracle sometime just before the fall of Samaria in 721 B.C.E. Others identify Shalman with the Moabite king Salamau who is mentioned in one of Tiglath-pileser's inscriptions (*ANET*, 282). No evidence is available, however, for the devastation of Beth-arbel, which was apparently widely known to Hosea's audience.

There are several probable allusions in the book to the last days of Samaria (9:1–9; 10:3–10; 11:5–7). But there is no mention of the actual destruction of Samaria anywhere. Indeed, in the conclusion of the book, Samaria is apparently still standing, but her end is nigh (14:1—Eng 13:16).

E. Canaanite Religion

The book of Hosea provides us with rare textual insights into N Israelite religion in the 8th century B.C.E. The Elijah stories (1 Kings 17–19) tell of the struggle in the N kingdom between the prophets of YHWH and the adherents of Baalism only a century before Hosea. In general, the picture is in accord with scholarly reconstruction from archaeological discoveries. Yahwism apparently did not dominate in the N kingdom as it did in Judah. By all accounts, Israel flirted with all manners of Canaanite religion. Many personal names on Hebrew seals discovered in Israel bear Canaanite theophoric elements, contrasting dramatically with the personal names of seals from Judah. The Samaria ostraca from this general period also contain

numerous Baal names. At Kuntillet ʾAjrud in the Sinai, the site of an ancient Israelite (as opposed to Judean) colony has been discovered with evidence of a syncretistic Yahwistic cult. On one pithos one finds the drawing of a couple with bovine features, and above it is the inscription: *brkt . ʾtkm . lyhwh . šmrn . wlʾšrth,* "May you be blessed by YHWH of Samaria and by his Asherah" (Meshel 1979).

It is sometimes posited that Gomer bat-Diblaim was a cultic prostitute who participated in the ritual sexual acts of Canaanite religions (2:7–15—Eng 2:5–13). It has also been suggested that the name Diblaim, which may be taken to mean "Two Fig" or the like, is a veiled reference to Gomer's partaking of the "raisin cakes" (3:1). The latter is possibly an aphrodisiac associated with Canaanite fertility cults.

According to Hosea, the people consecrated themselves at Baal-peor, soon after they had made the covenant with YHWH (9:10; Num 25:1–18). They were brought by YHWH to the land which he had blessed, but they turned to the Canaanite gods instead, and attributed blessings and success to Baal (2:7, 10–11—Eng 2:5, 8–9). The polemic against Canaanite religion is clear here. Baal was thought to be the god of nature and fertility, but it was really YHWH who gave and took away.

Among the practices of Canaanite religion, none irked Hosea more than their attempt to induce fertility by sympathetic magic. Since fertility was thought to have been generated by sexual intercourse between the deities (specifically between Baal and Anat), certain men and women were set apart for cultic coitus. But Hosea insisted that the Canaanite gods could not deliver on their promise. The woman pursued them but she could not catch up; "she will seek them, but they will not be found" (2:5—Eng 2:7). The imagery of a woman pursuing her lover is known in other erotic contexts (Cant 3:1–4). Here it may have to do with a sexual ritual to bring about fertility. The people participated in such sexual rites to ensure rich harvests and fecundity, but they would "eat but not be satisfied, prostitute themselves but not multiply" (4:10).

Eventually Israel had to learn that only YHWH could grant the blessings of the land. Then, YHWH alone would have the allegiance of his bride, not Baal. The name of Baal would be removed forever; Israel would call YHWH "my husband" *(ʾîšî)* and not "my master" *(baʿălî)* as before.

No other Canaanite god is explicitly mentioned besides Baal, although it is sometimes supposed that the Hebrew of 14:9—Eng 14:8 contains an allusion to the goddesses Anat and Asherah. In 4:12 one finds mention of people seeking oracles from "wood." This is probably an allusion to the statue of the goddess Asherah and/or the sacred tree in the sanctuary. Hosea inveighed against the use of idols, but special mention is made of the "calf of Samaria" (8:5), the "calf of Beth-aven" (10:5), and certain calves that people kissed (13:2). These are probably the calves that Jeroboam I made to prevent his subjects from going down to the Jerusalem temple (1 Kgs 12:28; cf. Exod 32:1–10). They were probably nothing more than pedestals on which YHWH was supposed to have stood, but the polemics of Yahwistic prophets made these out to be idols made for worship.

F. Structure

It is clear that chap. 1–3 and 4–14 constitute two major divisions of the book. The first section (chap. 1–3) functions as the preface for the entire book. The preface represents the unfaithfulness of Israel in the person of Gomer, and the pain and love of God in the person of Hosea. The prophet is asked to marry the promiscuous Gomer because "the land" had gone awhoring, going after her Canaanite "lovers" (the gods), depending on these illegitimate lovers for sustenance, and performing rites that joined her to them. Judgment is proclaimed, but it is followed by a message of hope for a new beginning. Eventually, the recalcitrant wife would realize that life was much better with her first spouse. Thus, out of the troublesome valley of suffering (see ACHOR) there would, nevertheless, be a door of hope (2:17—Eng 2:15). YHWH would no longer be confused with Baal. Indeed, the names of the Baalism would be removed from Israel's lips, and a new relationship would be established by YHWH. Israel would be betrothed to YHWH once again. The same juxtaposition of judgment with hope and the theme of redemption is also found in chap. 3.

Reflecting the structure of the first three chapters, the major portion of the book also juxtaposes oracles of hope (11:1–11; 14:1–8) with oracles of judgment. As in the first three chapters, so in the oracles of 4–14 YHWH's relation with Israel is expressed in familial terms, as husband and wife and parent and child (11:1–4). YHWH is portrayed as the faithful lover and husband, Israel as the adulterous and recalcitrant wife. The theme of the wife's unfaithfulness is carried through the book. YHWH is also the patient parent bent on teaching Israel, the rebellious child (11:1–7). Although he resorted to discipline, his compassion and mercy for the child prevented the child from being destroyed.

The book may be outlined as follows:

I. Preface: The Family of Hosea (chap. 1–3)
 A. Hosea's Call and His Family (1:2–2:3—Eng 1:1–11)
 B. God and the Wife (2:4–25—Eng 2:1–23)
 C. Restoration (3:1–5)
II. Faithful God and Unfaithful Israel (chap. 4–13)
 A. Unfaithfulness of Israel (4:1–8:14)
 B. Proclamation of Judgment (9:1–13:16)
III. Restoration (chap. 14)
 A. Call to Return (14:2–4—Eng 14:1–3)
 B. Promise of Restoration (14:5–9—Eng 4–8)
 C. Summary Call to Faithfulness (14:10—Eng 9)

G. Theology

Hosea stands firmly in the ancient Mosaic tradition of the conditional covenant, a tradition having its greatest influence in the N kingdom. Fundamental to this theological tradition is the understanding that the validity of the covenant was conditional upon the faithfulness of the covenant partners. This covenant has been compared with the suzerainty treaties of the ANE. Following this model, YHWH is seen as the benevolent suzerain and Israel as the vassal who owed allegiance to YHWH.

There are allusions in the book to the Sinai revelation. The very name *lōʾ-ʿammî,* "not my people," suggests the Mosaic tradition in which YHWH called Israel *ʿammî,* "my people" (cf. Exod 6:7; 3:7, 10). That relationship assumed that the nation would obey the command of YHWH and "keep the covenant" (Exod 19:5); failure to do so would

result in covenant curses and invalidation of the relationship. According to Hosea, God used to call Israel *ʿammî,* "my people," but because of their unfaithfulness the Israelites will be called *lō᾽-ʿammî,* "not my people." At Sinai, the deity was revealed as the great *᾽ehyeh,* "I am" (Exod 3:14), but now, because of Israel's unfaithfulness, the message from God is *lō᾽-᾽ehyeh,* "I am not (your God)" (1:9). Hosea was interested primarily in Israel as a chosen people. Unlike his contemporary, Amos, he was not interested in the punishment or salvation of other nations. Because of his emphasis on the covenant relationship, he refers to the deity usually by the name YHWH (38 times); where *᾽ĕlōhîm* is used, a pronominal suffix is used to imply that it is the God of the Exodus and Sinai of whom Hosea is speaking. As a divine name, *᾽ĕlōhîm* occurs only 3 times in Hosea without suffixal or other specification. Thus, Hosea was concerned with YHWH, the God of Israel, who led the Israelites out of Egypt and preserved them in the wilderness (12:13, 14). Israel knew "no other God" but YHWH, there was no other savior (13:4; Exod 20:3).

Throughout the book there are specific references and allusions to the Exodus event (2:17—Eng 2:15; 11:1; 12:10, 14[—Eng 12:9, 13]; 13:4) and the wilderness experience (2:16[—Eng 2:14]; 9:10; 13:4). Hosea romanticized the early days of Israel's history as a time of Israel's faithfulness (2:15 [13]).

Against this background one must understand the sins of Israel. The vassal had betrayed the suzerain; the people of Israel had rebelled (5:7; 6:7; 7:1; 7:13, 14; 8:1–2; 9:15; 14:1—Eng 3:16). Israel (the figuration as a woman surfaces repeatedly) had transgressed the covenant and violated its stipulations (4:1–3; 6:7; 7:1; 8:1). This she did by showing allegiance to other gods, turning to foreign military power, and relying on her own military prowess. Sharing the same world view as the predecessors of the Deuteronomic school, Hosea condemned any deviation from the Yahwistic cult. The people had made molten images of silver and gold, just as they did in the days of Moses and Aaron (8:4–5; 13:2). Israel had violated her trust by turning to the Canaanite gods and participating in their sexual rituals (2:7b–15—Eng 2:5b–14; 9:10). The prophet described this unfaithfulness in sexual terms, as harlotry and adultery (1:2; 2:4–15—Eng 2:2–13; 4:10–19; 5:3–4; 6:10; 7:4; 9:1). Here again is an allusion to the covenant at Sinai where the proliferation of altars and the worship of other gods are regarded as acts of harlotry (Exod 34:12–16; cf. Judg 8:33). They have indeed rejected the love of Yahweh and turned to the Canaanite gods. They made idols and worshipped them (4:17; 8:4; 10:5; 11:2; 13:1–3; 14:9—Eng 14:8). Like the later Deuteronomists, Hosea condemned the proliferation of altars and local sanctuaries (10:1–2, 8; 12:11). He regarded the temple in Jerusalem as the sole legitimate sanctuary in which to worship YHWH, and he condemned those who worshipped at the N shrines at Gilgal and Bethel (4:15; 9:15). He attributed the apostasy of Israel to what the Deuteronomist called "the sin of Jeroboam," namely, the erection of the golden calf at Bethel (10:5).

In spite of YHWH's faithfulness as evident in history, Israel did not trust in YHWH's power to protect and deliver them. Instead, they turned to Assyria and Egypt (5:13; 7:8, 11; 8:9–10; 12:2—Eng 12:1), precisely the oppressive nations from which they had to be rescued. Thus Israel acted treacherously against YHWH her suzerain. Hence her sacrifices and offerings were of no use to YHWH (6:6; 8:13).

Because of Israel's violations of the covenant, YHWH brought a lawsuit against her (2:4 [—Eng 2:2]; 4:1; 5:1). YHWH charged that Israel lacked faithfulness *(᾽ĕmet),* loyalty *(ḥesed),* and knowledge of God *(daʿat ᾽ĕlōhîm;* cf. 4:1). Knowledge and loyalty are two key theological concepts in Hosea. They occur together again in 6:6, where it is emphasized that YHWH preferred loyalty and knowledge of God to sacrifice.

Knowledge of God marked Israel's special relationship with YHWH. People and priest alike are rejected by YHWH because of their lack of knowledge (4:1, 6; 5:4). The verb *ydʿ* indicates intimate knowledge as of partners in a covenant or marriage. Israel's relationship with YHWH was once correct: they *knew* no other God but YHWH, and YHWH knew them in their wilderness wandering (13:4). But as soon as they were satiated with the nourishment that YHWH had provided them, they forgot the benevolence of YHWH (13:6). They claimed to know YHWH (8:2), but they had flagrantly broken the covenant with YHWH and violated the law (8:1). In fact, they did not know. They did not even know that it was YHWH who provided her with grain, wine, and oil (2:8). Instead, they attributed these products of the land to other gods (2:7 [—Eng 2:5]). They reckoned that vines and fig trees were their payment for their devotion to their "lovers" (2:14 [—Eng 2:12]). For the sake of grain and wine they participated in the fertility rites associated with Baal (7:14; cf. 1 Kgs 18:28). They gashed themselves even though it was explicitly forbidden for them to do so (Deut 14:28). It was YHWH who cared for them and healed, but they did not know it (11:3). They did not know YHWH because they were possessed by the "spirit of harlotry" (5:4). But YHWH knew them (5:3). They had rejected knowledge, the absence of which was evident in their violation of the commandments of God (4:1–3, 6). The lack of knowledge is taken to be synonymous with treachery (5:7; 6:6–7), and for this treachery she was to go into exile (4:1, 6). But beyond the judgment Hosea saw hope for a new relationship established by YHWH and based on faithfulness, loyalty, justice, and mercy. Then would Israel truly know YHWH (2:22—Eng 2:20). To that end, Hosea urged his audience to "know YHWH and pursue the knowledge of YHWH" (6:2).

For Hosea, "loyalty" *(ḥesed)* marked the covenant of mutuality. Both covenant partners were expected to demonstrate this quality. There was inequality. YHWH's reliability was likened to the predictability of dawn and the spring rain (6:1–3). Israel's loyalty, on the other hand, was as fleeting as the morning cloud and the dew that evaporates all too quickly (6:4). She must repent and sow righteousness in order to reap the fruits of *ḥesed* (10:12). The people must keep loyalty and justice (12:7). Israel will, indeed, be punished for the abandonment of her covenant responsibilities. But beyond judgment there is hope. Eventually, God will take Israel back as bride in righteousness, justice, mercy, faithfulness, and loyalty, and Israel will truly know YHWH (2:22–23—Eng 2:19–20).

It is for good reason that Hosea is often called the

prophet of love. The love of YHWH for Israel is substantiated and exemplified in Hosea's own relationship with his wife. Divine love is shown in the microcosm of Hosea's marriage. Love, indeed, is the central theme that unifies the book. The relationship between Hosea and his beloved (chap. 1–3) which mirrors the relationship between YHWH and Israel (chap. 4–14) is one of love on the part of the gracious husband. As with loyalty and knowledge, so love may be understood in terms of the covenant. In the ANE, the ties between the vassal and suzerain were said to be marked by "love." The vassal was supposed to "love" the suzerain by observing the treaty stipulations, honoring its responsibilities, and being loyal to the suzerain. Hosea was commanded to love a harlotrous woman as a symbol of YHWH's love for the people in spite of their unfaithfulness (3:1). God is also said to have loved Israel like a child, even though Israel kept gravitating toward other gods (11:1–4). That same love would be freely given with the eventual reconcilation (14:5 [—Eng 14:4]). By the same token, the invalidation of the covenant is expressed as the withdrawal of love (9:15).

For their transgressions, the people would be punished. Covenant curses would be upon them. They would be cursed with hunger (4:10; 9:2). Their threshing floors and wine vats would cease to be operational (9:2). Though they were engaged in all sorts of rites to bring fertility, they would experience barrenness and dryness of breasts instead (4:10; 9:11). They and their princes would die by the sword (7:16; 9:13; 11:6). Their children would be dashed in pieces and their pregnant women would be cut open (11:6; 14:11—Eng 13:16]). War would overtake them (10:9; 14). Their cities would be destroyed by fire (8:14). Parents would be bereft of their children (9:11–14, 16). Worst of all, there would be a reversal of the Exodus; they would be brought back to Egypt whence they had been delivered (8:13; 9:3; 11:5; 14:1–2) or be in exile (9:3, 17; 11:5, 11). Thus the unfaithful nation would receive the same punishment as the unfaithful Gomer: they would be cast out of their home (land) and left to fend for themselves in foreign territories. Through this experience of punishment Israel would learn, even as the unfaithful wife did, that life was better with her first husband, namely YHWH (2:9 [—Eng 2:7]).

Thus, Hosea's message is not entirely of doom. Punishment was inevitable. The situation was not hopeless because God's compassion for Ephraim the child was great (11:8–9), and God could not bear to see God's beloved destroyed. In the end, the children would "be pitied" (14:4 [—Eng 14:3]; cf. 1:6; 2:25 [—Eng 2:23]). Hence, the people were asked to return *(sûb)* to YHWH (6:1; 12:7 [—Eng 12:6]; 14:2–3—Eng 14:1–2) in order that they might be restored to their wealth and health. In accordance with Deuteronomistic covenant theology, the repentance of the offender would bring forgiveness and life. YHWH's affliction was only temporary; it was intended to cause Israel to see the foolishness of her ways. Eventually YHWH would heal the sickness and bind the wounds so that his people would live again (6:1–2). Their fortunes would be restored and they would be healed (6:11). The exiles would return home (11:10–11; 6:11; cf. 3:5). They would be healed (6:1, 11). YHWH would correct their apostasy and love them freely again (14:5—Eng 14:3). They would return and dwell under his shade (14:8 [—Eng 14:7]).

HOSHAIAH (PERSON) [Heb *hôšaʿăyāh*]. **1.** Leader of the princes of Judah at the dedication of the wall of Jerusalem (Neh 12:32). The list of participants in vv 32–

36 has probably been spliced into a separate narrative about the procession (vv 27–31, 37–43) from the first-person accounts in Nehemiah known as Nehemiah's Memoirs (Williamson *Ezra, Nehemiah* WBC, 370), perhaps for the purpose of making a historical connection between Nehemiah and Ezra (whose name in v 33 may itself be a gloss on "Azariah").

2. Father of Jezaniah (Jer 42:1) or Azariah (Jer 43:2), a leader in Jerusalem after the assassination of Gedaliah and one of the "insolent men" (Heb *hazzādîm;* 43:2) who forced Jeremiah to flee with them to Egypt. Therefore, Hoshaiah was presumably also the Maacathite referred to in Jer 40:8. The LXX versions of Jer 49:1 (—Eng 42:1) and 50:2 (—Eng 43:2) both refer to Azariah as the son of MAASEIAH *(maasaiou)* instead of Hoshaiah. The reasons for these variations are unclear. The name Hoshaiah in its longer form, *hwšʿyhw,* is well attested in inscriptions outside of the Bible including the Lachish letters (Fowler *TPNAH,* 97). There is no certainty that the Hoshaiah of the Lachish correspondence is the same man referred to in Jeremiah, but this is a possibility. See JAAZANIAH and JEZANIAH.

STEVEN L. MCKENZIE

HOSHAMA (PERSON) [Heb *hôšāmāʾ*]. The sixth son of Jeconiah (Jehoiachin), king of Judah (598–597), who was exiled by Nebuchadnezzar. Hoshama is mentioned only in 1 Chr 3:18, as part of the list recording the postexilic descendants of David.

RUSSELL FULLER

HOSHEA (PERSON) [Heb *hôšēaʿ*]. **1.** The earlier name of Joshua, the son of Nun (Num 13:8; cf. Deut. 32:44), which Moses, for some unspecified reason, changed to Joshua (v 16). This Ephraimite was among the twelve scouts whom Moses, at Yahweh's command, dispatched N from the wilderness of Paran in order "to spy out the land of Canaan" (v 17). See JOSHUA.

2. The son of Azaziah and chief officer (*nāgîd,* 1 Chr 27:16) of Ephraim during the Davidic monarchy (1 Chr 27:20).

3. The last king of Israel (ca. 732–724 B.C.E.), the son of Elah (2 Kgs 15:30), and a contemporary of two Judean kings, Ahaz and Hezekiah. Though his ultimate fate is unknown, this murderer and successor of Pekah had a relatively short and troubled rule prior to being taken captive by Shalmaneser V, king of Assyria. Hoshea's career and its impact on the N kingdom will be considered under three categories: prelude, Hoshea's regal tenure, and aftermath.

a. Prelude. When the anti-Assyrian coalition that was headed by two politically unrealistic monarchs—Pekah of Israel and his ally, Rezin of Aram—proved ineffective, these small states in W Asia were slated for trouble. In 734 B.C.E. Assyria's king, Tiglath-pileser III (745–727), pressed westward. After an initial sweep down the Mediterranean coast he directed his attention to interior regions in Syria-Palestine. Tiglath-pileser reached the climax of his campaign when he moved against Damascus in 733–732 B.C.E. He devastated the city, executed its king, Rezin, deported much of the population, and reorganized Aram into four Assyrian provinces. During or just prior to his siege against Damascus, Tiglath-pileser confirmed Hoshea's appointment as king of Israel (*ANET,* 284). Israel seems not to have suffered accutely from Assyrian visitation at this juncture, though some of its people were deported. Also the Assyrians took charge of Israelite territory in Galilee, the valley of Jezreel, and Transjordan that Rezin had seized for Aram some years earlier. In mounting the throne in Samaria, Hoshea would govern a small territory that did not range beyond the city of Samaria and the neighboring hill country of Ephraim.

b. Hoshea's Regal Tenure. Credited with a reign of nine years (2 Kgs 17:1), Hoshea presumably entered the regal office during the latter phase of Tiglath-pileser's W campaign. The precise manner whereby he displaced his predecessor Pekah is not known. On the one hand, the biblical text reports that "Hoshea the son of Elah made a conspiracy against Pekah the son of Remaliah, and struck him down, and slew him, and reigned in his stead" (2 Kgs 15:30). On the other hand, a first-person statement in the annals of Tiglath-pileser III discloses that the people "overthrew their king Pekah and I placed Hoshea as king over them" (*ANET,* 284). Though forthright initiative on Hoshea's part need not be questioned, surely the Assyrian endorsement of the one who would next govern the vassal Israelite state was a matter of import.

Whatever the exact circumstances may have been, pro-Assyrian sentiment momentarily prevailed in Samaria. It was not a moment too soon for Israel to make amends to the Assyrians, who surely would applaud Pekah's removal. If Israel's fate were not to replicate Aram's, Hoshea would need to provide visible tokens of his awareness that his relationship to Tiglath-pileser was that of vassal to overlord. Indeed, in 731 B.C.E., at an obviously early stage in his regal tenure, Hoshea dispatched tribute to Tiglath-pileser, who was currently involved in a campaign in distant Babylonia.

Though no details are available, we may assume that Hoshea's response to Shalmaneser V (727–722 B.C.E.), the son and successor of Tiglath-pileser III, was likewise submissive. Admittedly, the text in 2 Kgs 17:3 invites two distinct interpretations. Reporting that "against him [Hoshea] came up Shalmaneser king of Assyria; and Hoshea became his vassal, and paid him tribute," this verse could be perceived as a disclosure that Shalmaneser V found it necessary to pay Hoshea a personal visit in order to remind him of the requirements of Israelite vassaldom to Assyria. A second and more viable interpretation holds that, as Hoshea had placated Tiglath-pileser with tribute, he did no less for his new successor Shalmaneser.

In 724 B.C.E., however, Hoshea committed a costly political error by shifting his loyalty from Assyria to Egypt. He ceased making annual payments of tribute to Shalmaneser V and began to cultivate diplomatic ties with Egypt. Thus the biblical text states that "the king of Assyria found treachery in Hoshea; for he had sent messengers to So, king of Egypt, and offered no tribute to the king of Assyria" (2 Kgs 17:4). Owing to the lack of historiographic literature for the reign of Shalmaneser V, this laconic biblical text remains in the shadows. Perhaps an increasingly strong anti-Assyrian faction in Samaria induced Hoshea to shift his position. Moreover, Hoshea might have

assumed that other Palestinian states were ripe for a mutual campaign against Assyria. In any event, Hoshea misread Egypt's capacity to help on this occasion. Currently fragmented into several insignificant rival kingdoms, Egypt was not about to spend its energies tending to some other nation's problems.

Also it is not clear to whom Hoshea directed his appeal. Egyptian records do not attest any pharaoh named So. Until 1960 it was commonplace for So (perhaps vocalized as Sewe) to be equated with Sib'e, the Egyptian military commander often mentioned in the inscriptions of Sargon (*ANET,* 285). Since Borger (1960: 49–53) has demonstrated that the cuneiform sign in question must be read ideographically as Re'e, the identification of So with Sib'e has been abandoned. Kitchen (1986: 463) accepts So as an abbreviation of the name Osorkon IV, the last pharaoh of Egypt's 22d Dynasty. Since the identity of the pharaoh with whom Hoshea sought to establish diplomatic ties is not beyond dispute, another approach commends itself. This involves equating So with a *place* (the city of Sais in the Nile delta) rather than with a *person* (Goedicke 1963: 64–66). Thus Albright (1963: 66) argues that the Hebrew text originally stated that Hoshea sent "to So (i.e., to Sais), to the king of Egypt." Several years prior to 720 B.C.E., Pharaoh Tefnakht, who founded Egypt's 24th Dynasty, established an independent kingdom in Sais. Uncertainties surrounding the identity of So, however, in no way discount the fact that Hoshea's appeal to some Egyptian element went unanswered.

c. Aftermath. The Assyrian reprisal was prompt. In some manner, Shalmaneser V captured Hoshea and "bound him in prison" (2 Kgs 17:4). Perhaps Hoshea, choosing to break with Samaria's anti-Assyrian faction, appeared before his overlord to make amends. At any rate, Israelite resistance did not cease with the king's arrest. Only after a lengthy siege involving two calendar years did Samaria's stalwart population surrender to the Assyrians. Apparently Shalmaneser deployed only some of his forces against this city that was still being well served by superbly constructed defensive walls erected more than a century earlier by Omri and Ahab.

In the biblical text, Shalmaneser is credited with having captured Samaria. Since he died shortly before or after Samaria's citizens were forced to surrender, it is not surprising that his brother and successor, Sargon II (722–705), celebrated the conquest of Samaria as the outstanding event of his first year of rule (*ANET,* 284). Though during the early months of his rule Sargon's energies were devoted to settling problems in both Assyria and S Mesopotamia, by 720 B.C.E. he was able to reclaim Samaria, deport 27,290 of its citizens, and incorporate it into the expanding Assyrian provincial system.

Finally, whereas Hoshea is censured in the biblical text for having done "evil in the sight of the LORD" (2 Kgs 17:2), the judgment is softened by this additional statement: "yet not as the kings of Israel who were before him." Though no precise reason is available to explain why Hoshea is the one N monarch to receive a mitigated condemnation, perhaps he lacked time and energy to mount religious pursuits that the Deuteronomic author would have found objectionable. That he was treated with some respect in the light of his tragic role as the last king of the N kingdom is a possible, though not compelling, answer.

4. One of "the chiefs of the people" (*ro'šê hā'ām;* Neh 10:15—Eng 10:14), a lay leader who set his seal to the covenant in the time of Nehemiah (Neh 10:24—Eng 10:23). This deed is perceived as a solemn commitment that flowed naturally from the communal fasting and confession of sin that is the subject of Nehemiah 9. Presumably, by means of his own personal seal, Hoshea formally signed the document in question.

HOSPITALITY [Gk *philoxenia*]. The practice of receiving a guest or stranger graciously was common to many social groups throughout the period in which the OT and NT were composed. But special nuances of hospitality, particularly with regard to the guest and host roles played by God or Christ, serve to distinguish the notions of the biblical writers from those of their contemporaries. The word most often associated with hospitality in the LXX and the NT is *xenos,* which literally means foreigner, stranger, or even enemy. In its derived sense, however, the term comes to denote both guest and host alike. Typically, the verb used to describe the extending of hospitality is *xenizein* (Sir 29:25; 1 Macc 9:6; Acts 10:23; Heb 13:2). In the NT one who receives visitors is said to be *philoxenos,* i.e., a "lover of strangers," or to be practicing the virtue of *philoxenia* (1 Tim 3:2; 1 Pet 4:9; Rom 12:13; Heb 13:2). All these terms occur in classical Greek literature as well.

The Hebrew Scriptures contain no single word for hospitality, but the activity itself is prominent, especially in the patriarchal stories and accounts in the book of Judges. In these narratives the practice usually illustrates bedouin traditions having to do with a resident's obligation to nourish and protect travelers who find themselves in hostile environments. Thus, in Gen 18:1ff. Abraham rushes out of his tent to greet three strangers who approach him "in the heat of the day." When a feast is set before them, these unknown visitors reveal how God's promise concerning the son to be born of Abraham and Sarah is at long last approaching fulfillment. By conveying their message, the guests return a favor to their host, thus setting in motion a numinous reciprocity which is typical of stories about table fellowship in the ancient world. A similar exchange occurs when Abraham's servant visits Mesopotamia to procure a wife for Isaac (Gen 24:1–49). Having reached his destination, the servant prays that God will

make known the desired bride in the person of the first young woman who not only responds to his request for a drink of water but also offers, on her own initiative, to water his camels as well. This turns out to be Rebekah. Over dinner in the house of Rebekah's father the servant discloses his identity and tells of his mission, ending with an account of the answered prayer. In both of these patriarchal stories God's will comes to light through an act of hospitality.

A more direct encounter with the divine occurs in a meal scene recorded by the preexilic author of Exodus 24. Immediately following the ratification of the Sinai covenant Moses, Aaron, and 70 elders of Israel ascend the holy mountain at God's command. Still at some distance from the top, "they saw the God of Israel . . . and he did not lay his hand on the chief men of Israel; they beheld God, and ate and drank" (Exod 24:9–11). This connection between a meal and an extraordinary vision of the divine finds echos in rabbinic literature (*m. ʾAboth* 3:4; *m. Ber.* 17a) and in the NT (Luke 24:13–35; John 21:1–14). By contrast, the Sodom and Gomorrah story (Gen 19:1–11) and an account of the rape-murder of a Levite's concubine by some Benjaminites (Judg 19:16–30) depict abuses of hospitality which call down wrathful responses from God and the people of Israel.

Another feature of hospitality that emerges from the OT record is Israel's deep sense of God as its host. Conscious of its formation from descendants of a "wandering Aramean," Israel knew and treasured its identity as a pilgrim people (Deut 26:5–22), especially during the Exodus journey when it received manna from God in the wilderness (Exodus 16–17). Having taken possession of the promised land, Israelites nevertheless remembered that their home belonged to Yahweh (Lev 25:23) and that they, like their forebears, remained sojourners and passing guests in God's eyes (Ps 39:12). Precisely as inhabitants of the land, they pictured themselves being led into green pastures and feted at the table of the divine king in the presence of their enemies. The "house of the Lord" in which they hoped to dwell forever was essentially God's perpetual hosting (Psalm 23; see also Psalm 104 in which God is portrayed as feeding and sustaining the entire creation day by day). When Israel's prophets looked forward to an era of perfect righteousness and *shalom*, it was no accident that they envisioned God entertaining the people at an endless feast (Amos 9:13–15; Joel 3:18; Isa 25:6–8; see also *1 En.* 62:14; *Midr. Exod.* 25:7–8). According to Isaiah, this great banquet would be spread for everyone on earth: "On this mountain the Lord of Hosts will make for all peoples a feast of fat things, a feast of wine on the lees. . . . He will swallow up death forever, and the Lord God will wipe away tears from all faces. . . ." This passage may have formed the basis for Jesus' pronouncement that many would come "from east and west and sit at table with Abraham, Isaac, and Jacob in the kingdom of heaven" (Matt 8:11).

Even more than their Greco-Roman neighbors, Jews of the Second Temple and rabbinic periods prized hospitality as a virtue (*T. Zeb.* 6:4f.; Jos. *Ant* 1.250f.). Particularly in the synagogue, which could serve as a hostel or meeting place for travelers seeking accommodations, and at the sabbath eve meal visitors were welcomed. The extent to which gentiles were included in these acts of hospitality must have varied from community to community. Among the rabbis, scholars were to be given precedence in the receiving of food and lodging (*m. Abot* 3:4). For both Palestinian and Diaspora Jews one figure, the patriarch Abraham, emerged as a special exemplar of hospitality (*T. Ab.* 1–5; Philo, *Abr* 107–18; *ʾAbot R.N.* 7; *Tg. Yer.* on Gen 21:33; *Tg. Neof.* on Gen 18:1f.). The last text cited contains a midrash on the story of the three visitors in which God, having appeared to Abraham shortly after the advent of his messengers, is told by the patriarch to wait until he has attended to the needs of those who arrived first! In the NT, Abraham's role as archetypal host can be glimpsed in Matt 8:11 and the parable of the rich fool, where heaven is termed "Abraham's bosom" and is probably to be understood as a place of abundant eating and drinking (Luke 16:22–26). Other rabbinic stories portray Abraham as the founder of inns for travelers (*Gen. Rab.* 39:14), the inventor and teacher of grace after meals (*b. Soṭa* 10a–b), and the missionary host who insists that his guests praise the God of Israel for their meal or pay cash for it (*Gen. Rab.* 49:4).

As pictured by the Synoptic writers, the ministry of Jesus manifests the theme of hospitality in two basic ways. First, Jesus' proclamation of the kingdom is frequently symbolized by images of food and drink, especially at festive meals. Thus the kingdom is compared to a great banquet (Matt 8:11; 22:1–14 = Luke 14:16–24), and Jesus ends his ministry with a ceremonial meal at which words about eating and drinking in the kingdom are spoken (Mark 14:17–25 and parallels). In Luke's version of the Lord's Prayer the petitions for the coming of the kingdom and for daily bread are joined together (Luke 11:2–3). Moreover, teaching about the kingdom is implied in Jesus' pronouncements about feasting with the bridegroom and new wine (Mark 2:18–22 and parallels), in the promise that faithful servants will be invited to enter into the joy (i.e., feast) of their master (Matt 25:21–33), and in the conclusion to the parable of the prodigal son (Luke 15:20–32). Indeed, the majority of Jesus' parabolic sayings have to do with the production and use of food and drink or the providing of homelike refuge for God's creatures. What seems to lie behind this body of teaching is a conviction held by the Synoptic Jesus that God is revealing himself powerfully and eschatologically as Israel's host. The feast predicted by Isaiah (25:6–8) has already begun to appear in the present world order.

Second, the Synoptic record of Jesus' behavior shows that he intended to live in accordance with the coming feast of the kingdom. This is epitomized in a dominical saying about how Jesus' contemporaries were perceiving him. "John," he complained, "came neither eating nor drinking, and they say, 'He has a demon'; the Son of man came eating and drinking, and they say, 'Behold, a glutton and a drunkard, a friend of tax collectors and sinners!' " (Matt 11:18f. = Luke 7:33f.). If the substance of this saying is genuine, one may conclude that the various accounts of Jesus' eating with tax collectors and sinners (Mark 2:15ff. and parallels; Luke 19:1–10) or welcoming them (Luke 7:36–50; 15:1–2), though sometimes built up from the sayings tradition and always modified in their transmission and redaction, nevertheless have some basis

in fact. It is difficult to determine what sort of event underlies the narratives of Jesus' feeding the 5000; but the fact that this is the only miracle story to appear in all four gospels suggests that the early Church considered it foundational for the interpretation of Jesus' mission. It has long been observed that Jesus' choice of twelve itinerant disciples constituted a claim that God had initiated the end-time restoration of Israel's dispersed tribes. But it should also be noted that Jesus' larger group of followers, which included residential supporters, seems to have functioned as a network for sharing God's eschatological abundance among themselves, and for inviting the broader population to join them in this new mutuality. The Jesus movement was itself both guest and host of the kingdom.

It is Luke especially who accents this theme in Luke-Acts. Only the third gospel contains the parables of the good Samaritan, the prodigal son, the rich man and Lazarus, the story of Zaccheus, and the Emmaus narrative, according to which two disciples come to recognize the risen Jesus "in the breaking of bread" (24:35). For its part, Acts may be read as a collection of guest and host stories depicting missionary ventures that have originated in circles associated with the earliest churches. Luke's special concern is to show how itinerant and residential believers can support one another in the worldwide mission of the Church. Through this mutuality, he believes, the Holy Spirit will bring about rich exchanges of spiritual and material gifts; and the Church will grow (Koenig 1985).

Paul writes that "the kingdom of God is not food and drink but righteousness and peace and joy in the Holy Spirit" (Rom 14:17). This statement appears to contradict the gospel traditions in which meals are seen as a primary locus for the appearance of the kingdom. But the context in Romans shows that Paul does not intend to separate meals as such from the impact of the gospel. Instead, he is trying to reconcile two factions of believers who disagree over which foods may be consumed and are thus prevented from sharing the common meals of the Church. Presumably, these would include the Lord's Supper. Paul's hope is that all groups in Rome will "welcome one another . . . as Christ has welcomed [them] for the glory of God" (Rom 15:7). This reciprocal welcoming, preeminently at meals, becomes both an act of worship and a display of unity that will attract outsiders. A similar point is made when Paul writes to correct abuses of the Lord's Supper in Corinth which have the effect of excluding or dishonoring certain believers, especially the poor. Paul insists that there must be no second-class citizens in this ritual proclamation of the crucified Christ and his world-reversing gospel (1 Cor 11:17–34). Much earlier in his ministry Paul had opposed Peter publicly in Antioch when the latter reneged on his practice of eating with gentile converts (Gal 2:11ff.). For Paul, the meals of the Church have become a critical arena for the revealing of God's righteousness in Christ and humanity's response to it. It is not surprising that the Pauline disciple who wrote 1 Timothy considered the talent for hospitality much to be desired in one who occupied the office of bishop (3:2).

In the Fourth Gospel exchanges of food or drink also function as occasions for the revelation of God's love in Christ (4:7ff.; chaps. 6 and 13–17). But the distinctive character of John's concern for hospitality shows itself in his christological statements. Jesus is not only the door to the sheepfold, the preparer of heavenly chambers, and the way to the Father (10:1ff.; 14:1–6). He is himself the place where believers worship (2:13–22) and dwell (14:20, 23; 15:1ff.). These images take on special meaning if members of the Johannine community have recently suffered expulsion from the synagogue. In the Johannine letters the presbyter-author urges his readers not to receive Christian travelers who do not abide in the doctrine of Christ (2 John 9f.). But he and his emissaries are themselves the objects of inhospitable treatment by a certain Diotrephes (3 John 9f.). Apparently the issue is one of conflict over authority.

Images of hospitality occur with some frequency in the general epistles. James exhorts the recipients of his epistle not to humiliate poor people by assigning them to inferior places in the public assemblies of the Church (2:1–7). The author of 1 Peter addresses his readers as aliens and exiles who were once "no people" but are now a "chosen race . . . built into a spiritual house to be a holy priesthood" (1:1; 2:4–10). As such, they are to "practice hospitality ungrudgingly to one another" (4:9). This terminology may reflect a real social-political situation in which the readers suffered from their status as resident aliens and transient strangers (Elliott 1981). Perhaps the most winsome of all reflections on hospitality by early Christian writers is found in Heb 13:2 where believers are urged to receive strangers graciously on the ground that "thereby some have entertained angels unawares." Clearly the allusion is to Abraham's enthusiastic reception of the three heavenly messengers. But Jesus too may come as a stranger. Matthew, Luke, and John all make this point (Matt 25:31–46; Luke 24:13–35; John 20:11ff.; 21:1–14). And so does the author of Revelation when he records the words of the Risen One to the church in Laodicea: "Behold, I stand at the door and knock; of any one hears my voice and opens the door, I will come in to him and eat with him, and he with me" (3:20). The context indicates that this meal with Jesus, like many of those narrated in the gospels, will be one of repentance and reconciliation.

JOHN KOENIG

HOSTS, HOST OF HEAVEN. The term *ṣābāʾ*, pl. *ṣĕbāʾôt* (masc. pl. 2x; Pss 103:21; 148:2 [Q]), commonly translated "host," "hosts," denotes primarily a military retinue or army, a meaning consistent with its common Semitic etymology (cf. Akk. *ṣābu;* Old South Arabic *ḍbʾ;* Eth. *ḍabʾa/ṣabʾa;* Ug. *ṣbʾu*). The term occurs some 486 times

in the Hebrew Bible, 315 of which are in the plural. The plural form, *ṣĕbāʾôt,* occurs as a divine epithet associated with Yahweh in 284 of those occurrences. The term is used in Hebrew to designate both human and divine armies, as well as to connote certain celestial bodies, a usage that is not uncommon within the mythopoeic conceptions of the ANE.

A. Hosts
B. Host of Heaven
1. Yahweh's Military Retinue
2. Yahweh's Council
3. Objects of Worship
C. Yahweh *Ṣĕbāʾôt*
1. Cultic Name
2. Associations with Prophetic Speech

A. Hosts

Apart from its use with the divine name Yahweh, the word *ṣābāʾ* most commonly designates a military retinue or army (e.g., Exod 6:26; 12:51; Num 1:3, 52; 2:3, 4, 6, 8; 10:14, 15, 16, 18; 31:48; Deut 20:9; 24:5; Josh 4:13; Judg 4:2; 8:6; 1 Sam 12:9; 2 Sam 2:8; 8:16; 10:18; 1 Kgs 1:19; 2:35; 2 Kgs 4:13; Isa 13:4; Pss 44:10—Eng 44:9; 60 12—Eng 60:10; 108:12—Eng 108:11; etc.). By extension, the word also indicates warfare or military service (Num 1:3, 20, 22, 24; 26:2; 31:3, 4, 5, 6; Josh 22:12, 33; 1 Sam 28:1; 1 Chr 5:18; 12:26—Eng 12:25; etc.). Additionally, *ṣābāʾ* may be used to designate cultic service (Num 4:3, 23, 30, 35, 39, 43; 8:24, 25) as well as difficult or harsh service (Isa 40:2; Job 7:1; 14:14; Dan 10:1).

B. Host of Heaven

The phrase *ṣĕbāʾ haššāmayim,* "host of heaven," is used to denote the heavenly bodies, either as personified forces or as celestial bodies. In this usage, *ṣābāʾ* always occurs in the singular.
